Whenever our face turns towards our sister on the south we feel that we are looking in the direction of friends and of people who are progressive and earnest to meet the problems of to-day, and that are determined to solve them right. In proof read the following letter:

Editor Up-to-Date Farming:

I have been a close reader of agricultural papers all my life, but I have never seen a paper so valuable to farmers as Up-to-Date Farming. Its editorials are crisp, strong and logical; its arguments are clear and convincing, bristling with such an array of facts and figures as to be absolutely unanswerable and irrefutable. It was the first farmers' paper published in the United States that taught farmers how to obtain equitable prices for the products of their farms by controlled marketing. The wonder is that no one ever thought of this plan before. The plan is both simple and feasible, and it is one that appeals to the reason and intelligence of every unprejudiced mind. If he who multiplies the products is a benefactor, how much more a benefactor is he who develops a plan that will enable every farmer, every mechanic and every artist to get an equitable price for the products of his labor and skill. Mr. Everitt has developed such a plan, and is therefore a benefactor of the human race. This means to the farmer true independence and prosperity :and in order to hasten the accomplishment some plan ought to be devised to put this paper in the home of every farmer and laboring man in this country, for it seems to me that no intelligent person can read the paper and not become a convert to its teachings.—W. G. Brawner, Hopkinsville, Ky.

Mr. Brawner's suggestion is a good one. The wider the circulation of Up-to-Date the wider will the doctrine of relief for the farmer through controlled marketing be extended and the sooner will his independence be achieved and his prosperity secured. We make this remark without any feeling of rivalry toward any other paper on earth. This country is large, and the need for instruction along these lines is great; we wish every paper would fill its mission and merit success and win it.

Let us now introduce a letter from North Carolina. They reach us laden with good words from everywhere, because truth is searching out the people:

Editor Up-to-Date Farming:

I never attended school five months in my life, but "a wayfaring man, though a fool," can see that supply and demand do not control prices. It may have something to do with comparative values, but controlling prices is a different thing, since organized capital arrogates to itself the right to rule the commercial world. It is therefore entirely plain that producers cannot raise a living crop and sell it at a living price, only as a "happen so," until

(Continued on Page 22.)

HAVE YOU ORDERED YOUR THIRD POWER BOOK?

It is worth more to any farmer, stockman or fruit grower, than a college education. After you read it then you can apply learning, before you cannot to any certain good advantage.

We have one for you, 25 cents and the below coupon will get it.

UP-TO-DATE
Home on the Farm
HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

LIFE

A wail, a smile, a laugh, a tear!
The sum of human life is here.
A little toil, a little ease,
A little island 'twixt two seas;
A gleam of day, a flash of light,
A moment seen, then out of sight.
From the eternal past we come:
Eternal future! There's our home.
—John P. Steele.

Improve the fleeting moments ere they pass.

April brings the sun higher and his rays brighter. Are our hearts warmer and lighter?

"From schoolroom to furrow" is a good text for the farmer boy to preach from now. Preach and practice; think and act, remembering that the seeds of good deeds sown now will bear fruit although you may wait many years.

The boy that does his best in whatever calling is the one that will find the best callings.

The home on the farm is not necessarily a place of toil. It should be a place of pleasant duties well performed. Drudgery is work grudgingly done. Our A. S. of E. and U. T. D. people don't work grudgingly.

Mother love is a love of sacrifice; filial love is a love to lighten mother's burdens. "By their fruits ye shall know them."

Let the April showers wash the winter cares away. Let April suns call up the heart flowers and waken the songs of the heart birds. The human heart can't afford to stay in winter quarters while the great heart of nature is throbbing with the delights of spring time.

If the coal oil lamp does not make a satisfactory light, see if the little tube that runs down the side of the wick tube is open. This must be kept open for good results.

Put a few drops of turpentine in hot starch and see if the linen does not take greater brilliancy on being ironed.

Don't let the house plants die of dyspepsia. If the leaves turn yellow and fall, it is very likely the plant is suffering from this trouble. The plant food is carried up into the leaves, and there digested by the aid of light, sunlight. To be healthy the plants must have light. Give them sunlight if possible.

There are few more wholesome breakfast side dishes than fried corn meal mush. If a little sweet milk be added to the water before stirring in the meal it will improve the mush for frying. The mush to be used for breakfast should be made the evening before.

Some one says this beats Crackerjack, and if it does it is a "crackerjack:" One cupful of white sugar, two small tablespoonfuls of butter, four of water. Boil till thick, then stir into it three quarts of popped corn, mix well, stir till it cools and pour onto glazed paper or a buttered dish.

The old lamp wick is a good thing to throw away, or to use in starting the next fire. Few single articles of household use cost less than a lamp wick, and few are so persistently held on to. Once in a well-to-do home we saw two old wicks sewed together to make a wick long enough for use. No economy in that. Old wicks become clogged and fail to give good light often before they are too short for use.

A writer in the Rural New Yorker says ripe and dry sweet corn is the best of all corn for parching. It does not pop open like popcorn, but it parches crisp and brittle, and is very sweet. Parched and ground in a coffee mill it makes an excellent "breakfast food," with the advantage that you know what it is.

It is a mighty good rule to do nothing that you don't want people to know, then you won't be afraid it may be found out.

There are many ways to make money and to make it honestly, but there is but one way to save it. and that is to spend less than you make.

The quickest way to clean a clothes wringer is to rub the rollers with a cloth saturated with coal oil.

Dates are good friut, especially for persons inclined to be constipated. Here is a way to make nice date sandwiches: Cut thin slices of bread, butter lightly, spread with dates chopped fine, and form into sandwiches.

Try this method with parsnips. Boil in salt water until very tender, mash and season with butter, pepper and salt, add a little flour and two well beaten eggs, form into small balls and fry in hot lard.

If nuts are eaten with salt they are more easily digested.

If whalebones become bent out of shape, soak them in water a few hours, straighten them or put them in proper shape, and dry them so.

Is thrilled with joy
The ambitious boy
As summer breezes come;
In budding trees
Again he sees
A happy harvest home.

There are certain scents which insects will not tolerate, such as oil of cloves, oil of cinnamon, anise oil, or oil of cedar. A few drops will scent a bureau drawer, and all bugs will keep away from it. Our informant declares that no matter how badly infested a bed may be, no bug will venture between sheets scented with any of these essential oils. Only a few drops are required, and a small vial should be in every travelers kit.

Aunt Eliza contends that the yard or lawn is unfinished until it has a bed of petunias. If there is a spot where a large, showy plant would be ornamental plant some cosmos there.

Don't try to grow roses under large trees. The rose likes sunshine, and it does not care to share its food with the gluttonous roots of a large tree. Give the rose its own place in which to grow, and let it have a deep, mellow bed of well composted manure, and where it will have plenty of moisture, but not where the ground is likely to remain wet long at a time.

That beautiful custom of decorating soldiers graves should be thought of now, and an abundance of flowers provided for.

While this department is specially devoted to the Home on the Farm, much is said here which might greatly benefit the home in the village, town and city. It is a small bit of ground that is not large enough to produce a flower, and it is certainly a beautiful home that a bright flower would not make more beautiful. Let flowers be grown everywhere. Our sympathies are warm toward civic improvement associations, and we wonder they are not made more efficient.

The phlox is one of the most brilliant and showy flowers that can be grown in the outer corners of large lawns. So are the dahlias. Hardy and easily grown, requiring very little care. Gold and silver may not be scattered around the farmers' front yard, but there is a great deal of beauty hidden in the dark soil that composes it. Put in the seeds, keep away the weeds, and nature will do the rest.

Prepare for a display of chrysanthemums next fall. Easiest plants in the world to grow. Give them a chance. Why grieve that you can not afford costly pictures in the parlor when God will paint you such beautiful ones just outside the door?

The pansy bed may be on the shady side of the house Plant them in variety, and they will bloom in profusion. Plant early.

After plants begin to bloom they need more water than before the blooms appear, but they must not be kept watersoaked.. Give them a good soaking as a heavy rain would do, then let them wait until they need another rain. The habit some have of merely wetting the surface every day does as much harm as good.

We will warrant there is an unsightly corner somewhere about the yard when a bunch of sweet peas would exactly fit and be a pleasure all the season. Put the seeds there.

Yes, we are talking a good deal about flowers. We offer no excuse. Flower time has come, and we would be greatly disappointed were we to get out among the homes of Our people and find no flowers. We want the beauty of right living in the home, and the beauty of God's brightest flowers all around it.

Should a friend present you with a choice bouquet that you would like to preserve as long as possible, put it in a glass with soap suds in it instead of pure water. Each morning take it out, let the stems soak a few minutes in clear water, take out, sprinkle the flowers lightly, about like a dew, with clear water, and put back into the soap suds. Give this treatment every day, renewing the suds every two or three days, and you will be delighted with the length of time your bouquet will remain fresh and bright.

Common baking soda moistened and bound on a wart and left over night, will very likely result in its removal.

Money back IF YOU WANT IT

For only 10 cts. you can buy a **ZOBO** the Wonderful Musical Instrument. There is nothing at anywhere near the cost that will bring so much joy to boys and girls. This musical instrument can be played without instruction or practice by young and old. It furnishes good dance music, can be used in street parades, or any place where music is desired. Nothing better these long winter evenings for a little entertainment around the fire and in the house. It is made of strong material and is not liable to injury. Full printed instructions with each ZOBO, 6 inches long. Get a dozen and sell them to your friends. We will send one for 10c postpaid. A dozen postpaid for $1.

New York Bird Store, Pittsb'g, Pa.

The Field

(Continued from Page 20.)

they are organized as capital is.—J. M. Maynard, Apex, N. C.

Some splendid nuggets of truth in that letter also. Let us bring them before the whole world and revolutionize thought in these lines.

The following appeal comes from live people in Arkansas:

Editor Up-to-Date Farming:

Arkansas is not behind. The A. S. of E. is making swift progress here. Let every one lend a helping hand, and push this movement forward. Every day you refuse to help, you simply prolong the time for equitable prices. All we need is for you to join and help us. Then we shall see the time when our cup will run over with joy. Attend your local unions, do your part, and thus assist in the greatest achievement of the ages.—Luther Kent, Carden Bottom, Ark.

If all were moved by that spirit, and lived to it, how different would the world be, and what a bound forward would civilization take!

We are sorry the politicians still refuse to accord to the energetic people of Oklahoma and Indian Territory the privileges of Statehood, but we suppose it is not within our province to discuss this question. Read a typical letter from that beautiful new country:

Editor Up-to-Date Farming:

Dec. 26 I received my commission and took up the work at once. January 7 I organized a local with 28 members, and we have steadily grown until now we number 38. We receive the official paper promptly, and its teaching keeps us alive in the faith. Each new copy makes us jubilant with the hope that the long prayed for time of our deliverance is at hand.—Rev. L. N. Nichols, Muldrow, Ind. Ter.

Yes, Bro. Nichols, the time of deliverance will come. The agitation that has been stated in its behalf can never be stopped until the curse of price manipulation is removed. The general intelligence of the American farmer is of a high order, and yet, until his attention was called to it he tamely submitted to have his toil and life efforts, his all, made the sport of people whose only purpose was to plunder him. He submitted to it without thinking, because it was the custom, but he is thinking now, and he will never again regard speculative price making as the proper thing; will never again tolerate it.

We are glad to get letters from distant points. The heart of the Old Dominion, the first settled State, is throbbing with the same impulse that moves the hardy men and women of the new regions of the west. The following brief letter tells about it:

Editor Up-to-Date Farming:

Our local at Red Eye is getting along well. We meet twice a month, and continue to secure additional members. We have organized a debating society at a nearby school house, in which union and non-union alike take a part. We discuss such subjects as the good roads movement, diversification of crops, etc., always having an interesting time.—W. S. Walker, Whittles, Va.

Here we close the letters for this issue with a hearty "God bless you" to the writers. Even the most intelligent people may long submit to wrong when their eyes are turned in the opposite direction, but once the wrongs are seen the wrongdoers may as well step aside.

Questions and Different Views

Editor Up-to-Date Farming:

I am a member of Local Union No. 1 at Lyonia, Hancock county, Ky. We were organized March 27, 1904, with eleven members. We were then, and are now, alive to the work. Our membership now is one hundred and five. We discuss subjects and have a lively time, especially on tobacco subjects, as that is our main stay for money here.

Our local is determined to hold for the Lynchburg price, or not sell at all. We have about 160,000 pounds in our local (Feb. 21) that is being held for "three 8's." We favor the warehouse plan when we can't hold our tobacco in our own barns any longer, but not until then. We can put our tobacco in the warehouses, though, and draw as much money on it as we got on an average last year, and still have a chance at the three 8's by still keeping it off the market.

We also favor some plan of curtailing production, but we think it would be best to reduce the hours. Eight or ten hours is long enough for farmers to work, and if that were the rule it would prevent hiring a hand for 50 cents, and then working him sixteen hours for a day, as is sometimes actually done. Every other class of people work a certain number of hours, and why not we? I believe that will do more toward cutting down production than anything else we can do, and thus we may do justice to the man that has to hire out and work by the day. I don't think the average tobacco raiser hurts the market; it is the man that hires hands cheap, and puts out great fields of it when there is a prospect of a fair price. Work shorter hours and demand a better price as our wages will stop that kind of tobacco raising.—Cicero Phillips, Lyonia, Ky.

NOTE.—It is just as natural that farmers should differ upon questions as that other people should. Men that never differ are men that never think. Our correspondent gives one side of the farm labor question, the side of the man who farms for wages to be paid by another. The man who pays the wages would likely say he pays now all he can afford to pay even for the long hours, and risk the prices he may be compelled to accept. And under old conditions and methods of buying and selling, he is no doubt correct.

You Must Not Give Up

You are going to get well if you do your part and just try

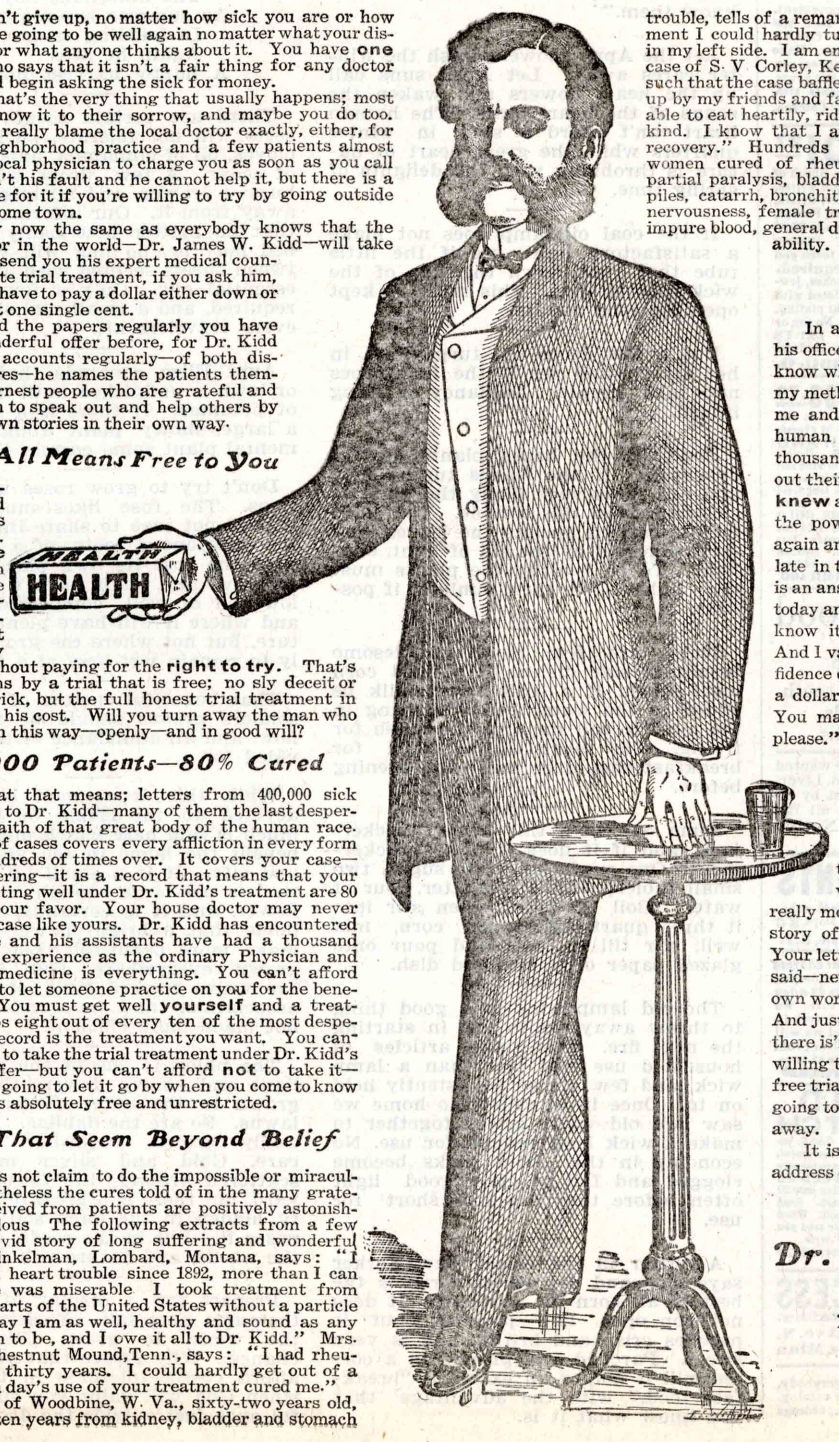
Report of Marvelous Cures by a famous doctor—His sweeping offer of a full trial treatment free—The only way to convince the Sick and Afflicted

You mustn't give up, no matter how sick you are or how poor. You are going to be well again no matter what your disease may be, or what anyone thinks about it. You have **one** able friend who says that it isn't a fair thing for any doctor to come in and begin asking the sick for money.

And yet that's the very thing that usually happens; most sick people know it to their sorrow, and maybe you do too. But you can't really blame the local doctor exactly, either, for any small neighborhood practice and a few patients almost compel your local physician to charge you as soon as you call him in. It isn't his fault and he cannot help it, but there is a help elsewhere for it if you're willing to try by going outside of your own home town.

You know now the same as everybody knows that the greatest doctor in the world—Dr. James W. Kidd—will take your case and send you his expert medical council and complete trial treatment, if you ask him, and you don't have to pay a dollar either down or afterward, not one single cent.

If you read the papers regularly you have seen this wonderful offer before, for Dr. Kidd publishes the accounts regularly—of both diseases and cures—he names the patients themselves—the earnest people who are grateful and willing enough to speak out and help others by telling their own stories in their own way.



Free To All Means Free to You

You can believe this and trust the words—for when Dr. Kidd says **free** he means it in the same sense you mean it—**free**; the willingness that you should try to get well without paying for the **right to try.** That's what he means by a trial that is free; no sly deceit or round-about trick, but the full honest trial treatment in your houses at his cost. Will you turn away the man who comes to you in this way—openly—and in good will?

400,000 Patients—80% Cured

Think what that means; letters from 400,000 sick people written to Dr Kidd—many of them the last desperate hope and faith of that great body of the human race. That number of cases covers every affliction in every form and stage, hundreds of times over. It covers your case—your own suffering—it is a record that means that your chances of getting well under Dr. Kidd's treatment are 80 out of 100 in your favor. Your house doctor may never have seen one case like yours. Dr. Kidd has encountered hundreds. He and his assistants have had a thousand times as much experience as the ordinary Physician and experience in medicine is everything. You can't afford for an instant to let someone practice on you for the benefit of others. You must get well **yourself** and a treatment that helps eight out of every ten of the most desperate cases on record is the treatment you want. You cannot only afford to take the trial treatment under Dr. Kidd's magnificent offer—but you can't afford **not** to take it—and you're not going to let it go by when you come to know that the offer is absolutely free and unrestricted.

Cures That Seem Beyond Belief

Dr Kidd does not claim to do the impossible or miraculous, but nevertheless the cures told of in the many grateful letters received from patients are positively astonishing and marvelous The following extracts from a few letters tell a vivid story of long suffering and wonderful cures: A Hinkelman, Lombard, Montana, says: "I suffered from heart trouble since 1892, more than I can describe. Life was miserable I took treatment from doctors in all parts of the United States without a particle of good. To-day I am as well, healthy and sound as any man could wish to be, and I owe it all to Dr Kidd." Mrs. James Ash, Chestnut Mound, Tenn., says: "I had rheumatism about thirty years. I could hardly get out of a chair. Fifteen day's use of your treatment cured me."

E J Mills, of Woodbine, W. Va., sixty-two years old, a sufferer for ten years from kidney, bladder and stomach trouble, tells of a remarkable cure: "When I began your treatment I could hardly turn myself in bed; I was nearly paralyzed in my left side. I am entirely cured" More remarkable still is the case of S. V Corley, Kestler, Ala., who says: "My condition was such that the case baffled the skill of local doctors, and I was given up by my friends and family. After seven day's treatment, I am able to eat heartily, ride horseback, perform manual labor of any kind. I know that I am cured and I thank Dr. Kidd for my recovery." Hundreds of letters of this kind from men and women cured of rheumatism, kidney trouble, heart disease, partial paralysis, bladder troubles, stomach and bowel troubles, piles, catarrh, bronchitis, weak lungs, asthma, chronic coughs, nervousness, female troubles, lumbago, skin diseases, scrofula, impure blood, general debility, etc., prove the doctor's remarkable ability.

The Newspapers

In an interview last month Dr. Kidd said in his office to the reporters present: "Gentlemen, I know why they are talking about me and saying my methods are revolutionary. You may state for me and from me that I have some faith yet in human nature. I know that the four hundred thousand sick and hopeless people who stretched out their hands to me without a dollar in them—**knew** and believed in my honor and skill and in the power of Kidd's treatment to lift them up again and make them well and strong. It's pretty late in the day for criticism. No petty jealousy is an answer to my army of patients who are well today and voice the praise of my treatment. They know it—**these people** know it. I know it. And I value that great health-record and the confidence of my patients infinitly more than picking a dollar here and there from some sick woman. You may publish that statement or not—as you please."

When You Write In

When you write in to the doctor—and the **good** time to do that is right now when you're in earnest about yourself and really mean to get well—tell the doctor the whole story of your case; don't keep anything back. Your letter is sacred confidence—no word will be said—never. You must tell him plainly in your own words and in your own way just how you are. And just remember when you're doing that, that there is'nt anything more for you to do but just be willing to tell your trouble truthfully and take the free trial treatment, and don't give up for you're going to get well—you're going to get well right away.

It is better when you write to put down the address exactly as the doctor gives it, this way:

Dr. James W. Kidd

Box 201

Fort Wayne, Ind.

FOR 70 YEARS A HOUSEHOLD REMEDY

DR. MARSHALL'S CATARRH SNUFF

(Relieves at Once and Cures Absolutely)

One quarter actual size.

It should be used by all sufferers of Catarrh, Cold in-the-head, Ringing in the Ears or Deafness (due to Catarrh.) It gives instant relief,—cleans the head at once by reaching the inflamed parts. Contains no cocaine, morphine, or other dangerous drugs.

25 cents *per bottle at all druggists, or by mail prepaid.*

A complete treatise on Catarrh. free by mail. Write for Book C6

F. C. KEITH, Prop., Cleveland, Ohio

70 YEARS A HOUSEHOLD REMEDY

The Press Clippings and Comments

The stolid indifference of the agricultural press is still a matter of comment, and it gives more encouragement to the enemies of marketing controlled by the farmers than anything else, because these elements look to the farm press to express the sentiment and outline the movements of the farmers. On this account their indifference is to be regretted; otherwise it matters little, for they are simply repeating history. Every advance in human affairs has been made in spite of those who have held control of existing conditions. They seem to dread changes that must lead them into new channels, and that is all there is to it. But the general press, the secular press, so to call it, is not so fearful of innovations. They know that what benefits agriculture will benefit them and all else, and they do not hesitate to support movements of that kind when they can be assured of honesty and reasonable results. Note the following clippings and comments as valuable proofs.

The News, Tell City, Ind., makes the following announcement as an act of friendship to the farmers and the Society:

Hon. Flage Carter of Carters Landing, Ky., will be at this place in a few days to organize a local union of the American Society of Equity.

From the Rochester, Minn., Record we clip the following account of what the farmers are doing in that far northern State:

The meeting of the local union American Society of Equity, which was held in the City Hall Saturday afternoon, was one of the largest attended and most important since the organization of that body in the county of Olmsted, and it becomes apparent that the optimistic views entertained by the ones who agitated the movement here in the beginning were not entirely unreasonable. For not only has the A. S. of E. proven of interest to the farmers of this section in the past, but it is daily attracting more and more attention, as was quite manifest from the attendance of Saturday when the council chamber in which the meeting was held was filled, and out in the hallway a large number were listening to catch the words of the various speakers.

John A. Simon, secretary of the Chatfield Union, was present and addressed the society in a general way, telling of the progress in Chatfield during the short period of four weeks, since the organization was perfected, increasing the membership from 30 to 200 in that time. He told how the farmers there had succeeded in co-operating with the merchants to the mutual advantage of both parties, and he touched in an interesting manner on the benefit the farmers expect to derive from having trade confined to their own locality.

Lester A. Robertson, secretary of the Viola Union, gave an impromptu talk on the good which those in his vicinity are going to gain from the local union organized there three weeks ago, and while the time has been too short to be able to trace any large gain in membership, still he notices with pleasure that there is a tendency among the farmers in that vicinity to want to know more about the A. S. of E., and furthermore to become affiliated with it. The movement is bound to be a success in Viola, and he has no doubt that at the next meeting the membership will be augmented by an increase good to see.

Mr. Linsley of Tracy, another visiting delegate, stated that in his section of the State the farmers were waiting patiently for the State vice-president to come out and effect a local organization of the American Society of Equity, and W. C. Webber, who holds the office, expects to be able to accomplish this desirable end some time in March.

Some one has said, "Set a good thought in motion, and it cannot be stayed until it has brought good to the human race." Thus has the idea of controlled marketing to secure just reward to those who labor on the Nation's millions of farms, passed on like a wave on a quiet sea until it is rapidly reaching those farms no matter how remotely located.

Referring to a special dispatch announcing the organization of two strong local unions in Breckenridge county, Ky., and meetings for the organization of several others, the Breckenridge News says:

The above special from Hardinsburg contains news of one of the most encouraging things for the farmers that has happened in Breckenridge county for some time. Those sections mentioned as having been organized and those to be organized are among the communities that have been the slowest to take hold of the ideas of the American Society of Equity. Their coming to the front at last is a very good indication that all communities in this county, as well as in other counties, will eventually be organized and that the strength of the A. S. of E. is surely and swiftly increasing.

Don't think activity is confined to Minnesota. Note this from the Rochester, New York, Democrat-Chronicle:

A county union of the American Society of Equity has just been organized at Hayt's Corners, the object being to unite the agriculturists of the county so as to regulate and secure better prices than heretofore for farm products. The county officers are: President, H. Seward Miller, of Romulus; vice-president, L. H. McCluen, of Covert; secretary, Gilbert D. Townsend, of Townsendville; treasurer, George W. Jacobs, Hayt's Corners.

What better can we do now than to clip the following from The Farmers' Journal, of Abilene, Texas? We thus have a triangle whose long arms embrace almost the entire country:

The highly complimentary notice of the Journal clipped from Up-to-Date Farming and displayed elsewhere took up by surprise, and we feel honored overmuch. And why shouldn't we? It comes from the very highest source. Up-to-Date Farming is the most far-sighted, level-headed, practical, business-like publication along agricultural lines in America to-day. It is national in its scope and character, and its circulation is immense and growing rapidly. We regard its editor as the Moses of American agriculture. His was the first voice to cry out, "Keep your farm products till you are offered profitable prices."

The Farmers' Journal need not feel at all flattered by what Up-to-Date may say of it. We hope never to reach a point when we shall be unable to recognize merit when we see it, or when we shall be too full of selfishness or prejudice to give it full mead of praise. Gladly do we grasp the hand of every helper in this movement, and when we shall have fought our last battle and passed to our reward, we shall expect such stalwart youngsters as the Farmers' Journal to keep up the fight and enjoy the fruits of victory. There is no room for selfishness, envy or jealousy in this movement.

Read the following from the Earlington, Ky., Bee. Seven other meetings are announced in the same paper, but the clipping reaches us too late for their announcement to be of value in this paper:

The movement to organize the farmers of Hopkins county in a commercial way under the American Society of Equity, which society has found ready co-operation of the farmers of a number of Kentucky counties, has begun in an active way during the past few days. Meetings have been held at Walnue Grove schoolhouse, near Dawson Springs, on Saturday night last at Cox's schoolhouse, Monday evening; at Ashley's schoolhouse last night.

The following is a clipping from an Illinois paper whose name we have lost, and it refers to a meeting to organize a county union in one of the counties of that State:

The session was a very enthusiastic one and every one present showed deep interest in the principles advocated by the American Society of Equity. The society has many points in its favor, and it is presumed that by the united efforts of all farmers much can be gained for their prosperity and welfare. The characteristic idea conveyed by the organization is that by harmonious and well regulated action the market prices on all farm products will ultimately be governed entirely by the farmers.

From the Owensboro, Ky., Messenger we take the following:

The joint meeting held here to-day of the county unions of the Society of Equity of Hancock and Breckenridge counties was largely attended. There were nearly 400 farmers in the meeting, most of whom were delegates regularly chosen to represent the various locals in the two counties. No definite action was taken in any respect except to limit the acreage and also to refuse to raise the price above the Lynchburg prices.

There was much enthusiasm in this meeting, and there is rejoicing among all because of the firmness with which all are standing by the "three eights" prices.

Getting back to Minnesota, we clip the following from the Owatonna Chronicle:

"A meeting to organize a Steele county union of the American Society of Equity at the court house Saturday afternoon was attended by nearly fifty farmers. They were addressed by W. C. Webber, the deputy organizer, and this smooth, convincing speaker held their attention for nearly two hours. He devoted much time to telling the farmer where the profits of his labors were going and cited many instances of millionaire grain men who enjoy fabulous incomes without doing any work, but simply getting the profits on grain which rightfully should go to the farmer. Briefly stated, the plan of the American Society of Equity is to do away with the problem commonly stated as the "law of supply and demand."

The Chronicle is mistaken in its final conclusion. It is no part of the plan of the A. S. of E. "to do away with the problem commonly stated as the law of supply and demand," but to restore that law to full force and effect. Since speculative so-called boards of trade have arrogated to themselves the right to make prices, control markets and deal in futures, supply and demand have had little or no effect on prices, and manipulations have ruthlessly extortioned on both producers and consumers—producers by forcing prices down without regard to the demand, and consumers by forcing prices up without regard to the supply.

Again we quote from the same paper but of a different date, which, speaking of the organization of a local at Zumbrota, says:

In this connection it is interesting to note that this is the twelfth organization of this society perfected in southeastern Minnesota through the instrumentality of W. C. Webber, they being Rochester, Stewartville, Pleasant Grove, Chatfield, Wykoff, Eyota, Viola, Plainview, Hammond, Pine Island, Kasson and Zumbrota. Dates have been secured for St. Charles, Spring Valley, Austin, Owatonna and Tracy. There are 1,500 members enrolled just in this little section of the State, a pretty good showing when it is considered that Rochester Union, the first organized, celebrates its first birthday to-day. All of which speaks well for those who are in charge of matters.

We quote now from St. Charles, Minn., Union:

A mass meeting of the farmers of this locality was held in A. O. U. W. Hall Friday afternoon. The meeting was called for the purpose of organizing a local union of the American Society of Equity, which is a national organization of farmers, the primary object of which is to secure profitable prices for all farm products.

Mr. Webber said that it was not the intention of the society to create a farmers' trust in the sense in which that word is usually taken, but by controlled marketing to regulate the prices on all crops. Farmers have heretofore dumped a whole year's supply on the market in two or three months instead of supplying the demand as the demand existed.

The Union will be pleased to publish more of the plan of the society from time to time, and hopes that the movement will succeed in interesting our farmers to such an extent that the expected favorable conditions may be realized and the whole community be benefited.

A local union was organized with a membership of thirty-four, and the following officers: President, C. L. Blair; vice-president, Timothy Daly; secretary, O. P. Boysen; organizer, Chas. Rabben.

We thus close this review of the field for this issue of Up-to-Date Farming, and we point to these few extracts quoted out of many that come to our notice, not only with a feeling of pride in the work being done, but with gratitude to the enterprising publications that assist in making it known.

Here is a ringing report of Equity work which we clip from the Constitution, Carlyle, Ill.:

The call for the county convention by National President J. A. Everitt, of the American Society of Equity, to be held at Buxton last Saturday, was responded to by a large number of the farmers of Clinton county. A large delegation arrived on the early morning train from the eastern part of the county, and almost a carload of delegates arrived on the accommodation from the west. Besides these many others came in their own conveyances and the town house of Buxton, where the convention was held, was crowded to its utmost capacity. The call for the county convention was read by S. Holtgrave, of Wade township, after which the selection of officers was taken up. J. G. Taphorn, of Wade, was chosen temporary chairman, and H. Winkler, of Santa Fe, Secretary. Numerous discussions and speeches were had and a very enjoyable time was had by all. We believe it was the jolliest crowd that ever assembled here. There were delegates present from every township in Clinton county and the meeting was quite a success. Important matters were attended to outside the prime purpose of the convention; every agricultural industry as they tion taken looking to the solidification of affect the farmers were considered and acinterests and the building up of the American Society of Equity. The next meeting of the Clinton county Farmers' Union will be held at the courthouse in Carlyle on April 28. The permanent officers elected are E. Krost, president; Ed Wringe, secretary.

I Cure Women

OF FEMALE DISEASE AND PILES

I Will Cure You So That You Should Stay Cured—Women No Longer Need Submit to Embarassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has seldom failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, believing that it will effect a cure in almost any case, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, so will send you some of the medicine free. If you will send me your name and address I will mail you a trial package absolutely free, which will show you that you can be cured. Do not suffer another day but just sit down and write me for it right now.

Mrs. Cora B. Miller, Dept. 137, Kokomo, Ind.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did It Gladly Tells You How

Mr. A. S. Hitchcock (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease, that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health.

Our advice is to take advantage of this most generous offer while you can do so without cost.

This $1.00 box SENT ON TRIAL

STOMACH TROUBLES CURED!

I will send a $1.00 Box John's Stomach Tablets, enough for one full month Before You Pay

They cured me of stomach troubles. Try them at my expense. Pay when satisfied. They are the best remedy for dyspepsia, gas on stomach, heartburn, heart palpitation. A trial will prove it. For your own health's sake you should send for them today. Address JOHN MORROW, Chemist, 138 Forrest Bldg. Springfield, Ohio.

Osborn's SYSTEM PILLS

Purely Vegetable

ALTERATIVE, TONIC, LAXATIVE, and CATHARTIC

Act mildly on the liver, cleansing it thoroughly of bile secretions. Strengthen the bowels, quiet the nerves. Tone up entire system. Increase appetite. Renewed vigor.

CURE Biliousness, Habitual Constipation Sick and Nervous Headache, Dizziness

By eradicating the above diseases, they clear the complexion of pimples and eruptions of all kinds.

25 DOSES 25c Your druggist or by mailpostpaid.

The Osborn Medicine Co., Dept. Indianapolis.

CANCER 30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 78 page book sent free. Address Drs. GRATIGNY & BUSH, 7 Odd Fellows Temple, 7th & Elm Sts. Cincinnati, O.

J. M. AULD, M. D. Chicago's Celebrated Specialist in Rectal and Intestinal Diseases, who treats patients personally.

I CURE Bowel Troubles, Constipation, Diarrhea, Proctitis, Dyspepsia, Indigestion, Malnutrition, Headache, Nervousness, Stomach, Torpid Liver, Flatuency, Fistula, Piles, Itching Piles, Rectal Fissures, Ulcers,

And all other Rectal and Intestinal Diseases, permanently and painlessly.

I MAKE NO CHARGE for consultation and examination.

CORRESPONDENCE Write me today in detail regarding your case and I will send you free of charge, a scietific opinion and my 40-PAGE ILLUSTRATED BOOK, "Rectal and Intestinal Diseases—Their Cause and Cure," with testimonials.

Harvester Talks to Farmers—No. 3.

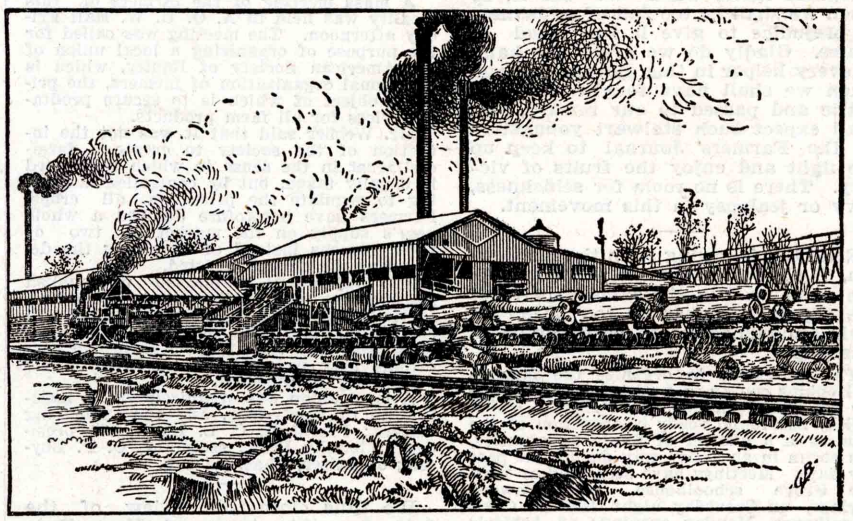
The Question of Quality, and how it is attained in the Champion, Deering, McCormick, Milwaukee and Plano Harvesting Machines.

THE International line of harvesting machines—the Champion, the Deering, the McCormick, the Milwaukee and the Plano—are used by nine-tenths of the grain and grass growing farmers of America.

Not because farmers could *not* get some other machine if they so desired, but simply because as careful, discriminating buyers they have deliberately chosen this line.

Their choice is based on experience. They have found that these machines are *better constructed,* and therefore will give *better service* and *longer service* than ordinary agricultural machinery.

And the explanation of the high quality of the International line is just as simple. It rests upon *superior facilities* and a far-sighted policy of management.



The manufacturers of the Champion, the Deering, the McCormick, the Milwaukee and the Plano own, operate and control the sources of their supply of raw materials; their lumber comes from their own forests, their coal and iron from their own mines, their steel from their own steel mills, their coke from their own coke-ovens, and so on.

They not only secure these materials at *first cost,* but, what is of greater importance, they secure a uniform quality of materials at a uniform price, enabling them to produce machines of the *highest quality* at a *minimum cost.*

And that's why the discrminating farmer buys the International line.

The matter of lumber is of special importance, for this country is threatened with a lumber famine, the nature of which is appalling when we stop to consider it.

The consumption of lumber increases every year; the supply, according to the best authorities, decreases at the rate of 3 per cent per annum, and the price consequently jumps from 1 per cent to 5 per cent every year. No. 3 pine, for instance, in June, 1896, sold for $6.75 per thousand feet; in June, 1904, only eight years later, it sold for $15.50, and other lumber has advanced accordingly.

The great harvester companies, realizing that it is only a question of time until the lumber problem will be one of the most serious confronting the manufacturer, inaugurated several years ago a policy in keeping with what they are doing in iron, steel, coal and coke—that is, to become entirely independent of the lumber markets by securing a source of supply of their own.

Their timber lands in the famous St. Francis Valley consist of 60,000 acres which the International Company owns in southeastern Missouri, and 22,000 acres leased in northeastern Arkansas, both a portion of the reclaimed "sunken land districts."

The Missouri lands are near the new town of Deering, which the International Company is making a model lumber town, with all the advantages and comforts of modern life in the midst of the forests. The land is heavily timbered with oak, ash, elm, hickory, cottonwood, cypress, gum, hackberry and maple. At the principal mill here—shown in the illustration—a daily average of 44,000 feet of lumber is cut, and 125 men are employed at the mill and in the timber.

On the Arkansas lands the mill is at Truman; 85 men are employed and the average output is 35,000 feet per day.

On both tracts, tramways, canals, and every modern facility for the economical handling of logs and lumber are provided.

The entire output of both tracts, after it has been properly air-dried, is used by the plants of the International Harvester Company in manufacturing harvesting machines and agricultural implements.

But the most important feature of the company's lumber operations is this:

All timber is cut in strict accordance with the rules of forestry. Instead of denuding the land, only ripe trees with well-matured, hardened wood are cut, and the greatest care is exercised to protect and preserve all young timber, so that by the time the best timber is once selected from this vast tract of 82,000 acres—even at the rate of 20,000,000 feet per year, the present consumption of the International factories—a new supply will have grown to a commercial size.

In other words, the company by this far-sighted policy has secured practically a perpetual supply of the lumber necessary for the manufacture of the harvesting machines used by the American farmer. It is in position for the next generation, at least, to secure lumber of the highest quality and is absolutely independent of fluctuating markets, and, at the same time, by conserving the forests is not only reaping a benefit for itself and its customers, but is serving the best interests of the country at large.

Of course, we realize that "when we get down to brass tacks," as the saying is, the purchaser of a harvesting machine, or of any other commodity, cares very little about how it is produced or where it is produced, or by whom it is produced—provided he gets what he wants at a fair price.

There's no sentiment about it one way or the other.

But that *"provided"* means much to you as a purchaser.

The old proverb has it that "you can't make a silk purse from a sow's ear."

Neither can you make a high-grade article from low-grade material.

The International Harvester Co. is manufacturing machines of the highest possible grade, of the best quality; more than that, of a *better grade and higher quality* than they could by any possibility manufacture if they did not have the exceptional facilities with which they have surrounded themselves, for both the production of raw material and the completion of the finished product.

And by the same token they are putting a higher quality into their product than any other manufacturer can put into his and depend upon the uncertain, unstable markets for materials.

This question of *quality* is at the base of the American farmer's success. It is because he has always striven for better things—for better live stock, for increased fertility in his land, for finer fruit, for better methods—that he has been able to give a new meaning to the word agriculture.

And it is because he has given *quality* first consideration in purchasing supplies that he has made money.

We ask *your* careful consideration of these facts, and of the advantages offered you in the International line. They mean a saving of money, a saving of time and worry, and a satisfaction which you can not obtain elsewhere.

You will probably find local dealers in your community who represent the International line—the Champion, the Deering, the McCormick, the Milwaukee, or the Plano. Each dealer understands thoroughly the line he sells and carries a complete stock of repair parts. Call upon him for catalogue and full particulars.

The International Harvesting Machines,

Champion, Deering, McCormick, Milwaukee and Plano

have in them the **quality** that means satisfactory work every day you use them, few repairs and long life—a quality made possible **only** by the manufacturers' policy of producing and controlling the raw materials that enter into their machines—a quality you cannot obtain elsewhere—a quality you cannot afford to overlook.

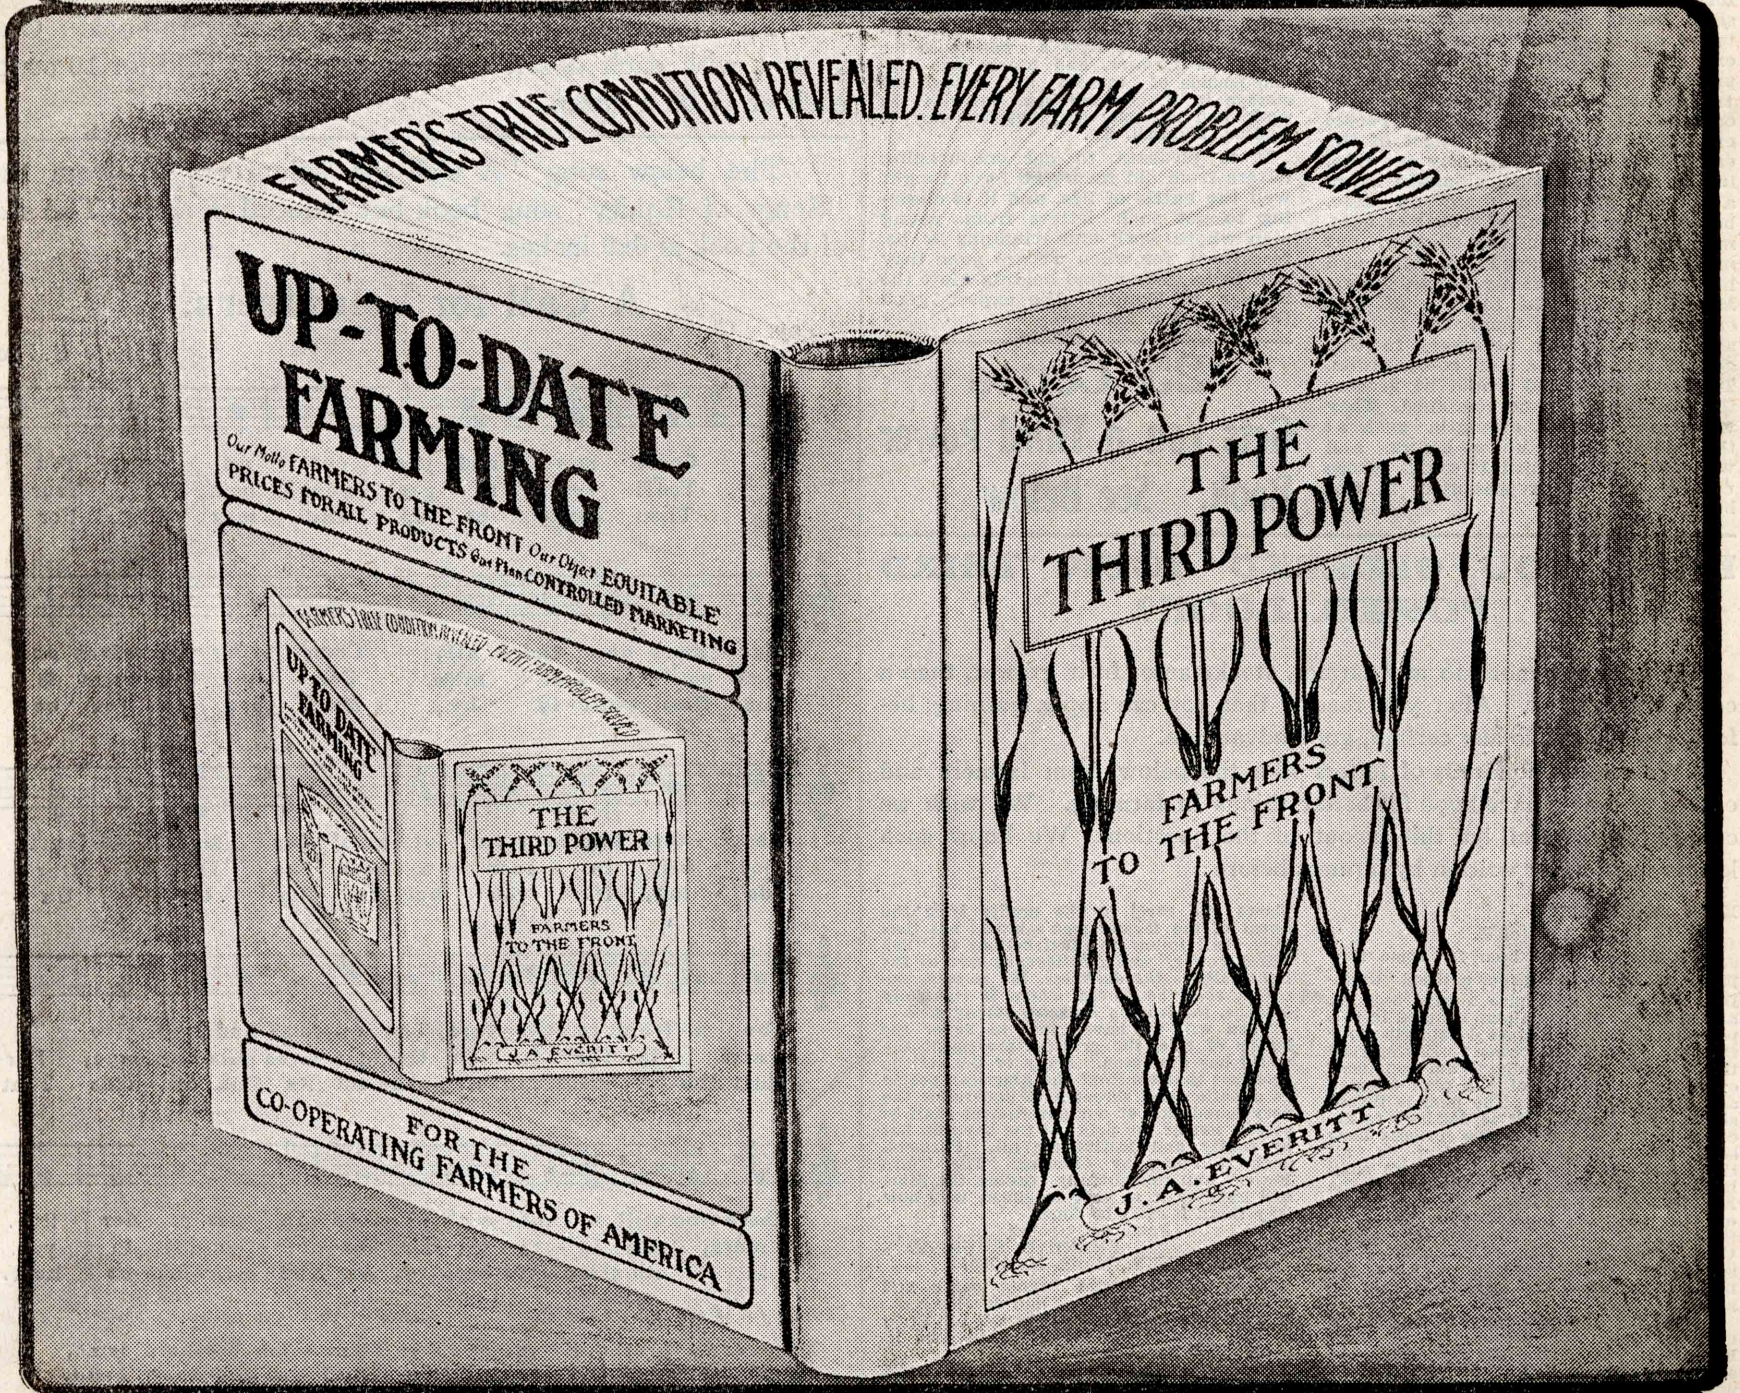
The International Lines are Represented by Different Dealers. See them for catalogues.

Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Mowers, Tedders, Hay Rakes, Sweep Rakes, Hay Stackers, Hay Balers, Knife Grinders, Gasoline Engines, Weber Wagons, Binder Twine.

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT *Our Object,* EQUITABLE PRICES FOR ALL PRODUCTS *Our Plan,* CONTROLLED MARKETING

INDIANAPOLIS, INDIANA. APRIL 15, 1905.



FOR THE CO-OPERATING FARMERS OF AMERICA

Commending the Third Power and the A. S. of E.

From the Boston (Mass.) Times.

Although there are the names of very few farmers on our subscription list, the Boston Times is much pleased to be able to lend its assistance to that large and eminently respectable body of citizens, as indeed it is to all persons who are interested in social problems. I have before me a volume by Mr. J. A. Everitt, President of the American Society of Equity of North Power,'.' it is a good book for farmers, and it is dedicated to "the largest class, the most dependent, the hardest working class, the poorest paid class of people in the world." It is true that that farmers own the earth, but if there is a place or corner anywhere in the world, where the producers of our food and clothing supplies—commonly called farmers—are not ready to revolt against the absolute domination of nonproducing classes in pricing their products, like Mr. Everitt, I do not know where he lives. Farming exists by Divine right, and they should make their own prices. Nearly all, if not all, industries are interwoven with that of agriculture, and this is true throughout the world. The farmers first possess all the food and clothing supplies which are indispensible for the life and comfort of human beings and domestic animals; their products constitute the greater portion of traffic for the railways of the land, and for the vessels of rivers, lakes and seas; nearly all the products of factories are largely consumed by farmers, or in equipments to handle farm products. If there is any one industry entitled to distinction, it is agriculture. If there is a class of people entitled to be called the select of the earth, it is the farmers. Any one who, in the days long gone, ploughed many a furrow, harrowed many an acre, bound many a sheaf of wheat or oats, many a sheep for the shearer, cut many a cord of wood for mills and helped to fatten many swine, I say, May God bless the farmers of this country, and give them the courage and understanding necessary in this age of organization and co-operation. The farmers united would be greater than all other unions combined. They would represent a strength, such as the world never knew before, and would be "The Third Power," whose case is so well represented in this book.

Behold Great Things

Here we have a nice letter from a promising young Kentuckian, who sends us his picture also. He fully understands the situation, and by proper effort he may become a great aid to this cause in his state:

Editor Up-to-Date Farming:

We would like a bit of space in the columns of the grandest paper on earth. We have been pursuing our calling in the midst of darkness for lo, these many years, but when Up-to-Date came to our homes, the darkness fled away, and today we can see thro' the A. S. of E. into the future and behold great things for the farmer. The Society has been a great power in Kentucky. Heretofore we have worked hard in the tobacco fields, and have got little for our labor; but we are going to get pay for our work this year. Let the farming class continue to organize and be independent for a while. We sell our eggs for 17 cents and less, but the consumer must pay from 25 to 40 cents. That is too great a difference between the producer and the consumer. Give the transporter and handle fair pay, and then divide the extortion between the parties most interested—give the producer a little more and charge the consume less. That is equity.

RAY C. HUDSON.

The tobacco question is settled in Daviess county. We have a warehouse for the union farmers, and nearly two million pounds of tobacco are booked for storage in it. Let all say, on with the work, and not only say, but do.—Roy C. Hudson, Maxwell, Ky.

It is pleasant to get encouraging letters from old men who have fought well the battle of life, and it is cheering to get such letters from young men whose work and triumphs lie before them, for when we are gone they will be in their prime holding aloft the banner of Equity. We expect good things of Mr. Hudson.

25 Cents Gets You a Third Power Book. See Below

HAVE YOU ORDERED YOUR THIRD POWER BOOK?

It is worth more to any farmer, stockman or fruit grower, than a college education. After you read it then you can apply learning; before, you cannot to any certain, good advantage.

We receive hundreds of letters like the below from farmers and others who now have hope for better things in farming. We wish we could print them all but this is out of the question. We know such letters were never written by farmers before:

MR. J. A. EVERITT,
Pres. A. S. of E.

Dear Sir:—I have been for some time past a reader of your paper entitled "Up-to-Date Farming," and have always been an ardent supporter of the plan adopted in this periodical. Not long since I subscribed for the book, "The Third Power." Having read this treatise thoughtfully, I am convinced of the practicability of the plan adopted and explained therein. The plan is indeed simple; yet I believe it is destined to accomplish that for which the farmers have been disadvantageously fighting in all times and ages. When the farmers shall have learned through the tutorage of the American Society of Equity the significance of our national phrase, "In Union is Strength" (E Pluribus Unum), then might Carlyle well say, "The mild shining of the sun shall silently accomplish what the fierce blustering of the tempest in vain essayed."

I hope the time will speedily come when every farmer will procure one of these books which even the simplest may read and understand. This done, they will be unitedly resolved, that they, the tillers of the soil, shall no longer be the servants and burden bearers of those who sit in high places and revel in the profits from the sweat of the farmer man's brow; but that they shall follow the instructions of "The Third Power," *and I believe, as sure as the light follows the darkness, the farmers vocation shall be placed where it rightfully belongs, the leading industry among men.*

Then will we have cause to honor the leader of this, the greatest movement the world has ever seen. Many of the serious problems that confront the American people as a nation and threaten to undermine the very foundation of our government shall be solved, not at the point of the bayonet, but by equity and justice for all. Farmers, push it along by ordering "The Third Power" and thoughtfully reading the same and handing it to your neighbor, who now may think it can't be done."

Fraternally yours,
FRANK L. SHUSTER.
Kingston, N. Y., March 20, 1905.

Three hundred and twenty pages and cloth cover. A handsome and durable book. A book that would ordinarily sell for $1.50 in book stores. The price is $1.00, and 10 cents extra for postage.

BUT THE SPECIAL PRICE IS ONLY 25 CENTS and the below coupon, which cut out and send.

The coupon pays 75 cents.

THIRD POWER BOND | **75c**
Coupon No. 1

The American Society of Equity, of Indianapolis, Ind., will accept this Coupon for *Seventy-Five Cents*, as payment on a Third Power Book. Subject to the conditions as printed on the back hereof.

J. A. EVERITT, *President.* No. 10

A bond worth $6.00 in gold (or its equivalent in cash) will be sent to the person who sends in this coupon with 25c for a THIRD POWER book.

This Coupon when accompanied by Twenty-five Cents (25c) will be accepted in full payment for one, one dollar ($1.00) copy of the great book The Third Power.

The third edition, revised and enlarged, 320 pages, cloth bound. Sent by mail postpaid, for this coupon and 25 cents.

This book should be read by every person--especially farmers.

Songs of Equity

THE ONLY SONG BOOK FOR FARMERS EVER WRITTEN

IF THESE songs are sung all over the country, the effect, in the betterment of the farmers condition, will be magical. The hearer may soon forget a speech but he or she will remember the song a long time.

There should be an enormous demand for this song book. It is especially appropriate for use in local unions, picnics and all similar gatherings of farmers.

Issued April 1, 1905. Sixty-four Pages and Cover

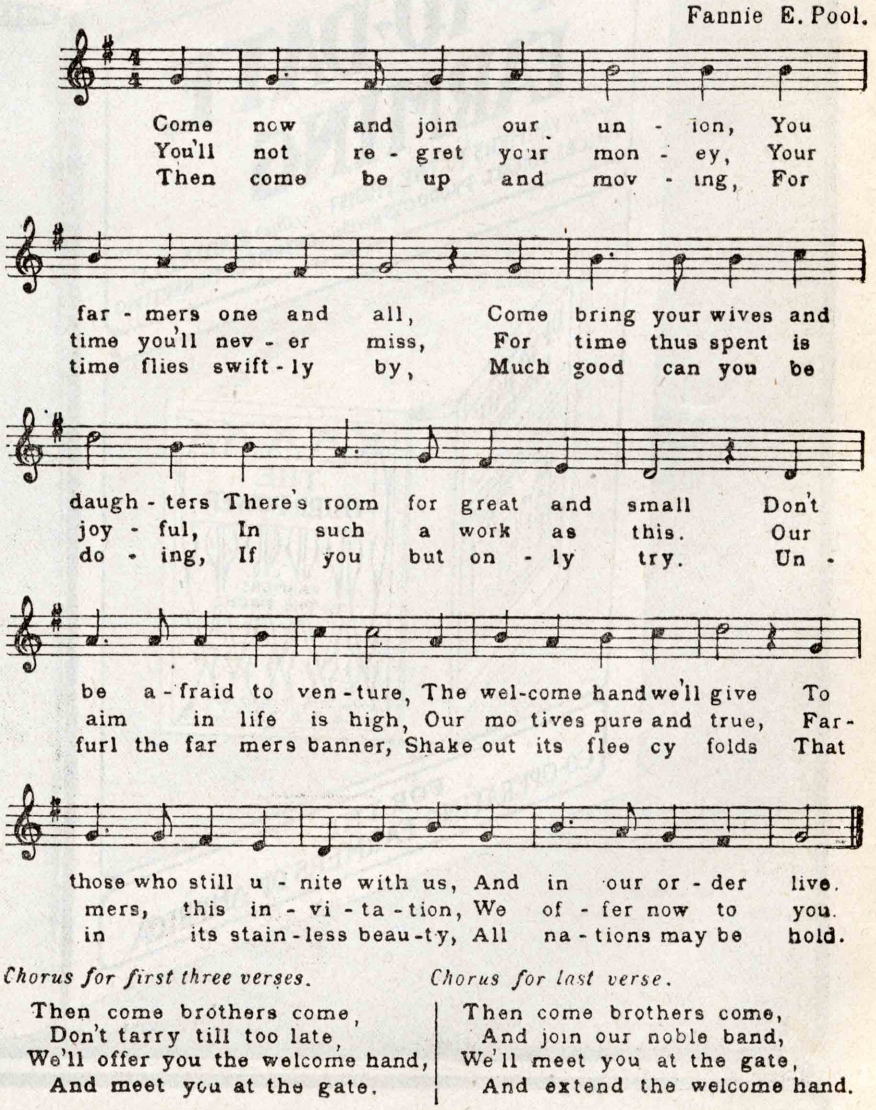
Price 25 Cents Postpaid. Dozen $2.40 Postpaid. Dozen $2.00 Not Prepaid.

The instrumental accompliment is a separate book. One is sent with each dozen ordered or will be sold for 10 cents each or $1.00 a dozen.

The below song "A Call for Volunteers" is from the "Songs of Equity" song book but reduced in size. The size of the book is 6x9 inches.

A Call for Volunteers.

Fannie E. Pool.



Chorus for first three verses.

Then come brothers come,
Don't tarry till too late,
We'll offer you the welcome hand,
And meet you at the gate.

Chorus for last verse.

Then come brothers come,
And join our noble band,
We'll meet you at the gate,
And extend the welcome hand.

Your wealth consists of meadows green,
And fields of moving grain,
Your homes made neat with labor sweet,
Prove you've not lived in vain.
Then hail to the farmers's banner,
From war and bloodstain free,
May peace, good will and Equity,
It's motto ever be.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 227 West Washington Street

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII — **INDIANAPOLIS, APRIL 15, 1905** — **Number 8**

UP-TO-DATE FARMING
PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR
Foreign Subscriptions $1.00 a Year.

Membership in The American Society of Equity, $1.00, including a year's subscription.

Clubs. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

Allied Printing Trades Union Label Council Indianapolis 18 — The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the LABEL.

National Union Label — American Farmers

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	-	**$ 1.20**
Corn, No. 2 " " " "		
Until January 1st, 1905,	-	**.50**
From Jan. 1 to Apr. 1, 1905,		**.55**
" April 1 to next crop	-	**.60**
Hay, No. 1 timothy, " per ton	- -	**12.00**

Hogs, " per cwt.	-	**6.00 to 6.50**
Cattle, " per cwt.	-	**6.00 to 7.50**

$1.00 a bushel for wheat will be a successful export basis. If the crop is a bumper one we will try it this year.

$1.00 FOR 1905 WHEAT

No matter how large the crop is. If a short crop it will be higher. Keep this in mind.

Spring time.

Plow and plant.

For whom? Doesn't it seem strange for free people to be expected to do all that work to raise stuff for some one else to say what they will give, and take it at that price?

No mysterious power rules the markets. No law or natural condition makes the prices. In the past it was all done by individuals and boards of trade, who simply took advantage of crop reports to put prices up or down as best suited them, and would most likely add to their profits. The cost of the article or the necessities of those who produced them never enter into their calculations.

It is wonderful how long this system of exchange was permitted to prevail. But it is also wonderful how long the farmer cut his grain with a reap hook, and threshed it with a flail; and you would now just as well try to get the farmer to go back to the reap hook and flail, as to induce him to give up the idea of controlled marketing. Which will be the mainspring that makes prices. The idea is now too firmly fixed in the agricultural mind to be abandoned.

Can any one give an intelligent reason why farm price-making and controlled marketing should not be discussed in farmers' institutes? The subject is neither partisan nor political, it is not sectarian or sectional, it is neither local nor class, it is not antagomistic to other interests; it is broad as the country and as deep as the business interests of all the people. Why should such a question be tabooed?

Speaking of farmers' institutes, we are reminded that the Illinois institute is something of a storm center just now. Mr. A. B. Hostetter, who has been State Secretary for several years, and until last year superintendent also, has been deposed, and, as is very natural, is inclined to talk back. The law that created the Illinois institute was one of the most liberal of such laws, placing the control of the local institutes almost entirely in the hands of the farmers themselves. This has all the time been distasteful to a coterie of "managers," who wished the entire control vested in themselves. Mr. Hostetter, who is a man of liberal mind, has failed to second all these concentration motions, and he has, therefore, been a thorn in the flesh of the concentrationists. An attempt to oust him was made once before, but his own personal strength was too much for those who wished to depose him. The present plans of the "management" will not meet popular approval when they are generally understood. Illinois has as good institutes as any state in the Union, and the people themselves have controlled them. They will not lightly surrender that control to "bosses."

Cotton is pretty well holding its own. A slight break occurs occasionally, but a rally very soon follows and a net gain in price has been made. This season will fully test the warehouse plans of the financiers, and it will also try the strength of the farmers themselves. We are for the method that will bring surest results, for we know that farmers cannot be independent and prosper so long as cotton buyers make prices on both the raw material and the manufactured goods. If it is the rule for buyers to make prices, it should apply to all alike. If the buyers price the cotton, ought not the buyers instead of the maufacturers, price the goods? If the buyers instead of the producers price the wheat, ought not the buyers instead of the millers, price the flour? No matter from what view point you look at the old system of marketing and price-making, its absurdity appears. It will not measure by the square of equal rights at all.

Those Clearing Houses and Telephones

YES, the time will come when agriculture will have clearing houses. These clearing houses or headquarters will be connected with all the principal markets. They will also be connected with all the organized farmers through their county unions.

Suppose you try to imagine some of the benefits that will result to producers of our grain, live stock, fruit, vegetables, etc., etc.

We will say you grow strawberries for market and are situated in Southern Indiana.

You know there are tens of thousands of others also who grow strawberries, and you know that in the past you often time hit a glutted market and failed to get profitable prices. Every grower of strawberries has been up against it time and time again under the old system or lack of system when each was for himself. The best you could do was to guess and then chance it.

But when the new system (a real system) is in operation the farmers' clearing house has down on its books the actual requirement of the Indianapolis, Cincinnati, Louisville, Columbus, St. Louis, Cleveland, Chicago, Detroit and all other considerable markets for a number of days ahead. It also has had reports from the producing sections and has down on its books the known supply for the next day or two. It is an easy matter now to direct the county unions where to ship their supply so all the markets get enough and none get too much.

But there is a day when 470,000 crates are reported, which is 50,000 crates more than enough. The Central clearing house sizes up the situation as follows:

The Eastern clearing house reports to Central clearing house that it can use 20,000 more crates of strawberries than they have in their district. We send 20,000 crates from our Eastern sections to them. We now have 30,000 crates surplus, which, if sent on the market, is quite sure to break the price, hence we will cut every producer thirty, four hundred fiftieth or one-fifteenth, which he must keep at home and let spoil, if necessary. This makes the supply equal to the demand and no more, and prices will be maintained.

For crop reporting the system is perfect. When the clearing houses are established and the machine is built the National Union of the A. S. of E. can call for a report on any crop any day and get it in a few hours.

The A. S. of E. wants thousands of representatives. Every county must be organized as quickly as possible.

If you will help, fill out and send the below coupon. Workers will be paid, and good people who can show proper results will always find a place for their services in the army of people who will be required to put agriculture on the same basis as are the most successful of other industries.

Bright farmers' sons are particularly desired as representatives.

To The American Society of Equity, Indianapolis, Ind.

Gentlemen: I hereby make application for a position with your society as per your call in Up-to-Date Farming. I am now engaged at ..... In the past I have been engaged at.....

I can give of my time (write ALL or the part of your time you can give to the work) .....

Name .....

Address .....

County .....

On receipt of this application we will send further particulars.

Don't give the bears a bit of encouragement by contracting a bushel of wheat to them for future delivery at less than $1.00 basis, at Chicago.

The merry cotton war goes on. Organization goes on. It is a long time till another crop season and plenty of time for faithful holders to win. Oh! if only all cotton planters would refuse to market a pound of cotton for thirty days, except at the minimum price—10 cents at interior points—the price would be put up and then could more easily be maintained. Cotton growers must learn of the wheat growers.

The most interesting time of all is with the tobacco growers. We will soon see which is the stronger, the farmers who first have the tobacco or the trust that don't have any tobacco, but must have some and must buy it from the farmers.

If the farmers win (and they have nearly won their price already), will the rank and file of farm papers tell their readers how the farmers solved the trust problem?

J. H. Hale says: "Where a dollar's worth of fruit was consumed ten years ago, ten dollars' worth is wanted now. Unless all signs fail, one hundred dollars' worth will be required ten years from now."

If fruit growers will bring to their business, organization and a good system for distribution the consumption could be doubled at once providing it was possible to produce the stuff.

A reader inquires, "What was the cause of the recent drop in the price of wheat?"

Answer—It was a "shake-out." The heavy bull operators threw large quantities of wind wheat on the market which the bear operators would not take at the top price. The purpose usually is to take on a larger line at a lower price. Supply had nothing to do with the drop in price.

The price will be higher and we advise all holders to watch the market and dispose of what stock they have at the minimum price or thereabouts. If the present fine crop prospects continue don't count on more than $1.00 for the 1905 crop. When farmers are sufficiently organized the minimum prices can absolutely be maintained under all conditions.

It is not reasonable to expect more than the average world's crop of wheat no difference what the size of the crop in this country. An average crop of wheat is worth $1.00 a bushel. If ever there is more than the average any one year it must be held over to make up the short crop years.

Let us sing, farmers, to the front. Get a "Songs of Equity" song book. 25 cents post paid; 64 pages and cover.

Thousands of questions are asked us in letters about farming, marketing, price-making, etc., etc., all of which are answered in "The Third Power" book; 320 pages with cloth cover, all for 25 cents post paid. Get a book and everything will be made clear to you.

If this paper has been valuable and profitable to you support it liberally with your own renewal. Also see that all your neighbors and distant friends take it. There is one peculiar quality about Up-to-Date Farming. The greater its circulation the greater is its value to each individual reader. No other farm paper can honestly make such a claim.

We always like to hear from A. S. of E. readers as to their estimation of the comparative merits of farm papers.

Mr. Farmer: Are you still waiting on congress, or your legislature, or Providence to solve your problems?

We hope farmers will not get the notion that so great a change in their favor as taking the making of the prices of their products out of the hands of greed and speculation, can be accomplished without an effort on their part. They must not only organize, but they must stay organized and they must stick to their purpose. By the plan of the A. S. of E. they are getting back much more than they are asked to put up, and they must, therefore, not hesitate to assist in the work of organization. It is too slow to depend upon the efforts of a few persons. Since it is for the benefit of all, all must freely aid in it.

It must be admitted that the A. S. of E. needs greater compactness in its form of organization, and a more perfect system to secure revenue and a well defined policy of business to use the revenue. There are ways in which its members may receive direct and personal benefits not now included in our work. These, of course, will involve the payment of moderate dues, but if the returns are commensurate with the payments required, we are sure no reasonable person will object, but will gladly hail whatever will give the society financial standing and permanency.

Controlled Marketing Attracts Attention in Foreign Countries

The following is a very brief resume of a long editorial in a recent issue of The Leader, Melbourne, Australia:

One of the most successful of the co-operative movements of America is that which, although started as recently as 1902, has already made extraordinary progress and whose rapid extension promises to eventually embrace the agricultural producers of the whole of the States. * * *

In the circular we have received full particulars are given of the manner in which the movement is being organized in every detail, and these are so well worked out by an evidently practical business head as to fully account for the remarkable success that has attended the movement.

In a letter from the editor of above named paper, the request is made for authority to start the movement in that distant country, which we were glad to give. The society of Equity is built to be international in its scope. We hope ere long to see it established in every foreign country and particularly in surplus producing ones.

* * *

The time when international co-operation by farmers will be an accomplished fact may not be far in the future. The king of Italy has had his attention called to the plan of the American Society of Equity, and, evidently, to Part II of the first and second editions of The Third Power—"International Consolidation of Agricultural Interests"— as evidenced by the following proclamation:

To H. E. Cav. Giovanni Giolitti, President of the Council of Ministers, Rome :

Dear President:—A citizen of the United States of America explained to me, with that warmth which comes from a sincere conviction, an idea which seemed to me practical and valuable, and which, for that reason, I recommended to the attention of my Government.

The agricultural classes, generally the most numerous, and who exert everywhere a great influence on the destiny of nations, live disunited and dispersed, and are consequently unable to provide adequately for the improvement and rational distribution of the various forms of agricultural produce, and to safeguard their own interests on the markets, which, in the case of agriculture, are becoming every day more international.

For this reason an international institution, absolutely unpolitical in its aims, which would have before it the conditions of agriculture in the different countries of the world; which would notify periodically the quantity and the quality of the crops in hand, so as to facilitate the production of such crops and render less costly and more rapid the trade in same and facilitate the attainment of a more favorable settlement of prices, would be most highly beneficial.

This institution, acting in unison with the various national associations already constituted for similar purposes, would also furnish reliable information as to the demand and supply of agricultural labor in various parts of the world, so as to provide emigrants with a safe and useful guide; it would promote those agreements necessary for collective defense against diseases of plants and domestic animals which can not be successfully fought by means of partial action; and, lastly, it would exercise a timely influence on the development of societies for rural co-operation, for agricultural insurance and for agrarian credit.

Such an institution, which would be an instrument of solidarity for all the components of the agricultural classes and which would consequently be a powerful influence for peace, would be capable of many beneficial developments. Rome would be a worthy and propitious seat, and there the representatives of the various States adhering to the project, and the representatives of the principal associations of the parties interested should meet, so that the authority of the various governments and the free energies of the tillers of the soil may work harmoniously together.

A movement as good as the A. S. of E., and that has for its aims the amelioration of the conditions of the agricultural classes wherever found—in whatever nation—cannot be confined within the borders of one country nor of one continent. As we have always said this movement is good enough, broad enough and comprenensive enough for every condition of agriculture wherever found; and its usefulness and equity appeal to all people, no difference what their station, vocation, or interests (if legitimate), everywhere.

* * *

We recommend the Russian nation to establish the American (or rather a Russian) Society of Equity in that country. With official endorsement it would quickly be accepted by the peasants and large land owners whom it would benefit immensely. Such a great and good movement as this we predict would most quickly cure the wounds made by the war, settle the internal strifes, and be of incalculable benefit to the nation and agriculture throughout the world.

One of our correspondents wrote as follows: "When the farmers are organized in the A. S. of E. the meat trust, the food trust, the tobacco trust and others will need a microscope to see their own importance."

It Is All Right, But--

We copy from the Orange Judd Farmer, the following article bodily, for two reasons: 1. For the good points and arguments it contains; and, 2, because it shows the warning, doubt, and uncertainty that pervades the agricultural press. They admit the feasibility of farm price-making, concede the justice of it, acknowledge that it is right and no more than all other productive interests do, and offer strong arguments in favor of it, but when it comes to the final show-down, to the point of urging farmers to do it, there is always something in the way. The eternal "but" manifests itself. Read the article:

ORGANIZATION TO CONTROL PRICES.

COLON C. LILLIE.

I am asked by F. E. Davis, of Kent county, Mich., if it would be practicable for farmers to combine and fix prices for their products. It certainly is not right for a farmer to grow a crop of any kind and then be compelled to sell it for less than it costs him to raise it. The manufacturer estimates the cost of making his goods, the cost of selling them, the wear and tear on his machinery, interest on his investment and a certain per cent. net profit. These, all added together, constitute his selling price. Now, why should not the farmer figure in the same way?

The argument is that the great law of supply and demand governs prices, and it is true, yet the manufacturer and others organize and see that the supply only meets the demand, and the farmer will have to do the same thing. Take the potato crop for instance; it can easily be estimated how many potatoes will be needed for annual consumption, seed, etc. Through a careful system of reporting, the crop can be very closely approximated. Then the practical thing to do would be to simply put enough of the crop on the market at one time to meet the demand, and in the end, if there was a surplus, they could be used for stock feeding or they could be destroyed, which would be better from a business standpoint than putting the whole crop on the market and reducing the price of production. Then it would be only a business question to figure on the acreage that would meet the demand at profitable prices and devote the land to some other crop. Every other crop could be estimated and handled in the same way. It would not be right to hold crops for excessive prices, for this would be doing an injustice to the consumer.

SO MUCH FOR THE THEORY.

of the situation. The practicability of the scheme is an entirely different proposition. It is possible for the manufacturer, because comparatively, they are few in number. They are easy to organize and they have capital at their command. Farmers are not easy to organize on account of the exceedingly large number of them, and they lack capital to hold crops for better prices. Many farmers are compelled to sell from dire necessity as soon as the crop is ready for market, and some way must be provided that will take care of this phase of the question.

But the whole crop would not have to be held. Simply the surplus withheld from the market would keep the demand healthy. This fact is illustrated many times in the Chicago live stock market. When the export demand is good and a small per cent. of the receipts of live stock can be taken by the foreign trade the market is relieved and prives are maintained. Let this export demand fall off, however, which only takes a small portion of the supply, and the effect is shown at once on the market. It would be just the same with the farmers' potato crop; if only enough was offered from day to day to supply the actual demand, prices could be maintained. When more is offered, then prices are demoralized. Therefore, only a certain portion would be required to hold their crop in order to maintain prices.

What spoils the entire scheme is the lack of confidence that the average farmer would have in its practicability, and in the head of the organization, which would be absolutely necessary, in order to carry it out successfully. Farmers have had their confidence shaken so many times by unworthiness, dishonesty and lack of ability in the heads of commercial organizations, that they hesitate in giving their money toward maintaining such an organization and in promising to support it.

LEADERS OF INTEGRITY NEEDED.

If men of known integrity, national acquaintance and reputation would take hold of a scheme of this sort and farmers could be educated to have confidence in the movement and in their organization, I see no reason why it could not be carried out successfully. No local or State organization need ever expect to accomplish such a purpose. It must be national and worthy the support of all. The organization must start with the township, extend to the county, the State and the nation. It would take a vast amount of money to make such an organization, and yet, in my opinion, it is possible, practical and proper.

The great farmers' organization to-day is the grange. It has subordinate, State and national organizations. It is an organization that all classes of people to-day have confidence in. It can command capital. The national grange has over $80,000 in its treasury to-day. It is responsible. If this great organization could be induced to investigate and foster this idea of controlled marketing, I believe great results could be accomplished, and that it is a much more worthy project for the organization to grappel with than are political issues, which in the end are bound to cause internal troubles.

The above would be a splendid article, very much to the point, and strongly in the interest of the greatest advance ever made in agriculture, if certain interjected declarations were eliminated. A proposition that can be supported by such strong arguments should not be weighted down by obstructions or "you can't do its." So far as the Grange is concerned the founder of the A. S. of E. invited the heads of the Grange to co-operate with him to work out the farmers' problems on the plan of the present A. S. of E., but they absolutely refused to do it. The Grange was organized on an entirely different basis. Price-making and marketing was in no part of its make-up, and no organization is likely to work out a proposition entirely foreign to its original purpose.

Is this article an admission that the editor and publishers of the Orange Judd Farmer do not measure up to the standard as men "of known integrity, national acquaintance and reputation?" Is this the secret why other editors of farm papers

do not attempt to help the farmers in marketing their crops? Or is it lack of a courage that never halts before obstacles that must be surmounted before the goal is reached?

Every great good that the world has ever enjoyed has been accomplished through the efforts of a few couragous souls who have fought every step of the way against the vain imaginings and forebodings of pessimists, who constantly sound the warning of dangers along unexplored shores. Would Columbus have discovered America if he had ordered his ships back when the sailors imagined they saw plantomes rise from the sea? When would the Atlantic cable have been laid if Cirus Field had heeded the warnings of the pessimists of his day? Would the farmers now be converted to the new doctrine of controlled marketing if one man had weakened when the press and people of a nation proclaimed him visionary and his scheme impracticable? Would the editor of the Orange Judd Farmer have inspired this article, two years ago, which admits the possibility of all that the A. S. of E. stands for. He says: "I see no reason why it cannot be carried out successfully?"

The world can do without the croakers, the alarmists, the foreboders, but it needs more men and women who have the courage to do things regardless of impediments that may be found, or thrown in the way.

Hence came the A. S. of E. with price-making for its chief corner stone, and it is being accepted by the people as the harbinger of success in this very line. To it we apply all the arguments in the above article, and point to the victories already won as a guarantee of complete success.

Not Afraid of Price-Making in Kentucky

At least some of the farmers' institutes of Kentucky are not afraid of farm price making. The Daviess county institute a few days ago had a lively discussion of this subject. Mr. M. W. Neal, editor of the Farmers' Home Journal, introduced the subject of an argument in favor of the organization of farmers. We quote:

"All trades are organized except the farmer. He alone is single-handed in life's fight. We are seeking to organize farmers' clubs and institutes. Only when we get the farmers together can they rightly study their mutual interests. All questions as to soil, seeds and more scientific culture are good enough, but when the farmers come and tell me that they cannot sell at a profit what they have already produced, then I see something more than soil must be attended to. When the farmers organize thoroughly then will we see wrongful combinations tremble from turret to foundation stone. We cannot hope for such combination at once, but in organizing in small communities we are doing the best we can to bring this about."

Mr. Neal was followed by Commissioner Hubert Vreeland, from whom we quote the following unanswerable argument:

"It should be patent to every one that the farmers should organize. It is necessary to organize and to keep up the organization. When we organize more clubs we expect to organize a State club and to have the first meeting at Frankfort in the presence of the next Legislature. The laboring man started out with only brain and muscle. By organization he soon had excellent wages. Here you farmers own the very earth, and yet you claim you cannot organize. If you organize and say the purchser must pay a reasonable price for products you can get it. If I scatter bills here announcing that Si Jenkins and some one else will have a political discussion here I can easily crowd the room. The same should be true of farmers' meetings for the purpose of organizing. As to the outside plans, I believe Kentucky has to work out her own salvation. While commissioner of agriculture I propose to spend every cent appropriated for my department for the benefit of the farmers. We want to organize a State club and to hold the first session at Frankfort during the next Legislature. Because you were not organized you have paid the lion's share of taxes and gotten the lamb's share of results."

But as is unsually the case, the objector was there also, this time in the person of S. R. Ewing, but there were those there ready to meet him. We give the argument as reported by the Messenger:

Ewing—"I am glad to hear from Mr. Thomson a defense of the law of supply and demand. That law is inexorable. He admits that a temporary influence may affect it, but not materially. I am in favor of farm organizations when the purpose is a good one and within reasonable bounds. But that they should attempt to withhold crops and make artificial prices is not only wrong, but impracticable. What would become of the great mass of people if the farmer could fix arbitrarily the prices of their products? If in the farmers' hands to fixe prices he would fix them as high as possible for his gain. But they say let the other fellow fix his price and then we will fix ours just a little higher. This is an absurdity on its face."

Mr. Vreeland—"What will become of the farmer if he don't organize?"

Ewing—"Well, I think he will be all right. Tobacco is a luxury and people can do without it. If the farmer puts up the price abnormally the world will not suffer. It will do without it. If the price is too low we will quit raising tobacco. I do not believe we can overstock the world with anything."

Mr. Vreeland—"They are burning cotton down South."

Mr. Ewing—"Yes, and there are lots of poor people needing that cotton. I insist that there is nothing that will control the amount of farm products but price and Providence. Besides, you will never get farmers to see alike. I raise tobacco. If I could get three-eighths I would soon be as rich as any business man. I say it is a dangerous line to encourage men in the beliefs that are being now propogated. I am not in favor of trusts. If trusts are vicious things we will find some method to curb them."

Mr. Vreeland—"We have a method. We will fight the devil with fire."

Mr. Ewing—"As a matter of fact, no farmer can put his finger on a point where the trust has hurt him."

Mr. Vreeland—"It seems that Mr. Rockefeller's little bank circular has, and he is several trusts in one."

Mr. Ewing—"What was that?"

Mr. Vreeland—"Why, Mr. Rockefeller sent out a circular to banks warning them not to back the farmers' plans with money, and they at once refused to do so."

Mr. Ewing—"I don't know about that. What I object to is your effort to get farmers into a trust to control prices."

Mr. Vreeland—"Where would you rather leave the fixing of prices, in the hands of the trusts or in the hands of the farmers?"

That ended Mr. Ewing, and Mr. R. C. Crenshaw fired the following parting shot:

"I realize fully the beauty of the theory of the law of supply and demand. I know that law ought to regulate the prices of all products and commodities. If left untrammeled it would be all right. But when a syndicate is formed to destroy competition it destroys the law of supply and demand.

"The price of all implements is set by the manufacturer. Now, why not the farmer do the same? There is no reason why he should not fix the price of his products. He knows their cost. The very men who condemn the farmers' organization gets benefits from them. Those who make their objections to the farmers' organizations never find fault with the trusts. The meat trust sets its price on beef, mutton and pork. Why not the farmer on cattle and hogs? The trusts even go to the tropics and California and set the prices on fruits by destroying competition. I say, by all means, let the farmer take a part in this setting of prices."

We Register Our Kicks

We are opposed to the system of crop reporting as carried on by the U. S. Department of Agriculture.

We are opposed to gambling in farm products on boards of trade and bucket shops. We defy congress, President Roosevelt or Secretary of Agriculture Wilson to advance one good reason why it should exist. We can give them hundreds of good reasons why it should be killed. It is THE NATIONAL SIN.

We are opposed to food adulteration. The people don't want to eat adulterated food. If members of the A. S. of E. will use the union label on their products as a guarantee of genuineness, they will be surprised how the public will prefer them to unguaranteed goods. Let us use the union label on farm products. Let us educate the consumers to look for it and where they find it they will get purity.

From COLLIERS—The National Weekly—we take the following:

State Legislatures and the United States Senate refuse to pass pure food laws because they are the sacred guardians of the poison industries. Why interfere with an established business, in which are invested many millions? Not on your life. We talk a good deal about dangerous patent medicines, and the evil they do is undoubted; but the food situation is much worse. We need not take patent medicine. We need not, as a rule, drink "whiskey," running our chance of getting something wholesome, such as prune juice or something as deadly as wood alcohol. But we must eat, and life would be better worth the living if the National and State Governments would give us the right, natural to modern private citizens, of eating without reflecting upon so large a chance of unwillingly hastening death.

The public is being educated. It is receiving a constant supply of information about the poison trade, and digesting some of it. In time, perhaps, it will know so much that adulteration will be less profitable, and even Legislatures may not be worth buying by manufacturers. *We understand that the Agricultural Department now refuses information when it is asked about the safety of articles which it has investigated.* The reason for such refusal we have not seen. Foreign governments are not so kindly in their treatment either of the men who manufacture poison by the wholesale or of the men who sell it at retail. No wonder the conditions in this country remind some observers of the man who said he always took hash, because then he knew what he was eating.

We have often said that all the farmers' troubles will be solved by the A. S. of E. We have also said that many of the troubles of other classes will be solved by it. It is a fact. The producers of our food can solve the pure food problem with the cooperation of the consumers. Let us be honest with each other, let us co-operate for our mutual good and down the damning industries that now flourish like the Green Bay tree.

Errors

Everybody makes them, but if everybody would try to not make them there would be less of them. The error that causes us and our customers the greatest amount of trouble is the omission of all, or part of addresses on orders. No person is seeking for the trouble that must arise on this account, therefore, we warn all our people to be sure to write their address complete and very plainly. If you cannot write plainly then white like print.

The condition of the growing wheat crop is satisfactory at this writing. Just think what it will mean if farmers raise a good crop and get $1.00 a bushel for it. Then there will be good carpets, pretty rugs, comfortable and handsome furniture, pianos, rubber tire carriages, colleges and other things for many farmers that they never could afford before. You can nip the first indications of low prices in the bud by resolving that no crop of wheat this country ever will raise shall sell for less than $1.00 a bushel, and then stick to the resolve. Talk $1.00 wheat now to your neighbors and to your dealers.

Letter from the National Organizer

Dear Fellow Worker:

The American Society of Equity is marching on to greater triumphs, nearing the goal of our purpose every day, and exploited farmer may soon realize their expectations, viz.—profitable prices for their hard-earned products.

It behooves us all, as workers, who are leading in this mighty struggle for justice to be diligent in our work, push out into unoccupied fields and lift up the banner of Equity, to cheer up the toiling farmers as they till the soil, so that the teeming millions may be fed.

Remember, fellow worker, that you have been appointed to a great work, and the farmers are anxiously waiting for you to come and organize them so they may help themselves. The National Union looks to you to do the work that has been assigned. It depends on you, even though your success has not been much until this time. Better results can be gotten now than ever before, because of the education that has been given.

If you sleep on your opportunities the work will be hindered and the hope of our farmers will be cast down. Don't wait for opportunities, but go out and make them. You will be surprised to learn how eager the people are to get organized so they can secure a just reward for their toil. As national organizer, having such a large field to look over, it is impossible for me to give much time to any one section, and when a man accepts an appointment as local or general organizer we have a right to expect that he will be vigilant in his work.

We are very anxious to reach the million mark before 1905 has become history. We must forge ahead until farmers are in a position to dictate the price on every product of the farm.

The only thing that is necessary to accomplish this is for those who have accepted the position of leaders to push out and preach equity everywhere. The National Union has prepared everything necessary to help you. The official paper is a great help. The Third Power book is a powerful teacher. The Songs of Equity (just published) are not second to any of the other helpers, while headquarters supplies liberally of free educational material. Victory is in sight and will be in our grasp before we write 1906, if the workers now in the field will buckle down to the work with determination to win.

Call the people together in the cities, towns, hamlets and schoolhouses. Explain the beauty and perfection of the Equity plan and objects, and the people will get into line in a way that will surprise you. Put the literature into their homes, so they may read it. The Third Power costs only 25 cents, postpaid, or 15 cents each in quantities. The official paper, only 10 cents for three months. They will do the educational work; then organization will be easy.

Remember that farmers have been sorely disappointed over the failures of other farmers' organiaztions, and they must be made to understand that this one will not fail and will give them all they need.

I intend to visit as many sections of the country as possible, but the field is so large that it will be impossible to cover all of it. Whether I visit you or not, I implore you to do all that you can so we may see as much accomplished in the next six months as was done before in two years.

Yours to bring farmers to the front,

H. B. SHERMAN, National Organizer.

Woodward, Okla, March 29, 1905.

(As Mr. Sherman is constantly moving about, mail should be addressed to him care of A. S. of E., Indianapolis, Ind.)

Letter from Past National Organizer and Present State Organizer for Illinois

Brother Workers for Equity:

Every honorable means possible ought to be used to psuh this organization in the ten cotton and ten wheat States. We ought to have one million members in the South and another million in the North in a short time.

The necessity for this organization becomes

An Object Lesson In Uncontrolled Marketing

The following are four headings to one day's market reports as printed in one paper. They teach an eloquent lesson in marketing. Taking this illustration and any number of others that can be given, it is as clear as day to any intelligent person, that if the producers had a system of marketing that would regulate the supply to equal the demand and no more they would be absolute masters of the prices and uniformity and certainty would prevail. Study this matter. Further comment is unnecessary, except to inform all new readers that the A. S. of E. plan which is working out meets all the requirements for the system.

TRADERS ACT VERY WEARILY

After the Strenuous Efforts on 'Change During the Past Ten Days Operators Are Inactive—Reaction in Wheat, but Litle Doing in Corn—Provisions Closed Firm—Snow's Statement Expected to Be Bullish on Wheat.

BEEF CATTLE SOLD STEADY

The Tone of the Cattle Market Was Quite Good for Medium Weight Steers Which Changed Hands at Steady Prices—Good Heavy Cattle Were Ten Cents Lower—Cows Sold on a Weaker Basis.

HOG VALUES DROP LOWER

Prices Looked Fully 10c Lower Than the Best Time Yesterday on the Bulk of Offerings—Liberal Receipts the Cause, Shipping Demand Being Active but Still Hampered by Lack of Cars—Market Was Slow.

MUTTON TRADE RULES FIRM

Diminution in Receipts Has a Beneficial Effect—Some Sales Looked Higher—Supply Falls Short of Expectation—Shippers Take a Long Chance of Getting Stuff Out but Fill Orders—Scanty Supply of Natives.

Let us all work together until the farmers' clearing houses are established; farmers representatives are on all markets, and all markets and all producers are connected by telephones through the clearing houses. Any person can get fuller particularsby sending to The A. S. of E. Headquarters.

more obvious and imperative every day, but how to organize it and keep it organized is a question which ought to be open for discussion in our official organ to all the members and organizers of the society.

As State Organizer for Illinois, I am trying to organize three or four townships in a county. Then I organize a county union and set them to helping to organize the rest of the county. All the locals in a township should co-operate and hold joint meetings. In Helvetia township, Madison county, Ill., we have a president, a secretary and a treasurer of the joint meeting. The president appoints two members from each of the eight school districts. These nineteen men are the Executive Committee for this township. They meet at Highland, Ill., once each month and talk over the interests of the society. They will collect 30 cents each quarter from every member. Every cent of this money is spent in this township and county to organize the society and carry out its plan.

HOW TO ORGANIZE THE A. S. OF E.

A township meeting of all the members is held once in three months. A postal card is sent to every farmer and business man in the township, urging them to be present. The township is flooded with posters, announcing the meetings. Good speakers address the meetings.

If you carry out this plan of organization almost every farmer and business man in the township will be brought into the A. S. of E. and will help to bring farmers to the front, which means that every legitimate business of that district will be benefited.

C. O. DRAYTON.

Greenville, Ill., March 30, 1905.

When Farmers Were on the Rack

Only about ten years ago, it was hard to give corn away at ten cents a bushel in some more Western States and Indiana farmers had to be content with 17 to 20 cents. Wheat 40 cents to 50 cents a bushel; cattle and hogs 2 to 3 cents a pound. Farmers were more anxious to hire out to work for somebody else, if they could find somebody that had money to hire them, than to work their own farm. Then the man who had a little money could buy any kind of farm products at almost any price he would offer. Farm land at $15 to $25 an acre in good agricultural sections and what it would sell for would often times not pay the mortgage on it. Will it ever occur again? 'Tis said, history repeats itself.

That depends entirely on whether the farmers' teachers who teach more production without the ability to price it prevail or whether the teachings of Up-to-Date Farming prevail.

It behooves every farmer who does not want history, in this respect, to repeat itself to prepare in time of peace for war—organize to prevent overproduction and to control marketing. This is the only sure preventative.

If you don't believe us watch the actions of the markets even now. Do you want to sell your next crop of wheat on the basis of 84 cents at Chicago? That is the price for next September wheat as set by the speculators on March 24th, 1905. Don't you see that just as sure as you grow a good crop of wheat the buyers will put it down to the very lowest notch. That is they will try to, but for two years they paid your price when settlement day came. We wonder if there is a single farmer in the U. S. so dead to his own interests that he will help the gamblers by contracting his wheat for future delivery on this basis? We are sure there is not a reader of Up-to-Date Farming who will do it.

It is the same way with all other crops. But things are changing and the farmer's day has come. They have learned their lesson so well that they will not in the future throw up their hands and be subject to indignities amounting to highway robbery as in the past. This is the year for farmers to keep a stiff backbone and stand for all their rights.

Spending Money for Farmers' Benefit (?)

The Indiana legislature has made an annual appropriation of $25,000 to be used by Purdue University for the benefit of general agricultural research, investigation, and experiment. How this money is to be expended is indicated by the advisory board appointed in connection therewith, being special representatives of the State Dairy Association, the State Live Stock Association, and the State Corn Growers' Association. The object, therefore, is increased production in live stock, and dairy products and field crops.

We are pleased at this liberalty on the part of the legislature of Indiana; and yet we need not refer to this appropriation as liberality of the legislature, for it is not their money that is being appropriated, but the money of the people of the State, raised by general taxation. Still it is gratifying that the claims of agriculture are thus recognized by the law making powers.

There is a question, however, in connection with this appropriation and all similar ones, which is eminently worthy of consideration. Increased producton is the object of all of them. In all of these lines the farmers of Indiana, and elsewhere, are producing an abundance for their own consumption. Hence, if an increased production is to benefit them, it must be by giving them more to sell, and the amount of this benefit depends upon the prices they are to receive. Nothing is said in the bill making the appropriation about enlarging the market or increasing the price. This question is entirely ignored, and possibly, as it is claimed in the case of farmers' institutes, may be tacity forbidden.

Under the ordinary and usual conditions, increased production invariably leads to reduced prices. In that case appropriations to secure increased production does not benefit the producer of the crops and products but the buyers and consumers of them. It is true such efforts in the past have not been effective, as we have often shown in these columns, all previous efforts having absolutely failed to perceptibly increase general averages, but as an intelligent farmer remarked concerning this appropriation, "Should the effort increase production ten per cent. and reduce prices twenty per cent., the usual result of such increase, who would get the benefit of the $25,000?" There is no question as to who will pay it, but, taking this view of it, an entirely reasonable one, who will get the benefit of it is problematical. Any effort to benefit the farmer in the line of production which does not take selling price into consideration, is a delusion, if not a mockery.

The Wheat Situation

A farmer in Illinois has 3,300 bushels of wheat and he writes to us for advice. He asks if we think wheat will be higher?

Our reply was in substance, as follows:

"We expect wheat to go to the minimum price again before the 1905 crop is ready for market. The market is nearly bare of flour and will require a large amount during the next four months, or one-third of a year. The buyers will certainly not stock up for future needs, unless unfavorable conditions enter into the new crop prospects, but the people must eat and they can consume all the wheat in store and in farmers' hands if they can get it.

"The only question is, will farmers let them have it at less than $1.20. If they were sufficiently organized we could answer the question definitely.

"There is a question that we want to ask Mr. Illinois Wheat Grower. Did you offer your wheat when the minimum price prevailed, or did you think you would hold for a higher price?

"The A. S. of E. is not a society—only to get people to hold stuff but to sell at profitable prices. Money cannot be made while you hold, but when you sell at a profitable price. No person can blame the society or its plan if they refuse to sell when their price can be had.

"It is not likely that the present very exceptionable fine prospect will be maintained until harvest. Therefore if droughts come later the tendency of the market will be upward as it is now downward."

The First Order

The first songs of Equity song book was purchased by R. C. Baker, R. R. 2, Strasburg, Va. The second order was from C. M. Jones, Gishton, Ky., and was for two dozen books.

These people are to be congratulated in securing the first copies of this beautiful and valuable book. They will value them immensely more because of being first copies.

No Fight Against Anybody

We wish members of the A. S. of E. would remember that they have no fight against anybody or anything except the bad system of the past, of marketing crops.

We are not organizing to fight any other individual, class, trust or institution. But we are organizing to attend to our own business in the most modern, up-to-date business way. When farmers do this they will be entirely independent; they will set the standards and all other people will be obliged to adapt their affairs to the farmers standards.

We appeal to you to not use the word "fight" when referring to the other people. The trusts and combines may have fought against the farmers in the past, but we will not fight them. We don't need to.

If a trust will pay our prices, sell to them. When the farmers are well organized, if the trusts don't deal fairly with the other great class, the consumers, we will compel them to be good.

Are You Ready?

Farmers, are you thinking about the clearing houses, representatives on markets, and telephones as aids to acomplishment of complete control of marketing to compel profitable prices? How soon will you be ready to move in this direction? If you want the step taken now fill out blank below and send to us. The blank is self-explanatory:

Have farmers in your section got telephones? ....

About what proportion of farmers' homes have telephones? ....

What telephone company supplies the service? ....

Give the address of the telephone Company.

....

....

Who would be a good person for A. S. of E. representative? .....

....

....

Send this to the American Society of Equity, Indianapolis, Ind.

Three Million Homes

Know What Liquozone Can Do. Who Else Will Try It Free?

We judge from our records that one home in five, the country over, has some one whom Liquozone has cured. Some have been cured of little ills; some know that their lives have been saved by it. And most of those homes still use Liquozone daily, as we do, to keep well.

Those homes are scattered everywhere. Your neighbors and friends live in some of them. If you will only ask about Liuqozone there are plenty to tell you about it. Why will you suffer with any germ disease while millions know how to end it?

Don't you realize that a product which is used like this must have remarkable merit? We have never asked a soul to buy Liquozone. We have published no testimonials, no evidence of cures. We have simply asked the sick to let us buy the first bottle—to let the product itself prove what it can do. And we ask that of you, if you need it. If you are still using drugs to cure germ troubles, let us, at our expense, show you something better.

What Liquozone Is

Liquozone is a product which, in the past two years has sprung into world-wide use in the treatment of germ diseases. It is now used by the sick of nine nations; by physicians and hospitals everywhere. It is daily used in millions of homes in America.

The virtues of Liquozone are derived solely from gas, made in large part from the best oxygen producers. No drugs, no alcohol—nothing but this gas enters into it. The process of making takes 14 days, and requires immense apparatus. At the end of two weeks we get one cubic inch of Liquozone for each 1,250 cubic inches of gas used. The attainment of this product has, for more than 20 years been the constant subject of scientific and chemical research.

The main result is, to get into a liquid, and thus into the blood, a powerful, yet harmless germicide. And the product is so helpful—so good for you under any condition—that even a well person feels its instant benefit.

We Paid $100,000

For the American rights to Liquozone, and the rights in other countries have sold for proportionate sums. We mention this fact to indicate the value of Liquozone—the value to you. Men have never before paid such a price for any discovery used in the cure of sickness.

We need not tell you that we proved Liquozone well before buying it. For years it was tested through physicians and hospitals, in this country and others. It was employed in every stage of every germ disease; in all the most difficult cases obtainable. With thousands of sick ones, considered incurable, we proved that it did what medicine could not do. Then, and then only, did we pay the price.

Since then we have spent nearly $2,000,000 to make Liquozone known. We have bought the first bottle and given it free to every sick one we learned of. These people told others, and the others told others. The result is that Liquozone is now more widely employed than any medicine ever was. And no one can doubt that it is doing more for sick humanity than all the drugs in use combined.

Kills Inside Germs

The greatest value of Liquozone lies in the fact that it kills germs in the body without killing the tissues, too. And no man knows another way to do it. Any drug that kills germs is a poison, and it can not be taken internally. For that reason, medicine is almost helpless in any germ disease.

Liquozone is a germicide so certain that we publish on every bottle an offer of $1,000 for a disease germ that it can not kill. Yet it is not only harmless, but of wonderful benefit—better than anything else in the world for you. No one is so well that he can not be helped by it.

The reason is that germs are vegetables; and Liquozone—like an excess of oxygen—is deadly to vegetal matter. To the human body Liquozone is exhilarating, vitalizing, purifying—the most needful, the most helpful thing possible. But to germs it is certain destruction; and these facts are true of nothing else in existence.

Germ Diseases

These are the known germ diseases; all due to germs or to the poisons which germs create. These are the diseases to which medicine does not apply, for drugs can not kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding nature to overcome the germs. But those results are indirect and uncertain, depending on the patient's condition. A cure is always doubtful when drugs are used, and some of these diseases medicine never cures.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes, so that no germ can escape it. The results are almost inevitable. Diseases which have resisted medcine for years yield at once to Liquozone. "Incurable" diseases are cured by it. In any stage of any disease in this list the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer accomplishing what no drugs can do.

50c Bottle Free

If you need Liquozone, and have never used it, please send us the coupon below. We will then send you an order on a local druggist for a full-sized bottle—a 50c bottle—and will pay the druggist ourselves for it. This applies only to the first bottle, of course—to those who have never used it.

The acceptance of this offer places you under no obligations. We simply wish to convince you; to let the product itself show you what it can do. Then you can judge by results as to whether you wish to continue.

This offer itself should convince you that Liquozone does as we claim. We would certainly not buy a bottle and give it to you, if there was any doubt of results. You want these results; you want to be well and to keep well. Then be fair enough to yourself to accept our offer to-day. Let us show you at our expense what this wonderful product means to you.

Liquozone costs 50c and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Company, 458-464 Wabash Ave., Chicago.

My disease is .....

I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

.....

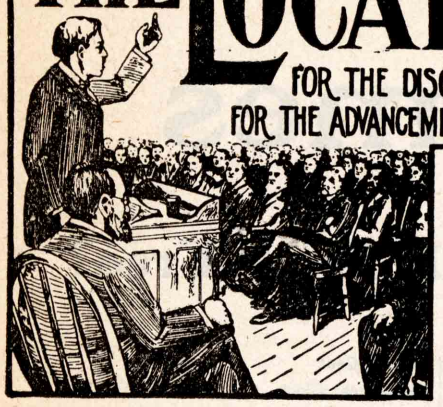
M 115—4 Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc. It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Organize.

Stay organized.

Get everybody else organized.

Discuss controlled marketing.

Inquire why farm papers do not favor controlled marketing.

Investigate why farmers' institutes refuse to permit the discussion of controlled marketing.

Are you visiting neighboring locals? Best way in the world to keep up an interest.

The cotton growers and grafters are still having a struggle. Compact organization of the farmers, controlling the marketing themselves, is the final solution of the problem.

Latest advices are to the effect that the Burley tobacco growers' organization has failed. It is no pleasure to us to say "we told you so." We would much rather, for the sake of the growers, they had succeeded, but whenever anybody sets out to get money from farmers to buy their own crops, the very principle of it marks it a failure. Farmers don't have to buy what they already own.

Every local union is a school. The boys and girls are learning to read, to think and to speak in the local meetings. And so are the grown ups.

If your committee on extension work or organization is not active and efficient, discharge it and appoint another. This is the most important committee of the local union.

Our correspondence indicates a great many points where farmers are anxious to organize, and not far from organized unions, too. What is the matter? Locals should be on the watch for such places.

Our information from every direction indicates that farmers are ripe for organization—that they feel the tightening grasps of trusts and combines, and fully appreciate the necessity for organization to meet them. The A. S. of E. is accomplishing this. It is not making a special fight for any one product, but it stands for all and fights for each in its season. Broad and comprehensive. practical and just, liberal in all of its ramifications, and consistent in all of its parts, it appeals alike to the bonanza farmer as well as to the small farmer, to the tenant and to the farm laborer, and guarantees stability to all business. No other society or organization can truthfully say these things.

Farmers should not slight a great opportunity. It is not necessary to put off organizing until an organizer can come. The A. S. of E. has no secrets to impart, no ceremonials to teach, no pledges to administer, no sings, grips and passwords to learn. What it does it does in the open; its methods and its teachings are public. Hence farmers can organize anywhere without any assistance. Meet and elect the necessary officers, and report to the National Union with the necessary fees, and your charter, certificates, and the official paper will come promptly. Or send to headquarters for simple printed instructions.

This is the time when organization should be in your thoughts as much as is planting of the crops.

Without planting you will not get a good crop. Without organization you will not get a good price.

Remember, the world will consume as much at a good price to the consumer as at an unfairly low price. Wheat at $1.00 is not high. If the U. S. has a big crop and sets this price and maintains it the world price will come to it. Wheat growers, be up and doing, something besides watching your crop develop.

As the speculative price of wheat goes down the calls for organization in wheat sections go up. This shows the sentiment. It must be crystalized into the A. S. of E. system of making prices.

Organized in Woodward County, Oklahoma

Editor Up-to-Date Farming:—

The A. S. of E. of Woodward county met at the court-house to organize a county union, I. J. Teeters in the chair. The weather was very inclement, yet a goodly number was present. There are seventeen local unions in the county, and twenty-eight members were in attendance. Short speeches were made by Hon. B. F. Willett and others, all favorable to the movement.

They were followed by a brief summary of our principles and methods, by E. R. Williams, of Stockholm. W. E. Bolton, editor of the Live Stock Inspector and Woodward News, publicly tendered the society free use of a column of the News, for which the union tendered a vote of thanks. Later the other county papers extended the same favor. A committee on organization headed by Irwin Hiatt, on business men and the press headed by E. R. Williams, and on programs headed by John Leasure, were appointed. The next county meeting is to be at the court-house in Woodward, at 10 a. m., May 17. Intelligence, conscious responsibility and enthusiasm marked the entire proceeding.—E. R. Williams.

A Good Letter from Arkansas

Editor Up-to-Date Farming:—

Your excellent journal comes regularly to our union, and is veril a power and an inspiration not only to its members and their families, but to the farmers of the surrounding country. From our first struggle for members enough to secure a charter, we have grown to thirty-two, with a large probable increase.

But we have had difficulties to overcome. Many of our members are not regular in their attendance at the union meetings, but as members of the A. S. of E. we are becoming more and more impressed with the truth that a member who cannot leave his place of business, his farm or his workshop, three hours on Saturday evenings to attend the union, does not keep in touch with it, looses interest, and is but little benefit to the cause we are fighting for.

Never in the history of our country was there a time when so many bankers and merchants stood shoulder to shoulder with the farmers of the South to aid them in a struggle to secure a fair and equitable price for their cotton, yet there are many too blind to courage to stand up for the right and defend it. This is no time for skulking in the rear. If you are true to the interest of your neighbor and the country, get off the fence, and fall into line for the cause on which depends the future prosperity of the farmer.

As our faithful watchman on the tower, Bro. Everitt, continue to sound the clarion notes through Up-to-Date until the mighty hosts of farmers shall rout every foe, and the banner of Equity, with victory perched upon it, shall float in triumph over every home in our Southland.—G. W. Irvin, Sugar Grove, Ark.

Good Plan of Work

Editor Up-to-Date Farming:—

We have a plan laid out for organizing more unions here. We are very busy all the time on the farm, but we are willing to take part of our time to go to the schools and distribute literature one week, and then go back the next week and organize. We want to see the good work progressing. We are sure we must be organized; we cannot be heard without it, and the sooner we get in position to make ourselves heard the better.—M. Sowers and wife, Henryetta, Ind. Ter.

Must Have Courage

Editor Up-to-Date Farming:—

We must have courage. Going into battle with the idea that we are weak and the enemy strong and that we are going to be defeated, defeat is sure. We must have confidence in ourselves. and stand boldly to the foe. Ask your neighbor if he is for or against equity. If we can get farmers courageous and confident, and interested in the cause

of equity, and the right to price his produce, which is, as one can say, is wrong, prosperity will sweep over the country, and the two extremes, greed and poverty, will be swept away no more to return. But we must refuse to listen to the prophets of evil, of defeat. —George M. Davenport, Olmstead, Ark.

Teachings of Up-to-Date Lead to Prosperity

Editor Up-to-Date Farming:—

Your March 1st issue is at hand, and I find many interesting subjects in this exceptionally fine number. Owing to my association with the old St. Louis Fair, which I have been connected with for the past thirty years, the past ten years as reviser of our yearly catalogue and superintendent of agriculture and horticulture, many catalogues and pamphlets, and books on those sbjects, reach my hands, and truthfully, I can say, among the most instructive, intelligent and facts-giving one is Up-to-Date Farming. Many visionary and impracticable ideas are set forth in a great number of our publications on farming. But merely theoretical ideas are not what the farmers are seeking. Those who keep well up to the progress of the present day farmer, cannot but observe with satisfaction the wonderful improvement he is making—how successfully he is climbing out of the old rut. One venturesome man's success leads or prompts many others to follow. Thus are improvements running all along down the line, and the consequence is a betterment of the farmer's condition.

A little independence leads to a desire to possess greater, and where farmers clung to the old ideas of hog and hominy, and had no respect for the farmer who counted much upon his fruit, poultry and truck garden as profit, are finding out that these things are resources not to be despised in these event ful times of opulence and idea is being retired to the rear.

Throughout the counties adjoining St. Louis county, I am glad to say, few farmers can be found at present, bearing the burden of a mortgage, and all present a presence of prosperity. Prices of farming lands are advancing, debts are being paid, and happy countenances greet you as you drive up to the farmer's gate—the old bars are gone.

This improvement we must attribute to the good, practical ideas set forth in publications like Up-to-Date Farming. Such matter gets the farmer to thinking, and when his mind is once stirred up the desire takes possession of him to try, and success crowns his efforts. —J. D. AYRES, St. Louis, Mo.

The F. M. B. A. Interested

Editor Up-to-Date Farming:—

I wrote you as a representative of a lodge of fifty members of the F. M. B. A. All of this lodge is greatly interested in the farmers' organiaztions of this country, and I verily believe that almost, if not all the lodges of our order, are becoming more interested as they educate themselves by studying the principles and plans as set forth in your great paper, Up-to-Date Farming, and your wonderful book, The Third Power. I earnestly hope to bring this question before all lodges of this order, trusting that it may at least cause them to consider our interests in the great movement, and that proper steps be taken by the leaders whereby co-operative plans may be arranged, making the F. M. B. A. a part of, or in full harmony with, the A. S. of E., which we admit has done and is doing more for the farmers than all the others combined.

And now, Brother Farmers, let us come together by co-operative action to fight for our interest as we have never done before. Let each member of our order who possibly can take the official paper, Up-to-Date Farming, and educate himself that he may be better prepared to push the cause along.—L. I. Duncan, Ewing, Ill.

Note.—The hand of the A. S. of E. is ever extended for a cordial grasp with any and all farm organizations that recognize and teach that farmers have a right to price their products, and that they are entitled to as fair remuneration as are other classes of labor, and that will earnestly work to secure these ends.—Editor Up-to-Date Farming.

Up-to-Date Goes

Editor Up-to-Date Farming:—

I am tyring to get subscribers for three farm papers, but they are not friendly to the A. S. of E., and I always put them first, more as a test than for anything else. Well, I can't get any subscribers for them, and when I fail on them, I say "Gentlemen, here is Up-to-Date Farming, price 50 cents a year." Interest is manifested at once, and they eagerly inquire what it teaches. I begin to explain, but I never get farther than controlled marketing and profitable prices, when some one calls out, "Hold on, that is enough. That is the paper I want." And I have to call for order so that I can get their names. And it makes little difference with me whether it is for three months or twelve, for I know that if they begin reading Up-to-Date Farming they will never let the paper stop nor lose a copy.—L. E. Stewart, Palmer, Ind. Ter.

Best Paper in the Land

Editor Up-to-Date Farming:—

I read many farm papers, all extra good ones, too, but there is no doubt about Up-to-Date Farming being the best paper in the whole land for farmers. I am past fifty, but in all that number of years I have found no paper so valuable to me.—Ed. J. Schmid, Osgood, Ind.

The Ancient Granger

W. T. HILDRUP.

I am, I believe, the Ancient Granger, being the only living member of the second grange organized.

I have seen in my life of eighty-three years so many benefits growing out of humble beginnings, that I predict for the A. S. of E. great results.

I was an active worker for Homestead Exemption, abolition of imprisonment for debt and freedom of the public lands to actual settlers. Way back in the forties, I was also a leader for co-operative stores in that decade. I have followed your writings and studied the plan of the American Society of Equity and am persuaded it will win. There is a great field for grand work and results.

Although beyond working days, I am heartily with you and predict success. The Infinite has rich rewards for the intelligent, faithful workers, who with willing hands help Him to the perfecting of this part of His creation. All the plans proposed to help the humble, faithful workers, especially the farmers, deserve general and generous support.

Faithfully and fraternally,
W. F. HILDRUP.

Raleigh, N. C., March 7, 1905.

An Endorsement From Texas

Editor Up-to-Date Farming:

While I am a member of the F. E. and C. U., I am also a reader of Up-to-Date Farming and a hearty co-operator with the A. S. of E. I must admit, and I am not at all loath to do it, that Up-to-Date Farming is doing more to educate and build up the farming interests and other industries of the nation than any other publication that has ever been given to the public in this proud land of ours. Its teachings are in exact keeping with my opinions, except that it makes them so much plainer and goes so much deeper in its work than I had ever dreamed. Every copy I receive I am made to wonder if God has not a hand in leading the mind that guides the pen that traces its teaching in this great work .

The editorial in Feb. 15 issue headed "Why Cotton Only" I am sure is very timely. I say amen. Support each other. Make the organization broad enough and strong enough to meet the needs of the stock raisers and all the products of our nation. In other words, we must educate, then organize, and then co-operate.—J. P. Crim, Henderson, Texas.

Think of it! A 320 page book, cloth bound, for 25 cents, postpaid. It is a book worth more to farmers than any college education they can obtain.

SIMPSON EDDYSTONE PRINTS

Individuality

Simpson-Eddystone Prints have an individuality that makes them look different.

They **are** different—better; in quality, patterns and colors.

Thoroughness has always been the keynote of Simpson-Eddystone manufacture and is what has made them **the standard calicoes of the United States for over fifty years.**

Buy Direct. It saves the profit of the middleman. Our Guarantee is all that any manufacturer can give, and infinitely more than the dealer can grant. When you deal with us you **get your money back** if you are not pleased, besides it means a great saving because we sell to you at

WHOLESALE PRICES AND PREPAY THE FREIGHT.

We use nothing but **High Carbon Spring Steel Wire,** and make it ourselves that we may be sure it is good. We coil it that it may provide for **Contraction and Expansion.** We **Heavily Galvanize** it with **Commercially Pure Spelter,** to avoid rust and corrosion in all climates.

Our long experience has made us masters of fence construction and we are able to tell why we make the **strongest** and **best** fence on the market. We have a 40-page Catalog which fully describes and illustrates every style of our **High Carbon Coiled Spring Farm Fence,** which we will gladly mail to you upon request. Write for it. Address,

COILED SPRING FENCE COMPANY
Box 88 **WINCHESTER, INDIANA.**

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

SECOND ANNUAL TOBACCO GROWERS' CONVENTION

Attention, Tobacco Growers

Pursuant to a provision made by the Tobacco Growers' Convention, held in Lynchburg, Va., November 10 and 11, 1904, the Executive Committee of the Tobacco Growers' Branch of the American Society of Equity now issues a call for the second annual convention of Tobacco Growers, to be held in Owensboro, Ky., October 18, 19 and 20, 1905.

The basis of representation will be three delegates from each county having three or more local unions, and these delegates should be chosen at a joint meeting of all county unions at least two weeks prior to the date of the convention.

All tobacco growers and members of all other tobacco growers' organizations are earnestly invited to participate in this convention, and to make it the greatest meeting of tobacco growers ever held.

A splendid auditorium will be placed at the disposal of the convention and reduced rates will be given on all railroads.

Local unions and county unions should make early preparation for sending delegates and making complete and accurate reports of the amount of tobacco produced in 1905.

By order of the Executive Committee.

H. B. SHERMAN, Chairman.
E. L. DAVENPORT, Pres. Tob. Growers' Branch A. S. of E.
C. HAYES TAYLOR, Secretary.
April 1, 1905.

WHAT TO DO AND HOW TO DO IT.

A few of our old members, many of our new members and all tobacco growers who are not members are interested in what our organized farmers are going to do, and how the work is to be done. We have given our plans in these columns before, but our membership is growing so rapidly that we must repeat much that has already been said for the benefit of those who have lately become interested.

A few facts concerning what we have done and are doing is right in line with our explanations, so we have given our department in this issue to the work being carried out by our members, and to a short review of prices.

Some of our members complain because we do not publish market prices. As our matter must be prepared two or three weeks before it reaches our readers, to quote market prices would not be very satisfactory. (It will not always be this way. Better printing facilities will be provided as soon as possible.) We endeavor to give prices in a general way and to prove by them the value of controlled marketing. As an instance of this the attention of our readers is called to the situation at the present time compared to one year ago.

The latest quotations are fully 33 1-3 per cent. in advance of prices quoted at this time one year ago on most grades of tobacco. A representative of the American Tobacco Company recently gave to the Owensboro (Ky.) Messenger the following figures. He said: "Where we paid $4 last year we are paying $5.60 this year, and for the quality that we paid $5 last year we are now paying $7, and other grades in proportion."

In 1886 a very large crop of tobacco was produced, and prices were very low, the greater portion of the crop averaging less than 3 cents. It was all purchased by the buyers, however. In 1887 the farmers curtailed their crops, because there was no money in tobacco at 3 cents, and a short crop was produced. Prices trippled or quadrupled, and those who bought the tobacco in 1886 sold it in 1887 at a great profit. They held it until it was needed and then the demand paid not only a good price, but a big one. They carried out the principles of our society and profited thereby. We are organized to prove that the farmers themselves can hold back the surplus and get the profits.

RESOLUTIONS PASSED.

A member of Hawesville (Ky.) Local Union No. 1, proving false to the principles of the society, and without good cause, disposed of his tobacco for less than the price set by the society, notwithstanding the fact that the members of his local union offered him assistance in holding his crop, was expelled from the union by the unanimous vote of its members, and the following manifesto was issued:

We therefore call on all liberty-loving men, who believe in equal rights to all and special privileges to none, to stand by us and help fight for the right that is justly ours—a right that is not denied any other class. Our demand is that we be allowed to set the price on our own product, that represents our labor and the sweat of our brows.

We therefore caution all farmers and tillers of the soil to be on the alert; keep your eyes open; do business strictly with those who favor our cause. The man who works against the interests of the farmer is his enemy. Treat him as such.

A note of warning is hereby given to all persons directly or indirectly connected with the union, or outsiders known as "scabs" who interfere with the workings of the union to its detriment that all such persons should be considered as enemies to the cause and should be treated as such by all members of the A. S. of E.

That a copy of this manifesto be sent to Up-to-Date Farming, Hawesville Plaindealer and Hancock Clarion for publication.

A. H. BRUNER,
WALKER POWERS,
MIKE R. EAGAN,
DULLIE POWERS,
MORGAN TRUMBO,
Committee.

ANOTHER ERRING MEMBER.

Lewisport (Ky.) Local Union No. 2, after deliberate consideration, expelled a member for proving faithless to the society without cause, and publish resolutions to the effect that no man can wilfully ignore his duty to his family and his neighbors and retain the respect of his fellow men. They express the following sentiment, which should be the sentiment of all farmers:

We, as farmers and members of the A. S. of E., fully realize that our greatest enemies are men who are so degraded and devoid of concience and principle that they are willing to array themselves against their neighbors who are fighting for justice and against the domination of our greatest enemy—the tobacco trust.

D. B. GREATHOUSE,
J. B. HOLLAND,
T. B. HENDERSON,
R. J. HOLLAND,
J. W. ROBERTS,
Committee.

We give space to these matters to show that the farmers are terribly in earnest and that it would be well for members to hesitate before proving false to the principles of our society. We do not condemn the man who is forced by adverse circumstances to dispose of his crop before the minimum price may be secured and our members are willing to assist all those who need assistance to the full extent of their ability. Our organization is for mutual benefits as well as self-interest and self-protection. All members are assured of fair and impartial treatment, but when they refuse to remain loyal to themselves and their fellowmen, by refusing to carry out the plans of our society when fully able to do so, they are no longer worthy of the confidence of their fellows or to be members of the society.

Following is an etxract from resolutions passed by the Webster County, (Ky.) Tobacco Growers' Association, March 11, 1905:

Resolved, that if there are members of the Webster County Tobacco Growers' Association who are in financial straits and cannot hold longer, the same are advised to consign their tobacco to the Henderson County Tobacco Growers' Association, where they can receive liberal advancement. They will be given a certificate of recommendation from the Webster County Tobacco Growers' Association, or from a local union, of which he or they are members.

Our Friends are treated right by our advertisers.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. 10% discount when two or more consecutive issues are used. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Agents who want a meritorous article to sell should handle C. & F. Wonder Knives—nine tools in one. It is a handsome pocket knife, light, convenient and has no more parts than an ordinary three bladed knife. Contains strong wire pliers and wire cutter that will easily cut barbed wire fence. Also leather punch, swedging awl, alligator wrench, hoof hook, screw driver and screw bit. Don't you think you can sell an article like this? Price each $1.25. One dozen delivered for $11.00, f. o. b. Indianapolis $10.50. If not satisfactory your money will be refunded. Now if you will trust us (and the publisher of this paper who guarantees advertisers) send for a dozen. We refund your money if youwant it. That's fair. Don't forget to write us—better do it now. Cooner & Fortune Co., Indianapolis, Ind.

Binder Twine. Prices lower than last season. No advance. Cooper Cordage Co. Chicago; Minneapolis; Kansas City.

Business Manager Wanted. In every town to manage Branch Office and superintend force of salesmen. Big money. Experience unnecessary. No canvassing. Can be handled with other work or business. Cive references. Particulars on application. Knight & Bostwick, Nurserymen, Newark, New York.

You reader, have something you can profitalbe advertise here. 150,000 farmers and their families read every advertisement here twice a month. Try it.

WANTED Immediately. Practical experienced Nursery Salesmen. I offer special inducements to salesmen who can successfully cover extensive territory, Give references. Big money. Write at once. Arthur N. Christy, Newark, New York.

Farm Lands

Farm Lands. Warranty deed. 40 acres good (Michigan) fruit land for $60. Investigate. E. Weimer, Ludington, Mich.

Farms For sale. I have fine farms in every part of the country. I buy and sell farms anywhere. Be sure to write for my beautiful book and attractive proposition. W. M. Ostrander, 406 No. Am. Bldg., Philadelphia Pa.

For Sale Nine acre Fruit and Poultry farm, near San Diego, Calif. 200 bearing olive trees. Ideal climate. Rural mail. Nice neighborhood. For particulars address, William Tatnall, Marshalltown, Delaware.

Oklahoma Farms, write for prices. H. E. Stephenson, Kingfisher, Oklahoma.

Wanted Quick. Tenant for fine farm. Immediate possession. "Gepford", Princess Anne, Md.

Household Supplies

Canning Business information for a 2c stamp. Warford, Newburgh, N. Y.

Cream Extractor at small cost. Send for catalog. Ka Dexx Cream Separator Co., 22 Ka Dexx Bldg., Rochester, N. Y.

Enjoy the long winter evenings by having a Zon-O-Phone in your home. We send one on trial before you pay a cent. Try it, and if you like it, and want to keep it pay $5.00, and after that only $2.50 a month. The cost is only $25.00 and is as good as musical instruments costing much more. It will play any make of Disc Records. Catalog free. Cincinnati Talking Machine Co., 1228 Vine St., Cincinnati, O.

Light The best Light at low cost can be obtained with "Sun" burners and lamps. Send for our free catalog sure. Agents wanted. Sun Vapor Light Co., Box 870, Canton, O.

Implements and Farm Supplies

Binder Twine for farmers, local unions and dealers. From factory to you at wholesale prices. Anti-trust twine. Orders accepted and filled now at 10½c per lb. Sold in bales of 50 lbs. each. Buy your twine now, price is sure to advance as harvest approaches. Twine guaranteed. None better at any price. Samples free. Prairie Mfg. Co., Indianapolis, Ind.

A GALA DAY

Fifteen Hundred People in Attendance at the Convention of the Muhlenberg County Union of the A. S. of E.

There is no need of statistics to prove to even careless observers that the farmers are rapidly coming to the front. The grand meeting held by them on the 17th and 18th of March, 1905, at Greenville, Ky., speaks for itself. The members of eighteen local unions of the county, accompanied by their wives and daughters, formed a procession of over one mile in length. Each union was designated by a banner with an appropriate motto and decorated with farm products.

Marching into town and passing through the princapal streets, they assembled at the court-house. The meeting was called to order by the President. Song by Mt. Pisgah choir, composed of forty members, followed by appropriate remarks and prayer by the Rev. J. L. Stirsman.

The court-house being inadequate to hold the assemblage, they marched in order to the new opera house, where the exercises were re-opened by Rev. J. W. Gill, followed by an appropriate song, entitled "Union of the Farmers," composed by Mr. Charles Jones, leader of the choir.

On the resignation of the President, Mr. J. H. Burney was elected for the coming year, with H. H. McCracken as Vice-President. E. L. Davenport was re-elected Lecturer and T. N. Divine was elected Treasurer. Adjourned until one o'clock.

The house was called to order at one o'clock by Rev. E. T. Lewis, and a song by the choir. We had a recitation by Miss Verna Jones, entitled "A New Rebellion." The rendition of which made us proud to class her among the farmers' daughters.

Mr. T. T. Barret, of Henderson County, took up the subject of tobacco, and in an able manner told how the curtailment of acreage would enable the farmers to secure a better price for the product.

Mr. W. S. Ball, of Brenckenridge County, gave us a talk on tobacco, and after another song by the choir, Mr. W. P. Stevens, of McLean County, addressed us, after which Mr. H. G. Overstreet, of Daviess county, then took the floor and in clarion tones "floored" the trusts.

The union then elected one delegate from each registered district in the county to meet The Western Kentucky Dark Tobacco Association at the court-house at 7 p. m. The representative, a representative from Hancock County, gave us an outline of the work being done by the farmers of his county, which clearly shows the A. S. of E. is growing strong there. The meeting then adjourned to meet the following morning with President Burney in the chair.

Prayer by C. G. Newman. Each local union was ordered to send out six delegates to organize new unions in various parts of the county, and do this immediately. The County Lecturer was asked to put forth every effort possible to complete the organization of the county, and all local unions were asked to take up collections to defray the Lecturer's expenses. The County Union then discussed the subject of County Unions, and each local union was ordered to assess each member of its union twenty cents and send same to County Union, said money to be used to defray the expenses of the County Union and forward the work of the A. S. of E.

Adjourned for dinner.

At one o'clock the house was called to order. Each delegate was asked to request the President of his local union to appoint a suitable person in his neighborhood to report the work of the A. S. of E. to the Record publisher at Greenville, Ky. Mr. J. A. Shaver was appointed to invite Mr. Roark, publisher of the Record, up into the hall to copy the resolutions adopted by the Western Dark Tobacco Association.

The plan submitted by Mr. T. T. Barret was also adopted and ordered attached to the resolution. The resolution and plan are as follows:

Whereas, we recognize the fact that the 1904 tobacco crop in the Dark Tobacco district of Kentucky was considerably less than that of 1903, and the further fact that the trusts so far have been able to repel all our efforts to secure a reasonable price for our tobacco. Now, therefore, be it

Resolved, that we the representatives of the counties of Breckenridge, Ohio, Hancock, Daviess, McLean, Muhlenberg, Henderson and Webster, in convention assembled, do recommend, urge and insist, that the organization in each county us its best efforts and every means at its command through its local unions and organizations to secure a reduction of the acreage of tobacco, so that no farmer will raise exceeding over 10,000 hills per hand. It being understood that a hand is to be from 16 to 60 years of age, of men who work in tobacco, and a boy from 12 to 16 years years, to constitute a half hand, and not to have exceeding 5,000 hills. And in no event is a County to plant exceeding 75 per cent of an average crop, taking the average of the 1903 and 1904 as a basis.

H. G. OVERSTREET,
Chairman;
W. P. STEVENS,
M. F. SHARP,
THOS. T. BARRET,
BEN WATSON,
E. L. DAVENPORT,
W. S. BALL,
S. A. BORN,
Committee.

AGREEMENT.

It appearing that the general welfare of this county can best be served by a curtailment of the tobacco crop for 1905, we, the undersigned citizen farmers thereof, do agree and bind ourselves, under penalty of forfeiture of the excess to the Farmers' Organization, not to plant or allow planted on lands that we control, a greater number of acres than is indicated by the number opposite our names in the column 1905. And we further state that the numbers in the columns 1904 and 1903, opposite our names, represent truly the number of acres cultivated in tobacco in those years.

All farmers present who were not delegates voted for the adoption of the resolutions and plan. The union received reports from the different local unions in this county as to the amount of tobacco that is now held by the members for a specified price and not to be sold till that price is obtained. Number of pounds so held is 550,100. The secretary was ordered to send for a charter for the County Union. Amount collected for charter, postage, etc., $2.47. By a unanimous vote the union extends thanks to the choir and the ladies, and invites then to be with us at our next County Union, and Messrs. Barret, Ball, Stevens, Overstreet and all other visitors from other counties for the valuable assistance rendered us, and extends to them a hearty welcome at any time they may wish to visit us.

Also unanimous vote of thanks to Mr. Countzler for the use of the opera house, and each delegate was asked to report to his local union the kindness of Mr. Countzler, and ask them to remember his hospitality when they go to Greenville to do their trading. The secretary was ordered to send a copy of the minutes to the following papers for publication:

Clarksville Leaf Chronicle.
Owensboro Messenger.
The Gleaner, of Henderson, Ky.
Muhlenberg Record.

Adjourned to meet May 26, 27, 1905, at Cisney, Ky.

R. F. LEIGH, Sec'y., pro. tem.

The Grip of a Giant

The tobacco situation here is unchanged. The farmers are the complte masters of the situation. They are holding it with the grip of a giant. They have commenced to prize their tobacco, and their confidence in their ability to compel a fair price has not been in the least disturbed. The trusts have subsided. and have nothing to say. The farmers on delivery of tobacco at the prizing houses can get an advance of about three or four dollars per cwt. on medium and good tobacco. (This is as much as they realized for their tobacco last year).

I shall endeavor to have this section well represented at the Owensboro convention. Yours truly,

D. T. HAMIL,
March 10, 1905. Guthrie, Ky.

Sutherland, Ky., March 6, 1905.
Editor Up-to-Date Farming:—

We organized here Jan. 7, 1905, with fourteen members, and since that time have never failed to have an interesting meeting once a week and take in new membrs ach time, until now we have thirty-seven members.

We have agreed to put our tobacco in the warehouse at Owensboro, which is called the Equity House, not only because it is for the benefit of the A. S. of E, people. but because we all have equal rights there. I would like to see every section of the country producing tobacco taking this step. This warehouse plan just simply makes it easier for those to hold their tobacco who want to hold, and say they can't, on account of money matters pressing them.

All who feel the need of help to enable them to hold tobacco will appoint a warehouse committee and arrange for that kind of storage, it will be of great assistance. Yours truly,

A. L. COLE,
Sec'y. Sutherland L. U. No. 1.

Tobacco growers who store their crops should never hold beyond the minimum price. Money is not made by holding but by selling at a profitable price. Facilities to store and hold must not be used to run up a surplus. It is always better for the producer to hold his crop on the farm if possible.

Did your local union receive a personal letter from President Everitt in regard to the tobacco situation and the new plans soon to be put in operation? If not, it was because you have not been chartered and are not recognized at headquarters. All local unions having no charter should send for one at once for there are other good things to follow.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Plough deep while sluggards sleep,
And you will have corn to sell and keep.

—Benjamin Franklin in Poor Richard's Almanac, published before the Revolutionary war.

Hold on a minute. What was it you intended to do differently this spring?

You don't know what may hinder tomorrow; the job that is pressing should be done to-day.

This is the time of year when the line fence is liable to make trouble. Settle your differences. Time is too precious to waste it in quarrels with neighbors and money is too needful to squander it in law suits.

Do you know that every line printed in this paper is intended to give each reader something to think about, that, it is hoped, will be a benefit to him or her?

H. W. Riley, Tolono, Ill., is reported in one of our exchanges as having paid $150 for twenty-five ears of Farmers' Interest corn—$6 per ear. It was specially selected exhibition corn. For illustration and description of Farmers' Interest corn see pages 119, 120 and 121, Mr. Everitt's 1905 catalogue. There is nothing like having the best.

Speaking of prize corn reminds us that at an exhibition at the Iowa Agricultural Colloge some prize ears were sold at auction. The first prize ear brought $11; 100 prize ears brought $102; 40 ears brought $35; 10 ears brought $13; another ten ears brought $12, and a collection of 20 ears brought $24.

The cow pea will still have a place in the fields. Many have not made the success with it that others have, but to improvements of the ground from which it grows gives it a permanent place on the farm. Seed of cow peas are very scarce this season. Some varieties cannot be had at any price.

The farm help problem is up again. Pay the hired man as good wages as the results of his labor will justify, and on the basis of the market price for labor, and not try to overwork him, and treat him as you would like for him to treat you if your positions were reversed, and the problem will very nearly solve itself. If you cannot afford to do that then look to your income as the real base of the trouble.

The problem of hiring farm labor will be an open one, a practically unsolved one, so long as the farmers' income is one of doubt, uncertainty, and perplexity, and the business will never be anything else so long as speculative greed makes the prices.

We have several times spoken of the field culture of pumpkins, and we may or may not be pardoned for doing so again. The pumpkin is a valuable farm product sadly neglected, but its value depends upon the use made of it. It may be grown in the corn field among the corn, or it may be planted in a field to itself. Its luxuriant vining habit improves the land by shading it during the most scorching times of summer heat, and, growing among the corn, it may serve as a kind of mulch for the corn, actually benefitting all except, possibly, the hills in which it is planted. The pumpkins are good feed for almost all stock, and are specially valuable to cattle and hogs fattening and on corn feed. Fed thus to cattle the pumpkins should be cut into pieces of proper size to be easily taken into the mouth, and should be fed from a feed box or trough. They keep well through the winter, but must be protected from the frost. The Genuine Mammoth, Mammoth Tours, Mammoth Etampes, Connecticut Field, Kentucky or Indiana Field, and Large Cheese are excellent sorts. The last three for field cultivation.

The high price of seed restricts the clover acreage on many farms. We must contend that money spent for clover seed is well spent. But such expensive seed should be treated right. Clover seed losses are generally the result of improper seeding. We believe it is always a risk to sow clover seed on land that was prepared the fall before, the seed being thrown upon it this is the way, perhaps, nine-tenths of the clover seed is sown in this country—on fall sown wheat, rye, or timothy. Good catches are often obtained in this way, but it is not to be looked for with much confidence except on porous land—soil that contains an abundance of humus. We prefer to sow on fresh worked land, and if sown on fall worked land, a light harrowing after sowing is a good thing. The harrowing will also benefit wheat or other fall sown crops provided the land is in good condition for working.

Give the Farmers a Chance

The ocean covers three-fourths of the earth's surface. Rocks and mountains, cities, towns, mines, railroads, public highways, deserts and swamps cover about one-sixth more of it. This leaves only one-twelfth of the earth's surface for productive cultivation, and on this one-twelfth the farmer must produce enough to feed and clothe the whole world of mankind, excepting only such food products as are taken from the sea. Ought not the farmer, therefore, be given a chance to do his best? Should not all classes aid rather than retard his efforts? And should any begrudge him a reasonable price for his products?

What Do Your Crops Cost?

It is time now for the farmer to become a business man—an up-to-date business man. With the privilege of pricing his products comes the responsibility of knowing the cost of them.

This makes necessary the keeping of accounts. Each field should have a page in a day-book. Take the following as a sample page, showing the account with one field.

IN ACCOUNT WITH FIELD No. 1.

(To be planted in corn.)

Date.		$
....	Breaking.....56 hours at	.....
.....	Rolling.....10 hours at	.....
.....	Harrowing...12 hours at	.....
.....	Planting.....10 hours at	.....
.....	Harrowing after corn was up....10 hours at	.....
.....	Cultivating..12 hours at	.....
.....	Other work..20 hours at	.....
.....	Gathering...100 hours at	.....
.....	Seed.....5 bu. at	.....

Fertilizer and other items put down in same way.

The wages should be for hand and teams.

The above record accurately kept will show the cost of producing the crop. It will be as easy to enter on the opposite side of the page the receipts from the crop and the balance between the two footings will disclose the result.

We recommend that each farmer appoint one of the boys book-keeper for the farm.

Test the Seed

We believe all seed should be tested before planting, but seed corn especially. The corn crop depends upon getting a good stand more than upon any other one thing. In an ordinary ten-acre field the absence of an average of ten hills to the row means a loss of about one-eighteenth of the crop.

An ordinary dinner plate makes a good tester. Fill with clean sand, moist but not too wet. Take four or five grains each from different parts of several ears of corn, press them into the sand and cover; put another plate reversed on top of this to prevent too rapid evaporation; keep in a warm room, about like a comfortable living room; examine often enough to be sure that it does not dry out; sprinkle with warm water if it gets too dry. In two or three days the kernels should begin to sprout, and thus show the vitality of the corn. If more than five in a hundred fail to sprout we would hesitate about planting that corn if we could get better. Whatever the percentage of unvital grains the planting should be increased to overcome it.

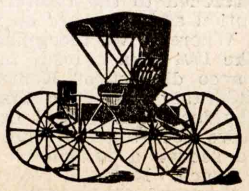
We have thousands of testimonials from satisfied customers.



THE COLUMBUS CARRIAGE & HARNESS CO., COLUMBUS, OHIO.

Do the very best you can. A perfect stand of corn can not be secured from one planting. Even if the planter would drop the corn perfectly as regards regularity and if every grain produced a stalk, the cut worms, crows, other birds or even biddie will take a share. The best that can be done is to strive for the greatest regularity in stand, but more dependence must be placed on the average than on entire regularity of stand. Consequently the uniformity of grains is not so important. The planter should be set so as to drop a correct aggregate to a certain length of row, or a correct average to the hill. If this advice is sound, then there will be no good excuse for rejecting the grains from any part of the ear on account of their size.

Write to the American Society of Equity and tell them what telephone company furnishes service to farmers in your county. Give the name and address of the company and a very concise statement of the field it occupies, etc. This information is needed in working out the farmers' problem of controlled marketing.

Spring began in earnest March 1st, this year, in this latitude instead of about April 1st. Farm work is advanced and crop prospects are flattering. Every farmer who wants good prices for this year's crop should do something now for the A. S. of E.

UP-TO-DATE
Live Stock and Dairying
PRODUCTION AND MARKETING

"Now that I have a sheep and a cow, everybody bids me good morrow."—Benjamin Franklin in Poor Richard's Almanac, printed before the Revolutionary war.

Those who own property receive the considerate attention of the world.

The Supreme Court says the packers violated the law; Commissioner Garfield says they are very clever fellows, and are barely making a living.

The packers used to boast that the utilizing of (former) waste in the packing business paid their operating expenses. Hence we might argue that the difference between cost of the animal and the price of meat was the measure of profit. Or that the cost of operating has mightily increased.

We predict that the solution of this problem and many others will wait for the rise of the third power.

Food adulteration is everywhere and in everything. Farmers lose a large per cent. of their markets on account of it. It will wait for the rise of the third power for solution.

You wouldn't take your best wheat to be ground into flour by an old pioneer horse mill. Why feed your best corn and hay to be converted into beef and pork by old-fashioned scrubs?

Is the pasture for the pigs all right? You are selling your corn too cheap if you are depending upon it alone for your summer hog feed.

Farmers are no longer satisfied with corn bread and molasses for dinner. Then don't expect the cattle to be satisfied with poverty weed and tickle grass for pasture. Let them have blue grass and clover. They'll sell better and weigh heavier.

The farmer whose stock is always poor never attracts buyers. No matter what the pedigree, the fat stock are the best sellers and are always ready for market.

Don't pasture muddy fields. Such pastures are little benefit to the stock and the stock are a great damage to such pastures.

Don't use milk from any but perfectly healthy cows. Disease may be communicated from the cow to the human who uses the milk. Especially is this true in malarial diseases and tuberculosis.

The problem of live stock marketing is not yet solved. Though the beef trust has been found guilty and Commissioner Garfield's report makes the packers "guilty but good," the low price of live stock and the high price of beef has something between them that the stockmen would like to see knocked out. When they have had enough of live stock associations and lose faith in commissions' investigations, they will adopt controlled marketing and solve the problem in less than a single season.

Live stock men seem to be the slowest of all to grasp the idea of controlled marketing. There have been so many associations for the promotion of this or that phase of the business, some for one thing and some for another—some seeking to increase prices by making better stock, others to increase profits by cheaper production, still others by contests to reduce the cost of transportation, and others yet to secure special favors through legislation, that the real source of relief—control of supply and the making of prices—has been entirely unseen by them. And being unseen by the stockmen it is no wonder that it was seen and eagerly seized by the spirit of greed personified in the packers. This is the live stock situation to-day, and those are the causes which have led up to it. Even yet darkness hovers over the field lots, pastures and ranges, and the stockmen are blindly depending upon spasmodic legal effort to save them from conditions that greed creates to take from them what is justly theirs. Apparently they are still oblivious of the fact that relief is in themselves alone. They are the first owners of the property and the dictators of the terms of its sale. When they realize this fact and act upon it, relief is already obtained.

In spite of conditions, we feel it our duty to encourage the growers of live stock. The world must and will have thir product. The people must eat, and they will continue to eat meat. The meat must come from the ranges, the pastures and the feed lots, and can only be obtained at a price. The eaters must pay for what they eat. It is only a question of who shall set the price and receive the money paid. All concede that the logical person to do this is the producer, not the purchaser, and we have unlimited faith that—

Right o'er might must find its way,
And justice rules no distant day.

Meanwhile be just as vigilant to stop the smaller leaks, and take every advantage of what good has been taught by the efforts previously referred to—efforts not to be counted useless, but vain, so far as the accomplishment of the main purpose is concerned. Be content with nothing but the best; bring that best to the market at the least possible cos, but do not fall into the error that expenditure is always extravagance. In the production of live stock, as in most other productive effort, the withholding of a dollar is sometimes the worst of waste, and the expending of one the very best economy. Good judgment must decide such cases and point to the better way. If you pasture, have the richest at the least expense; if you feed, use that which will surest accomplish the purpose at the smallest cost. Do not understand that we are advising a life of seeking high values for little pay, a life of nigardly beating down of prices. We can think of no more unhappy life. The intelligent reader knows what we mean. Some pastures are expensive

WHAT PRICE MEANS IN BUYING A SEPARATOR

There are two most important considerations in the purchase of a Cream Separator. One is efficiency and the other life or durability.

Every buyer thinks of efficiency, and while recognizing the superiority of the De Laval in such respect is frequently tempted to overlook it because some inferior machine, claiming equal capacity, is $10.- to $25.- "cheaper" in first cost.

Few buyers stop to think of comparative life and durability. The established life of a De Laval machine is at least twenty years, and may be as much more. The twenty years is already proved.

On the other hand, as they are made to-day and run at the tremendously high speeds they are, in the effort to approach the efficiency of the De Laval machines, no other separator on the market can last for more than two to ten years at the outside. The average will not exceed five years. Examination alone will satisfy every buyer of this.

The price of a 10 to 25 cow De Laval machine is $100.- and its established lifetime twenty years. Even if just as good in every other way, the machine which lasts ten years is worth $50.- That which lasts five years is worth $25.- And that which lasts two years (and there are several makes on the market which cannot possibly last longer) is worth just $10.-.

And when you add to this the fact, which nobody who knows attempts to dispute, that a De Laval machine gains and saves at least twice as much every year as any imitating separator, it will be better understood how little FIRST COST of the separator really means, or rather HOW MUCH IT MEANS even if it is a little more to begin with.

A De Laval catalogue, or better still a De Laval machine itself, helps to make all these facts plain to everybody having use for a separator, and either is to be had for the asking.

Bog Spavin

Lameness resembles bone spavin, but the bunch is in front of the true hock joint, a little to the inner side, and is soft and yielding, hardening sometimes as the case grows old.

Fleming's Spavin Cure (Liquid)

is a special remedy for the soft and semi-solid bunches that make horses lame—Bog-Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It isn't a liniment to bathe the part, nor is it a simple blister. It is a remedy unlike any other—doesn't imitate and can't be imitated. Easy to use, only a little required, cures the lameness, takes the bunch, leaves no scar. Money back if it ever fails. Write for Free Horse Book before ordering. It tells all about this remedy, and tells what to do for blemishes of the hard and bony kind.

FLEMING BROS., Chemists,

207 Union Stock Yards, Chicago, Ill.

NEWTON'S Heavo, Cough, Distemper and Indigestion Cure. A veterinary specific for wind, throat and stomach troubles. *Strong recommends.* $1.00 per can, of dealers, or Exp. prepaid.

The Newton Remedy Co., Toledo, Ohio.

though of little feeding value, others are rich in value, but cheaply produced, and so of feeds. That is what we mean. Skill and judgment are the winning cards and will continue to be so even after the stock raisers have come to the front and are universally recognized as the makers of prices on their products.

We have a letter from a feeder in Kansas who ordered his paper stopped because, as he wrote, "I expected the A. S. of E. to establish clearing houses, have representatives on the leading markets, report markets, advise producers, control marketing and make for us profitable prices."

This man registered a complaint because the A. S. of E. has not accomplished all these things in two years. He has probably paid to the society $1 or $1.50 and expected to realize all these things for himself and for the hundreds of other stock raisers, very few of whom have contributed anything.

Fortunately, and it is usually so, the society had already taken the first steps to accomplish all these things for stockmen, as readers of Up To Date have noticed in recent issues. But it takes time—more time really to teach the interested people of their own self-interest than it will to accomplish the results after the teaching is done—to do thes things. The great railroad systems have been many years building up. The same with that great and wonderful system, the Standard Oil Company.

If stockmen would rally to the support of the A. S. of E. as they should, it would not be more than a few months until their machine would be built and in complete running order.

The Ox Team

Those who are as old as the writer of this, if they lived as he did in the then sparsely settled regions adjacent to the Mississippi river, have seen the oxteam at work on the farm, on the road, and even at church on Sunday. The American Cultivator, published in Aristocratic Boston, is still not averse to saying a word for the ox team: "The slow, steady going ox team, with its inexpensive outfit, can still accomplish valuable service on the farm and without grinding away the best scaffolds of hay or devouring large rations of grain or becoming worthless with old age and broken bones, as does the horse. They always bring a fair return at the butcher's block."

When receipts of stock are large on any market the price is low. When receipts are small price is high. When stockmen have their own central headquarters and connected with it by telephone, and it with the markets, there will be gluts, but just enough and the price will soon rise to a fair level and remain there.

Don't let the teams stand on a manure pile in the barn. It seems like we have said something like this before, but it is a point where too much carelessness is manifested on the farms.

Growing mules are good property, and the mule is a profitable grazing animal, but the mule pasture must have good fences.

Comparing the live stock in the United States January 1, 1905, with the number January 1, 1904, there was a 200,000 increase of cattle, 300,000 increase of hogs, a 320,000 increase of horses, a 130,000 increase of mules, but there was a 6,457,721 decrease in sheep. There was a slight increase in the value of horses, a slight increase in the value of mules, a six million decrease in the value of hogs and nearly a hundred million decrease in the value of cattle. What do you think of that? A large increase in the number of cattle and hogs, but a great decrease in their value. Who prices them?

Some of the papers are charging buzzards with being carriers of diseases of live stock, and cases are cited where it is claimed they carried hog cholera for miles and transmitted it to hogs that had had no symptoms of it before. It seems quite probable that they might do so, which only emphasizes the importance of burning or burying all dead carcasses, which should be done as a sanitary measure anyway.

A 320 page, cloth bound book, price $1.00, and 10 cents extra for postage, all for 25 cents, postpaid. See coupons

"Hobo Soup"

BY MOLLIE MINOR.

Oh, its jolly to read the weekly sheets,
Tellin' us sons of toil
To be careful about the seed we sow,
And to fertilize our soil;
That we should raise a bumper crop,
And do the thing up brown,
But we're dead on to their little game
To make
the price
go down.

Their prate about the science way
Is thinner than hobo soup;
We've all to loose and nothin' to gain
By their plans to make a scoop.
They egg us on in a gentle way,
Whenever we go to town,
And laugh up their sleeves in merry glee,
When they see
the price
go down.

So I guess we'd better organize,
And sing a different rhyme,
And not be caught with their silly talk,
But await the coming time
When we can sit on our own doorstep,
And say to the man in town,
"We've got the crops, and we tell you
plain
The price
shall not
go down."

Our readers need not hesitate in sending ten cents for the splendid new catalogue just issued by Messrs. White, Van Glahn & Co., Department D., New York city, whose advertisement appears in this number. This catalogue is said to be the most complete volume of the kind ever issued, and contains descriptions, illustrations and prices of nearly twenty thousand different articles of daily use either as necessities or luxuries, in the home or on the farm. Besides this, there is a supplement of useful information, the facts for which have been gathered from all sources during the past quarter of a century.

Messrs. White, Van Glahn & Co. are perfectly reliable, and are the oldest, largest and most progressive mail-order house in the East. They were established in 1816, and in New York city alone have two establishments. Their goods are high grade, and in prices they have the reputation for being the lowest.

The catalogue is handsomely gotten up, and costs eighteen cens to mail. One will be sent on receipt of ten cents, which is asked to cover about half the postage. We believe our readers will have a great deal of pleasure and profit in this book.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

The annual poultry products of the United States exceed in value the wheat crop, the hay crop, or the products of the mines."—Statistical Gleanings.

There will be a good demand for early chicks at good prices.

The larger the visible supply the lower the price. Doesn't the egg market furnish an illustration?

The fussy old hen is a mighty big bird, and she has again settled down to business, and is scratching for a new record.

So long as there are millions of dollars' worth of eggs imported into the United States there is no danger of an over production of eggs.

The most important problem before the poultry raiser is to increase the percentage of hatched chickens that are raised. To solve this problem, the young chicks must have better quarters than are usually given them.

Success depends upon having healthy fowls at this time of year. As a precautionary measure, let us suggest, modestly, that you have the poultry house cleaned out and whitewashed, and keep plenty of lime and gravel about the yard.

Scaley legs is a common spring trouble. It is a parasitic disease. Rub the legs and feet thoroughly with an ointment of fried meat grease and coal oil. Work it well under the scales—kill the parasites. One or two applications will do the business.

Don't let any cold rains find the early chicks exposed. "April showers bring May flowers," but they reduce the percentage of chicks raised to the number hatched.

Try to keep a record of your best layers and, if possible, save your pullets from them, always discarding the inferior layers. Thus you may build up a laying strain of whatever variety you may keep. But there is a limit that should be kept in mind. Hens that are kept laying through the winter should not be expected to continue a high record through the spring and summer. It will be a progressive step when we get our eggs for hatching from hens that have not laid much during the winter months.

May we again speak of watering the poultry? This is generally the weak point in the poultry yard. Bad water is a wonderful vehicle for carrying disease. Provide clean water and keep the drinking vessels clean. Have all arranged so that the young chicks cannot get into the water. A shallow vessel filled with large gravel and then with water, as mentioned in a previous issue, makes an excellent watering place for young chicks, but both gravel and vessel should be cleaned every day or two.

The bee-keeper is on the alert now. The bees are in the midst of the fruit bloom, reaping their first harvest. It is a good time to examine the hives to see that all is right, but do not disturb them more than is necessary. For best results the hives should be strong by the time the white clover begins to bloom. Cool, rainy weather during the fruit bloom is bad for bees, and may make artificial feeding necessary at this time, in order to insure early development. If extra stores are saved the hives must be strong during the honey flows.

If there are no trees or shrubs in the poultry yard, plant a few hills of giant caster beans. Chickens must have shade and no other shade equals that made by the leaves of growing trees, shrubs or plants.

Be sure to so plan that you will not have a flock of old hens. Two years is a limit that should not be passed except in cases of special excellence.

The water-glass method of preserving eggs, as we gave it in Up-to-Date Farming of June 1, 1904, is entirely successful.

Imagine a telephone in the house of every poultry man. This phone connected with the County Union. All the County Unions and all the markets connected with the farmers' clearing house. Will not the poultry man's problems begin to solve themselves?

It is very questionable whether fowls injure meadow land by running upon it in an ordinary farm way. They are bad in newly sown grain or newly planted corn, and until it is "knee high." After that they are an advantage.

In muddy times do not feed the fowls more than once in the same place in succession, and then, if possible, feed on sod or in dry trash—don't feed in the mud is what we mean, nor where they have tramped and left their own filth. Of course, we are speaking of grain feeding; soft feeds should always be given them on a floor or in troughs.

A Few Incubator Points

The following hints as to the care of incubators we find in the Farmers' Voice for March:

The first week the great danger lies in letting the heat run above 103; the last week in running below 100. In the early stages the eggs will not stand too much heat. A rise of several degrees above regulation temperature will kill the delicate germ. A fall in temperature at this time is not as serious as a rise. But during the last week the embryo chick needs the heat to help it to mature and reach the point of exclusion. The going out of the lamps at hatching time is well known to be ruinous to the hatch.

If the room in which the incubator is run is quite cool, be careful about leaving the eggs out of the machine long at turning time. If possible, take the tray into a warm room. If this cannot be done, great care and quickness are necessary, particularly during the first week. After the chicks are considerable developed, so that animal heat is strong, the danger is not so great, but even then the eggs should not be allowed to cool too much.

Do not open the incubator except when it is necessary to do so, and then keep it open the shortest possible time. Each opening involves a rapid change of temperature within it.

About the South

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about Southern Farm Lands, Mississippi Valley Cotton Lands, Truck Farming, Fruit Growing, Stock Raising, Dairying, Grasses and Forage, Soils, Market Facilities and Southern Immigration along the lines of the Illinois Central and Yazoo & Mississippi Valley railroads, in the States of Kentucky, Tennessee, Mississippi and Louisiana.

Send for a free copy to J. F. Merry, A. G. P. A., I. C. R. R., Dubuque, Ia.

Choice Pickings in the YAZOO VALLEY

"Choice Pickings in the Yazoo Valley" is the title of an illustrated 36-page pamphlet describing the railroad lands in the famous Yazoo Valley of the Mississippi, on the line of the Yazoo & Mississippi Valley Railroad, and showing what has been accomplished by the large number of settlers successfully established there. For a free copy, address E. P. Skene, Land Commissioner, I. C. R. R., Central Station, Park Row, Chicago, Ill.

Information concerning rates and train service to the South via the Illinois Central can be had of agents of connecting lines, or by addressing
A. H. HANSON, G. P. A., Chicago, Ill.

Fruit Growers' Special to Texas in June

About the middle of June the Cotton Belt Route will run a special train excursion of fruit and truck growers to and through the wonderful East Texas fruit and truck country. The round-trip from St. Louis will consume about a week. The object will be to study conditions of fruit and truck growing in the East Texas country at the height of the harvest season—when they are picking, crating and shipping peaches, plums, tomatoes, potatoes, etc. From the vine and tree to the refrigerator car. The big orchards will be visited and every opportunity given to SEE RESULTS.

Many big growers, officers of State horticultural societies, experiment station experts, editors of farm and fruit papers from Northern states will be with us. Extremely low round trip rate, special train for the party run on fast schedule—only one night on the road.

The chance of a lifetime to see the great East Texas country to best advantage and at trifling expense.

Write for copy of fruit booklet, itinerary and cost of trip and full particulars.

White Wyandottes EXCLUSIVELY

WINTER EGGS PAY. DO YOU GET THEM?

If not, you have the wrong breed, or else no breed at all like Peter Tumbledown's hens. If you want winter eggs—hens that are hardy, good foragers and the leaders in market for broilers and fryers, I have them for you. They are Prize Winners, also. I keep them for profit and breed with these points in view. My strain "The Bird for Business" is a money-maker. You will have to place order early to insure delivery at time you say. Orders booked now for immediate or future delivery at $2.00 for 15; $5.00 for 45; $10.00 for 100. A. R. TUBBS, Weston's Mills, New York

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

THE APPLE TREE

I'll plant a tree, a spreading tree,
Whose shade may welcome you and me;
A tree whose blushing autumn store,
Shall cheer the rich and bless the poor.
A goodly, heritage 'twill be,
The best of trees—the apple tree.

—J. P. S.

Peaches will be scarce in the Ohio and Mississippi valleys.

Fruitful orchards are the footprints of progressive farming.

Don't forget the mulch in the orchard. Ten trees well mulched make a "bigger" orchard than twenty trees weedy, neglected and starving.

He who plants a tree erects his own monument.

The strawberry bed, the Jersey cow and the sugar bowl—no other ingredients necessary.

The exceptionally hard freezes of February cut short the blackberry crop.

Don't fertilize nor cultivate the pear trees. This is easy advice to follow, and it is all right.

Dewberries trained upon stakes will beat those permitted to run on the ground.

EMPIRE MFG. CO., Box 68 F Quincy, Ill.

For the old orchards—clover, peas, hogs, sheep, mulch.

Mr. A. Donald recommends the free use of salt, not brine, around pear and plum trees.

The main secret of success in setting a tree is to pack the dirt as firmly around the roots as it was before the tree was removed from the place where it originally grew, and to be sure that there are no air spaces about the roots.

The Elberta is the Ben Davis of the peach orchard. There are a great many better peaches when you come to test the quality, but it is hardy, has a very wide range, is a prolific bearer of large-size fruit of fine color and is attractive to buyers.

In making an orchard, don't run too much to varieties. Be sure to choose what is adopted to your soil and climate, and what your market will take, and confine yourself to a few varieties that most completely fill these requirements.

When we set trees in clay lands we don't dig the big, deep holes most people recommend. Nine times at most in ten the earth will be but imperfectly packed in again, and the first heavy rain will fill the hole with water, the clay walls will refuse to let it filter out; result, a mud hole and a dead tree.

The General Orchard Spray

To get the best results fruit trees should be sprayed three times each season: (1) just before the blossoms open; (2) immediately after the blossoms fall; (3) a week or ten days after the second application. If you can not spray but once do it just after the blossoms fall. If but twice, just after the blossoms fall and again in a week or ten days after. The best mixture for you to use is the Bordeaux with paris green added.

To make Bordeaux slack 50 pounds of good lime in 25 gallons of water and dissolve 50 pounds of copper sulphate in 50 gallons of water. Use a wooden vessel for the copper sulphate. You will save time to put the copper sulphate in a gunny sack and suspend in the vessel so that it is just immersed in the water. If you use a 50-gallon barrel or tank to spray from, when you are ready to spray, fill it about half full of water, then pour into it four gallons of the copper mixture after you have stirred it well. Take two gallons of the lime water after stirring well and dilute to 25 gallons, adding four ounces of paris green that have been previously mixed with a small quantity of water, then pour this diluted lime water into the copper mixture, stirring well as it is poured in. If the barrel is not full, fill with water.

All mixtures and the water should be strained as they go into the barrel.

If you use a larger or smaller barrel or tank to spray from use the two mixtures and the paris green in the same proportions.

The above treatment is for coddling moth, scab and other common insect and fungus enemies.

Caustic Soda For Scale

A Maryland orchardist gives the press the following experience with caustic soda as a spray for scale:

"One application of soda has about cleared them up. It has been used here in many orchards that had not been sprayed before and the results were all that could be desired. It not only killed the scale, but cleaned the bark and gave it a nice, clean appearance. Our trees never looked better. We think we know a good thing when we see it and want our neighbors to know it, as it may do them good. We know the value of lime, sulphur and salt wash also. We are satisfied with caustic soda. We find it less than half the expense, not one-fourth the trouble as the L S S wash. Eight pounds of crushed caustic soda to 50 gallons of water is the proportion we use. Put the soda in your spray barrel; fill the barrel with water; stir a few minutes and you are ready for work. It should be applied before leaves put out. Simple, inexpensive and effectual has been our experience. We have had only one year's experience with it, but feel encouraged to continue it in preference of anything else, even at the same cost.

If fruit men want to market without gluts and always secure profitable prices they must organize on the plan of the A. S. of E. We ask them to send the name and address of their telephone company so we can begin lining them up in a solid army.

Fruit as a Food

Fruit alone will not sustain life for any great length of time, but helps to furnish a variety in the diet.

It stimulates and improves appetite and digestion, relieves thirst and introduces water into the system; acts as a laxative or astringent, stimulates the kidneys and supplies the organic salts necessary to proper nutriment..

Those inclined to be constipated will find figs, prunes, dates, nectarines, oranges and mulberries beneficial.

Those troubled with too great a looseness of the bowels may be benefited by the use of blackberries, dewberries, raspberries, pomegranates, quinces, pears, wild cherries and cranberries.

Grapes, black currants, peaches, whortleberries and prickly pears may be eaten with good effect by such as have sluggish kidneys—they stimulate the action of the kidneys.

Red and white currants, gooseberries, lemons, limes and apples are good for those who are inclined to be feverish—they are cooling and soothing. Apples are also useful as a stomach sedative; that is, they will quiet the stomach and relieve nausea.

RELIABLE WATCH CO. Dept. 188 Chicago

UP-TO-DATE Gardening and Flowers

HOW TO GET BEST RESULTS AND BEAUTY

Food the Gods delight to honor,
In the farmers' gardens grow,
And beauties passing skill of artist
Are found where Nature's flowers blow.
—J. P. S.

We suppose the hardy early planting is completed. But in this latitude danger from frosts is not quite over.

Look around and see if there is not a pile of wood ashes or of chip manure that ought to be in the garden.

Peas and beans. These are the stand-bys of the vegetable garden. And the sweet corn. Have these coming on as early as you dare for frost, and have them in variety of early and late.

Don't discard the pole bean because of the trouble of "sticking" them. The bush beans can scarcely be made to take their place.

To keep beans and peas from becoming infested with weevil, put in a barrel, set or suspend in the barrel a small bottle, uncorked, containing bisulphide of carbon, cover the barrel tightly with an old quilt or rug and let remain three or four days. Take out the bottle, and if any of the liquid remains in it cork tightly and put away in a secure place; it will do to use again. When uncorked it evaporates rapidly, and the gas, being heavier than air, settles down among the beans or peas or any other grain so treated, killing all insect life, but in no wise injuring the vitality of the seed, nor affecting them for subsequent use as food. Do not breathe the fumes, for it is injurious if taken into the lungs. Do not handle it about a fire, nor light a match when you are using it. as the gas is explosive. Give the seeds, barrel and room a good airing after treatment.

Go oftener to the garden for summer food than to the smoke house. Vegetables are cooling foods; meats are heat-producing foods.

The old-time plate of greens! How eagerly our mothers sought them in the bottom fields, along the creeks and on the sunny slopes! They were relished as a change from winter fare, but the longing for them, though not understood, was nature's call for relief from too much meat and solid food. Hurry up the "garden sass."

The flower garden or yard is incomplete without petunias, and the new star petunias are special beauties, as are also the dwarf inimitable, but the New Giant, with its flowers sometimes five inches in diameter, is a wonder.

Poppies are both old and new favorites. Fairy poppies are perfectly double and have flowers that often exceed six inches in circumference. Snowdrift is a beautiful large, double, perfectly white poppy. They come readily from seed.

Salpiglossis is a beautiful garden plant that will seem a stranger in most country gardens, but once seen it will receive a glad welcome. Flowers many colored, exquisitely veined and sometimes three inches across.

If you want a beautiful little flower bed in some cozy corner, try Cupid sweet peas. They grow only 6 to 12 inches high, and do not need supports. Planted around a center bed of Bush sweet peas, which grow from 15 to 18 inches high, a beautiful effect is produced.

The Zinia is an old-fashioned flower, but, like a good friend, it bears acquaintance. There are now those which produce large flowers as double as dahlias, and they bloom from July until frost.

If you have laid away the March 1st Up-to-Date without securing those beautiful roses and delightful cinnamon vines, take it up and consider that offer again. We are sure you do not wish to miss either of those premiums. And perhaps you have not renewed your subscription, either.

In making garden this spring don't forget the rows of early turnips. They'll help you out with many a good dinner. We speak of it because sowing turnips in the spring is not so common as it should be. Any of the early flat turnips are good for this purpose.

Celery is one of the best of vegetables for nervous people; it is really medicinal. Grow some of it this season by all means.

Of course every farm garden will have lettuce, but will all have a trial row of Improved Grand Rapids? That is just about as near an all-round lettuce as can be had, and once tried it will have a place in the garden until crowded out by something better, as many other good things have been, but we don't know when a lettuce better than Grand Rapids will be found.

The Farmer and Strawberries

Who has a better right to all the strawberries he can eat than the farmer? If he does not have them, whose fault is it? No family garden is complete without them; it is just as easy to grow strawberries as it is to grow anything else in the garden. They are the very first fruit to ripen, coming at a time when the wife is at her wits' end to know what to have, to help her prepare a complete meal. And there are many ways in which they can be prepared for winter use.

Let us figure it up and see how much it will cost the farmer to keep a big family well supplied with strawberries all the year. Four hundred plants will be ample, and they should be selected from the earliest to the latest varieties, so the table can be supplied with fresh, rich berries all through the season. The cost of this number of plants would not exceed $3; they will occupy about 10 square rods of ground and one man can set them out in about two hours. After this, they require about the same amount of work as vegetables; the yield should be at least 500 quarts. Figure this up at 10 cents per quart and you have grown $50 worth of strawberries, and this same bed of plants will do fully as well for one more season. However, we should not figure them in money value, for the pleasure of contributing such good things to the family's happiness counts far more than money.—Frank E. Beaty.

THE UP-TO-DATE BICYCLE

The 1905 model bicycles, with coaster-brakes and puncture-proof tires, would have been considered miracles of mechanical achievement only a few decades ago, and yet they can be bought today for only a fraction of the prices then prevailing. The Mead Cycle Company, Dept. G 150, Chicago, are offering the finest of this year's models at from $10 to $24. and the models of 1903 and 1904 at from $7 to $12. Their factory clearing sale is attracting much attention among wheelmen, and their special catalogue, which they mail free, is worthy of careful study.

How $196.00 profit was made by L. P. Adams, Howard, Kansas: "My stallion got kicked on hock and it enlarged. Everyone said he was ruined. You advised me to use ABSORBINE. I got two bottles and today you can't tell which leg was hurt. It made me $100.00 per bottle. I am much obliged for the advice." Absorbine is $2.00 per bottle, at your druggist, or I will send a bottle express prepaid upon receipt of price. W. F. YOUNG. P. D. F., 102 Monmouth St., Springfield, Mass.

UP-TO-DATE

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

RISE HIGHER

"I saw a little blade of grass
Just peeping through the sod,
And asked it why it sought to pass
Beyond its present clod.
It seemed to raise its tiny head
All sparkling fresh and bright,
And wondering at the question said
'I rise to seek the light.'"—Song.

Seek the light. Rise steadily higher.

Home is what its inmates make it.

What member of the family is responsible for discord? An unenviable responsibility!

Be satisfied with your home, but don't be content until there is nothing else to achieve.

The farmer's wife often feels the weight of drudgery. Have you not made many trips that might have been covered in one?

How much did you get for the pig you was provided with to eat the kitchen slops? Did not provide one? Astonishing ! Don't neglect it this year.

"Do what you like to do," is advice given to housekeepers for their leisure moments. The best rest in the world is change of employment, and whatever one has a special fancy for is the happiest change, be it patchwork, fancy work, music or writing or reading.

No leisure time? Then make some. If you can't be a good housekeeper without some moments you are at liberty to devote to something you like to do, and whose doing is restful, then I declare I would not be a good housekeeper; I would find something to leave undone, no matter what might be said of it. Brain and muscle and nerve are too precious to be in a constant strain, and such strain is generally born of a lack of system and tact. Many things are done that might be left undone, and the housekeeping be just as satisfactory.

Joseph Thrifty would blush to see his mother go to the well for a bucket of water or carrying a load of wood while he was about the house, and his sister Anna is the first to note the time when the kitchen fire should be started. But we once heard Bill Threadbare tell his mother if she wanted a load of stove wood to go and get it.

Never doing anything wrong is not all there is of being good. Goodness is an active not a passive quality. To be good we must not only not do wrong, but we must do good.

The thought of the interminable routine of housework on the farm is almost as wearing on the busy housewife as is the work itself. Try if you can't vary it some and break the routine. If the breakfast table should sit while you make a bed or two, or clean up a room, or comb your hair, no law would be broken, and the mere change might be restful.

The best speaker is the one that says what he desires to hear, the best person is the one that does what we wish to have done, and the politest boy or girl is the one that most nearly keeps out of our way and performs for us at the desired time the little kindnesses we wish done without our having to make our wishes known. This may not be according to rule, but it is according to humans.

A little money to be spent absolutely as her own is very restful to the farmer's wife, and it is no more than her just due. But some farmers are very slow to pay debts they owe at home.

Don't too severely criticize other members of the household. Our faults may merit severer criticism than theirs. We have no right to demand perfection of others while we are imperfect ourselves. "Let him that is without sin cast the first stone." This is not an apology for evil, nor does it teach the excusing of faults, or the condemning of sin. It is a lesson in charity that elevates humanity and makes for peace and love.

We cannot look at the home on the farm without seeing the boy and girl that are growing up there. The "old folks" will soon depart. "The place that knows them now will shortly know them no more." Our interest in them is no more permanent than is their sojourn here. Not so with the boy and girl. In the course of nature they will ere many years, exercise a dominating influence in two separate homes, with responsibilities that reach into still other homes, and other homes, down, perhaps, a long line of the future. Hence every influence for good should reach out after the boy and girl, especially the boy and girl in the home on the farm, because the hope of the world centers in their future rather than in the future of city children.

Excess of food taken into the stomach cannot fail to produce bad results. The body must be sustained, normal animal heat maintained and the waste places built up. A definite amount of food is required to do these things, and every particle taken in excess of these needs is a burden to the system, impairs its ability to resist disease and shortens the life of the machinery—hatens death. Hence one of the most important studies is food and food values, and the wise student will reduce each lesson to practical personal account.

It must be clear that food taken into the stomach which cannot be properly used there must be a harmful burden to the entire machinery of alimentation. Nature sometimes violently throws it out by the same route by which it entered. This is the least harmful way of disposing of it. Otherwise it must ferment and produce acidity and gases to be disposed of by organs not designed to handle such matter, thus giving them work for which they are not adapted and impairing their natural functions and vitality. Or it actually putrefies and passes down the alimentary canal, not as healthy, life-sustaining, digested substance, but as putrid, poisonous matter, forcing its poisons into the blood, laying the foundation for disease and inviting death. One of the maxims of a great philosopher was, "We never repent of having eaten too little." We often repent of having eaten too much.

The great aim of civilization is to bring the human race constantly to a higher level and to secure for mankind greater comfort and more perfect happiness. We wish we could talk these things over with all of Our People and get their views as well as to express our own; but since Up-to-Date can carry but one side of the conversation, we must be content with a one-sided talk, and depend upon the good letters our kind friends write us for their side of the conversation.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also, how to cure sterility. Do not delay but write today.

Brooks' Sure Cure FOR RUPTURE

Brooks' Appliance. New discovery. Wonderful. No obnoxious springs or pads. Automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lymphol. No lies. Durable, cheap. Pat. Sept. 10, '01.

SENT ON TRIAL. CATALOGUE FREE.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did It Gladly Tells You How

Mr. A. S. Hitchcock (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease, that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health.

Our advice is to take advantage of this most generous offer while you can do so without cost.

I CURED MY RUPTURE

I will Show You How to Cure Yours FREE

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write today. Capt. W. A. COLLINGS, Box 672 Watertown, N. Y.

OLD EYES MADE NEW. Away with glasses. By mail 10c. **Dr. Foote, Box 788,** New York.

Growing all the time—the Business Exchange.

This Washer Must Pay for Itself.

A MAN tried to sell me a horse, once. He said it was a fine horse and had nothing the matter with it. I wanted a fine horse. But, I didn't know anything about horses much. And, I didn't know the man very well either.

So I told him I wanted to try the horse for a month. He said "all right, but pay me first, and I'll give back your money if the horse isn't all right."

Well, I didn't like that. I was afraid the horse wasn't "all right" and that I might have to whistle for my money if I once parted with it. So I didn't buy the horse although I wanted it badly. Now this set me thinking.

You see I make Washing Machines—the "1900 Washer."

And, I said to myself, lots of people may think about my Washing Machines as I thought about the horse, and about the man who owned it.

But, I'd never know, because they wouldn't write and tell me. You see I sell all my Washing Machines by mail. (I sold 200,000 that way already—two million dollars' worth.)

So, thought I, it's only fair enough to let people try my Washing Machines for a month, before they pay for them, just as I wanted to try the horse.

Now I know what our "1900 Washer" will do. I know it will wash clothes, without wearing them, in less than half the time they can be washed by hand, or by any other machine.

When I say half the time I mean half—not a little quicker, but twice as quick.

I know it will wash a tub full of very dirty clothes in Six minutes. I know no other machine ever invented can do that, in less than 12 minutes, without wearing out the clothes.

I'm in the Washing Machine business for Keeps. That's why I know these things so surely. Because I have to know them, and there isn't a Washing Machine made that I haven't seen and studied.

Our "1900 Washer" does the work so easy that a child can run it almost as well as a strong woman. And, it don't wear the clothes, nor fray edges, nor break buttons, the way all other washing machines do.

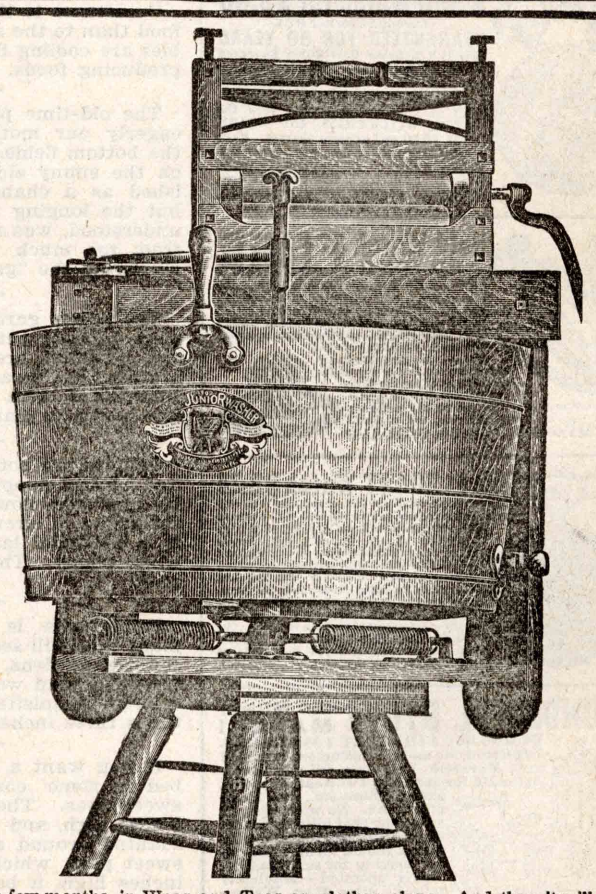
It just drives soapy water clear through the threads of the clothes like a Force Pump might.

If people only knew how much hard work the "1900 Washer" saves every week, for 10 years,—and how much longer their clothes would wear, they would fall over each other trying to buy it.

So said I, to myself, I'll just do with my "1900 Washer" what I wanted the man to do with the horse. Only, I won't wait for people to ask me. I'll offer to do it first, and I'll "make good" the offer every time. That's how I sold 200,000 Washers.

Let me send you a "1900 Washer" on a full month's free trial! I'll pay the freight out of my own pocket. And if you don't want the machine after you've used it a month, I'll take it back and pay the freight that way, too. Surely that's fair enough, isn't it?

Doesn't it prove that the "1900 Washer" must be all that I say it is? How could I make anything out of such a deal as that, if I hadn't the finest thing that ever happened, for Washing Clothes,—the quickest, easiest and handiest Washer on Earth. It will save its whole cost in



a few months, in Wear and Tear on clothes alone. And then it will save 50 cents to 75 cents a week over that in Washerwoman's wages. If you keep the machine, after the month's trial, I'll let you pay for it out of what it saves you. If it saves you 60c a week send me 50c a week, 'till paid for. I'll take that cheerfully, and I'll wait for my money until the machine itself earns the balance.

Now, don't be suspicious. I'm making you a simple, straightforward offer, that you can't risk anything on anyhow. I'm willing to do all the risking myself! Drop me a line today and let me send you a book about the "1900 Washer," that washes Clothes in 6 minutes. Or, I'll send the machine on to you, if you say so, and take all the risk myself. Address me this way,—R.F.Bieber, Gen. Mgr. of "1900 Washer Co.," 645 Henry St., Binghamton, N.Y., or 355 Yonge St., Toronto, Canada. Don't delay, write me a post card now, while you think of it.

A View Through the Press

In our glimpses over the field for this issue, the article which first attracts our attention is from the Republican and Herald, of Winona, Minn. A writer, speaking of the unfavorable condition of the markets, continues:

Now what is the remedy? It is the organization of the farmers on a plan that will give them control of the markets, without which their efforts will be lost. How can they get control of the markets of the products of the farm? By placing them on the markets as fast and no faster than the public will consume them. This keeps them in the hands of the farmers instead of in the hands of the speculators. When they are in the hands of the speculators they are used as a club over the farmers' heads to keep down the price to the cost of production. This is a curse to the business and wealth producing interests of the entire country. This plan of controlled marketing is the plan of the American Society of Equity. This organization gets its grain statistics through its own members that are scattered all over the grain growing sections. Upon these statistics the prices of grain are fixed and the public must pay them or go without. This does not add anything to the cost to the consumer, it simply takes away the enormous profits that now go to the speculators and leaves them in the hands of the farmers, where they belong. This increases the purchasing power of the farmers. This can not be done without stimulating the anteries of trade, and the merchants and wage earners receive an equal benefit.

The national organization is rapidly increasing in membership, and as impossible as it may seem to the man that has given it no study, it is going to accomplish its object within two or three years, and this at a very small cost. Farmers of Winona county, come to the front and perform a duty you owe yourselves, your families and your country. This society does not interfere with other people's business. The farmers have enough to do to place their own business on an equal footing with every other business of the country.

In Olmsted county the merchants are taking a great interest in this movement, and are helping to push it along because the prosperity of the farmer means the prosperity of the merchant.

Words of wisdom everyone, and the publisher of the Republican and Herald has done his readers a greater favor than they know in giving them an opportunity to read that article, a favor which they ought, and will some day, appreciate.

We next quote from the Weekly Times, Conway, Ark. Speaking of an address delivered by Mr. Sherman, and of the A. S. of E. and its purposes, the editor says:

There is no question of the ability of the farmer to control prices, and he certainly has the right. At the present time the market is made and controlled by the bulls and bears on the board of trade, men who never raised a grain of wheat or a boll of cotton in all the unprofitable days of their lives. If these few gamblers can and do fix the price on farm products, why not the men who raise the stuff have the right to say what it is worth?

Can any one, dare any one, who claims the right of citizenship in a free country, and who himself exercises the right to own property, say that the above is not true. If a farmer may own property, if what he produces belongs to him, he has a right to put a price upon it, and to refuse to surrender it until he gets his price.

We quote now from the Democrat, of Rochester, Minn.:

The American Society of Equity will meet in Viola February 17. W. C. Webber has been engaged to speak on subjects relative to the farmer and his problems, and how to obtain profitable prices. Mr. Webber is prepared to answer any questions which may be asked. We believe any one who may be opposed to the society and all who will come and hear Mr. Webber will be convinced of its great good to the farmer and will join and help along a good cause.

Mr. Webber is an earnest worker, and he is building for himself among his people a monument more enduring than granite or bronze, for he is leading them away from wrongs they have suffered for many years.

The Circleville, Ohio, Watchman, furnishes us with this item of news:

The American Society of Equity Thursday, February 2, fixed the price for growing sweet corn at $9.00 per ton and agreed to furnish at that price all the acreage required by the Amanda factory.

Amanda, Ohio, is a center of sweet corn production, and the A. S. of E. stands ready to supply the utmost needs of the factory at an equitable price.

We clip the following from the Louisville, Ky., Courier-Journal. It refers to a meeting at Cloverport:

The Victoria Union of the American Society of Equity, seventy-five strong, marched into the city to attend the meeting, with flying colors and raised banners. Their wagons and horses were decorated, and the procession was headed by two horsemen carrying the union's banners. Such interest among the farmers over a national question has never before been known in Breckenridge county.

Cloverport business men demonstrated their interest by serving the farmers a bountiful free lunch.

Tobacco is being held for eight cents for three classes. Many farmers of the county believe so strongly in their union that they are holding their tobacco, although they are actually in want.

Such devotion certainly merits success, and it is characteristic of farming people. They see that one of their most sacred rights has long been denied them, and they propose that it shall be restored to them, no matter what the sacrifice necessary to secure it.

The Huntingburg, Ind., Independent gives this account of the Society in Dubois County:

The county convention of the American Society of Equity was held in this city Tuesday afternoon. The meeting was held in the council chamber, and delegates were present from every union in the county but one—Jasper Union No. 1.

The election of officers resulted as follows: President, Daniel Lichlyter; Secretary, John G. Koch; Treasurer, John W. Katterhenry.

The President, Secretary and Treasurer were authorized to secure some one to thoroughly organize the county, and each union will be instructed to select three members of their respective union to assist in the work of organization.

The society is one in which the farmer is particularly interested, and is of much aid to all who belong. While the organization is but two years old in this county, the membership numbers from 125 to 150 of the best farmers in the county. Duff Union is the strongest of the twelve unions, having a membership of almost fifty.

Thus the work progresses, and the kindly words spoken by the press are appreciated.

The Louisville, Ky., Times gives the version of the meeting at Cloverport:

Between 400 and 500 farmers have come here to attend the American Society of Equity, which is holding a meeting today. Hancock and Breckinridge counties are represented by a large number of enthusiastic members of this society. A large delegation came from Victoria on horseback, carrying banners with a "3" and "8" on them. The farmers say they want $8 a hundred for each of the three classes of their tobacco. From the interest manifested to-day they will hold their corps until they get their price.

The tobacco growers are manifestnig more activity than almost any other class at present.

The Elkton, Mich., Advance heads a leading editorial article thus: "The American Society of Equity is doing good work in getting better prices for farm products." We quote from the article as follows:

There are several farmer organizations throughout the country ,but none of them have proved to be what they ought for the reason that they tended to antagonize other trades and business, but in this society one can readily see the intents and purposes from the suggestions of the emblem, and they are to regulate the price by the amount of the farmer products consumed, claiming that they (the farmers) are under neither legal or moral obligations to feed the balance of the world at unprofitable prices. To accomplish this object necessitates an organization that will acquaint the farmer with such information that will enable him to know how much of the different form products are raised and ready for market from time to time and an approximate amount needed for consumption and provide means by way of warehouses and elevators where the surplus can be kept in years of great abundance for years when any commodity is scarce on account of poor crops. To furnish all this information and get it to the farmer there is first organized a national union with headquarters in Indianapolis, Ind., with local unions all over the county.

In some townships where the farmers are alive to their interests there are several unions. In Chandler township of this county the farmers are working up to a degree that is charactistic with them to do what they have to do with a vim and with telling effect as is shown by the many fine well cared for farms. There are, however, many farmers who will take no interest in the organization apparently for the reasons that other societies they have been induced to join have come in a great measure, to naught. This all comes from the fact that they don't understand the great plan of this society. This society is no political scheme nor a secret institution; nor is it one to work to pull down other classes of business, but rather to harmonize matters in their business relations with the every day business men of our villages and cities. That this is true is plain to understand from their constitution which admits any person of good moral character, fourteen years old and over, engaged in any branch of agriculture or one who is a friend to agriculture and willing to put his shoulder to the wheel and work for its principles.

The Elkton Advance thus proves itself entitled to the kindly consideration and support of the farmers of Michigan.

Thus comes the press to the help of the farmers, and we extend to each of them a fraternal hand and bespeak for them the liberal patronage of our people. Note, however, that not a single so-called farm paper is quoted from, and yet we have scanned their columns as closely as those of any other class of publications, and would even more gladly have quoted them. The conduct of the agricultural press is unaccountable.

Insufficient Address Orders

Following is a list of orders received by us since Jan. 1st, 1905, which can not be filled on account that complete address was not given.

We caution our readers to be sure to give complete address and write very plainly. We are waiting for the proper people to claim the below orders. When writing give amount remitted and a duplicate of orders.

J. A. EVERITT, Indianapolis, Ind.

Harvester Talks to Farmers—No. 4.

A New American Industry of Vital Importance to Every Farmer.—Binder Twine at Greatly Reduced Prices.

A NEW market for the products of thousands of acres of American farm lands—development of a new American industry—a high grade binder twine at greatly reduced prices.

These are some of the results following the introduction of the International Harvester Company's new flax twine—an article which is undoubtedly destined to enter largely into the binding of grain.

It is an important move in many ways, for it not only makes possible a cheaper twine for the farmer's use, but, also, creates an entirely new market for one of the most important American farm products.

For many years the manufacturers of harvesting machines have been experimenting in an attempt to perfect a method by which American-grown flax can be utilized in the manufacture of binder twine and thus render both the manufacturer and farmer independent of manila and sisal fiber of foreign growth.

In their first experiment the attempt was made to use retted flax, but the process of retting the fiber was so slow and so expensive that but little was gained by the substitution of flax for sisal and manila, and finally the attempt was abandoned.

One of the brightest inventors in the country was put to work to solve the problem of how to utilize the flax in its natural state as harvested.

In the early part of 1904 this inventor succeeded in perfecting a process and in constructing the necessary machinery for the work.

This overcame all the mechanical obstacles, but the next difficulty was to get a sufficient quantity of flax suitable for twine manufacture.

Flax for this purpose must be sown much more thickly than flax sown for seed, in order to produce a higher and less bushy growth, getting a longer and better fiber. The ground, too, must be left as smooth and level as possible, so that the flax may be cut low down, with a short stubble, getting all of the straw and the longest possible fibers in the product harvested.

The flax is harvested, when fully matured, with a regular grain binder, and bound into bundles. In handling flax for twine purposes much care is taken to keep the sheaves straight. The company buys the flax in the bundle, before it is threshed, paying for it a price based on the yield of seed, and saving the farmer the expense of threshing.

As soon as the process of manufacturing the twine was demonstrated to be a success, a corps of men were sent into the flax growing sections of the country and succeeded in securing a large quantity of flax of a good quality, the twine from which will be sold and used in the harvest of 1905. A few carloads were made in time for the harvest of 1904 and gave such uniform satisfaction that the manufacturers were encouraged to undertake operations on a much larger scale for 1905.

Men are now canvassing Minnesota, Michigan and other flax growing states, contracting with farmers to grow flax for twine production and the expectation is to secure sufficient flax in this way to place a large amount of twine on the market for the harvest of 1906.

In many instances the company is furnishing the flax growers with seed for planting, using the best seed grown in this country, or a high grade of Russian seed—all carefully cleaned and recleaned three or four times by hand.

Inasmuch as the company takes the entire production of the flax field before threshing, it is desirable that the twine mill be located as near the flax growing region as possible. At the present time all the twine is manufactured in Chicago, but it is the company's intention to establish branch mills in the leading flax growing sections of the country.

When the supply of flax fiber shall be sufficient to permit the making of the twine in large quantities, the price will be still lower as compared with the price of manila and sisal fiber twines; while the price which the company pays for the flax in the bundle makes it one of the most profitable crops the farmer can grow.

We need not point out the great importance of this new industry to the American farmer; a twine cheaper than the twine made from imported fibers has long been a crying necessity. The utilization of flax gives him an article, at a lower price, in every way the equal of many higher priced twines.

But beyond this is the fact that the utilization of thousands of acres of farm lands for flax growing, at a profitable price, means a greater diversification of crops and less crowded markets for everything the farmer raises, and in this respect the new industry is of vital importance to every farmer in the country, even if he never raises an acre of grain or buys a pound of twine.

As the industry grows, we may confidently count upon a flax twine mill in every flax growing section, giving flax growers a market of easy access for their product.

This movement is in direct line with the well-defined policy of the International Harvester Company—to produce from the raw material the machines and appliances needed for the harvesting of grain, securing by this means material of the highest grade at the lowest cost of production—and now they are developing a new industry, producing an indispensable necessity at a lower cost to the farmer, and making the American farmer independent of a foreign grown article and giving him a new market for one of his staple crops.

The supply of flax twine for 1905 will not be nearly sufficient to meet the demand for it, but by next year it is hoped and confidently expected that every farmer who wants a purely American product can secure it without difficulty, and at a price which will save him much money.

In our former talks we called attention to the immense facilities of the International Harvester Company for manufacturing harvesting machines, and as harvest time is rapidly approaching, we wish to emphasize our statements that the Champion, Deering, McCormick, Milwaukee, Osborne and Plano machines have fully demonstrated their worth.

No other machines have gained the approval of so many farmers of the country as have these. No other machines have made so enviable a record.

And you know the reason why—

These machines are all of good, honest value—that's why.

You know your wants for the on-coming season. If a harvesting machine is one of them, see the local dealer in your locality. Remember there is a separate dealer for each machine and each one will be glad to show you his own line.

The International Harvester Company's Machines,

Champion, Deering, McCormick, Milwaukee, Osborne and Plano,

have been endorsed by nine farmers out of ten as being the most worthy of their patronage. A good enough reason in itself, isn't it, why you, also, should use this line of harvesting machines for saving your grains and grasses?

Different Dealers Represent Different Machines. See them for Catalogues.

Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Mowers, Tedders, Hay Rakes, Sweep Rakes, Hay Stackers, Hay Balers, Knife Grinders, Gasoline Engines.
Weber Wagons, Binder Twine.

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, MAY 15, 1905

ONE DOLLAR PER BUSHEL IS NEVER TOO HIGH FOR WHEAT

LEARN A LESSON FROM RECENT SPECULATION

WE appeal to farmers with more seriousness, if possible, than we ever appealed to them before, to learn a lesson from the April deal of the Gates and Armour forces in May wheat. If, hereafter, any one is so audacious as to contend that supply and demand regulates the price of farm products, he should be treated with the contempt his ignorance or perfidy, or both, deserves. Speculation, the most selfish, contemptible and wicked speculation, fixes these prices under the miserable board of trade system, and if farmers cannot break it up, then their struggle with the world for a competence, or even a living, is a hopeless one.

But they CAN break it up, and they MUST break it up. The necessities of their calling DEMANDS it, the advancement of civilization REQUIRES it and the fate of the human race makes it IMPERATIVE.

The farmers are the only power that can overthrow this giant system of wrong, and they can do it only by organization. The whole world is looking to them to do it; is depending upon them for rescue from this greatest of all evils, this most threatening danger to equitable business and steady progress.

Will the farmers fail to come to the rescue? Will they deliberately disappoint those who are so fondly depending upon them? They must not. They must organize. They must stand firm. They must accept and meet this responsibility. The great interests, the masses of the people, the men, women and children who are suffering under this pernicious system of speculation in their sweat and blood and lives, must not appeal in vain. The conservative masses, the intelligent forces of labor, must organize, must organize NOW, must organize STRONG, must organize PERMANENTLY, and put fair equitable and STEADY prices upon farm products that the world depends upon for life—prices that speculation and greed cannot shake or disturb.

No matter what may be said, no matter how much may be produced, not a bushel of 1905 wheat should sell for less than a dollar per bushel. Write that upon every granary door, upon every wagon body, upon the side of every car that transports wheat, and stamp it in living green upon every acre that produces it.

A dollar per bushel is not beyond a fair export basis. Russia wants it. England concedes it. Germany is clamoring for it. France demands it. Italy is pleading for it. And Argentina would like to have it. The demand for a fair and equitable price is universal. Let American farmers rise to their great privilege and MAKE IT.

And every product should, and must, be held with equal firmness—the cotton, the corn, the hay, the oats, the barley, the beans, the tobacco, the fruit, the meat stock—all must bear equitable prices, and the farmers must make and sustain them. Think of the great annual meetings of the A. S. of E. Line up to attend them. Come in the name and power of the people behind you, and greed, and gambling, vicious beating down of prices in "futures" will and SHALL retire before you.

FOR THE
CO-OPERATING FARMERS OF AMERICA

ORGAN-IZE

ORGANIZE

ORGAN-IZE

A Declaration of Independence

By all Wheat Growers, Corn Growers, Barley Growers, Oats Growers, Potato Growers, Bean Growers, Cattle and Hog Feeders, Cotton and Tobacco Planters, Fruit Growers and all others engaged in Agriculture

In the past we have worked hard and long to produce as good crops as possible.

When the crops were produced, and even before, a lot of people who produce nothing assumed to sell our crops at prices made by themselves, and expected us to deliver to them at these prices.

The prices set never took into account our investments, toil or sacrifices; neither were any profits considered for us.

By this plan we were absolutely dependent on other people, and as there never was any certainty, one year with another, what they would allow us for our stuff, our business was unsatisfactory and uncertain.

But knowing that we first have the property on which all the business of the country depends and even the life and comfort of the people, and all the domestic animals.

Therefore, we know that we need not be dependent upon other people to put prices on our goods, but that we can put a fair price, or a high price if we want to, on our own stuff and the other people will pay such rather than starve or go unclothed.

Also we know that all we produce goes into consumption; hence there is not much danger of having any left over if we quit dumping our stuff and letting the other people hold it.

But if we hold it ourselves until the demand comes, the demand will be as strong as the supply and when the year is around our barns and graneries will be empty and our bank account will be larger.

Or, if we do raise a surplus of any crop, we cannot know this for a certainty at the beginning of the season. Hence we will still start out with a good price and if all our supply is not taken, we will hold it over for the short crop years. If a perishable crop, we will let the surplus spoil at home?

Now, therefore, as the American Society of Equity of N. A. supplies a simple and practical plan to remedy our troubles, we do hereby declare ourselves free and independent from all speculators, gamblers, unfair middlemen and commission men, food trusts, stock yard grafters and cotton factors; and that we will organize into the A. S. of E. to throw every one of these parasites off of our backs forever and make them earn their own living.

This declaration is proclaimed throughout all the lands of the United States and Canada of America, and is returnable July 4th, 1905, to the National Union of the American Society of Equity of N. A. with one million signatures.

We want every producer of any crop to know that he can put a fair price on it and get it if he will do two simple things, as follows:

1st. Organize in the American Society of Equity.

2d. Read Up-to-Date Farming. This is the only paper printed that tells you how and when to market your crops to insure your price.

One million farmers organized on the plan of the A. S. of E. will stop the prices from going down; will put the prices up where they ought to be and keep them there.

It will make big crops blessings, and the bigger the better.

Have you not noticed that when you market lightly prices go up, when you market heavily prices go down, but when you market just right to equal the demand prices are steady?

But marketing in the past was done by chance. It is a little better now because several hundred thousand of farmers have been taught to control their marketing, and they know their price.

In May, 1903, the wheat crop prospects were very good and the new crop was being sold for future delivery by speculators at 65 cents a bushel. The A. S. of E. said the crop should sell for $1, and it did, but after hundreds of thousands sold out for a lower price.

In 1904 the conditions were similar, and on the good prospects the speculators put the price of the new crop at 80 cents. The A. S. of E said it was worth $1.20, and the price went to that figure.

Now, again in 1905 there are splendid crop prospects, and the bears have forced the price down from around $1.20 to 80 cents. The A. S. of E. has said the new crop shall not be worth less than $1 a bushel.

If the gamblers win it will mean a loss of $140,000,000 to farmers on this one crop (providing the crop is 700,000,000 bushels).

What are you going to do about it? We've told you what you must do to protect yourselves and beat the gamblers' game.

There are many counties now, each with 1,000 members of the A. S. of E. What has been done in them can be done in others. One thousand counties with 1,000 members each will give the million. This is what we will strive for. A thousand members can be gotten as readily under the new terms of the A. S. of E. as one hundred under the old. The new terms guarantee large unions, and the inducements offered insures the permanency of the organization.

Who will volunteer to organize a county with a thousand members?

Or who will recommend an organizer?

The National Union will pay good organizers. Full instructions with blanks, etc., will be sent free to all applicants where the territory is not already taken.

If a few hundred thousand co-operating farmers were powerful enough to influence the markets on part of the 1903 and 1904 crops (and they were), 1,000,000 co-operating farmers can compel $1 per bushel for every bushel of the 1905 crop and fair prices on every other crop.

HENCE THE CALL IS FOR 1,000,000 MEMBERS FOR THE AMERICAN SOCIETY OF EQUITY.

They are wanted quickly. If farmers will now come forward and join this great movement the benefits to them will be hundreds of millions of dollars. Is it worth an effort?

The obligations to organize a local union of the American Society of Equity is placed on every farmer and his family. This obligation will not be discharged until there is a union in every school district in the United States and Canada—and until these countries are saturated with local unions of the great A. S. of E.

Every little helps. Thousands of local unions must be organized by busy farmers themselves. You cannot be too busy to attend to this. The National Union will even pay you for doing it. Send for terms.

If this call falls into the hands of a merchant or professional man, we urge him to see to it that the farmers in his section are organized, because what benefits the farmars benefits every legitimate industry.

The speculators are busier now than for years. They are gloating over your fine crop prospects. They contemplate their immense prospective profits while you should be astounded at your prospective losses. Yet, if the farmers will only say the word "Organize," and back it up by their action, those selfsame speculators, gamblers and grafters would need a microscope to see their own importance.

Will you say the word "Organize"?

Will you organize?

We are ready right now to help.

Send to-day for the blanks and we will guarantee a local union in your neighborhood in ten (10) days or less. It simply can't fail if you will help us just a little.

A postal card will bring all particulars and instructions.

Will you invest in a postal card?

Is it worth a postal card to make a declaration of independence in pricing your own products?

Is it worth a postal card to get profitable prices for all the crops you grow and all that are grown in your neighborhood?

Remember, you are only asked to spend *one cent* for a postal card. The National Union will assume all other expenses and pay you for your time besides.

We are talking to farmers who grow wheat, corn, oats, barly, flax, beans, potatoes, cattle, hogs, cotton, fruit, tobacco, vegetables, etc.

We are talking to *you.*

Are you awake and alive?

If you don't respond to this we know you are absolutely *dead*—to your own interests.

Never before since the world began was anything proposed to a class of human beings so important to them as this matter is to farmers.

Nor is there another thing in human events more certain of accomplishment than that farmers can do all that is proposed, viz.; to set the price of their own products and get it, by the plan of the A. S. of E.

We guarantee it. All that is necessary is for 1,000,000 farmers to join the A. S. of E. and read Up-to-Date Farming. Everything will come to them almost without an effort.

We want God to send big crops, but we want farmers to have enough intelligence, enough independence, enough pride, enough self-respect—yes, enough backbone to stand for their rights and get fair prices.

We want that million members by July 4, 1905, and, remember, our guarantee of a good price on every crop that is grown this year if you will help us to get them.

Don't put off writing that postal card. Do it to-day. Do it now, before you forget it.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, MAY 15, 1905 | Number 10

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR
Foreign Subscriptions $1.00 a Year.

CLUBS. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee tbat they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18 — The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	-	$ 1.20
Corn, No. 2 " " " "		
Until January 1st, 1905,	-	.50
From Jan. 1 to Apr. 1, 1905,		.55
" April 1 to next crop	-	.60
Hay, No. 1 timothy, " per ton	- -	12.00
Oats, No. 2 white, " per bushel	-	.40
Barley, No. 2 " per bushel	-	.58
Barley, No. 3 " per bushel	-	.52
Potatoes—Chicago, per bushel,		
Until January 1st, 1905,	-	.55
After January 1st, 1905,	-	.65
Tobacco, (Price on the farm or at the market town)		
Virginia, dark, average per cwt.	-	$ 9.00
" bright, " "	-	12.00
Kentucky, dark, " "	-	8.00
" burley, " "	-	12.00

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit, per bu.		2.00
Clover Seed, No. 2, Toledo, per bushel	-	$ 7.00
Cotton, New York, per pound	-	.12
Broom Corn, Chicago, per ton	-	$75.00 to $85.00
Hogs, " per cwt.	-	6.00 to 6.50
Cattle, " per cwt.	-	6.00 to 7.50

$1.00 a bushel for wheat will be a successful export basis. If the crop is a bumper one we will try it this year.

Get busy.

Let every step be forward.

Post yourself on the constitution. It is very plain and easily understood.

An excellent way to get money into your local treasury is to stir out and organize some local unions. There is scarcely a place where this might not be easily done. See constitution.

April 24 the total amount of wheat in Chicago was 1,931,000 bushels, and yet the books of a single company showed that it alone had 3,000,000 bushels of May wheat. Wind enough to make a cyclone.

Study up on parliamentary rules and practices. The common people are the main dependence for progress. No telling what positions you may yet have to fill, nor what powers you may have to meet. Be prepared for whatever is before you.

Boast as others may the agricultural population constitute the leading power of our national life. We regret to witness serious mistakes in so many organizations, but ere long the dark places will be made light, and a solid front will march against the citadel of wrong.

We hope there will be no wavering in our ranks anywhere. The wheat growers see clearly what they have to overcome. The corn producers note what desperate efforts are made to keep their product down. The stock raisers have experienced what they are up against. The cotton planters realize what they must do, and are preparing to do it, in some cases in a mistaken way, we fear. The tobacco growers know that the most disastrous worm of all for them is the tobacco trust. The bean growers are fearlessly meeting the situation that confronts them. The potato growers know that many of their nutritious tubers are going to waste, while hungry people in many places would be glad to pay good prices for them. The orchardists and fruitmen likewise see much of their stuff a clear loss because of vicious market conditions. And so it is all through. Who can stand against these classes, all united under one banner, for the just and reasonable purpose of naming and securing a fair and equitable price for their products? And who would deny them the right to do that?

Dealers have now got out a story to the effect that much of the corn that has been held off the market by the farmers has spoiled and is worthless. Of course this is to discourage the idea of controlling prices by holding products. If any corn is found to be spoiled in the cribs or bins it was spoiled last fall. There was no weather through the winter or early spring to spoil it. When any corn is found to be spoiled for having been held through the winter we wish to hear of it.

Wheat growers need not be worried over the Gates-Armour squabble over wheat, and the bearing down of the price by Armour. Let the bears and bulls fight. The actual owners of wheat need not sell until they get their price. There is not a normal supply of wheat, and the price will recover.

But are not the recent operations in the wheat pit by the Gates and Armour crowds so plain as to emphasize the necessity for the finding of some means to prevent such things? Whether it be court or congress, some power should interpose for the relief of the people, both producers and consumers. But after all the people are the court of last resort. Let them strengthen and perfect their organization, and control the prices of real products in spite of speculation.

The available supply of wheat, according to Bradstreets, decreased for the week ending April 22 4,414,000 bushels, yet the price of wheat for that week went downward continually under the pull of the bears. Supply and demand, eh? Bosh! Bosh!

So-called dealing in futures ought to attract the attention of legislatures and congressmen more than any other thing. It demoralizes all lines of trade, and is specially disastrous to farmers, while it benefits no legitimate interest, but panders to greed and fosters a taste for gambling—is the very spirit of the get-rich-quick thirst. If legislation can reach cigarettes and lotteries, why can it not reach this species of gambling, ten times more demoralizing and far-reaching in its effects than all others combined?

A resounding echo of the wheat speculation may be heard in the defalcation for a million and a half of dollars by Mr. Bigelow, president of a Milwaukee bank. The money was lost in wheat speculation, and but for the unusual spectacle of strong friends coming to the rescue many innocent depositors would have been ruined. Per contra, it is said that Mr. Lawson made a million and a half in the deal. How long shall these things continue—playing with individuals' money, and with the business interests of the whole country, as children play "Hide the switch?" How long will right fear to combat wrong because the wrong is in high places? How long will honest strength tremble before dishonest weakness because dishonesty sits on piles of ill-gotten wealth?

Up-to-Date Farming does not ask its friends to buy anything they do not need, but whenever they are to send abroad for any article we ask them to consider those who advertise in this paper. Their patronage of our advertising columns entitles them to the consideration of our readers, because it enables us to make a paper we could not make without it—subscription rates do not pay for printing such a paper as Up-to-Date. We believe our advertisers will deal as they agree. We exercise due care in accepting them, and guarantee them as per note kept standing in the paper. But in writing to advertisers be sure to say you saw their advertisement in Up-to-Date Farming. This is very important to you and to us.

Are They Friends of the Farmers

About election times office seekers and party managers do not have to open their mouths to say good things to and of the farmers, because their mouths are already open for that purpose, and their hands are already raised to pat them on the back. And about subscription time the papers almost melt their type in their hurry to boost the "honest farmer."

But are these people really the farmers' friends? Their subsequent action makes it a matter of very great doubt. People seldom ridicule and make sport of those to whom they are friendly, and this the press notoriously does of farmers, both in caricature, in doggerel and in slang.

In noticing Mr. Everitt's "Third Power," a book that has received the attention of the world, the Wisconsin State Journal ridicules the dedication to "the poorest paid and most dependent class on earth," and declares that it is "an absurdity on its face." We cheerfully submit the question to the farmers themselves for a decision. Where is a class that works longer hours under greater difficulties, and is poorer paid, a class that must toil to feed all other classes, and yet must accept for the products of his toil what the other classes please to give? The farmer is independent because, thank God, he can live upon what he makes. But his ability to spend for pleasure and education is less than that of any other class. There are wealthy farmers, of course, and we are glad of it, but we are speaking of farmers as a class.

If the learned editor of the Wisconsin State Journal will go among the average farmers, work with them, eat with them, live with them, note the struggles of the support maker, the weary toils of the busy wife, and the children growing up without social, intellectual and educational advantages—the scarcity of ready money and the little that must be spent for pleasure and luxuries, and, worst of all, see the products of his hard toil going to a stingy market at prices made by somebody else, he may change his supercilious ridicule to a more thoughtful, if not a kindlier expression.

The editor of the Journal admits that "it does not appear that this buckwheat Moses is a self-seeking demagogue, although the fact that he lives in big Indianapolis instead of some Bear Creek is suspicious."

Any one that dares to speak for the farmers is a "buckwheat Moses," and must live out on Bear Creek where he could not make himself heard beyond his neighborhood, instead of where he has facilities to speak to the world and to make known the truths these papers have smothered all the years, and to demand justice for a people that have so long been denied it. Are such people the farmers' friends?

THE HOPE OF THE FARMERS

An Appeal

The writer of this has spent more years, perhaps, in work for the advancement of farming interests, especially in lines of organization, than any other man now living. In that cause he has written tons of matter, and has spoken in most of the great agricultural States of the union from New Jersey to Kansas, and southward to the Gulf. For five years as national secretary of the F. M. B. A. and editor of the Progressive Farmer, he saw that organization grow from a few hundred members to two hundred thousand, at which time he voluntarily retired, the organization, unfortunately, holding but three annual meetings thereafter. I tell these things not in the slightest sense of boasting, for I do not feel that I have anything to boast of, as it seems like I ought to have done more. I mention it merely to show that what I say below may be entitled to some consideration.

I believe the idea of controlled marketing is the greatest one that has ever been advanced in the interest of the agricultural masses, and that idea is personified in the American Society of Equity, a society which should have the earnest, active support of every farmer not only in America, but in the world. Heretofore the society has worked under rule, usage and instruction merely, but now it has promulgated an excellent constitution, that gives it a firm foundation, affords a clear guide to go by, and, I think, insures its permanency. That we should all entirely agree with all of its provisions is not to be expected, but it carries within itself a remedy for all its defects, and patriotism prompts to accept what may not be exactly to our liking for the sake of the good.

There is one feature to which I wish to call attention, and that is the age limit—the exclusion from the funeral benefit of those more than fifty-five years of age. That excludes the writer and hundreds of others of our very best workers, and it works an injustice for which there is no valid reason. It is an afterthought which came after the constitution had been prepared, passed upon, and put in type ready for the press, and it grew out of a fear, I think, entirely groundless, that the fund provided would not meet the calls that might be made upon it if this distinction was not made. Were it an insurance proposition, based upon insurance methods, this would no doubt be true, but it is not an insurance, but a fraternal agreement to pay a certain sum on the death of a member, not to exceed ten cents, and to pay far enough in advance to keep funds on hand to meet these sad calls.

Persons like myself that are excluded do not care for the prospective benefit, but we do care for the exclusion, for the placing us in a tabooed class because we happened to be born too soon. My understanding of equity leads me to be just as willing to pay my share, "not to exceed ten cents, on the death of a faithful aged brother as on one who falls in the noonday fight.

But here is why I write this: I know that others may feel about it as I do. I wish to appeal to every one to accept it. Give it the test of time. Let all things be proven. It may be found to be a wise provision. If so honor be to those who secured it. If it prove unwise, the fears ungrounded, less than a year gives an opportunity to correct it. Therefore, let us accept it, put our shoulders to the wheel more strongly than ever before, and work out, under God, the great purposes of this organization.

JOHN P. STELLE.

They Hold Back

It is unfortunate that those at the head persist in holding back, but it will always be so. All advances must be made in spite of those who are in the lead. They don't like for anybody or anything to pass them.

An instance is shown in the following from the American Agriculturist:

"Society of Equity (in answer to a correspondent)—To acquire membership in the Society of Equity practically costs nothing and amounts to nothing, unless you and the other members in your vicinity take hold and make the organization a power. It is a loose, disjointed proposition. * * * It does not make so much difference what the name may be of a co-operative effort, if the members thereof really work in unison and get right down to business. But this high-flown talk about associated marketing, simply to pull the farmer's leg for 25 or 50 cents, cuts very little figure."

That is dignified, indeed, for "one at the top," but it is simply an echo of the selfishness and egotism of those who were not the first in it. The Agriculturist commends the grange, but admits that "it does not do as much to promote co-operative buying and selling on the part of its members as it should." Yet it is all right because it is old and not much in anybody's way. So far as organization is concerned, under its new constitution there is not a more compact organization on earth than the A. S. of E. And then it stands out boldly upon the world's horizon in favor of equitable prices for farm products, and for controlled marketing to obtain them, and there is where the shoe pinches. That idea is so new, and, withal, so just, fair and reasonable, and at the same time so powerful and certain of accomplishment, that while none can attack it, it must be ridiculed to the rear, and the less aggressive, imbued with the old ideas, kept to the front.

Again. There lies before us a letter signed by P. V. Collins, president of the P. V. Collins Publishing Company, publishers of the Northwest Agriculturist, in which very bitter things are said of the promoters of the American Society of Equity. Mr. Collins then says: "There is an organization called the Farmers' Co-operative Information Society, with headquarters in the Schiller building, Chicago, which we think is entirely feasible and practical. Its officers serve without salary and there is no graft connected with it."

The editor of this paper, anxious to get in touch with all good movements in the interest of farmers, at once applied to Bradstreets' Commercial Agency, the agency used by commercial men all over the world for information concerning this good society that Mr. Collins can so unequivocally indorse. Here is the reply:

"The Farmers' Co-operative Information Society, Chicago, Schiller Building. Not known in the building and name does not appear in current directory."

Now, there may be such a society, and we would not throw a straw in the way of any good it might do, but that is not a very reassuring report of an institution so highly commended by one who so bitterly denounces the A. S. of E. Or, rather, it may be an index to the kind of societies favored by the enemies of the A. S. of E. and controlled marketing.

The Wheat Market

At this writing (the closing days of April) the world is having another object lesson of the perfidious character of speculative markets in farm products. Two opposing forces got into what is called May wheat. Of course there is no such thing as May wheat; it is but the gamblers' way of expressing the price of wheat sold and to be delivered in May.

None are so ignorant as not to know that the quantity of wheat can not increase in May, nor can the demand materially increase or decrease in that month. Hence, if supply and demand, as the unthinking claim, determined the price of wheat, prices ought to be very steady during the month of May.

But in April, weeks before the arrival of May, the price of wheat for that month became greatly disturbed. For a time it had an upward tendency, and then it started downward, and continued to go down, down, until it reached a lower level than it has had since the dollar mark was reached on the crop of 1903. Apologists for the speculative system of price making must now show that there is too much wheat, and that the demand is over supplied. This they are absolutely powerless to do, for every nook and corner of the globe has been ransacked for wheat since the 1904 short harvest, and no excess has been found anywhere. Canada was able to throw some upon the market, but not near enough to make a normal world's supply, and the supply and demand contention must be abandoned.

Why, then, and how, this remarkable turn of prices for May? One side of the speculative forces concluded they could take advantage of the well known scarcity of wheat, thought they had enough credited to them on the board of trade books to control the market, put the price to a high figure, and compel those who had ventured to sell wheat for May delivery to buy back their sales at high prices because they could not get wheat to deliver. In other words, compel them to pay a wide margin between the prices they had agreed upon and the prices the May "bulls" could force the market to.

But "there were others," and they entered the market on the other side, and henceforth it was simply a measure of reckless daring and dollars and not of wheat. Whenever the Gates faction offered to buy at higher prices, for the only way they could raise and maintain the price was to continue to bid higher and higher, and take all that was offered. They thought, of course, that they had so much under their control that none would dare to sell. But, as we said before, whenever the Gates faction offered to buy, the Armour crowd was ready to sell.

But where did they get the wheat? Perhaps they did not have a grain. They did not need any. It was dollars they were selling in the name of wheat. The Gates crowd never asked the Armours if they had the wheat. It was enough to know that if the Armours could not get the wheat they could pay the difference in money. It was then only a question of who would go the farthest and risk the most. The Armours proved to have the longest purse and the boldest spirit, and the price started downward. It was then the Armours' time to press the advantage. They had sold wheat high, and there they stood ready to sell more and more. The Gateses did not dare to buy, and the prices went lower and lower. The Gateses had to pay for their high priced wheat, each drop widening the breach. Thus men made and lost millions in the deal.

This is the way of price making on the boards of trade—the prices made by supply and demand! God pity the ignorant.

If this affected only the parties engaged, what would it matter? But it affects for the time every bushel of wheat grown in the world, every pound of flour that comes from the mills, and every mouthful of bread eaten by a hungry people! Not a move by the press to prevent it, not a word of condemnation by the farm papers; but when the American Society of Equity steps in the breach, and demands that these things shall cease, and that the farmers themselves shall make equitable prices on their products, the whole pack, Trip, Tray, Teaze and Bull, are turned loose upon it. Let them yelp. Right is right, and God is just, and the wrongs of the people will be righted.

Persons that take their time ,and often make heavy personal sacrifices, to go over the country and talk up a cause and organize for the good of others, must have some compensation. It is only fair and equitable. And it is no less fair when a local union or its committee does the same thing for remuneration to be allowed. See the constitution.

Beef Trust on Trial

A Chicago paper tells us that the meat packers of Chicago and fifteen other cities must within one month appear before a federal grand jury to prove themselves innocent of violation of the Sherman law and the Grosscup injunction.

That suit is thus brought simultaneously in sixteen cities must mean that the Department of Justice is in earnest, and it is a proper following of the recent decision of the Supreme Court. A republic does not purposely hamper or restrict personal effort, but when powerful men, backed by illimitable capital, seek to form a despotism within a republic and exploit the labor and necessities of a free people, the republic will step in between its citizens and the self-constituted despotism, and at least measure strength with it. That test of strength is now on, not only with the beef trust, but with the private car and railroad combines, while the Standard Oil and several other trusts are under national surveilance.

The penalty for a violation of the Sherman law is a fine not to exceed $5,000 or imprisonment not exceeding one year, or both at the discretion of the court, for each violation. For violation of a federal injunction the penalty is fine or imprisonment at the discretion of the court.

The court records at Washington show that the indictments are against the following:

Corporations—Swift & Co., Cuhady Packing Co., Hammond Packing Co., Armour & Co., Armour Packing Co., The G. H. Hammond Co., Schwarzschild & Sulzberger Co.

Individuals—Nelson Morris, Edward Morris, Ira N. Morris, J. Odgen Armour, Patrick A. Valentine, Calvin M. Favorite, Arthur Meeker, Thomas J. Connors, Charles F. Langdon, Michael Cudahy, Patrick Cudahy, Albert F. Borchert, Louis F. Swift, Lawrence A. Carton, D. Edwin Hartwell, Jesse P. Lyman, Frank E. Vogel, Louis Pfaelzer, William Russell, Albert H. Veeder, Henry Veeder, Edward C. Swift, Ferdinand Sulzberger, W. H. Noyes.

The charges made by the government and of which the defendants have already been convicted by the Supreme Court, are as follows:

1. That the packers restrain each other from competition in the live stock market, and by combination and consiparcy among themselves, thereby fix and regulate by fraudulent and perfunctory bids the prices of stock on the hoof to their own advantage and to the loss of the stockmen.

2. That by manipulating the prices of live stock without regard for the law of supply and demand the defendants have curbed the shipments of stock to the markets, and by further manipulation obtained such live stock at prices much less than it would bring if such combination and conspiracy were not in existence.

3. That by combination and conspiracy the defendants, or their agents, have raised, lowered, fixed and maintained uniform prices arbitrarily contrary to law, which prices are made in secret meetings of the defendants and their agents, made known to agents by letters in code, and maintained among themselves by fixed penalties for violation of agreement. And, further, that monopoly of the business is carried on by the giving of credits to certain dealers and the maintenance of a "blacklist" against delinquents.

4. That the defendants or their agents have maintained uniform rates of cartrage for the delivery of their sales to dealers, although such charges are not customary in trade or commerce, thereby preventing the purchase of meats by those who are unwilling to pay more than the price of the meats, without additional charge, all of which is in restraint of trade and commerce.

5. That the defendants have been guilty of conspiracy to create a monopoly in securing rebates from railroads, in violation of the published rates as required by the interstate commerce law, the whole design to throttle competition.

6. That the defendants have been for years in conspiracy with the railroads to obtain a monopoly of the supply and distribution of fresh meats throughout the United States and foreign countries, thereby imposing abnormal, unreasonable and arbitrary regulations for the conduct of their own and each other's business, affecting the same from the shipments of the live stock from the plains, to the final distribution of the meats to the consumer, all to the manifest injury of the people of the United States and in defiance of the law.

Advancement is of the People

All reforms come from the masses of the people. The world scarcely recognizes this, but it is true. Changes in government or society do not come without agitation, and agitation seldom begins at the so-called "top." When it does it invariably points from, not to, the average masses. Those who are already as far up as they think there is standing room, are content to stay there, and fear an advance step, unless it be sure to provide a higher plain for themselves, lest it bring on a crisis and push them from their vantage ground.

So of the schools. Those who preside over them feel that they have attained all there is to attain, that if any other discoveries were possible they themselves would have made them; that their systematic methods of investigation, their educated eyes and trained minds must first see what is to be seen, hence it is absurd, they think, for persons below them in attainment, to claim to have discovered what they themselves have not seen. Besides, if there is really anything else to see, anything else to learn, it means additional effort for them in paths laid out by the "unlearned," and such matters, in their estimation, should be frowned down or ridiculed off the stage rather than to be tested, and welcomed if found true. This is human nature. Those who have struggled to the top feel that they should be let alone, and they oppose the introduction of anything that might displace them or cost them further effort.

It is natural that among the masses struggling below should be found the elements of restlessness. All beyond is as new to them as is the undiscovered, and they are as apt to promulgate doctrines new to the world as doctrines new only to their class. Thus have many of the world's greatest truths been discovered, and when discovered the masses have been compelled to force them to the front in spite of the world's ruling classes and so-called leaders. This fact was recognized by the earlier thinkers and writers. Mr. Henry Thomas Buckle, a brilliant writer of many years ago, said:

"If we examine those enactments which are said to have benefited the people, it will invariably be found that the people demanded them first, and they were enacted afterward.

"So far from the legislators being the leaders of civilization, they are, as a rule, behind the civilization of their age, because, being accustomed to look at questions from their practical side, they are, in most cases, unable to look at them from a speculative (undemonstrated) point of view at all.

"And this is borne out by their private correspondence, in which they express their fears of the results of those very measures which the pressure of outside opinion obliges them to advocate in public."

That is a strong arraignment, but it is true. History proves it, and the present sustains it. In the realm of government the barons, who, at that time, represented the common people, those below them not being recognized as figuring in public affairs, started and maintained the agitation for better government, and finally compelled King John and the nobles to grant the Magna Charta, the first guarantee of liberty independent of the reigning powers. During the American Revolution the Tories were the pets of monarchy, and were entirely content with prevailing conditions; the battles had to be fought and freedom won by the common people. Even when the Savior came to preach a new life to mankind, "the common people heard him gladly," but the ruling classes crucified him.

In the realm of thought, when Columbus conceived the rotundity of the earth, and proclaimed the possibility of its circumnavigation, the schools and the ruling powers alike declared it the idle dream of a diseased mind; and so when Galileo declared that both earth and planets revolve, the schools knew better. Likewise when Harvey discovered the circulation of blood in the living body, and when Morgan introduced the use of anesthetics—the learned doctors declared both contrary to the laws of nature and the demonstrations of science.

So it has ever been. Buckle was right. Our very best laws have been forced upon the legislators by popular agitation; our worst ones have come from the legislators direct. Hence no progressive spirit should fear discussion—agitation, if you please, or even radicalism. Let the wheat be fearlessly threshed. The chaff will be blown away, the golden grain will remain. Let not the indifference, or even the opposition of the "upper stratum" frighten any. It is but the natural thing to expect, the thing that every propressive movement has encountered. The A. S. of E. is no exception. Agricultural experts and the press that have won their way on other lines will not generally adopt the idea of controlled marketing, or of farmers pricing their own products. It is so radically different from the beaten paths with which they are familiar. But in the midst of it all we shall move on to victory, and agriculture will take a position in advance of any it has yet occupied.

Farmers Can Fix Prices

Two years ago the truck farmers of Central New York organized. They did not believe they were getting a fair price for their products, and, after the question had begun to be agitated, they revolted at the idea of others making prices on their stuff. Hence they organized and made their own prices.

Canners were very much exercised because the farmers dared to organize. They denounced the farmers in strong language, claimed that a trust was being formed and refused to make any contract. But in about two months they decided to contract at the association's prices. By organizing, the farmers' organization has raised the price on corn from 55 cents per 100 pounds to 70 cents; on peas from $1.75 to $2.25 per 100 pounds, and more than that on other produce. The first year one member received $80 more for his peas than he did the year before, and he knows that it pays to belong to an organization.

What these people have done with their peculiar products is precisely what the A. S. of E. is doing all over the country for all products. The farmer who, in the face of the facts as they are being demonstrated every day and everywhere, is still opposed to organization ought to go away back and sit down, and stay sot.

Is It a Turning Movement?

The Russians in the present war are always in fear of a Japanese "turning movement."

When Up-to-Date Farming claimed that farmers should price their own products and the A. S. of E. was organized to enable them to do so through controlled marketing, nobody scoffed at the idea more, or dreaded it worse, than did the gentlemen of the boards of trade. But we went right on agitating, and the farmers went on organizing, until a formidable force appeared, and the doctrine of controlled marketing took a firm hold upon the minds of the people.

Then a strange thing occurred. Gentlemen of the Chicago Board of Trade began an organization of farmers to make prices by controlled marketing! That looks mighty like a turning movement, a desperate attempt to head off the A. S. of E. We are never much inclined to say no good thing can come out of Nazareth, but that Board of Trade farm organization is of very doubtful parentage, to say the least, and if no long ears are visible it might be well to look carefully to see if there are not places where such ears used to be. A Board of Trade organizing the farmers to compel better prices! That is a shock to the memory of P. T. Barnum!

An Effect of "Futures"

It appears that dry goods jobbers find it difficult to get their orders for cotton goods filled as they need them, the mills running on such low time as to be unable to fill the orders promptly.

This is not for a lack of cotton, the abundant cotton crop having been sung to all the tunes of which the voice is capable. It is the direct effect of the pernicious system of dealing in future prices. The mills do not dare to stock up while low and lower prices are bid and accepted for the future delivery of cotton. How dare they buy this month when deals show lower prices next month? Thus the mills are injured by this miserable system as well as those who produce the cotton, as are also the dealers who cannot get their orders filled, and, therefore, are unable to meet the demands of their trade. It injures every legitimate interest of the country to gratify the gambling greed of a few unscrupulous knaves. The law makers and courts are weak and truculent that cannot, or dare not, put a stop to it.

An Abundant Crop

Suppose the present good prospect should continue, and an abundant crop be produced this year, what effect would that have upon the effort to secure fair prices by controlled marketing? None at all, except that it would emphasize the necessity for it. Under the old system of speculative price making, an abundant crop would inevitably mean low prices, as low as greed could possibly pull them. Farmers know what that is, for they have experienced it time and again.

The brighter the prospect, therefore, the greater the necessity for organization. Under the system of controlled marketing, no matter how great the crop, the market is supplied only to meet its legitimate needs, and nobody is harmed. The consumer gets his supplies and the producer gets a reasonable price. Who can say this is not fair and reasonable and just? No one is disappointed but the speculating bidder and hoarder.

Hence the great necessity for organization. Farmers must act together; they must stand by each other and support one another. When the price is determined at the great farmer convention, the annual meeting, all must sustain it, and sell when they get the price and hold when they don't. We do not fear abundant crops. We like them. May God continue to send them. But let the producers have intelligence enough, backbone enough, self-respect enough, to stand by their price and get it.

Organize! Organize! Deputies and locals should now, of all other times, do their duty.

MINNESOTA FARMERS
STATE CONVENTION OF ALL INTERESTS

Notice is hereby given of a State Convention, for all farming interests, to be held Wednesday, June 7, 1905 at Rochester, Minnesota.

This is the centre of the barley production of the United States and special consideration will be given to that crop. All local unions of the A. S. of E. in Minnesota or in the barley districts of other States are urged to send delegates, also all unorganized districts are asked to be represented.

A cordial invitation is extended to every organized or unorganized farmer to attend this meeting. We will make it profitable to you and you will cheer us by your presence and help us by your cooperation.

Spread this call. Come to the meeting and learn how farmers will come to the front through such conventions, where prices will be agreed upon for our crops and the world notified that we at last have declared for our independence in pricing what is our own.

W. C. WEBBER,
V.-P. for Minnesota A. S. of E.

Rochester, Minn.

Law Created Riches

A few years ago a favorite expression was, "You can't make people rich by legislation." Whether you can or not is not yet beyond the pale of discussion. Manufacturers have always had the privilege of making the price at which their wares must sell. The strongest of these concerns have for years been pleading infancy and lack of strength to make these prices as high as they claimed they ought to be, and they have asked the national congress to enact laws which would enable them to make their prices higher. These laws have been enacted, and the prices have been made higher in this country, though the same articles have been shipped to foreign countries and sold at lower prices where American laws were ineffective. If higher prices make people rich, did not legislation aid in making these people rich? But this was done as mothers cherish nursing infants. Of course, it is right to help those who cannot help themselves—the farm implement trust and the steel trust, for instance.

Meanwhile, Old Man Farmer, who never thought of pleading the infant act, is not only given no law to aid him in getting better prices, but he is by common consent denied the right to make any prices at all on his stuff and if he once in a while looks up from his work and speaks of such a thing, he tucks his head down again, and forgets to mop his brow, as the "infants" cry "Paternalism!"

Well, there is a difference between paternalism and materialism. Materialism is nursing the "infants," you know, while paternalism is hustling around and getting something for them all to live upon.

But Old Man Farmer is getting ready to tackle the "infants," and if there should be a spanking bee in Uncle Sam's household, no one need be surprised, and justice will make no kick.

Building Up Home Interests

Mr. T. H. Miller, of Hodgenville, Ky., sending a letter he had received from a city mail order house, the usual form letter soliciting country business, makes the following very sensible comment:

"I feel that we cannot afford to work against our local merchants. We want to build up our rural towns in the same proportion that we build up the country, and let the prosperity that is sure to come be shared with our local dealers, who are also our personal friends."

All must recognize the reasonableness and wisdom of the position taken by Mr. Miller. There are no two classes on earth whose interests are more closely connected than those of the farmer and the local dealers. As the local dealers prosper they enlarge local enterprises and secure new ones, thus increasing the demand for farm products, and dividing back again the prosperity prosperous farming brought to them. Once in a while a local dealer may be selfish and exorbitant in his charges or profits, but such are very easily taught a wholesome lesson. There should be the closest intimacy between farmer and dealer, the strictest fairness in their business relations. This is equity, and the American Society of Equity is doing much to bring it about.

Contemptible

The Wisconsin State Journal, speaking contemptuously of farmers, says:

"Whoever saw a farmer who could not stop his plow or lean over the fence with a straw in his mouth and talk religion or politics?"

Who has a better right than the farmer to talk religion or politics if he wants to? If he talks religion he is very apt to practice it; and, though he may talk politics, he knows nothing of the graft and boodle on which so many political papers live. And he looks much better leaning over a fence which is his own than does the average city editor leaning over a bar which is not his, and he leaves it much soberer. And if he wishes to have a straw in his mouth, he raises the straw, let him have it there. The farmer looks better with a straw in his mouth than does the city newspaper dude with a cigar or cigarette in his.

$2,000,000

Have Been Spent to Let the Sick of America Try Liquozone Free

When we purchased the rights to Liquozone, the great problem was how to let the sick know its power. For years we had watched it cure diseases which medicine could not cure. We had proved that, in germ troubles, its results were almost inevitable. We were using it daily in our own homes, as a preventive of sickness, and we knew that every home should have it.

In every neighborhood, all over America, there was sickness which nothing but Liquozone could cure. There was everywhere suffering which Liquozone alone could stop. And thousands were dying whom Liquozone could save. What was the right way—the best way—to quickly let those sick ones know it?

We decided to buy the first bottle and give it free to every sick one we learned of. And we published this offer in 2,500 papers. The result is that millions know Liquozone almost as well as we do. And half the people you meet, wherever you are, know some one whom Liquozone has cured.

Not Medicine

Liquozone is not made, like medicine, by compounding acids and drugs; nor is there any alcohol in it. Its virtues are derived solely from gas, made in large part from the best oxygen producers. The process of making takes 14 days, and requires immense apparatus. At the end of two weeks, we get one cubic inch of Liquozone for each 1,250 cubic inches of gas used. The attainment of this product has, for more than twenty years, been the constant subject of scientific and chemical research.

The main result is, to get into a liquid, and thus into the blood, a powerful, yet harmless germicide. And the product is so helpful—so good for you under any condition—that even a well person feels its instant benefit.

This is a product which, in the past two years has sprung into world-wide use in the treatment of germ diseases. It is now used by the sick of nine nations; by physicians and hospitals everywhere. It is daily used in millions of homes in America.

We Paid $100,000

For the American rights to Liquozone, and the rights in other countries have sold for proportionate sums. We mention this fact to indicate the value of Liquozone—the value to you. Men have never before paid such a price for any discovery used in the cure of sickness.

We need not tell you that we proved Liquozone well before buying it. For years it was tested through physicians and hospitals, in this country and others. It was employed in every stage of every germ disease; in all the most difficult cases obtainable. With thousands of sick ones, considered incurable, we proved that it did what medicine could not do. Then, and then only, did we pay the price.

Since then we have spent nearly $2,000,000 to make Liquozone known. We have bought the first bottle and given it free to every sick one we learned of. These people told others, and the others told others. The result is that Liquozone is now more widely employed than any medicine ever was. And no one can doubt that it is doing more for sick humanity than all the drugs in use combined.

Kills Inside Germs

The greatest value of Liquozone lies in the fact that it kills germs in the body without killing the tissues, too. And no man knows another way to do it. Any drug that kills germs is a poison, and it can not be taken internally. For that reason, medicine is almost helpless in any germ disease.

Liquozone is a germicide so certain that we publish on every bottle an offer of $1,000 for a disease germ that it can not kill. Yet it is not only harmless, but of wonderful benefit—better than anything else in the world for you. No one is so well that he can not be helped by it.

The reason is that germs are vegetables; and Liquozone—like an excess of oxygen—is deadly to vegetal matter. To the human body Liquozone is exhilarating, vitalizing, purifying—the most needful, the most helpful thing possible. But to germs it is certain destruction; and these facts are true of nothing else in existence.

Germ Diseases

These are the known germ diseases; all due to germs or to the poisons which germs create. These are the diseases to which medicine does not apply, for drugs can not kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding nature to overcome the germs. But those results are indirect and uncertain, depending on the patient's condition. A cure is always doubtful when drugs are used, and some of these diseases medicine never cures.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes, so that no germ can escape it. The results are almost inevitable. Diseases which have resisted medicine for years yield at once to Liquozone. "Incurable" diseases are cured by it. In any stage of any disease in this list the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer accomplishing what no drugs can do.

50c Bottle Free

If you need Liquozone, and have never used it, please send us the coupon below. We will then send you an order on a local druggist for a full-sized bottle—a 50c bottle—and will pay the druggist ourselves for it. This applies only to the first bottle, of course—to those who have never used it.

The acceptance of this offer places you under no obligations. We simply wish to convince you; to let the product itself show you what it can do. Then you can judge by results as to whether you wish to continue.

This offer itself should convince you that Liquozone does as we claim. We would certainly not buy a bottle and give it to you, if there was any doubt of results. You want these results; you want to be well and to keep well. Then be fair enough to yourself to accept our offer to-day. Let us show you, at our expense what this wonderful product means to you.

Liquozone costs 50c and $1.

CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to The Liquozone Company, 458-464 Wabash Ave., Chicago.

My disease is .....

I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

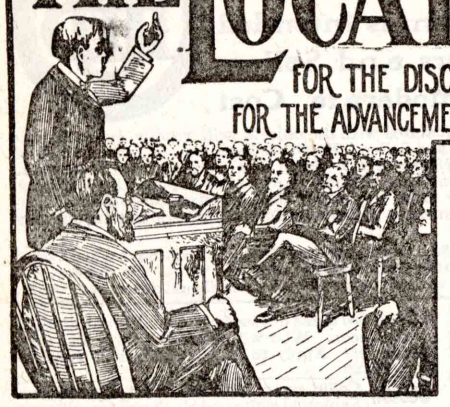
M 115—5 Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00 for members at large. Charter members of local unions pay no membership fee, and each member is entitled to receive a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness r distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

How do you like the Constitution?

Have you acted upon it, and set out for a brilliant record of effective work?

Few human documents are all we might wish them to be. Fewer still are absolutely perfect. It is human wisdom to accept the good and constantly work for better and better.

Any imperfections in the constitution may readily be corrected by the members themselves at the annual meetings. How grand it will be to see the A. S. of E. standing upon a foundation as solid and permanent as that of Masonry, and as certainly working out its noble purposes.

The Gates-Armour wheat deal ought to be a powerful proof to farmers that they must organize. Such manipulations cannot be permitted in a free country. If the cotton planters and the wheat growers cannot now unite, the world's intelligence is not up to the standard usually set for it.

Don't be uneasy about next crops' prices. They will be made at the annual meeting, a great national convention, and they will be made by the farmers themselves, and made right. Those who have not attended annual farmers' meetings cannot realize what they mean.

Organize local unions everywhere. Costs no membership fee in organizing. Make up the charter fee, even if you borrow it. You can soon raise money to pay it back. A great organization like this would not be worth anything if it had no established headquarters, or paper through which to teach its doctrines; and it costs money to keep up all these.

As fair and just a thing as was ever proposed is the A. S. of E. funeral benefit. The writer of this, the associate editor, is opposed to the age limit, that is, excluding those over 55 years, from the funeral benefit. I am in favor of giving all the benefit, but the president was fearful the fund provided for would not justify it. A short time will test the matter, and it can be considered at the annual meeting. So let every shoulder go to the wheel and roll on this car freighted with the best interests and dearest hopes of the farming world.

The writer of this sees no more beautiful picture, nor one so illumined by hope, as the farmers and business and professional men of the rural districts, and their families, all working together for the great good of all. This is what the A. S. of E. stands for and will bring it about. Those engaged in it could not do a nobler work.

Dr. J. C. Hale, a member of Lyonia local union, died recently, and the union held a meeting to make fitting expression on the sad occasion. Dr. Hale was a useful member, and the surviving members declare they will greatly miss him.

We regret to learn of the death of James V. Perrin, president of local No. 1, at Paineville, Va. Mr. Perrin was a good man and an earnest worker in the cause of equity. The local feels the loss deeply, and adopted fitting resolutions commemorative of the sad event.

As early as April the government crop experts began to publish statements as to the 1905 wheat crop, and put the crop at 450 million bushels Now let them tell us what the crop of plows, buggies, harness and toothpicks will be. Sauce for the goose ought to be sauce for the gander.

Organize! Organize! If the farmers were well organized the tobacco trust would be in the second class and at last be dictated to instead of being dictator.

Woodward county, Okla., union will meet at Woodward, May 17th, for the consideration of important business. Every local should be represented.

Local union No. 1, of Golden City, Ark., believes the price of cotton for the crop of 1905 should be fixed by the A. S. of E. now so there would be no occasion for farmers to sell in ignorance of the price. It is impossible to put an equitable price on any crop in advance of its growth. Such a price would be entirely arbitrary, and guesswork at best. The price of the 1905 crop will be made in the annual meeting of the A. S. of E., where facts and figures as to the crop will be at hand, and also as to the general level the planters must pay for what they have to buy. Then a truly fair and equitable price can be fixed that can and will be sustained. Meanwhile planters must know that a price will be made before this commodity is ready for market, and they must make no contracts in advance.

Bedford County Union Meeting

All local unions of Bedford county will please report in Bedford City on Monday, May 29th, and meet the deputy presidents and officers in matters of special importance at this time. All members of the American Society of Equity who produce tobacco are requested to attend. Matters of official importance relating to local and county unions should have immediate attention.

P. ANTHONY, Deputy Pres.
J. W. OVERSTREET, Deputy Pres.

H. G. Overstreet gave the members of the Muhlenberg County Convention a neat object lesson by taking from his pocket a plug of chewing tobacco that retails for $1.00 a pound, and giving proof that the raw material should bring the producer no less than twenty cents a pound.

Of course, you can find advertisements in any paper you pick up, but we ask it as a special favor that you write to those who advertise in this paper in preference to those you find in any other, always telling them you saw their advertisement in Up-to-Date Farming.

There lies before us a basketful of letters, each containing three letters cut from a monogram and placed so as to show what the monogram means. These letters came in response to an offer we made last fall to send free to any who would thus solve the mystery and send with the solution ten cents for a three months' trial subscription for themselves or some one else, a beautiful pin containing the monogram their answer proved them worthy to wear. So the writer of each of those letters received one of the pins. The busy events of winter crowded out this offer, but we now renew it in another place in this paper, for we want thousands more of our friends to have monogram pins. Try it.

Equity Speakers

A great many calls are constantly received at these headquarters for speakers. We refer to the following, who will accept such calls to address meetings. Write them for terms:

Hon. H. B. Sherman, National Organizer, A. S. of E. Address him at these headquarters.

State Organizer, Geo. G. Winans, Lakeland, Mich.

District Organizers.

C. C. Simpson, Dardanelle, Ark.
T. J. Woodard, Clarksville, Ark.
W. E. Johns, Tifton, Ga.
Walter Newby, Woodward, Ia.
E. B. Oglesby, Cloverport, Ky.
W. S. Ball, Hardinsburg, Ky.
S. B. Robertson, Calhoun, Ky.
E. E. Gay, Vultons Creek, Ky.
T. J. Mann, Liva, Ky.
L. N. Robertson, Utica, Ky.
D. T. Hamill, Guthrie, Ky.
E. L. Davenport, Cisney, Ky.
F. B. McCown, Kirkmansville, Ky.
J. W. Cannon, Liberty, La.
A. K. Fincout, Barryton, Mich.
J. P. Lockwood, Howell, Mich.
Walter Todd, Kelden, Mich.
W. C. Webber, Rochester, Minn.
C. W. McDade, Ceylon, Minn.
M. H. Poole, Geyser, Mont.
Chas. C. Wilson, Queenstown, Md.
D. Phillips, Pool Siding, Neb.

O. W. INGERSOLL, 234 Plymouth Street, Brooklyn, N. Y.

KANSAS FARMERS—NOTICE

National Organizer, H. B. Sherman, is in Kansas. He wants to set the State of Kansas on fire with the only way for farmers to organize and co-operate to throw all the speculators, gamblers, stock yards grafters and other parasites off of farmer's backs, and make them earn their own living.

He will visit every locality possible during the next month. If you want him address H. B. Sherman, Lyons, Kas.

This is a critical time for Kansas farmers and we hope they will see their opportunity and embrace it. No matter how many times you have been disappointed in other farmer's organizations, this one will deliver the goods if you will give it the chance. The American Society of Equity wants all the Kansas farmers and all the Kansas farmers need is the A. S. of E. Prompt action is advised.

Insufficient Address Orders

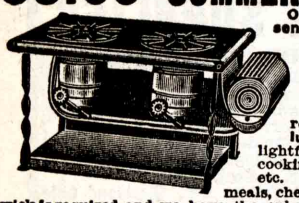
Why are so many people careless about giving their address when writing letters and sending orders? Or why do they write so indistinctly that the person who copies it must guess at the name and search the postal guide to verify the address? Why don't the teachers in our schools teach each person how to write his or her own name distinctly, and why don't they practice it through life?

The great public who write the letters have no idea of the annoyance, loss of time and loss of money to senders that is occasioned by this careless habit. Following is a list of orders we now have on hand and that cannot be filled until we receive the complete address. Is yours here?

We also request our correspondents to always give their COUNTY when writing to us:

In the list D. B. stands for "due bill."
March 14, D. B., Royse City, Texas.
April 4, D. B., John H. Hart.
April 8, D. B.
April 10, D. B.
April 10, D. B., Pheoba Lindsey.
April 15, D. B., Gishton, Ky.
April 10, 8 cents, Thos. I. Barnes.
April 7, 8 cents.
March 11, 10 cents, Autwine, Okla.
March 20, 10 cents, Kerr, Miss.
March 22, 10 cents, Lue Brown, R. R.2, Henderson Co., Ky.

$3.00 SUMMER STOVE



Our Wickless Kerosene Oil Stove at $3.00, as illustrated, will do all the work of a coal range without trouble, without heating the room, and is absolutely safe. Delightful for summer cooking, laundry work, etc. Furnishes quick meals, cheap and clean. No wick is required and we have the only guaranteed and successful blue flame wickless kerosene oil stoves made. Absolutely free from odor and smoke. Do not become greasy. No dirty wick to trim. A gallon of kerosene will furnish a hot blue flame gas fire in the burner for about eighteen hours; no more hot, fiery kitchens or carrying coal, ashes or wood.

In our Free Stove Catalogue, sent on application, we give a complete description of this Wickless Blue Flame Kerosene Oil Stove and also about twenty-four other styles of kerosene oil, gasoline and gas stoves for summer use, all offered at about one-half the prices others ask. For full explanation of the great advantages of these stoves for summer use, big illustrations and descriptions, our liberal terms, our 2ng guarantee, trial offer, low price offerings, write for our Free Stove Catalogue.

Address, SEARS, ROEBUCK & CO., CHICAGO, ILL.

HARRIS BROS., Loomis & 55th Sts., Chicago, Ill.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. 10% discount when two or more consecutive issues are used. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Agents Who are making less than $25.00 weekly and want to engage in a high-class business write Dr. Haux Spectacle Co., Haux Bldg., St. Louis, Mo., and mention this notice in Up-to-Date Farming.

Agents Write us at once. We have the largest line of "money makers" for hustling agents. We manufacture and sell to you at rock bottom price. J. B. Foote, Dept. 17, Fredericktown, O.

Men Wanted to sell the best line of scales made. Osgood Scale Co., Box 100, Binghamton, N. Y.

Farm Lands

Do You want a cheap home? Do you want a peach orchard that will produce fruit enough to pay for itself in one year? Do you want to grow cheap hogs? Do you want an alfalfa farm? Do you want to live in a land of sunshine and flowers? Then write to R. H. Thompson, Henderson, Texas.

Missouri Bottom Prairie Farm of one hundred acres for sale. Easy terms, $60 per acre. Fred Hollrah, St. Charles, Mo.

Oklahoma Farms, write for prices. H. F. Stephenson, Kingfisher, Oklahoma.

Household Supplies

Canning Business information for a 2c stamp. Warford, Newburgh, N. Y.

Furniture At wonderful low prices from hotels open during the World's Fair. Only slightly used. Send for complete catalog. Langen & Taylor, Dept. G. G., St. Louis, Mo.

Gloves direct from manufacture to wearer. Our Cowboys' Indian Tan Buckskin Gauntlets only $1.00. Send for our free catalog, mentioning this paper. Deerskin Glove Co., Gloversville, N. Y.

Housewives Do you want a washing machine that will pay for itself before YOU pay for it? That is the way we sell the "1900 Washer." Send for our book about the very best washing machine made. Or better still ask us to send a machine prepaid on one month's free trial. If you don't want it return at our expense. You can't loose. But we surely would if our machine was not the best made. Now just write today. Address me this way—R. F. Bieber, Gen. Mgr., "1900 Washer Co.," 645 Henry St., Binghamton, N. Y. Do it today.

Wheat Hay, Potatoes, Straw. I sell direct to consumers. J. A. Hall, St. Clairsville, O.

Cream Extractor at small cost. Send for catalog. KaDexx Cream Separator Co., 22 Ka Dexx Bldg., Rochester, N. Y.

Paint from the manufacturer insures you better quality at lower cost. Before painting read my book and get samples, etc. My book will help you with whatever paint you use. It's free. O. W. Ingersoll, 234 Plymouth St., Brooklyn, N. Y.

A Man

Had a 100-word advertisement in the Business Exchange. He said he received more than 300 replies. It was the best advertising investment he ever made. Of course it was. That's what the Business Exchange is for.

A Firm

Ran a small 23 word advertisement of feed sold in car lots only. They ordered it stopped because they could not take care of the orders.

Now what does this mean to you? simply this: That YOU can profitably advertise here, too.

See rates and conditions above and send orders. Our folder Results "*Impossible*" free.

INDIANAPOLIS

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

This Is May

The calm beneath the maple shade,
The plowboy whistling o'er the way,
The breeze that glides across the glade—
All gently whisper, This is May.
J. P. S.

Neighbor Thrifty is watching the weeds; he does not like for them to get a start.

Tom and Sally are beginning right. They decided to plant none but the very best seeds in field or garden.

Jim Denny says he don't care if potatoes did go flat this year; he proposes to raise them all the same. He expects to find "more money and fewer taters to the hill" next crop. Quite likely he is right.

Winter concluded he was too hasty in moving out in March, so in April he turned back to get a last glimpse of the old home, and to throw a parting kiss to spring.

Try to have the corn neither too thin nor too thick. Our grandfathers always replanted. Sometimes it pays to do that. Where there is no corn to grow there are plenty of weeds that will, and weeds never help to fill the wagon at gathering time.

And now the Wise People are marshalling their forces to attack the Hessian fly. We are glad they are, and will cheerfully hold their garments while they fight, but we "view with alarm" that the fly does not seem to be a bit worse scared than the cotton boll worm, the chinch bug and the Gypsy moth. The best thing, perhaps, for Our People is to not plant too much, make the ground rich, pulverize it deep and well, and have plenty of plants, but no weeds, and thus outgrow the pests.

Sometimes we don't know just what is best. Farmers are often that way. The press and the schools tell us to farm better and raise more; the market people tell us when we raise more it isn't worth so much. What shall we do? Go ahead and raise all you can, of the very best quality, and then say: "Gentlemen, here it is, but you must pay a reasonable price for it or you can't get it." That's business, sure as you're born, and it is no more than business.

Masonry was organized, it is said, when Solomon built the Temple, and the organization has grown bigger and greater as the race has developed. The craft idea has been forgotten, but the good in it has been perpetuated, and Masonic dues are now paid in more different kinds of money than has any other obligation. Now comes another society, the A. S. of E., on just as solid a foundation, and for even a greater purpose, and even now its dues are being paid in American, Canadian and Mexican money. As the years go by it will gain strength with age, and, like Masonry, the coin of every realm will contribute to the accomplishment of its great purposes.

Broom corn prices for the crop of 1904 have not been so bad except in the remote areas where speculative buyers imposed upon the growers and bought far below the market. Such areas must get organized, keep in touch with the buying and consuming world and hold for the equitable prices. There is where they lost out this year.

A year ago we urged the rice growers to get organized so as to compel an equitable division of the margin between the prices paid them and the prices paid by consumers in the North. They did not do so, and are still receiving a very unremunerative price for their product, while consumers are paying quite high prices.

We have frequently spoken in these columns of sour land. Most damp lands are sour, but not all. The acidity may easily be tested with blue litmus paper, which almost any druggist will furnish very cheaply, and will explain its action. Bury a bit of it in the soil to be tested, pressing the earth down upon it, and allow it to remain, say, 24 hours. If it is still blue when taken up the ground is not acid; if changed to a pink color it is. Such ground will not produce the legumes, nor is it very good timothy land, but red top does not seem to mind the acidity, and is, perhaps, the most profitable crop for such land, either for hay, seed or pasture. Acidity of soil may generally be corrected by underdrainage or by applications of lime in quantities commensurate with the degree of acidity.

A great many are this spring growing alfalfa that never tried it before. Its worst enemy during early summer will most likely prove to be weeds and perhaps crab grass. The best treatment is to clip it close with a machine. It may be necessary to do this more than once during the summer. After each clipping the alfalfa is expected to spring up ahead of the weeds, and finally outgrow them.

Leaving the Farm

"Yes, I have sold the farm," said my friend Hardin, "and we will move to a suburb of the city March 1. I am just fifty-one years of age, and at twenty-one settled on that corner 'forty' $300 in debt. Last week Ellison paid me $10,000 for my 150-acre farm and I will move near the city and enjoy the rest of my life."

I hated to see Hardin move away for he is one of our best farmers and a good citizen in every way, so I spent a day with him to talk over the past as well as to find out his plans for the future.

He said that during the past ten years he has sold, on an average, $1,250 worth of produce a year from the farm, and in that time has paid out over $2.000 for hired labor. As taxes he has paid out $1,200 and for buildings and fence repairs $1,000. His farm implement and blacksmith bills for ten years has been $700, or a total of $4,900. He has kept no account of butter, poultry and eggs sold from the farm or exchanged for dry goods and groceries, nor has he taken account of wheat used for flour, or for meat made from his own hogs and cattle for family use.

His plans are as follows: He will move to a manufacturing suburb of a large city and has bought an eight-room house there for $3,000. His only son is a bookkeeper nearby, at $10 per week, his daughter will assist her mother about the house, they will keep three or four boarders at $4 per week and Hardin says he will do an occasional day's work at some of the factories—"when he feels like it."

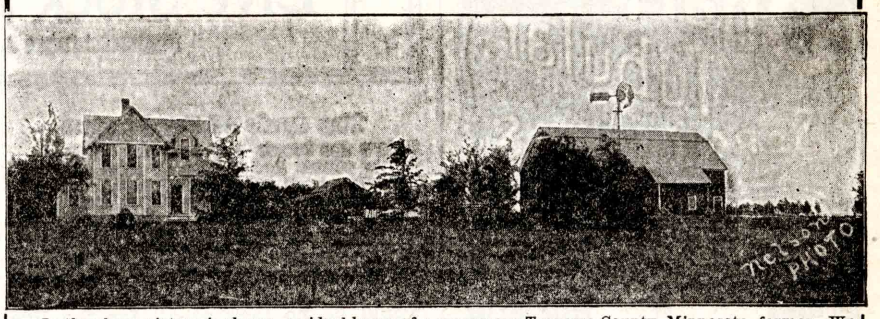
To my mind there is a dismal prospect ahead for this family, accustomed as they have always been, to an abundance of everything grown upon a farm—to fresh milk, butter, eggs, vegetables, fruits, to flour from the wheat in the bin and to the generous winter store of potatoes in the cellar. What a change there will be from all this plenty to the market basket, to the milk bottle, to the peck of potatoes and the small sack of flour.

Then the bills, bills, bills, bills for meat, vegetables, fruit, bills for wood, that used to come from the timber lot, bills for water, that used to come pure and fresh from the cliff spring, bills for everything.

Hardin is only one of hundreds who has made the ill-advised step of selling a productive farm and moving to a city, which may be said to be non-productive, excepting where labor is the producer.

The sunshine and the rain develop the crops on the farm, they grow on while the farmer sleeps, and there nature makes rich gifts. In the city all this is changed. With the last throb of the engine production stops; with the last stroke of the hammer wages cease, the stock of finished products does not increase during the night, but remains as the workmen left it until they are again in their places in the morning.—E. D. E. in Farmers' Voice.

A Home like this for you In the Garden Spots of Minnesota and Northeastern South Dakota



In the above picture is shown, an ideal home of a prosperous Traverse County, Minnesota, farmer. We have the making of such farms. Do you want one? If so, write us, stating what you would like to have, how much you want to pay down, etc. Do not be afraid to write us something like this: That you have so many dollars and wish to get a farm, state size of farm,—or so much money to invest in good farm land,—as the case may be. We are not selfish, we have made arrangements with other reliable land owners, to supply our customers with what we have not ourselves. Whether you want improved farms, prairie land, hardwood timber land with houses built for you, ready to move into, land on the crop payment plan (no crop no pay) or want to pay on the monthly instalment plan, write us. If you want a free homestead, and wish to buy adjoining lands, now selling at from $8 to $15 per acre, easy terms, write us, we will try to satisfy your wants. We court your good will and that of your friends. For further particulars and booklet, write,

P. M. Sharples West Chester, Pa.

Bone Spavin

Know it by the lump and the limp—a hard, bony growth on the inner side of the hock joint, usually low down and a little forward of the center of the leg—a quick hitch with the sound leg, and a stiff movement of the lame leg, bearing the weight on the toe, most noticeable in starting.

New cases, old and bad cases, the very worst cases, cases where firing has failed, are cured by

Fleming's Spavin and Ringbone Paste

Guaranteed to cure the lameness for good—may or may not take off the lump. Easily used by anybody, and a single 45-minute application usually does the work—occasionally two required. Write for Free Horse Book before ordering. It gives all the particulars, and tells you what to do for other kinds of blemishes.

FLEMING BROS., Chemists, 207 Union Stock Yards, Chicago, Ill.

You Can't Cut Out A BOG SPAVIN or THOROUGHPIN, but ABSORBINE

will clean them off, and you work the horse same time. Does not blister or remove the hair. Will tell you more if you write. $2.00 per bottle, delivered. Book 5-B free. ABSORBINE, JR., for mankind, $1.00 Bottle. Cures Varicose Veins, Varicocele, Hydrocele, Ruptured Muscles or Ligaments, Enlarged Glands, Allays Pain. Genuine mfd. only by

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

The Cycle of Production

Before the beasts had trod the earth,
The plants had grown to feed them.
The plants are eat at heavy cost,
But beasts give back the riches lost,
And plants still grow as they need them.
J. P. S.

There are but about five great stock markets in the United States. It would be no task at all for the live stock interests to keep a special agent at each of these to tell the shippers direct when to ship and when not to ship. Many single firms keep special purchasers on the ground. It is ridiculous to say that the live stock raisers cannot keep special market experts there. Such expert need not offer a hoof for sale. He would simply need to keep his eyes and ears open, and send back to the stockmen these little messages: "Don't ship," or "Ship." The order given to ship might sometimes bring a surplus. The order "Don't ship" would then go out, and it might be necessary to have some means of taking the surplus off the market, until it could be fed back gradually. Say that couldn't be done? Of course it could. Stockmen have done far greater things, and the telephone has come just in time to make it easy. Small and not expensive yards near the market cities where feed and care would cost little more than at home, would solve the problem, and not disturb a single business interest.

Cow Holding Up Her Milk

One of the mysteries that troubled my boyhood days was how a cow could hold up her milk, and that same matter is worrying a good many people yet. The fact is, a cow does not and cannot hold up her milk, but she does what has the same effect, she fails to elaborate it. Most of the milk a cow gives is elaborated; that is, becomes milk after the milking has been begun. Suppose a cow were shot just at the time of milking, and her udder cut open, do you suppose your would get the bucket full of milk you would have expected had you proceeded to quietly milk her in the ordinary way? On the contrary, you would have nothing but a bunch of milky, bloody glands. The milk is not there. By some process known only to nature, the milk producing system of the cow relaxes when milking begins, the milk glands secrete very rapidly and the stream flows out in response to the pressure.

Sometimes, however, the milk fails to respond to the manipulation as at other times, and then we say the cow is holding up her milk. The fact is the proper relaxation has not taken place; the glands are not working with their accustomed activity, and we fail to get the milk because it is not there to get. Many causes produce this effect. The cow may have been chesed or frightened in an unusual way, she may have been beaten, a strange milker may be at her side, strange people may be in the yard, her accustomed feed may be absent, or any other matter that disturbs her quiet or prevents her from feeling entirely at home, may have this unhappy effect. Some cows are much worse in this respect than others, because some are much more easily disturbed than others.

The point is to learn the cow's disposition and make her feel entirely at home at milking time. You may break her from undesirable habits, but you must do so at the expense of a portion of her milk until she gets accustomed to the change.

The Tamworth a Bacon Hog

From an article by W. Warren Morton, of Russellville, Ky., in the Inland Farmer. we make up the following regarding the Tamworth hog:

The Tamworth is essentially a bacon hog. In color it should be a rich golden red; it should have a long, straight back slightly arched, long and deep sides, broad and full hams, wide and deep chest with light, narrow shoulders, jowl very light, which gives nose rather long appearance, ears erect, legs long with stout flinty bone.

Tamworths are remarkable for hardiness of constitutions, great prolificacy and their wonderful success in rearing every pig born. For nothwithstanding their great size, with a nest full of pigs, they hardly ever overlay a pig. I know of one sow. that had brought eight litters and was due to bring her ninth in March last, and in those eight litters, all born in three and one-half years, she had saved and raised eighty-three pigs.

From 14 to 17 pigs at a litter are not unusual and from 10 to 12 pigs can be depended on nearly every time from an aged sow. As high as 22 pigs at a litter has been recorded.

Tamworths are great grazers and foragers and I have known old Tamworth sows with a litter to go four miles away on the range and bring their pigs home "to roost" at night through the woods. However, they bear confinement as well as any hog. They are "ripe" to kill at any time. In fact, the Canadians usually slaughter them at 6 or 7 months, when they should weigh something over 200 lbs.

Tamworths are the largest hogs in existence. "Amber King," 1705, recently sold by me to John Robinson's Circus, could be made to weigh 1400 lbs., and is the largest, longest and tallest hog on earth, and his sire, "Amber Luther," 150, weighed over 1160 lbs. The sows usually weigh at maturity from 600 to 1000 lbs.

The Tamworth is of value to the American farmer in its use for crossing on our short-bodied, short-legged and chunky lard breeders, which will make not only a cross but a hybrid as well, the cross being a union of two entirely different species, Tamworths being pure Suis Scrofa, while the lard breeds are made up largely of the species Suis Indicus.

The longer such breeds have been tied too closely to a corn belt, the greater the renovation such crosses will confer. The progeny will inherit strength, vigor and prolificacy that will surprise you. The great demand for a leaner and more delicate bacon, and the ravages of cholera and swine plague in the United States have led us to believe that some active, hardy, muscular and nervous hog like the Tamworth is bound to seek the supremacy in the hearts of American swine breeders.

How Your Separator May Pay For Itself

With the unprecedentedly high prices for butter there never was so important a time to make the most profitable of all investments for everyone having cream to separate as the Cream Separator.

But some who should have a machine do not have the ready cash and all may not understand that this isn't necessary in the purchase of the best of Separators.

Others who have a small amount of cash are tempted to put it into some trashy cash-in-advance machine because they cannot immediately command the full amount necessary to buy a DE LAVAL.

But there is no such necessity. More than 200,000 of the 600,000 users of DE LAVAL machines have practically let their machines earn their own cost, which they have done the first year and have kept on doing every year since.

If you have the ready cash of course there is a liberal discount for it. But if not, any reputable buyer may secure a DE LAVAL machine on such liberal terms that it actually means the machine paying for itself.

Send today for catalogue and name of nearest local agent.

It also quotes low prices on **Building Material, Wire, Pipe, Plumbing, Sash, Doors, Furniture, Household Goods, Down Spouting, Eave Trough** and thousands of other items bought by us at **Sheriffs'** and **Receivers' Sales.**

CHICAGO HOUSE WRECKING CO., 35TH AND IRON STS., CHICAGO.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

The poet's task is not a cinch,
Who over poultry would enthuse;
The hen may charm us with her "lay,"
But seldom she invokes the muse.

Lime about the poultry yard is almost necessary to success.

Bare runs are not good poultry quarters. Shade and vegetation are necessary.

The farmer's orchard is the best possible poultry yard—we mean the true fruit orchard.

Tom and Sally are proud of their new thoroughbreds.

They are not discarding the common fowls to which they are accustomed, but they are getting acquainted with the pure bloods.

Many chicks are sometimes lost for lack of strength to break out of the shell. Vigorous fellows that develop rapidly never fail to burst the shell. If many fail to do that the trouble may be from imperfect incubation, making the chicks weak, or it may be from lack of vitality in the parent birds. Eggs from hens that are too fat often show this lack of vitality.

Charlie says he has tried the strip of cloth tacked to the top of the perches and sprinkled with coal oil, and it settles the mite and lice question.

Fowls are not likely to have "limberneck" if there is no decaying flesh, maggots or such things in their reach.

Clay is a good absorbent of foul odors, hence, if you have nothing better, scatter plenty of road dust in the poultry house.

By the way, we almost forgot it: This is a good time to clean out the poultry house.

Fixed perches are out of date. Let them lie loose, so that they can be readily removed and exposed to the weather, while others take their places.

Don't put much faith in stuff to make hens lay. Good, healthy feed properly varied so as to furnish the fowls the needed elements of egg production, and that is nothing mysterious, flesh and bone and shell material, so as to keep the fowls healthy and strong but not too fat, and nature will do the rest.

A Great Contest

The value of the hen depends largely upon the number of eggs she lays, and this, to a great extent, measures the desirability of the various breeds. The poultry people of Australia are testing this matter of egg production. One hundred pens have been arranged with six hens to the pen, all to be treated exactly alike. These hens represent all the leading breeds, and some, we understand, from all countries; seven pens being from the United States. Each test continues for a year, the last one ending on the first of April, but we have, as yet, no report later than March 1st, at the close of the eleventh month of the contest, which we give on the authority of Mr. Miller Purvis, of Chicago.

The record the last day of February showed that a pen of Silver Wyandottes was in the lead with a record of 1,151 eggs. Next came two pens of White Leghorns, with records of 1,116 eggs, respectively. Next followed a pen of Rose Comb White Leghorns from America (Indiana), with a record of 1,092 eggs. Ninth was a pen of Rose Comb Brown Leghorns from Nebraska, belonging to Mrs. A. H. Hanse of Loup City, with a record of 1,028 eggs. Eleventh was a pen of White Wyandottes from America credited with 1,013 eggs. A pen of Rhode Island Reds from Kansas was twenty-third on the list. The other American pens were lower in the list. One pen of White Leghorns was down in ninety-third place.

The eggs thus produced in the eleven months have been sold regularly in Sydney, (Aus.), at market prices, and the winning pen is credited with having produced eggs to the value of 104 shillings, 9 pence, equal to $25.14 American money, and the best pen of American fowls is credited with the next best market showing, $24.72, American money. As the hens in these pens have no males with them, the eggs must have been sold for eating purposes only.

This is not the first of these tests. We are not advised how long they have been kept up, but we are informed that Silver Wyandottes won first place last year, and birds of the same breed bred from the same man, from the record at our last report, came out ahead this year.

Eggs as Food

Few articles have been as long and so unintrruptedly used as food as eggs have been, which should be proof sufficient to warrant their use, even though there had been no analysis to sustain it, but scientiffic analysis proves them to be a most suitable article of human food. Aside from their nutritive qualities which strongly commend them. We clip the following from Goodall's Farmer:

Eggs are very easily digested. Raw eggs are more quickly digested than cooked eggs. Soft boiled eggs, roasted eggs and poached eggs are more easily digested than fried or hard-boiled eggs. The stomach will digest a raw egg in from one and a half to two hours. Soft-boiled and roasted eggs require from two and a half to three hours, while hard-boiled or fried eggs must be allowed from three and a half to four hours for digestion. Eggs furnish a good substitute for meat and we believe it would be far better for the average person if eggs were more frequently used in place of meat. Especially do they make a light, nutritious dish for breakfast, instead of the usual bacon or ham or sausage.

Turkeys on the Farm

No one is in as good a position to raise fine turkeys as the farmer. It is almost impossible to rear them successfully without free range, and that is where the farmer has the advantage.

If the hens are fed too sparingly they will not lay early enough in the spring, while if too fat the eggs are apt to be infertile or have weak germs. When they begin to lay, which they will do in the poultry house if properly tamed, the first 15 or 20 eggs may be confiscated and put under hens. Then break up any tendency to broodiness, and if the tom runs with them at all times, as he should, they will soon lay a second clutch, which they may be allowed to sit on.

As fast as the poults hatch and get dry, remove them to a warm covered box placed near the kitchen stove, else some will surely get crushed. This is also the best time to give them a private mark, by which to identify them. A chicken punch costing 10 cents to 25 cents may save many dollars before fall. Punch each one on the same foot and in the same web of that foot. Then if some birds join a neighbor's flock, which they will often do, the feet will show proof of ownership.

I find it best to confine the little ones in a small inclosure, about a foot high, for a few days, or else put the mother in a large coop with slat slides so the little ones may pass in and out. In either case they should be out an hour or two before sundown, at which time they should each be driven into the poultry house for the night. By managing them in this way I find that they do not stray so far from the house, and do not become a nuisance to one's neighbors.

Feed no mashes. Prepared chick foods are good for a little while, more like nature's food. Several times a day at first, but only a very little at a time. Rolled oats, a little millet and finely cracked wheat are also good, with grit. I think it good to give only necessary water. In the wild state when they grow fastest they do not drink much except the dew in the morning. Unless they range enough to get many insects, they should be given meat scraps frequently, a few at a time. The only thing I have ever done for lice is to rub the head and necks slightly with melted lard. This need not be done if the hen is treated for lice before hatching and the poultry house kept free from them.—Mrs. E. G. Feint, in Orange Judd Farmer.

for they have proven the U. S. the surest and simplest money maker for the farm. Its simple bowl, operated by strong gearing entirely enclosed in a substantial frame, is easy to turn and gets *all* the cream—holds world's record for clean skimming. Notice the low supply can.

There are other advantages in using a U. S. aside from its wonderfully clean skimming, that are told in our handsome booklet, "The Dairy." Send for it immediately; it's free.

HOUSEHOLD NOVELTY WORKS, Chicago, Ill., or Buffalo, N. Y.

On your cattle and they will stand contented all day—free from flies and pesky insects. Spray 50 cows in 10 minutes. Increases milk and weight. Fly-Fuma costs nothing because every cent spent returns several in increased product. Gallon $1.00, 5 gal. $4.00. With first order for 1 gal. or more we send Electric Sprayer for applying FREE. Catalog free.

PRAIRIE MFG. CO.
Indianapolis Indiana

"I used Fly-Fuma last year on 50 cows in dairy. I am now using it with perfect success. The cows like it, will stand quietly and await their turns. One man with Electric Sprayer will go over the entire herd in ten minutes. The cows, after it is used, look as if they had been well groomed. By using night and morning the cows are not troubled with flies at all. I also use it on horses with fine results and found it one of the best things for sore shoulders and all harness galls I ever saw. I used Fly-Fuma on dogs for fleas and on chickens for lice with perfect success." FRANK MCGAVOCK, Nashville, Tenn.

Hagerman Pass is one of the crowning glories of the Rocky mountains. The Colorado Midland Railway has issued a magnificient steel engraving, 26x40 inches, showing a view of this pass. It is suitable for framing, and will be sent to any address on receipt of 15 cents in stamps. Write to H. W. JACKSON, Gen. Agent, Colo. Mid. Ry., Chicago.

"How Money Grows"

is the title of a book which tells:

How to invest small sums.
How to tell a good investment.
How to convert $100 into $358.83.
How to choose between real estate and stocks.
How savings banks make their money.
How to choose your partners.
How to guard against uncertain "prospects."
How to protect yourself in case you should not care to hold an investment indefinitely, etc.

This book is not an advertisement of any particular investment. It is a general "talk" about investments, based upon my experiences and observations. My book will interest everyone who can save $10 or more per month from their income. Write me a postal saying, simply, "Send How Money Grows." You will receive the book, free, by return Mail.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

The Orchard a Blessing

Long years ago a thoughtless boy,
Beneath the spreading fruit tree's shade,
With gleesome shout and childish joy,
I wist not why the trees were made.
But in the slanting autumn rays
Of life's maturer, clearer sun,
I see the Father's kindly ways
In all the wonders He has done.
—JOHN P. STELLE.

"The undevout astronomer is mad!" exclaimed the old philosopher as, amazed, he swept the heavens with his glass. May we not say the same thing of the orchardist, who sees nothing divine in the growing twig, the waving leaf, the beautiful flowers, and the luscious fruit?

Pear and Apple Blight

So important to orchardists all over the country is information on the subject of pear and apple blight that we make the following copious extracts from a press bulletin, the work of Prof. L. F. Henderson, recently issued by the Idaho Experiment Station:

Blight affects twigs, leaves, young fruit, and even the branches or trunks. From the experiments of Waite, it has been found that it cannot attack the plant through the uninjured bark or leaf. It can, however, gain entrance through any injured place on the trunk, limb, or even leaf. Its most common points of entrance are natural ones. These are the young growing tips of the branch, the stigma of the flower, or the glands which secrete nectar. Therefore the "flower-blight," the "twig-blight" and the "branch or trunk-blight" are all forms of this disease.

Frequently an entire limb or even the trunk will be affected for only a short distance, while the top will still be entirely free from the disease, and this can only be understood when we speak of how the disease is spread.

More frequently upon the pear several limbs and even the whole trunk will be affected, and when this is the case the tree should be cut out root and branch.

MEANS OF DISSEMINATION.

If the young shoots of a tree affected with blight be examined, small drops of sticky, thick fluid will be found exuding from the edge of the diseased area. If one of these drops be examined with a high-power microscope, myriads of little oblong bodies will be seen, some separate, some in short chains. These are bacteria. Arthur proved that these bodies, inoculated into a sound tree by a needle, would produce the disease; Waite proved to us beyond dispute that insects, especially bees, are the main instruments in their dissemination. They are attracted by the viscid sap, suck up part of the drop, and then carry thousands of these germs with them to inoculate flowers, shoots or wounded places in the bark. Undoubtedly heavy currents of wind assist in spreading the disease and probably account for the commonness of "twig-blight." The question comes right here: "Shall I keep bees if I have an orchard?" Certainly, and for two reasons. First, the honey, and the revenue derived from it, are often no small object to the farmer. Second, the bees are absolutely needed to assist in proper cross-fertilization or pollination of the flowers. This leads us to the subject of remedies, for preventives there are none.

REMEDIES.

As soon as the bacteria are carried to young flower or wound, they effect entrance, and, living upon the sap and starch, multiply rapidly. If they gain entrance along a limb or trunk they live in the inner bark and cambium-layer—that layer which adds yearly to the growth of both bark and wood.

It can readily be seen from this that they are well covered, and consequently spraying does no good. The only remedy thus far found has been and is the careful and continuous use of the saw and pruning knife. All diseased shoots and limbs should be cut off at from six inches to one foot below the place of evident infection or injury, as the bacteria have always gone down deeper into the limb than seems to be the case from the outside. Many pruners have the habit of splitting down the bark to see how far the disease has proceeded, but this practice is to be condemned, as they never can see how far the disease has proceeded, and the incision of the knife may carry the bacteria from diseased to healthy tissues. If the blight is bad in either the pear or apple orchard, the knife or saw should be sterilized each time it is used by either passing it through a flame or dipping it into weak carbolic acid water, or into kerosene. The pruned limbs or fragments should be collected and burned, and both pruning and burning should be done mainly in the dormant season, before the sap has started, the bacteria have awakened, and the bees are visiting the orchard. This is the best time for pruning and burning, but not the only one; it should be done whenever the disease makes its appearance. All large wounds should be painted over with paint as soon as the tree is trimmed, to prevent the reinoculation through the exposed tissues. Where the blight is bad, even young shoots or water sprouts should have their cut bases painted, for it has been shown time and again that the limbs and even trunks have been inoculated through these cut stubs.

UP-TO-DATE Gardening and Flowers

HOW TO GET BEST RESULTS AND BEAUTY

Whence Came the Flowers?

An Angel, on an errand sweet,
Awoke the sun at break of day;
His 'raptured beams glanced from her wings,
And flooded earth with flowers gay.
And ever since, 'twixt sun and showers,
The passing angels bring the flowers.
—JOHN P. STELLE.

Calladium esculentum (elephant's ears), is a thirsty plant. Its attraction is the great size of the leaves. To make large leaves it must have rich, mellow soil and plenty of water.

The great clumps of wild roses that are so abundant and beautiful in waste places on the farms in the Ohio and Mississippi valleys, are now nearly due. We very much dislike ragged spots on the farm, but, if any such place is justified, it is the groups of wild roses.

Before another issue of this paper reaches the reader, loving hands will strew flowers upon the graves of the departed. Simple manifestations of the love of the living for the unforgotten dead; of honor for the deeds of heroes in life unknown but in memory cherished and revered. What prettier emblems than the simple flowers, what higher testimonials than the decoration of the lonely graves. If spirits can see and know what is done on earth, and if there are degrees of happiness in the spirit world, Decoration day brings increasing joy to the disembodied host.

To produce some specially fine flowers of any variety choose some particularly thrifty plant, and do not permit it to produce more than two or three flowers. With scissors carefully clip off all the other flower buds as fast as they appear.

Most flowers and plants need not only rich, mellow soil, but they need plenty of moisture. Water copiously, but not too often. Potted plants must have drainage. The foliage of house plants need sprinkling, as the showers sprinkle the outdoor plants.

If you have but a small plot of ground, and wish your plants to do their extra best, punch a few small holes in the bottom of small tin cans, sink two of them in the ground, six or eight inches apart, until the tops are level with the surface. Plant the seeds between them, and keep water in the cans. This is for the coarse plants that make abundant roots. Cans thus sunk here and there in the flower beds, and water kept in them, show good results.

It is a mistake, I think, to plant perennial, woody vines, like honeysuckles and wistarias at windows, porch lattices or on front fences. They are beautiful all right during the growing season, but all through the winter they are anything in the world but ornamental. Herbaceous vines are better because when frost comes they can be cleaned away, and the lattice or fence painted for winter. Many such vines have perennial roots, and require but one planting. In case of annuals one has greater latitude, for different seasons we may have different kinds. Morning glories, sweet peas, cypress vines, nasturtiums, these and many others, are as pretty as can be and they are not in the way during the long winter when there are too many dead things to look at any way.

Rotations may still be planted in the vegetable garden. Keep a line of fresh vegetables as far through the season as possible; indeed, the farms should never be without fresh vegetables. When the frost drives them out of the garden, many kinds may take refuge in the cellar—potatoes, turnips, parsnips, cabbage, celery, and others; and in the absence of a cellar, many of them may be pitted out doors, or, better, under a shed.

Why are flower lovers neglecting the old-fashioned moss rose—portulacca? It is splendid for boxes, and it is hardy and pretty in almost any situation.

A shady corner is an ideal place for the pansy bed. Treat them well and these bright little flowers will come as near smiling up at you as anything you can grow.

The salvias, though so near a relative to the every-day practical sage, may be given a place in the garden or yard—there are few prettier flowers.

There is likely no occasion to water plants yet, but there will be later. Do it right. The too common practice of slightly wetting the surface around the plant is positively harmful, as it causes the ground to crust and adds no moisture to the roots where it is needed. At each watering give the ground about the plant a good soaking, like a copious rain would do; then it will need no more water for several days. If dry earth can be spread around the plant after watering it adds much to the value of the job.

WALL PAPER OFFER.

FOR 26 CENTS YOU CAN PAPER A ROOM.

Our New Plain Floral Wall Paper, as illustrated, only 1½ cents per single roll, 3 cents per double roll, handsome border to match, only ½ cent per yard (8 yards for 1 cent) **Cost of this paper for a room** 11x11 feet, height of ceiling, 9 feet, is 20 cents for sidewall and border. 6 cents for ceiling, **TOTAL COST ONLY 26 CENTS,** allowing for two ordinary doors and windows.

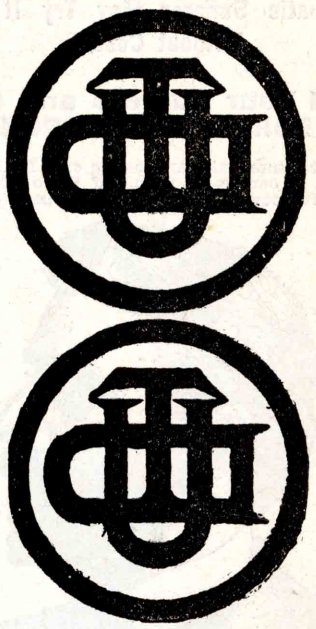
AN OFFER

For A Display of Skill and Ability

An Elegant Pin Free



The figure within the above circles is a monogram containing three letters, which are initials of three words, representing a condition or quality which we all like to have applied to ourselves. It also represents the name usually applied to what is doing more for the farmers than was ever before undertaken in the interest of agriculture.

We have also had that monogram reduced in size, made into a beautiful pin in blue and gold, in excellent taste, and suitable to be worn by any one. To the person who will cut the three letters from the monograms (if no mistake be made the three can be cut from the two monograms) arrange them in the proper order and tell us what they stand for, accompanying their reply with ten cents, for one three months' trial subscription (their own or for some one else), we will send free, one of the monogram pins in blue and gold, for their success will clearly entitle them to wear it, and to be regarded as belonging to Our Up-to-Date People.

UP-TO-DATE FARMING,

Have you Ordered your Third Power Book?

There is one for you and one for every farmer in the country

¶ The Third Edition of 10,000 sold in 40 days. The Fourth Edition (20,000) is now on sale and going at a remarkable rate.

¶ This is the most valuable book ever written for farmers, and should be read by all other people who want equity and fair dealing to prevail throughout America. Read a specimen letter:

MR. J. A. EVERITT, HARRISBURG, PA., Aprtl 27, 1905.

¶ DEAR SIR:—Enclosed please find one dollar for membership in the A. S. of E. I have read your book The Third Power, and have not been able to find any flaw in your plan to help the farmers. This book gives the farmers the key to the whole situation. I believe its teachings are entirely practical and can be carried out. I am ready to help the cause and do all I can to help the organization. I will meet with the Pennsylvania State Board of Agriculture and Farmers' Annual Normal Institute, at West Chester, Pa., in May, I have arranged with the Secretary of Agriculture to address the members on the subject of "How to secure profitable prices for farm crops." Send me a number of copies of Up-to-Date Farming and I will put them in the hands of the right peo le.

Yours truly,
S. F. BARBER,
210 S. 13th Street, Harrisburg, Pa.

Also read an extract from The Third Power. This extract, with the accompanying illustration, will serve to show what an interesting book it is:

¶ "It has been said of the Irish people that they have fought successfully in all battles except their own. This is largely true of the farmers. They have labored and struggled and paid taxes for others, and upon their intelligence, industry, and thrift, today depend the welfare and prosperity of the nation. The farmers in the United States have been the soldiers of civilization. They have reduced a wilderness to subjection, and have made it a fruitful garden. They have endured loliness, hardship, severe toil. privation and hunger, in order that others might be fed. Our export trade, of which we boast so much, and which has indeed attained tremendous proportions, has been swelled by the fruits of the labors of the husbandman. The factory, the railroad ond the mine all live off the farm. We talk of labor as the source of all wealth, and so it is—but it is the labor of the farmer. And yet we find that, after all these years these men on the firing line of our American civilization, who should be the most independent men in the world, are dependent on the captains of industry, the promoter, the underwriter, the labor leader, and the grain gambler. It is time to end this dependence. And unless the American farmer rouses himself, he will always be content to have his business controlled by others, to be called a "jay" a "rube" or "hayseed," and to see himself caricatured in the comic papers and on the stage as the ridiculous victim of the gold-brick swindler and the hay-fork note peddler, and indeed no gold-brick swindle was ever so palpable as that which is inherent n our present organization." * * *

$6.00 FREE. We mean just what we say. To each person who orders a book from this advertisement and returns the coupons below, we will send a $6.00 bond, worth $6.00 in cash. See below.

THIRD POWER BOND | 75c
Coupon No. 1

The American Society of Equity, of Indianapolis, Ind., will accept this Coupon for *Seventy-Five Cents*, as payment on a Third Power Book. Subject to the conditions as printed on the right.

J. A. EVERITT, *President.* No. 11.

A bond worth $6.00 in gold (or its equivalent in cash) will be sent to the person who sends in this coupon with 25c for a THIRD POWER book.

This Coupon when accompanied by Twenty-five Cents (25c) will be accepted in full payment for one, one dollar ($1.00) copy of the great book The Third Power.

The third edition, revised and enlarged, 320 pages, cloth bound. Sent by mail postpaid, for this coupon and 25 cents.

This book should be read by every person--especially farmers.

DO YOU KNOW that this great book contains 320 pages. That it is cloth bound. That it is a $1.00 book, but to educate you in the most vital affairs of your business, and to help you, we will send you a copy **FOR ONLY 25 CENTS POSTPAID.**

"And unless the American farmer rouses himself" * *

UP-TO-DATE Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Light Behind the Clouds

When the clouds appear the thickest,
And the daylight seems withdrawn,
And the hopeful joy of livin'
Seems to be entirely gone,
Just remember when 'tis darkest,
That, a little distance through,
The glad sun is brightly shinin',
And the sky is clear and blue.
So there ain't no use in frettin,'
At the hardships that we meet,
For the birds is still a singin'
And the flowers are just as sweet—
An' behind the deepest shadows
There's a light for me and you,
For somewhere the sun is shinin'
And the sky is clear and blue.
—MRS. JAMES COTTLE.

Fretting and worrying never lightened a task.

Nursed troubles grow rapidly; left to shift for themselves they soon disappear.

There is so much good in the worst of us;
And so much bad in the best of us,
That I cannot see why any of us
Should talk about the rest of us.

After it is over we know how it "might" have been, but the more important question is, how shall it be next time?

Very few people object to hearing other people scolded or criticised. But, privately, between you and me, or, rather, between you and facts known perhaps to you alone, how would such remarks apply to you? The only way that others' faults can benefit us is to furnish guides by which to correct our own.

That terrible housecleaning day! We suppose it has come and gone in most households? We suppose also it is a necessary visitation? But now let us see, may we not live a kind of "new life," so that house cleaning shall at least be reduced to the minimum next year. We think of the boy who could not see how people could stand it to comb their heads every day since it hurt him so to comb his once a week. But this paragraph is written by a common, every day man.

Flowers may be moved in full bloom from the garden to the house or yard.

For instance, take an ordinary pine box, say two feet by three, six or eight inches deep. Fill with nice, rich soil, thoroughly dampened. Take up the plants with as much dirt adhering as possible, and set in the box, firming the dirt around the roots. Fill the box full of plants in full flower, and of different kinds. When done, sprinkle thoroughly, just like they had been in a hard rain. Let drain, clean off and move into the house, or wherever you may wish them, and they will not wilt, but will keep on blooming—a veritable portable flower bed. Keep well watered. Be sure that the soil is well packed in the box. If mulched with excelsior or clean chaff, all the better.

To Remove Stains

The Twentieth Century Farmer gives the following methods of removing various stains. Treat the stains before washing the goods:

In Spots.—Wet the spot and drop a solution of tataric acid on it; then place the article in the strong sunlight for a while, after which wash in cold water.

Axle Grease.(on wash dresses).—Wet the spot with coal oil; then wash in soap and water.

Blood Stains.—Soak the article for some hours in clear, cold water, changed several times; then wash with soap and cold water.

Fruit (Berry) Stains.—Pour water through them, or steam over a cup of boiling water till stain is gone. Never use soap till the stain is removed.

Fruit (Pear) Stains.—Sprinkle a little powdered starch on the stain, then pour boiling water over it.

Mildew.—Wet the article with strong soapsuds, and spread out on the grass in the sun; then mix equal parts of soft soap and powdered chalk and spread over the stain, leaving it in the sun, which will gradually bleach it out. If the stain does not come out at the first trial, soak the article in soapsuds over night and repeat the above operation next morning.

Grass Stains.—Rub well with molasses; then rinse. Repeat until the stain disappears. Another method is to wet the stain and rub thoroughly with soap and baking soda (bicarbonate), letting it soak in for a time before washing.

Paint (Fresh).—Can be removed with turpentine, or gasoline.

Tea and Coffee Stains.—A solution of borax in hot water will wash them out.

Eat to Live

It is doubtful if in any other respect civilized man more imperatively needs education than in eating. If any one habit more than another, so universally practiced, weakens mankind physically and mentally and shortens human life it is, we have not a doubt, the habit of reckless and excessive eating. Eating is not merely to conform to a habit or to gratify taste, but to build up and repair the body, to maintain animal heat and preserve life. Any eating that does not serve these purposes is wrong eating, overworks a delicate and complicated machine, tends to get it out of repair and shortens its duration. A recent writer on this subject says:

"Much of the digestive process needs to be known to make clear the why of certain processes in cookery. Food has chiefly two offices to perform—the repair of muscular waste and the supply of heat and energy. Each of these is indispensable to health and strength. The great secret in the preparation of food that will prolong life and maintain a high state of health is to adapt it to the peculiar conditions of those to be fed. Variety of food is nearly always at hand. Knowledge only is necessary to choose that best adapted to present needs.

"Applying the knowledge of the wants of the body and the elements of food to a bill of fare, a wholesome breakfast demands strength-giving and muscle-making food. Eggs or broiled beefsteak provide for the muscles. For heat and energy starchy food is necessary. Bread and cakes of wheat flour are best. Fruits, raw or cooked, furnish the mild vegetable acid which aids digestion. If coffee is taken at all, breakfast is the time, so that the stimulating effect may pass away before the hour of rest."

A Chance To Make Money

I have berries, grapes and peaches a year old fresh as when picked. I used the California Cold Process. Do not heat or seal the fruit, just put it up cold, keeps perfectly fresh and costs almost nothing; can put up a bushel in ten minutes. Last year I sold directions to over 120 families in one week; anyone will pay a dollar for directions when they see the beautiful samples of fruit. As there are many people poor like myself, I consider it my duty to give my experience to such and feel confident anyone can make one or two hundred dollars 'round home in a few days. I will mail sample of fruit and full directions to any one of your readers for (19) two cents stamps, which is only the actual cost of the samples, postage, etc.

Francis Casey, - - St. Louis, Mo.

FREE PAINT SAMPLE OFFER

Cut this ad. out and mail to us, and we will send you **FREE**, by return mail, postpaid, our **Big, New Paint Color Sample Book.** This free book contains samples showing the **exact color** of every shade of ready mixed **House, Barn, Graphite-Creosote, Floor, Roof, Mineral, Enamel and Buggy Paint,** also everything in paint and painters' supplies, including **oils, leads, varnishes, dry colors, stains, brushes, sundries, etc.**

NOTE.—The above is the largest Mail Spectacle House in the United States, and perfectly reliable.

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

Some Figures to Consider

The American tobacco grower receives an average of about ten cents a pound for stripped tobacco, from which he must get his pay for the plant, his labor, his time and his investment in, a farm. The United States Government gets six cents for every pound manufactured. The English Government gets an average of seventy-five cents for each pound. The Italian and Austrian Governments get more than one dollar. The manufactures make millions in profits and the dealers are well paid. The consumers pay well for the luxury, and what is the reason the producer is not well paid for the material? They will be when they understand these matters and provide themselves with means to control the markets.

Tobacco Men Meet

In Kentucky and Tennessee, without the least attempt to mix politics and business, the Congressmen and Senators are greatly interested in the success of the attempt of farmers to gain control of the markets. They aid in every way possible, thereby proving their worthiness of leadership. Congressmen Gaines, of Tennessee, and Stanley, of Kentucky, in company with C. H. Fort, president of the Dark Tobacco Growers' Association, and "Private" John Allen, a prominent tobacco grower of Tennessee, attended a large mass meeting of tobacco growers in Henderson, Kentucky, a short time ago, and in ringing words pronounced their earnest determination to assist this movement. Such meetings and such speeches give the farmers confidence in their plans, their leaders and themselves, and will do much to draw farmers together and hold them in harmony.

Mr. Fort gave sound advice when he advised our workers to use the local papers. And we suggest that any paper that persistently ignores the farmer and his cause should be persistently ignored by the farmer when his subscription is solicited. No farmer should be expected to pay for something of no value to him.

Now, friends, if your editors and Congressmen haven't any insight into these matters you should point out to them where duty lies. Tell them of your struggles, the coming convention, and insist upon their aid.

Tobacco stems are quoted as being worth two and one-half cents per pound. Every tobacco grower should weigh a small quantity of tobacco, strip it and reweigh. He will then know just what percentage of his crop is worth but two and one-half cents per pound.

The government has received bids from manufacturers who desire to supply the navy with the 150,000 pounds of tobacco needed for its annual supply. The bids ranged from thirty-four cents to forty-eight cents. It appears that manufacturers could pay the producers considerably higher prices than those prevailing and still have a very comfortable margin of profit left. Who but the farmers can force them to pay better prices?

Wisconsin Tobacco Letter

Editor Up-to-Date Farming:

Edgerton, Wisconsin, is one of the great tobacco centers in America, and comparatively all of the tobacco that supplies this market is produced in six counties, viz., Rock, Dane, Columbia, Crawford, Jefferson and Vernon. Within the last two years the acreage planted in Rock and Dane, the two largest producing counties in the State, has been considerably diminished, on account of trust methods forcing prices so low that tobacco has too frequently been sold at a loss to the producer.

Trust methods are highly satisfactory to the trust managers who operate in this section. Farmers do not offer much tobacco before the succeeding crop is being prepared for. To hold their crop for another six months means some loss in weight, expense in handling and storing, and heretofore, with no assurance of any better prices to follow. The trust has held prices low during the winter months, knowing the farmers will hold for better prices so long as they can do so without extra trouble. They keep prices low in the spring because they know farmers will sell rather than hold and take chances. Those who persisted in holding and agitated any movement for such purpose were "spotted," and when their crops were offered a very low price would be tendered, thereby "teaching" holders the futility of holding.

Until the American Society of Equity came forward with its plan, our growers felt the hopelessness of holding their crops and sold at the first opportunity, regardless of price. But new hope is springing up and we feel that chances are all in our favor. With all growers combined in a demand for a fair price, refusing to sell until that price is offered, we feel that we can make the necessary arrangements to hold our tobacco, knowing that in time the buyers must come to our terms. It will pay us to hold and to make all necessary arrangements. Years of short supply will occur and call for any surplus that may exist and the planter may as well have the profits as the speculator. Interest in the American Society of Equity is spreading rapidly, and it is only a question of time until our farmers will join this movement, and take charge of our tobacco markets.

Very respectfully yours,
HERMAN OLSON.

Please give county each time you write to us, as part of your address.

The farmer's business calls for intelligent thought in the marketing of his crops as well as in the sowing, cultivation and harvesting. Will all the farmers' teachers take notice?

All farmers' troubles will disappear when the masses of farmers are properly educated. Hence spread the doctrine of controlled marketing and educate the people how to accomplish it.

Arouse yourselves, workers in the cause of the A. S. of E., and arouse you farmers to overthrow the powers that have taken the fruits of your labor in the past.

Good crops must be blessings, as they should be. The A. S. of E., with the help of the farmers, will make them so.

The fight for equitable prices will be short if the farmers will have it so. One million farmers on the side of right and equity will compel wrong and inequity to flee before them.

For the million this year sure.

Will farmers continue to work for other people or will they see to it that the fruits of their labor are preserved to themselves?

Waiting for the prices to go down demoralizes business. When farmers establish stable values, then business will proceed uninterruptedly the year around.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. What a CHATHAM Will Do

On Exhibition at Stock Yards, Chicago

Grades Corn Perfectly

The Chatham Fanning Mill has such a wide range of usefulness that its work comes under three important classifications:
It is a seed-cleaner, a seed-separator and a grain-grader—all in one.
Run through the list in all the seed catalogues you can find—the Chatham, with its seventeen screens and riddles, will handle any seed there, regardless of size or kind. It will take out the weed seed and dirt from grain and seed, no matter how foul it may be. It has taken out over twenty million weed seeds from a single bushel of unclean seed! It will clean and grade, **at one operation,** wheat, oats, rye, barley, timothy, clover, millet, flax, peas, cow peas, beans, velvet beans, corn, chufas, pecans, peanuts, rice, cotton seed, kaffir corn, broom corn, tobacco seed, alfalfa, all grass seeds, cranberries, etc., etc.
It is a timothy seed saver. Its grading is absolutely accurate. **We have a patent screen for succotash**—that is, in taking oats out of wheat.
Capacity of the Chatham, 40 to 80 bushels per hour. Runs easily, either by hand or power. Has a bagging attachment that saves one man's time.
Every Chatham is guaranteed for five years—will last a lifetime.

Try It 30 Days, at Our Expense

Find out for yourself what an invaluable addition a Chatham is to your farming equipment—how quickly it will pay for itself and begin earning extra profits for you. Then pay part cash and take six months on the balance if you wish. Write today for our free **Chatham Book.**

The Manson Campbell Co. Ltd.

Are You From Missouri?

There is an expression, common in many parts of the Country and undoubtedly familiar to you, in which the sturdy Missourian is reported as saying: "I am from Missouri and you have got to ***show me.***"

He was right. In these times of conflicting claims put forth by manufacturers,—some of undoubted responsibility, more, (unfortunately for you) of no moral standing, vertiable sharks and trixters, unscrupulous parasites, preying upon you. It is nothing more than fair when a man asks you to buy from him that you say, ***"Show me."***

That's just what we want to do. We want to "show you." That when your horses, cows, sheep and poultry are out of condition or wormy, or unthrifty or off their feed, that what you want and what you need is not a "Stock Food" but the Original Reliable ***Rex Conditioner.***

We want to "Show you" that Rex Conditioner is ten times stronger than any "Stock Food;" contains no poisonous minerals or dangerous drugs, but is compounded from the best and highest priced roots, seeds, herbs, barks, etc., in the right porportion for accomplishing the desired results and doing this, not ***occasionally*** but ***ALL*** times.

We want to "show you" that when all "Stock Foods" and cheap nostrums have failed to give desired results you can ***always*** depend upon the ***Original Rex Conditioner.***

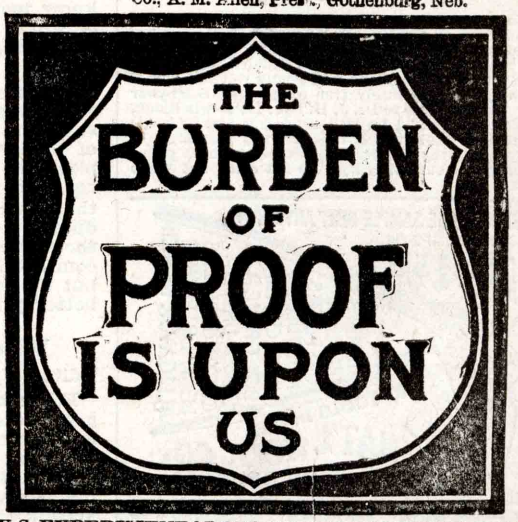
We want to "show you" that for general feeding and fattening purposes we have the ***CHEAPEST,*** best and the ***one*** Conditioner that can ***always*** be fed with the positive knowledge that results will be satisfactory, not ***"sometimes"*** but ***always.***

We want to "show you" many other things that space will not allow us to enumerate in this Ad, and ***We Want To "Show You"*** entirely at our own expense. Simply fill out and send us the coupon and we will send you four packages of our goods, charges fully prepaid and at no expense to you either now or at any time in the future.

WE "SHOW YOU" BY THE OPINIONS OF THOSE WHO HAVE USED REX CONDITIONER

THE ARMOUR PACKING CO SAYS:
Rex Stock Food Co., Gentlemen: We have been feeding Rex Conditioner to our horses used on our fifty delivery wagons. One of them was subject to periodical cramps or colic, and another was out of condition from some unknown cause, but after careful feeding with Rex Conditioner a number of worms were expelled from the out-of-condition horse and the horse troubled with cramps or colic had no more trouble of that kind. All horses in our Omaha stables are getting Rex Conditioner now and will continue to get it, for constant dry grain feeding needs such help as Rex Conditioner gives." Armour & Co.
"F. G. Beaton, Mgr. Omaha Branch."

A PROMINENT STOCK RAISER SAYS:
"We have fed 300 pounds of Rex Conditioner to our 150 horses and 100 hogs, and it brought the worms by the handful. It's the best stuff we ever got hold of. "Platte Valley Farm and Cattle Co., A. M. Allen, Pres., Gothenburg, Neb.



U.S. EXPERIMENTAL STATION'S ENDORSEMENT
"Arkansaa Agricultural Experiment Station, Fayetteville, Ark."
"Gentlemen: I have been using Rex Conditioner for over a month, and am much pleased with it. I have used it for horses, mules and hogs. At the time, our mules were off their feed, The Conditioner, after a few day's use, improved their appetite so they would eat the other feed with avidity. They are constantly improving with its use. I have found great value in Rex Conditioner with our hogs and pigs. The conditioner was especially beneficial to the sows with young pigs, and I can report it as a successful preparation." Yours truly,
"W. G. Vincenheller, Director of Experiment Station."

MANY OTHERS We have thousands of endorsements equally as strong from the leading and MOST intelligent stock raisers and others who make it their business to KNOW exactly what results are obtained. All of whom pronounce Rex Conditioner the ONE and only one, that can be given with assurance of satisfactory results in every case.

4 PACKAGES

Absolutely Free and Fully Prepaid

So great is our faith in Rex Conditioner and other goods of our manufacture and so sure are we of our ability to prove to you that it is a money-maker, that we give you a practical test of its value, at not one cent of expense to you. If you will fill out this blank and send to us to-day, we will send you prepaid a good size package of Rex Conditioner. We also send samples of Rex Stock Food, Rex Hog Remedy and Rex Poultry Food. We send all of these

Fully Prepaid and—**We send the Goods**—not an offer. Send to-day. There are absolutely no conditions to this offer. Not a cent for you to pay, either now or in the future. These packages are fully prepaid and absolutely free.

Our responsibility: It is sometimes a source of satisfaction to you in answering advertisements, to know the parties to whom you are writing are thoroughly responsible. We refer you to any bank anywhere in the country, any commercial agency or any wholesale house in the city.

REX STOCK FOOD CO., 812 S. 16th St., Omaha, Neb.

You may send me absolutely free and charges fully prepaid, a good sized package of Rex Conditioner, also a package of Rex Hog Remedy, Rex Poultry Food and Rex Stock Food, which I agree to feed according to directions. I have never used any of these goods.

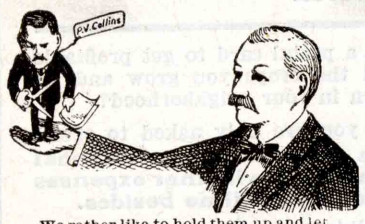
UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, JUNE 1, 1905

Here's Where the Laugh Comes In

P. V. COLLINS is editor of the Northwestern Agriculturist, and the Northwestern Agriculturist has been busy saying wicked things of the A. S. of E. and those who are working to secure profitable prices for farm products. In a very recent issue we referred to a letter signed by P. V. Collins in which he was unsparing in denunciation of this Society and its promoters. Of course we care nothing for these things. They are really to be expected, and the farmers must win their fight in spite of them.



We rather like to hold them up and let sensible people look at them

But the laugh comes in when we get at the motive of the fellows that fight us and see them as they are. We rather like to hold them up and let sensible people look at them. In the Northwestern Agriculturist for April 22, P. V. Collins, editor, we find the following:

"The ease with which too many farmers are led by designing men is illustrated by the so-called National Farmers' Association, which is nothing more nor less than a method adopted by a grain commission dealer of Chicago to secure the handling of "direct shipments of grain" by the members. All that this "Farmers' Friend" from the Chicago Board of Trade does for the farmers is to invite them to get together and ship their grain to him. He will sell it and get a commission for doing so. That is what he is in business for, but he has succeeded ridiculously in posing as the great "Farmers' Friend."

There is nothing fraudulent in the trsnsaction. It often is to the advantage of the farmer to sell his grain through a commission merchant, and, again, it depends on who is the commission merchant.

But it is ludicrous, or rather pitiful, to see mature farmers biting on such a bait, as if this grain dealer were the Moses to lead them out of the Egyptian slavery to the middle men—as though he himself were not a middleman like the others. Here and there, farmers have positively become excited over the project, they have bitten so deeply as to sign the circular letters prepared by this Chicago Moses, and to mail them to the press as their own personal and disinterested appeals to fellow farmers to rally round the Chicago man's flag.

Bosh!

It is all demagogic nonsense. Look out for it."

This is the Board of Trade Society to which we referred recently as a possible turning movement to head off the A. S. of E., but Mr. Collins says it is merely a movement to get business for the Board of Trade, and is "all demagogic nonsense."

But the same article above quoted continues:

The "Farmers' Friend"

"We believe in farmers getting together, holding frequent local meetings, uniting to ship their own grain and to buy all kinds of merchandise in large lots for the members of their local organization. We have always advocated that, but we advise farmers to do it themselves.

In order to demonstrate what we recommend as practical and profitable, we have endorsed the Farmers' National Cooperative Information Society and allowed the society the free use of our Chicago office, 914 Schiller Building. The secretary is A. A. Richardson, who is connected with the circulation-promotion department of the Northwestern Agriculturist. He gets no salary as secretary of the society, and the members of the society pay no dues, fees nor commissions of any kind or nature, either now or at any time.

Yet this organization offers every advantage possible to any farmers' cooperative society. We, too, are the "Farmers' Friend." We will see to any large orders for any kind of merchandise wanted by the members, and every subscriber of the Northwestern Agriculturist may consider himself a member so long as his subscription is paid up."

"It is rich!" says the party who sent us the clipping, and we sure enough think it is. This is the society so highly commemded, as mentioned in a recent issue of Up-to-Date, by Mr. P. V. Collins in a personal letter, which we referred to Bradstreet's Commercial Agency, who reported upon it as follows:

"The Farmers' Cooperative Information Society, Schiller Building. Not known in the building and name does not appear in current directory."

Here is certainly where the laugh comes in. There are fakes, and then some. The meanest fakes are always ready to cry fake at honest people. The Northwestern Agriculturist, P. V. Collins, editor, says the A. S. of E. is merely a scheme of Up-to-Date, and that Mr. Carr's Board of Trade Society is only to get business for himself, but that his Information Society, which Bradstreet's commercial sleuths could not find in the building it occupies (?), can buy for subscribers to the Nor hwestern Agriculturist, all the earth, a part of the moon, we suppose several of the stars, in short, take care of all their temporal wants.

"Where's That Society?"

Yes, here is where the laugh comes in. We are glad for Mr. Collins to do anything he can for his subscribers. They are good people, and ought to have some show to get the worth of their subscription money, but why should he step out of his road to throw dirt at an honest organization, chartered by a sovereign State, and supported by thousands of honest people, whose habitations do not baffle the general public, saying nothing of the eagle-eyed commercial agencies; and the corner-stone of whose purpose is to secure steady and reasonable prices for farm products through the simple means of controlled marketing, and which has already accomplished more in these lines than all other societies ever did combined.

Farmers' Meeting

"It Is Rich"

We set up no opposition to Mr. Collins or his unfindable information society, but when a man makes a fool of himself in a silly fight upon better things, our inherent charity does not prevent us from expressing sympathy for his followers and seeing "where the laugh comes in."

FOR THE CO-OPERATING FARMERS OF AMERICA

ORGAN-IZE

ORGANIZE

ORGAN-IZE

A Declaration of Independence

By all Wheat Growers, Corn Growers, Barley Growers, Oats Growers, Potato Growers, Bean Growers, Cattle and Hog Feeders, Cotton and Tobacco Planters, Fruit Growers and all others engaged in Agriculture

IN THE PAST we have worked hard and long to produce as good crops as possible.

When the crops were produced, and even before, a lot of people who produce nothing assumed to sell our crops at prices made by themselves, and expected us to deliver to them at these prices.

The prices set never took into account our investments, toil or sacrifices; neither were any profits considered for us.

By this plan we were absolutely dependent on other people, and as there never was any certainty, one year with another, what they would allow us for our stuff, our business was unsatisfactory and uncertain.

But knowing that we first have the property on which all the business of the country depends and even the life and comfort of the people, and all the domestic animals.

Therefore, we know that we need not be dependent upon other people to put prices on our goods, but that we can put a fair price, or a high price if we want to, on our own stuff and the other people will pay such rather than starve or go unclothed.

Also we know that all we produce goes into consumption; hence there is not much danger of having any left over if we quit dumping our stuff and letting the other people hold it.

But if we hold it ourselves until the demand comes, the demand will be as strong as the supply and when the year is around our barns and graneries will be empty and our bank account will be larger.

Or, if we do raise a surplus of any crop, we cannot know this for a certainty at the beginning of the season. Hence we will still start out with a good price and if all our supply is not taken, we will hold over for the short crop years. If a perishable crop, we will let the surplus spoil at home!

Now, therefore, as the American Society of Equity of N. A. supplies a simple and practical plan to remedy our troubles, we do hereby declare ourselves free and independent from all speculators, gamblers, unfair middlemen and commission men, food trusts, stock yard grafters and cotton factors; and that we will organize into the A. S. of E. to throw every one of these parasites off of our backs forever and make them earn their own living.

This declaration is proclaimed throughout all of the lands of the United States and Canada of America, and is returnable July 4th, 1905, to the National Union of the American Society of Equity with one million signatures.

One million farmers organized on the plan of the A. S. of E. will stop the prices from going down; will put the prices up where they ought to be and keep them there.

It will make big crops blessings, and the bigger the better.

There are many counties now, each with 1,000 members of the A. S. of E. What has been done in them can be done in others. One thousand counties with 1,000 members each will give the million. This is what we will strive for.

Who will volunteer to organize a county with a thousand members?

The National U ion will pay good organizers. Full instructions with blanks, etc., will be sent free to all applicants where the territory is not already taken.

If a few hundred thousand co-operating farmers were powerful enough to influence the markets on part of the 1903 and 1904 crops (and they were), 1,000,000 co-operating farmers can compel $1 per bushel for every bushel of the 1905 crop and fair prices on every other crop.

HENCE THE CALL IS FOR 1,000,000 MEMBERS FOR THE AMERICAN SOCIETY OF EQUITY.

They are wanted quickly. If farmers will now come forward and join this great movement the benefits to them will be hundreds of millions of dollars. Is it worth an effort?

The obligation to organize a local union of the American Society of Equity is placed on every farmer and his family. This obligation will not be discharged until there is a union in every school district in the United States and Canada—and until these countries are saturated with local unions of the great A. S. of E.

Every little helps. Thousands of local unions must be organized by busy farmers themselves. You cannot be too busy to attend to this. The National Union will even pay you for doing it. Send for terms.

If this call falls into the hands of a merchant or professional man, we urge him to see to it that the farmers in his section are organized, because what benefits the farmers benefits every legitimate industry.

The speculators are busier now than for years. They are gloating over your fine crop prospects. They contemplate their immense prospective profits while you should be astounded at your prospective losses. Yet, if the farmers will only say the word "Organize," and back it up by their action, those selfsame speculators, gamblers and grafters would need a microscope to see their own importance.

Will you say the word "Organize?" Will you organize?

We are ready right now to help.

Send to-day for the blanks and we will guarantee a local union in your neighborhood in ten (10) days or less. It simply can't fail if you will help us just a little.

A postal card will bring all particulars and instructions.

Will you invest in a postal card?

Is it worth a postal card to make a declaration of independence in pricing your own products?

Is it worth a postal card to get profitable prices for all the crops you grow and all that are grown in your neighborhood?

Remember, you are only asked to spend *one cent* for a postal card. **The National Union will assume all other expenses and pay you for your time besides.**

We are talking to farmers who grow wheat, corn, oats, barly, flax, beans, potatoes, cattle, hogs, cotton, fruit, tobacco, vegetables, etc.

We are talking to *you*.

Are you awake and alive?

If you don't respond to this we know you are absolutely DEAD—to your own interests.

Never before since the world began was anything proposed to a class of human beings so important to them as this matter is to farmers.

Nor is there another thing in human events more certain of accomplishment than that farmers can do all that is proposed, viz., to set the price of their own products and get it, by the plan of the A. S. of E.

We want God to send big crops, but we want farmers to have enough intelligence, enough independence, enough pride, enough self-respect—yes, enough backbone to stand for their rights and get fair prices.

Don't put off writing that postal card. Do it to-day. Do it now, before you forget it.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, JUNE 1, 1905 | Number 11

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher

JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR

Foreign Subscriptions $1.00 a Year.

CLUBS. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee tbat they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market, and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	-	**$ 1.20**
Corn, No. 2 " " " "		
Until January 1st, 1905,	-	**.50**
From Jan. 1 to Apr. 1, 1905,		**.55**
" April 1 to next crop	-	**.60**
Hay, No. 1 timothy, " per ton	- -	**12.00**
Oats, No. 2 white, " per bushel	-	**.40**
Barley, No. 2 " per bushel	-	**.58**
Barley, No. 3 " per bushel	-	**.52**
Potatoes—Chicago, per bushel,		
Until January 1st, 1905,	-	**.55**
After January 1st, 1905,	-	**.65**
Tobacco, (Price on the farm or at the market town)		
Virginia, dark, average per cwt.	-	**$ 9.00**
" bright, " "	-	**12.00**
Kentucky, dark, " "	-	**8.00**
" burley, " "	-	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Hogs, " per cwt.	-	**6.00 to 6.50**
Cattle, " per cwt.	-	**6.00 to 7.50**

$1.00 a bushel for wheat will be a successful export basis. If the crop is a bumper one we will try it this year.

One of our readers accuses us of being too modest in setting the number of members at ONE MILLION. He says "set it at FIVE MILLIONS, and let's work for that number."

Is the work under way in your county? Every county must be organized.

Is there a local union in your community? Every neighborhood must have one.

When breaks occur in the price of any farm crop all the farmers need to do is to quit marketing and calmly wait, when they will see the price mount upward again.

Don't think that this matter of controlled marketing all depends on YOU. There are hundreds of thousands of others doing their share, and the beauty of it is, and what makes it so certain, is the fact that those who practice it get well paid.

Send in the dates of your meetings to be published, but be sure to have them to us two weeks before the date of the paper.

Plan for your meetings, picnics and conventions now. Announce them as far ahead as possible. Send the dates to us and we will publish them. You will be surprised at the good this will do toward creating an interest and in securing a good attendance.

As it was: The supply overwhelmed the demand.
As it shall be: The demand seeking the supply.

We want to see a telephone in every farmer's home. We want the other end of the wire to be connected with his County Union, and that connected with a central point or clearing house.

Then we want every considerable market in the country connected with the clearing house. With the producing fields and the consuming cities connected at a common point, supply and demand may be compared and the supply controlled to always equal the demand. Then prices will be secured that will always be equitable and profitable to the consumer, because gluts will never occur.

Have you got your Third Power book? We have one for you.

This is the season when we again advise to build that granary, providing you did not built it last year.

$1.00 per bushel, basis of Chicago market, will be an export basis for wheat if the farmers of this country will set the price and maintain it.

If farmers want $1.00 wheat and prices of their own making on every crop they must do the only thing that will guarantee them, viz.: ORGANIZE.

Missouri is a pivotal state as regards the price of 1905 wheat. If Missouri growers dump their crop on the St. Louis market it may mean 10 cents to 20 cents off of the price. If they control their marketing they will add as much and the new crop will sell for the dollar.

Cotton Going Abroad

The heavy export of cotton goods should materially relieve the so-called burden of the great crop of 1904. The exports of the present fiscal year are put at $150,000,000 worth of cotton cloth and raw cotton. The actual exports for eight months were $92,500,000.

Of this great sum China took $28,000,000; Japan, $26,000,000; British Australasia, $17,000,000; Hong, Kong, nearly $8,000,000; British East Indies, $5,000,000, and the Philippines, about $3,500,000.

China takes cotton goods mostly, while the exports to Japan are mostly raw cotton, which shows Japan to be more of a manufacturing country than China.

With these enormous exports there is no reason why the home price of American cotton should be abnormally low—no reason except the power of speculation, to which, we are sorry to say, the United States Government contributed this year.

The planters must meet this power of speculation with the power of organization—the power to control the marketing no matter how great the crop.

$1.00 per Bushel

For the 1905 crop of wheat. Keep it before you.

German Edition

There is much demand for a German edition of Up-to-Date Farming. We would be glad to supply it if enough encouragement in the way of subscriptions was assured. Let us have postal card expressions from our readers Write a card and give us an idea of what circulation can be secured at your postoffice. When we are making arrangements and calculations for the weekly, which must come soon, we will also consider the German edition.

Preliminary Crop Reports

The A. S. of E. does not believe in them. Such reports can not affect the final yields, and are at best pure guesses on the final yields. They serve to unsettle business, and are in the interest of speculators and not in the interest of farmers.

The price for the 1904 crops were fixed by farmers or should have been. They should bring the fair prices and would, if preliminary crop reporting and boards of trade for speculative purposes were done away with. It will be time to decide the value of the 1905 crops when they are made.

When the proper time comes the A. S. of E. will ask for crop reports and then issue its bulletins of yields and prices.

How to Market the 1905 Wheat

CONTROLLED MARKETING is everything. Controlled marketing will make the price. Controlled marketing is irresistible.

If the farmers who grow the 1905 wheat will control their marketing in a common sense way the fair minimum price can be obtained for every bushel of wheat grown in the United States this year. The minimum price will be not less than $1.00 a bushel, no matter how large the crop.

$1.00 PR. BUSHEL

We will explain what we mean by a common sense way. Suppose you have raised 600 bushels of wheat. Now, instead of offering the whole 600 bushels as soon as it is ready for the market, offer 100 bushels. Then in a month offer another 100 bushels, and so on, market 100 bushels per month. This will allow you to market all your wheat in six months.

There are, of sourse, many farmers who don't need to market any for six months or more. These people are advised to hold all their crops if the market shows a weakness.

There is not a country in the world where wheat is raised but the farmers want a price equal to a basis of $1.00 per bushel at Chicago in this country, and we predict that if the farmers of this country will set the price at $1.00, and maintain it, that the markets of the world will rise to it.

This year you may have an exportable surplus of 150,000,000 bushels. We hope so; and if you have you must see that it is not a club to beat the price of all your crop down. You better sell 500,000,000 bushels at home at $1.00 a bushel ($500,000,000) than to sell 650,000,000 bushels at home and abroad at 75 cents per bushel ($487,500,000). Or you better lose the 150,000,000 bushels entirely than to sacrifice it and pay a big premium for the privilege.

Therefore we now appeal to all wheat growers to control their marketing. If you shove the early wheat on the market before the demand seeks it you will not get your price, and you will put a club in the hands of the speculators that they will use to beat down the price on every bushel. Give the world your wheat as you take your meals—when it is hungry—and it will pay your price. But just as sure as you begin dumping before the demand is ready the buyer will make the price and it will be low.

This appeal is particularly to the early harvest States—Missouri, Arkansas, Indian and Oklahoma Territories, and Kansas. They can start the price right. Will they?

The Devil's Own--Dealing in Futures--The Pit

The Most Demoralizing Influence in the Business World

The business world of today has engrafted upon it a system so inexcusable, so unreasonable, so demoralizing, as to disturb, if not corrupt, all other business, and which makes the most uncertain of all the business to which we look for the necessaries of life, and in which more people are engaged than in any other. The only reason why agriculture survives the system is because that calling holds in its own hands the means of human subsistence. Of course, all understand without our saying it, that we refer to the system or practice, of so-called dealing in "futures"—gambling in the future prices of important farm products.

Volumes have been written upon the pernicious character of this species of speculation, of gambling, and of its evil effects upon the productive industries, the demoralization which invariably attends it, and we could fill column after column with such condemnation from the highest and most respectable sources. But what is the use? No one denies the evils attending it, nor its demoralizing effect upon the industrial and business world. Let us quote from three eminently respectable publications representing three of our most important eastern business centers. Says the Boston Journal:

> The disastrous collapse of the attempt of John W. Gates to "corner" the wheat supply of the country, and make millions for himself by so doing, shows once more that even the money and brains of Wall street are no match for the hard-headed, logical, far-seeing students of actual wheat, like Armour and his associates out in Chicago. The thing has been tried many times, and in almost every case defeat has come to the would-be controllers of grain. Harper, Keene, Pardridge, "Old Hutch," "Joe" Leiter, all have seen millions squeezed from their pockets by the very crowd they expected to fleece.

Under the head of "A Conscienceless Game," the New York American says:

> After all, what an utterly conscienceless game it is!—for it is as purely a game as any of the devices with cards, or wheels, or dice, which the eminent authorities of the law in New York occasionally raid. A millionaire with the gambling instinct thinks he can buy and hold for a monopoly price all the wheat in the United States. Another millionaire, of like tastes, thinks he has enough money and can get enough wheat to "break" this corner. Both go into the game, each backed by business associates and friends who want to "sit in." Wheat soars for a time in price, then the other side has its inning, and it drops. Somebody suffers, though of the two leaders it makes little difference which one goes broke. But the whole country, producer and consumer alike, suffers from the unsettling of the values of country produce. The innocent bystander, who does not gamble in wheat or other foodstuffs, must in the end foot the bills.
>
> It is amazing that the defenders of the Chicago Board of Trade should continue their claim that its operations are necessary to the swift and profitable marketing of crops. That may have been its earliest purpose, but in these later days the institution has been given over rather to such raids on the food supply of the nation as Leiter some years ago, and Gates more recently, have attempted. The fact that the bull leaders have uniformly lost, and in some cases been bankrupted, does not affect the entire wrongfulness of the system. Intelligent people will rejoice that "Joe" Leiter lost $7,000,000 and Gates nearly $3,000,000. But the people who won were quite as much gamblers as the losers.

The whole thing is gambling, and those who engage in it are gamblers, no matter how prominent their names appear on church books, nor how long the column, nor how large the footing, of their benevolences. As we have said many times before, it is the most pernicious of all gambling, because most other gambling that the world and the law so emphatically condemns, seeks an obscure corner and hides itself, and its results affect only the participants, where as this gambling flaunts itself in open day, is engaged in semi-official quarters provided for that purpose, and finds its way immediately into the public press as matter of important news that affects the value of every individual's holding of the commodity for the moment thus gambled in, as well as every consumer in any form of such product.

Under the head "What Pit Savagery," the Philadelphia Record says:

> In the conflict of the Chicago wheat pit, which ended last week in the discomfiture of John W. Gates and his clique, the greed of gain was not the ruling passion. The rivalry of opposing factions controlling large amounts of money; the love of victory, and the eagerness of revenge stimulating the instinct of gambling had quite as much to do with the struggle as the desire to accumulate more wealth. Fortunately for the public, it generally happens that a combination of gamblers to corner wheat or corn or some other staple is almost sure to encounter a rival combination; and superior knowledge of the markets or power of endurance will determine the result.
>
> What seriously concerns the public is the utter want of ethical considerations in these conflicts. No thought of the welfare of others ever enters into them. They are as brutal as the primitive warfare of our savage ancestors, the chief difference consisting in the nature of the weapons. But legislative interference in this species of warfare, instead of mending matters, is apt to increase the evil by obstructing the legitimate operations of trade. The only remedy (a very remote one, perhaps) is in cultivating the moral sentiments until men come to regard with abhorrence this species of trade warfare and all concerned in it.

If there really is no remedy but that suggested by the Record, then must the public continue to suffer for many years to come, for it is difficult to conceive of a time when conscienceless greed will consider the rights of others, or check itself because of the injury it has wrought. As well expect the tornado to stop and look back at the havoc it has made.

But we have congresses and legislatures, powers to make laws to protect the innocent and punish the criminal, to encourage virtue and suppress crime, to subserve the public good and restrain the vicious. Many evils have been made the subject of such laws, and courts have upheld and enforced them. Liberty of the individual, when its exercise has been in conflict with the public welfare, or as the courts put it, contrary to good public policy, has been restrained without question, and civilized society has approved it. The "confidence" man is promptly arrested when caught plying his games. The man who fails to pay for goods he has purchased under fraudulent representations is punished for "obtaining goods under false pretenses." Parties who play at cards or other devises for money or other valuable things are punished because such games of chance are said to be demoralizing, and to permit them is "contrary to good, public policy." Persons who keep houses where others may go and engage in gambling, are liable to arrest and punishment, and their gambling devices, however valuable, are forfeited to the law and may be ruthlessly destroyed. The sale of intoxicans is considered inimical to the general welfare, and the law forbids it except under prescribed restrictions. The farmer is by law forbidden, in most places, to permit his stock to run at large, lest it encroach upon the rights or domain of others.

All these are restraints of individual liberty, and they are justified on the ground that they serve the public good, which, in organized government, is always held superior to the individual good, and individual liberty is subordinated to the welfare of society. This is not considered arbitrary; it is civilization's idea of government, and it is approved by the civilized world.

Take the unequivocal declarations of the above extracts, and the hundreds of like opinions that might be added to them; take the well-known and undenied methods of the operations of the Boards of Trade in the buying and selling of future options in farm products, and they are more directly in line with justified legal restraint than are many of the cases mentioned, and others that have been made the subject of such restraining legislation.

Why, then, may not this species of gambling be restrained by law, and the gamblers punished by the courts, as are those who commit smaller offenses? Must we conclude that legislatures and congresses are cowards? That they are ready to strike the weak and unimportant, but that they hesitate when the rich and powerful, those who may strike back, are involved? Do prison doors turn upon their hinges more easily when common offenders approach than when come the greater thieves and gamblers that demoralize all business, and pluder rich and poor alike by unsettling the values of the very food we eat? Can the public press discover trenchant remedies for the evil of throwing dice, but can see no remedy but pursuasion when a Gates or an Armour plans to destroy fortunes and wreck lives?

The world needs an education of boldness for the right, lawmakers and laws and courts that recognize "Equal and exact justice to all, with special privileges to none." Let the powerful offender be measured by no less a standard than is applied to the insignificant. Let the gambling, that wrecks fortunes and harms millions, be forbidden as well as the shaking dice upon a licensed bar.

This movement undoubtedly appeals to all classes. It is a genuine leveler, a destroyer of prejudice, a redresser of grievances, a minimizer of wrong a builder up of friendliness, a cementer of interests, an encourager of mutual helpfulness, a securer of justice, a bringer in of equity. All who love mankind and favor fairness in business find in the A. S. of E. the most powerful instrument for the accomplishment of these great purposes.

A

LOCAL UNION WANTED

IT is of the utmost importance that a Local Union of the A. S. of E. be organized in every farming community at once. This is necessary to stop the downward tendency of prices and guarantee good prices for this year's crops. Any body can organize a Union. Send for particulars. Address at once

THE AMERICAN SOCIETY OF EQUITY,
Indianapolis, Ind.

Virginia Meetings

National Organizer H. B. Sherman will soon return to Virginia to complete the organization work in that State. Meetings will be held as follows:

Grand rally at Lynchburg, Thursday, July 13; Amherst C. H., Friday, the 14th; Lovingston, Nelson county, Saturday, the 15th; Buckingham, Tuesday 18th; Cumberland, Thursday, 20th; Powhatan, Saturday, 22d; Goochland, Tuesday, 25th; Amelia, Thursday, 27th; Farmville, Saturday, 29th; West Appomattox, Monday, 31st; Rustburg, Wednesday, August 2; South Boston, Friday, August 4; Danville, Saturday, 5th; Martinsville, Tuesday, 8th, and Rocky Mount, Wednesday, August 9.

After these meetings it is expected to make a tour of North Carolina.

Farmers Must Be Prudent

Controlled marketing and farm price-making is the chief corner stone of the contention of Up-to-Date Farming, and its agitation is doing more to enlighten the farmers than any subject that has been discussed among them since the termination of the old Indian wars, and its accomplishment will do more for agriculture than the colleges and institutes and inventions have ever done. But farmers must be prudent. This is a practical age, and people no longer take things for granted. Every proposition is carefully weighed and measured by modern standards, and the theoretical and chimerical are quickly discarded. Propositions to find favor must bear the impress of reason, coupled with the presumption of accomplishment.

For instance, there now lies before us a series of resolutions adopted by an organization in the Indian Territory, to the effect that the price of the 1905 crop of cotton shall be ten cents per pound, and that members who dare to sell for a price less than that shall be fined from five to ten dollars for each offense.

Compare this with the resolution of a Kentucky Local Union of the A. S. of E., the members of which sold their crops in distress of necessity.

Our sympathies are unreserved.y with farmers everywhere, and under no matter what form of organization, in their efforts to control the prices of their products, but, as before said, success can only be achieved by prudent and reasonable action, and only equitable prices will be sustained. Prices below the equitable, the farmers themselves will not accept; above the equitable the world will not allow. Equity means equality, and equitable prices mean prices that stand upon an equality with the general level of values, so that when the producers part with their products they can with the proceeds obtain an equal, an equitable amount of labor in any line whose products they may desire.

This cannot be determined until the product to be priced is made, or is so nearly made that prudent estimation need not materially err. Equity in price is not arbitrary, but is essentially comparative, hence it is a mere matter of guess, of speculation, to say now what the price of the 1905 crop of cotton shall be worth, and it is the very opposite of production to declare that those who refuse to accept a price so fixed shall be subject to a fine. That is the assumption of legislative functions, which the courts would promptly overthrow, and to declare a fine without the ability to collect it, or to fix a penalty which could not be enforced, is like children's play at things that may well claim the attention of the wisest.

Our brethren of Blackrock mean well; they understand the situation and feel the necessity of doing something—their hearts are in the right place, but they are moving in eccentric lines. It will be found that the simple, prudent, and thoroughly practical plan of the A. S. of E. is the one which appeals to justice and reason, and which must accomplish the purpose.

Compare the action of a local union of the A. S. of E. in Kentucky which sold tobacco under the minimum price, as printed elsewhere in this paper, with the plan of the Indian Territory Society. Note the difference in sentiment, the result of teaching.

At a great national meeting,—a farmers' national convention, if you prefer to call it that,—where all the information that the world possesses will be present, the producers themselves will fix prices that will stand upon an equitable level with all other prices, and it will require no assessment of impossible fines to enforce an adherence to those prices—they will be prices which the world must recognize, and no others will be proposed.

We advise our friends in the Indian Territory as elsewhere, to prepare for representation at the annual meeting, and there participate in a work fraught with greater results than was ever before undertaken. Of course, it is better for all to belong to the great national organization represented by this paper, but the A. S. of E. is too broad and generous in its impulses to exclude any who may come with the sincere purpose of fixing honest and equitable prices on farm products, and of securing them by controlled marketing.

The Dues Analyzed

Farmers have one characteristic that does not manifest itself in so great a degree in any other class. They are not stingy; they realize that good things, cost money; they are fairly liberal in sustaining the ministry, and they absolutely drain their pocket books when it comes to paying for the services of a lawyer when they may unfortunately get into legal entanglements. But when it comes to remunerating, or even paying the expenses of those who devote their time and ability to the betterment of their general conditions, they balk at once. Any body else who serves them in any capacity must be paid for it, and paid liberally, paid whatever they charge, but when a broad-minded farmer undertakes to do for them a work they cannot do for themselves, and that no one else will do, he must do it for nothing, and at his own expense!

Farmers are not to blame for this; it has been taught them. Those who have so long robbed them of their reasonable profits and kept them down financially, have strengthened their possitions, even against the farmers' own better judgment, by persistently declaring that those who were fighting their battles honestly and faithfully, were simply doing so for money.

"How is your Society getting along?"

"Oh, very well."

"Yes, the leaders are making a good thing out of that."

"How much dues do you have to pay to keep up your society?"

"Oh, not much."

"You have to pay some don't you?"

"Yes, a little."

"Those fellows at headquarters are piling up money that will never do you any good."

"Mr. So-and-so is pretty active for your society, isn't he?"

"Yes, he is doing a good work."

"He's getting rich off of you farmers."

Wherever farm organization has been pushed such conversations as the above take place every day. They never attack the right of the organization, or the good it may do; their ever ready weapon is to destroy the influence of those who are doing the work. We have thus seen farmers scared out of paying their dues by men who in a single transaction was making more off them than would be required to pay their dues to the Society for five years!

"Come, and let us reason together." People ought to be paid for their time and toil even though it be devoted to the good of farmers. Every other class is organized, and they pay large sums to effect and maintain their organizations. Unorganized the farmers are at the mercy of other organizations. Farmers never can be organized unless somebody takes hold of it and works hard to effect the organization. No organization can be maintained and made eeffctive without central heads or headquarters—a medium through which all may speak and act—this is the essence of organization, of working together. This costs money, it cannot be done without it. All societies meet the expenses of this work by dividing it up among the members in the shape of dues.

An organization like the A. S. of E. to secure profitable prices for farm products, with the whole system of speculation to fight and overcome, could do nothing without such headquarters and a paper through which to fight and communicate with its people. What dues does it require to meet all these expenses? Fifty cents a quarter! Other organizations, even labor unions, laugh at us more for the insignificance of our finances than for any other feature connected with the society.

What is done with this money? Other than farm organizations do not trouble themselves to explain this, for their people know that expenses must be incurred and met, and they have faith in their officers that it will be properly done. But the A. S. of E. is willing to give every detail. Ten cents of the fifty stays in the local union treasury, ten cents of it goes into the publication fund to meet the cost of sending the official paper to every member. Twenty is held sacred in a fund to pay a funeral benefit on the death of a member. On the propriety of this, people may honestly differ, but we believe it is a splendid feature, and one that will win its way into the favor of every member. To meet all the other current expenses, ten cents goes into the general treasury, and that with a few other incidental fees, that are not regular but special, is all the money those who work for the society have to meet all expenses with, and to "get rich on!" God help the farmer who cannot see the reasonable necessity for these things, and understand the weapons so cruelly and foolishly used by their enemies, who are every week collecting from them heavier dues in the form of excessive profits, and who are sure enough getting rich off the farmers.

What is called the National Farmers' Congress is to meet in Richmond, Va., September 12th to 22d. If any one can point to any specific good to agriculture this annual junket ever accomplished, it would be enlightening to many.

Solid organization.

Permanent organization.

Learn and teach co-operation.

Honesty of purpose, good sense and reason in propaganda, stickability, persistent effort—these are the elements of success, and the A. S. of E. has them.

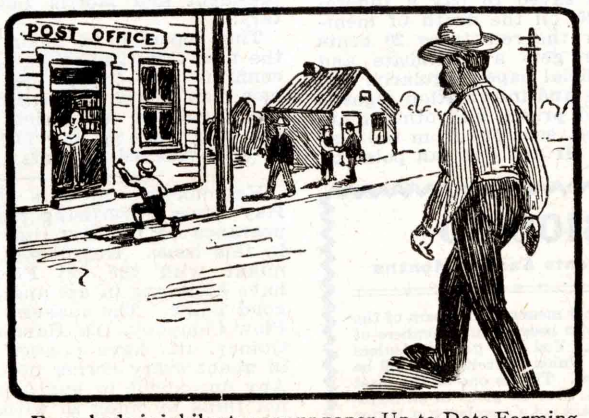
The A. S. of E. needs no capital stock—merely enough money to meet economic expenses, and even the church cannot get along without that.

Even little savings come handy in trying hours. The A. S. of E. Funeral Benefit is only a little savings fund—twenty cents every three months—eighty cents a year—a small saving, it is true, and no one can live long enough to pay the $100 to which they are entitled at time of death. This makes some think the Society can't do it. But it can do it. The fund will, of course, gain some by lapses (but you will see that yours don't lapse, won't you?). Then it has the general treasury fund to draw on. Another society has turned the trick for many years with less dues and very rarely an assessment.

Once in a while one may still meet a farmer who does not believe any but farmers should be admitted to a farm organization. But the A. S. of E. is not like other farm organizations—it is for the good of all. It is to benefit everybody, and if it does that it will benefit farmers most because most people are farmers. It is to secure equity in all the business relations of life, and that includes everybody that does business, and its achievement is the greatest good that could befall farmers. Hence we take this view. If farmers help other people to secure equity in their business, other people will help farmers to secure equity in theirs. This brings a mutuality of interest and friendliness among all people, and lays the foundation for equity we seek.

Ministers of the gospel are, and ought to be, leaders in all that means progress and the strengthening of right, the bringing of the people closer together and inculcating in them a love of goodness—placing before them higher ideals. Few human organizations teach higher ideals than the A. S. of E., and bring people closer together on higher planes. We would, therefore, be glad for every minister in the United States and Canada to know more of the Society and its purposes and workings—we wish them to read Up-to-Date Farming. A few broad-minded persons have created a fund to aid in securing this, which enables us to make this proposition. For ten cents we will send Up-to-Date Farming one year to any minister of the gospel in this country or Canada. Mr. Everitt has agreed to send the paper to ministers for half price, and the condition of the fund referred to is such, that any one who will contribute ten cents for this purpose as an evidence of good faith may draw on the fund for the remainder. Be sure to give the minister's name, address and church.

At this late day it excites a smile to hear any one say farmers cannot accomplish their purposes—so many things they have accomplished gives it the lie. Study wheat prices in 1903 and 1904, cotton prices for the same years and also for 1905. But for organization, cotton prices would have gone flat in 1905. Study the tobacco prices this year and last, and corn prices of the present year—well maintained though the largest crops produced. And all this under a preliminary organization. Now think of the power in 1906 of the organization perfected and permanent, of the great national convention or annual meeting, of prices made, in fact, by farmers themselves, of enthusiastic ratification meetings all over the country, of participation and approval by the honorable business men of the nation, and then say, if you dare, "Farmers can't do it!"



Everybody is jubilant over our paper Up-to-Date Farming. There is one boy at Muldrow who makes it a habit to beat his pa to the post-office so he can read the paper before his pa gets it. Rev. L. N. Nichols, Muldrow, Ind. Ter.

Minnesota Convention

REMEMBER the A. S. of E. convention at Rochester, Minn, June 7. Write to W. C. Webber, Rochester, Minn., for full particulars and railroad rates. Barley growers of all States are particulary interested in this meeting, but all farm interests will be considered.

SOME VIEWS ON WHEAT

Stocks Very Low

The visible supply of wheat in American (United States and Canada) was lower on May 1 of this year than it has been for many years. This does not prove that the American farmers have lost anything by lack of export trade, but would seem to indicate that if any considerable part of the 1904 crop would have been exported our own people would be put to dire stress on account of lack of flour. It looks more like American wheat for American markets each year, even should there be a bumper crop this year there will not be much for export. The market supplies are at a low ebb, and granaries are empty. If the farmers will refuse to market at less than their own price the buyers will come to it without delay—the fact is they can't delay, as the hungry mouths must eat.

Below we give the visible supply in the United States and Canada on May 1 for thirteen years. Excluding Canada the May 1 supply in the United States was a little more than twenty million bushels.

1905	42,018,000	1898	34,000,000
1904	47,385,000	1897	51,298,000
1903	56,268,000	1896	83,572,000
1902	58,295,000	1895	90.604,000
1901	65,382,000	1894	91,463,000
1900	77,814,000	1893	99,247,000
1899	51,713,000		

The supply this year is seven million bushels less than a year ago, sixteen millions less than two years ago, thirty-six million s less than in 1900, and only half as much as in 1896. The visible May 1 is twenty-two million less than on January 1 of this year. The condition is good for a good price for the new crop at the start.

If the cotton growers would refuse to market any cotton until they got their price they would win in thirty days or less. It would then be easy to maintain the price by refusing to market when the speculators put the price down. When the seasons roll around then cotton would all be bought at their price, because a 7 cent price does not particularly stimulate consumption, but it enables the middleman to accumulate a long line that he holds against the grower's supply and future crops. There is only one way under the sun to keep prices steady and fair, and that is to keep the supply in the hands of the producers, and only let it go when the demand will pay the agreed price.

Conventions and Meetings

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind. (Date to be announced later.) Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

MINNESOTA STATE CONVENTION of all farming interests, but primarily in the interest of barly growers. Rochester, Minn., June 7, 1905. W. C. Webber, Rochester, Minn.

RED MEN'S picnic, Hardinsburg, Ky., July 4. Write to W. A. Walker, C. of R., Hardinsburg, Ky.

FARMERS CONVENTION, Edmonton, Alberta, Canada, July 1, 1905. Write to W. J. Keen, Edmonton, Canada.

YELL CO., ARK., COUNTY MEETING in Luvena School House, June 3d. All local unions in Yell Co. arrequested to send delegates. C. C. Simpson, D. P., Dardenelle, Ark.

MICHIGAN MEETINGS.

KALAMAZOO COUNTY.

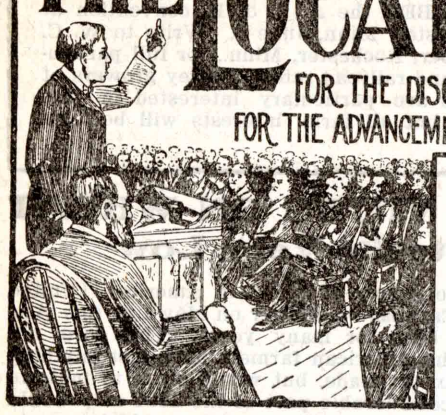
Schoolcraft Local Union No. 1 will meet at Terry School House, June 9th, at 8 o'clock P. M. A full attendance is desired. A. J. Andrews, Prest.

CASS COUNTY.

Marcellus Local Union will meet to con ider important business, at Kinney School House, Monday, June 12th, at 8 o'clock P. M. A. J. Andrews, Dep. Pres.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

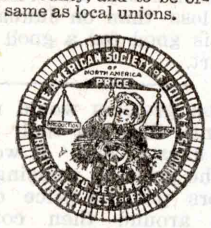
The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem



of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00 for members at large. Charter members of local unions pay no membership fee, and each member is entitled to receive a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

It's the thing.

The annual meeting.

Farmers have long wished to have a voice in their affairs; now they can have it.

The A. S. of E. is no star chamber affair. It is public to the world, and gives every farmer a voice in it.

When prices are made in a national convention the world knows exactly what has been done, and who did it.

The local union is not made up of representatives, but of the farmers themselves, and its voice is the voice of the farmers themselves. Every local union may send a representative to the annual meeting or national convention.

The county union is only one step away from the individual—it is made up of representatives sent by the local unions. Every county union is entitled to a representative in the national convention for every 200 members in the county, besides one for the union itself. How is it possible to devise a more perfect system of representation?

What is the annual meeting for? Listen. To consider all questions of interest to farmers and agriculture in general; to adopt such laws and rules as those present may consider for the good of the society, and to secure its objects; to take cognizance of the work done by the officers during the year, to approve what is right, disapprove what is wrong, and give any instructions deemed wise for the future; to examine the accounts of the officers, and the financial condition of the society, to see that all moneys have been properly accounted for, and that all expenditures have been judiciously made, and for the good of the society and its members, and to make full report thereof to the entire membership; to elect officers for the ensuing term, and see that good and sufficient bonds are executed to guarantee the safe handling of all the society's funds; to consider every crop produced, including live stock, dairy and poultry; to estimate the amount of each crop, compare it with the normal demand, and with the general level of prices of other commodities, and decide on a minimum equitable price on all farm products, so that every farmer may know just what he ought to receive for every crop he produces. If any one can point us to a more important meeting than that, or to one in which the masses of the people have more perfect representation, we would be glad for it to be done.

What does membership in such an organization, leading up to such a meeting once each year, cost? Aside from such funds as may be raised locally and in the county for local and county purposes, it costs 50 cents every three months, and 10 cents of that is kept at home for local uses.

What do the members get for the 40 cents that is sent to headquarters? Half of it is saved to pay a funeral benefit of $100, on the death of members, and for the remaining 20 cents each member gets a certificate and badge, the official paper regularly, and all documents and information regarding crops and prices, and other matters of interest, sent out from the National Union. If any one can point us to a more perfect system of organization, or one on more economic lines—one that does more and gives more at so little cost—we would be glad to have it done.

$100.00

For 20 Cents Each 3 Months

That's what it means to members of the A. S. of E. who become full members of Local Unions. You can get particulars of any Local Union Secretary or will be sent on request. This is one of the least benefits the A. S. of E. gives to all members. If you are not a member you better join at once.

THE AMERICAN SOCIETY OF EQUITY,
Indianapolis, Ind.

We very seldom indulge in invidious comparisons, and we will not do so now, but we wish our people to examine, not only the plans and purposes, but the minute details of every other organization on earth and see if they can find one which contains so much of good and so little of defects on so plain and broad a foundation that is so fearlessly made public in all its parts, that is so entirely under the control of the people themselves, at so small a cost and fraught with such wonderful possibilities. We do not dread such a comparison, for there is not one that can measure up to this.

Local unions occupy a proud position in this organization. They are not only its foundation stone, but they are the embodiment of its power. They are the makers of the county union, which is simply their representatives met to do their bidding, and they are the master builders of the society itself. Each is an organizer, clothed with the responsibility of organizing a local union at every available point, in their immediate vicinity or anywhere else, by itself as a body or through authorized committees, and it is allowed equitable remuneration for this work out of the organization fund. Again we declare that no other society has so complete a system of organization, or one which so fairly divides the honors and funds with the people themselves.

Acting Secretary Taylor, reporting what had been done by three local unions at St. Joseph, Ky., says: "This very creditable showing proves that local unions are as successful in organization as regular organizers are." To be sure. Let the home folks work up the home localities on the liberal terms provided in the Constitution. But we must remember the barren fig tree. Those who will not bear fruit, who will not do the work, must expect people to be sent in who will do it.

RATIFICATIONS

Kentucky, always ready to take the lead, sends the first words of approval and drives the first spike home that means the million co-operating farmers on a platform as sound, we believe, as the foundations of agriculture itself:

"Belcourt Local Union No. 1 met May 6, 1905, and it is my pleasure to inform you that we ratified and accepted the new Constitution and By-Laws of the A. S. of E. by a majority vote. Please send supplies.
"A. P. Jackson, Sec'y, Belcourt, Ky."

Virginia Follows Kentucky

Union Hall Local Union, No. 55, was the second local to ratify the new Constitution. The secretary writes: "Our union met Saturday and by unanimous consent accepted and ratified the revised Constitution as being far superior to the old form of organization. Please send at once full set of record books and supplies as provided for in Article IV. Our union is growing nicely."
J. R. W. CRUM, Sec'y, Union Hall, Va.

The new Constitution and By-Laws are sublime. I think they insure permanency, solidity and adhesiveness—three qualities essential to permanent success.
J. W. WADE, Buford, Ky.

Muldrow, Indian Ter., First

The first local union reported under the new Constitution comes from Muldrow, Ind. Ter. It was organized by W. H. Payne, under General Organizer Sam J. Hampton, and has 52 members to start with. H. H. Payne is president and Morris Levy is secretary.

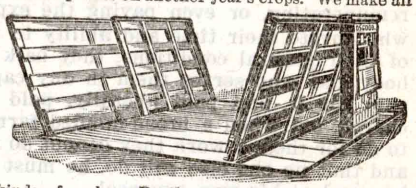
This report of a union on the day the new Constitution became effective confirms our hopes that under the new plan the unions will be large and the growth of the society rapid. Let the good work go on. The charter fee of $12 averaged 23 cents per member.

Haymakers will note that the Eli Hay Press advertising makes its appearance for the first time this season in this issue. Haymakers are all familiar with the Eli Presses. They have been long in use and they have a good name. The makers, the Collins Plow Company, 1192 Hampshire street, Quincy, Ill., have presses doing duty in about every corner of the country. Any one about to buy a press should not think of doing so without first investigating the Eli line. It consists of some 38 styles and sizes, both horse and belt power. The Eli catalog will be gladly mailed on request, and it gives full information.

in The New Idea Pitless Scale

You have $$$ coming. You save them on "underweights" when you buy an Osgood "New Idea" Steel Pitless "Ready to Weigh" Scale. No pit. No wall. No timber (except platform plank.) No expense or trouble.

You know you need a scale. You have been thinking and talking about it for years. Now send for our prices and liberal terms. Don't wait until you have lost the profits on another year's crops. We make all



kinds of scales. By the way, do you know a good machinery man? Do him and us a favor. Show him this ad, and write us about scales for yourself.

Osgood Scale Co. Box 100, Binghamton, N.Y.

The Local at the Crossing

On calling the meeting to order the president said:

"Members, I am glad of the full attendance this evening, for there is an important matter before us in the consideration of the Constitution which goes into effect to-day. I have studied it very carefully and I think I understand it. It may contain some provisions which I would not have included had I been writing it, but I was not writing it. If that duty had devolved upon me perhaps it would not have been half so full and complete as it is, nor so fair—possibly it would never have been written at all. But it is not my purpose now to express an opinion concerning it. The subject is open for discussion."

George Bowers.—Mr. President, I have studied it, too, and there is much in it that I like, but I believe I see in it one danger, and that is concerning the dues. Is it not possible that a great fund may accumulate at headquarters and prove too strong a temptation for the national officers? Besides, has it not often been said that there are no dues to pay? I am not kicking. I know nothing can be done without incurring expenses, and these expenses must be paid in some way by the general membership, but the question of dues strikes me as I have mentioned it.

Joe Riley.—I know there has been a good deal said about no dues to pay, but that was under the preliminary or experimental organization. I have all the time known we could not make a permanent success and accomplish our purposes without a permanent organization, and that means the payment of dues to meet expenses which no organization can avoid if it does anything. Besides, the dues are very light when we consider what the members get in return in addition to the general good from the objects to be accomplished. We've got to pay dues if we accomplish anything. But that funeral benefit is something new to me.

Pat Murphy.—Misther President, funeral benefit is it? Whin I die I don't expect my folks to git up a funeral that will be any benefit to me. Be jabers, I don't want any funeral meself so long as I can help it. But me father died, and me grandfather died, and me great grandfather died, and if I live I expect I'll die, too. Then somebody's got to put me under the sod. If this A. S. of E. will do that instead of me heartbroken wife, I'd be a queer felly if I didn't lift me hat an' say, "Thank 'e, gentlemen." If I am to have that kindness done for me I wouldn't be worthy of the ould counthry if I wasn't willing to place a shovelful or two over the remains of them as needed it before me, heaven rest their souls. I vote for the funeral benefit.

Charles Lambert.—And so do I. It struck me at first as bringing something into the society that had nothing to do with our purpose, but our entire work is mutual. It is fraternal as well as business. Its success depends upon the close co-operation, and whatever brings us together and hold us closer in the ties of mutual interest develops in us the spirit of general brotherhood, increases our power in the world and brings us nearer to final accomplishment and independence. Since I have considered this matter I would be in favor of a sick benefit even, but that is not practical, because, unfortunately, there are some who are not so honest as they ought to be, and sickness can be counterfeited, but nobody can counterfeit death, and I am more than willing to pay the small sum necessary to keep up that fund, knowing that it is a popular feature of many other societies, and I like to think that the greatest society in the world will do this for my folks when I am called away from them.

Mr. Oakley.—I'm no speecher. I had to hoe corn, or cut wood, or clear ground when I ought to been at school. But I allers try to look at things with common sense. What is all this talk about them dues?

The President.—Members pay a quarterly dues of 50 cents.

Mr. Oakley.—What is it for?

The President.—Ten cents of it is to be used by us in whatever way we may wish to spend it; 20 cents is to create a funeral benefit fund, 10 cents is to pay for whatever printing the National Union has to do, including the official paper, Up-to-Date, which then comes to the members free, being paid for by the National Union. The other 10 cents is to meet all other expenses.

Mr. Oakley.—Ten cents. Two cigars or a dozen pipesful of tobacker. The only thing I see agin it, boys, is it's too cheap. We are tryin' to do too much with too little money. That's been the trouble with all the farm organizations—too much on the bargain-counter style. Whenever we try to get something for nothing we are bidding to get bit. I ain't got much larnin', but I've seen a heap of the world. The reason I didn't jine this society before I did was becasue I knew it couldn't do anything without money, and they kept tellin' me there was no dues to pay. Anything that's good costs something, and I'm willin' to chip in my part. I begin to have faith in it now.

The motion was then put and the Constitution was approved, every member voting for it but Jim Denny, and he declared his vote had started, but the president didn't give it time to get out.

The local at the Crossing believes the success and permanency of the A. S. of E. is now certain. The Constitution and annual meetings make it so.

County Organizers and Representatives

The National Union is now engaged in appointing county or district representatives where the territory is not already allotted or where the representation is not satisfactory.

This is a matter of much importance to members and unions in the counties, and they should have a voice in the choice of representatives; in short, they should make the choice. To this end we invite them to agree on their representative and send his name to headquarters as soon as possible.

In counties having a county union this can easily be accomplished at a meeting of the county union. Where no county union exists we want all the unions to agree on a man. Please be prompt, as in absence of any recommendations we will do the best we can from material that we have.

Herewith is shown the record as kept at headquarters. It is constructed so as to show the development of the society in the county each quarter. Such a system should spur each organizer, county union, local union and member to work for a steady development.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. 10% discount when two or more consecutive issues are used. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Agents Who are making less than $25.00 weekly and want to engage in a high-class business write Dr. Haux Spectacle Co., Haux Bldg., St. Louis, Mo., and mention this notice in Up-to-Date Farming.

Men Wanted to sell the best line of scales made, Osgood Scale Co., Box 100, Binghamton, N. Y.

Farm Lands

Do You want a cheap home? Do you want a peach orchard that will produce fruit enough to pay for itself in one year? Do you want to grow cheap hogs? Do you want an alfalfa farm? Do you want to live in a land of sunshine and flowers? Then write to R. H. Thompson, Henderson, Texas.

Exchange 80 acres unimproved Michigan land, $800.00. What have you. J. R. Bell, Paris, Mo.

For Sale Five first class, black soil corn farms, 160 to 200 acres each. Good buildings. Send for descriptions. Chas. W. Butler, Defiance, Ohio.

For Sale Large and small improved farms. Write us for free list, J. H. Piper & Co., Mt. Vernon, Ill.

Missouri Bottom Prairie Farm of one hundred acres for sale. Easy terms, $60 per acre. Fred Hollrah, St. Charles, Mo.

Oklahoma Farms, write for prices. H. F. Stephenson, Kingfisher, Oklahoma.

Household Supplies

Canning Business information for a 2c stamp. Warford, Newburgh, N. Y.

Furniture At wonderful low prices from hotels open during the World's Fair. Only slightly used. Send for complete catalog. Langen & Taylor, Dept. G. G., St. Louis, Mo.

Gloves direct from manufacture to wearer. Our Cowboys' Indian Tan Buckskin Gauntlets only $1.00. Send for our free catalog, mentioning this paper. Deerskin Glove Co., Gloversville, N. Y.

Implements and Farm Supplies

TO PROTECT & PROMOTE FARMERS' INTERESTS — FARMERS' PROBLEMS

Under this head we will reply to any question affecting organization of farmers, co-operation, controlled marketing and price making.

Q. 1. Our local union members have renewed their subscriptions to the official paper, thus paying their dues for the year. Are we to be considered as members or not? 2. We do not approve of the funeral benefits. When the society is a success we can bear our own expenses. Can we remain members without contributing to the funeral benefit fund? 3. If we refuse to ratify the new Constitution, how will we be treated by the National Union?

BYRON TABOR, Sec., Ada, Ohio.

A. 1. Certainly you are considered as members of the A. S. of E. If you ratify the new Constitution the amount paid in advance on subscription will be deducted from the publication fund portion of the quarterly dues. If you don't ratify it, go ahead just as in the past.

2. Just so, when the society is a success—you mean when it has a million members and when every farmer is getting profitable prices. But have we not told you that something was necessary to bind the farmers together. This is the benefit that you are opposed to. If you can get profitable prices on all crops in one or two years under the present Constitution against five or ten years under the old plan, will you oppose it?

3. You can continue as in the past (read third paragraph of Introductory Address). It is quite probable, however, that you will ratify the Constitution, because it will be to your interest. The A. S. of E. never proposes to say any person shall do anything. Its mission is to point out the best thing to do and show the way. It realizes that the people must do things, and they will not do foolish or unprofitable things from pleadings or threats.

Q. I was a member at large of the A. S. of E. and joined a local union. They charged me 50 cents. Is that right? I don't regret the cost, as I consider the A. S. of E. as an institution as necessary and as worthy of support as the U. S. postal system or the public school system. I would pay $5 if that was the fee.

A. Under the old plan there would be no charge to join a local union. The only requirement was to keep the official paper renewed. Under the new Constitution a member at large in good standing with the National Union may join a local union without any fee.

The following questions have been asked with reference to the new Constitution:

Q. Special members, children between 14 and 21 years. Now, in case of a boy who is a special member becomes 21 years old, what action must be taken?

A. Read Article I, Special Members. * * * "Children not under 14 years of age and residing at home with their parents." Note that the Special Member term is not limited to 21 years, but is rather governed by the fact of residing at home with parents, etc. It is intended to give Special Members relief from the expense of the official paper when it is not needed. As soon as they reside by themselves or are in business for themselves they are expected to become full members and pay full dues.

Q. If Special Members refuse to pay quarterly dues, what action is to be taken?

A. See "Arrearages," Article IV, as follows: "A member six months in arrears for dues or other charges shall stand suspended without action of the union, etc. This applies to Special Members as well as Full Members. Also the right to participate in funeral benefits is forfeited by a member in arrears."

Q. If regular members under the old Constitution refuse to ratify the new Constitution and to pay the dues, what action should be taken?

A. Each local union must call a meeting at which they will ratify the new Constitution or leave it for future consideration. If not ratified they can continue indefinitely under the old plan. It is, however, hoped that all local unions will agree to the new order very promptly for the sake of uniformity and the greatest good.

Q. Will the official paper still be 50 cents extra?

A. No. But the subscription price remains 50 cents. Non-members can subscribe for it at this price.

Q. Members in arrears for their subscription to the official paper, what should they do?

A. They should pay the arrearage promptly. It has been earned and should be paid.

Q. What use will be made of the general treasury fund?

A. It will largely be used to help out the organization fund. There is much expense for printing circulars, booklets, postage, clerical hire, etc., etc. Also, if any surplus in this fund it will be turned into the insurance fund, as provided for in the Constitution.

Q. Was there a convention called from headquarters to get up the new Constitution and By-Laws?

A. The Constitution and By-Laws, as promulgated May 1, 1905, was adopted at the annual meeting of the A. S. of E. in December, 1904. Its promulgation was deferred because of the busy season just then opening and the fact that the facilities at headquarters were not adequate to take care of the great amount of extra work that the new conditions involve.

Q. Have the governed any voice in making the laws by which they are governed in this society?

A. Yes, liberal and ample. Read the Constitution and Laws. Sent free in booklet form to all applicants.

Q. Are local and county unions already organized under the old Constitution to accept and be governed by this new Constitution, whether they are in accord with its provisions or not?

A. See paragraph 3 of Introductory Address, page 4 of Up-to-Date Farming. Or same paragraph in booklet, "Constitution and By-Laws." We wish our friends would read carefully all the matter placed before them, as many of their questions have already been answered.

Q. Will the National Union supply books and blanks necessary to conduct local union business?

EDWARD T. SHOTZ, Spring Bluff, Mo.

A. Yes. All unions organized under the new Constitution and all old unions ratifying the new Constitution will be supplied with a complete outfit.

Other questions asked by Mr. Shotz are already answered.

Q. Are members obliged to pay quarterly dues or can they pay yearly dues and not receive funeral benefits? 2. If we must pay quarterly dues, what must be done for those that their subscription has not expired? 3. What does the member get to show that they are entitled to a funeral benefit?

A. 1. Meetings of local unions must be held to ratify the new Constitution (see third paragraph in "Introductory Address"). If a majority of members present refuse to vote in favor of it then continue under the old plan and try again in the future. 2. Any subscriber paid in advance can apply to headquarters for a statement of amount paid in advance, and this may be applied on quarterly dues and reported against the publication fund. 3. Proper blanks will be supplied to all local unions organized under the new Constitution, also to all old ones, as rapidly as they ratify it. Also record books, bonds, receipt books, etc.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Do Without a Debt

'Twas a lonely little homestead, the home of pioneers,
On the wide and open prairie, where passed my early years;
Sometimes abundant harvests with plenty filled the bin,
And sometimes on the threshold Hard times stood peering in.
Then serious discussions of ways and means occurred,
To be finally concluded by my father's cheery word,
"Whatever we may do without, whatever we may get,
There's one thing that is certain, we can do without a debt."
—Woman's Home Companion.

Think about the price.

Havn't you as good a right to put a price on your products as any one else has?

Don't you believe that farmers, organized and acting together could do that just as well as laborers can put a price on their labor?

Labor unions say they will not work for less than so much per day. May not farmers' union say they will not sell their products for less than a price fixed by them? One is just as reasonable as the other, and it is just as easily accomplished.

But farmers won't do it, you think. Why not? Are not farmers as intelligent as wage laborers? Are they not as resolute? Are they not as determined when they set their heads to do a thing? We pity the farmer that has so little confidence in his calling.

This talik may better apply to other departments of this paper, but we believe the most important element in successful farming is the price, and, honestly, we would rather teach people how to get a good price than how to make a great yield—it would be money in their pockets.

The ripest question among farmers just now is how to best save the hay. We presume at this writing the bulk of the clover crop is ready to harvest—some of it, perhaps, is already cut. Do not let it get too ripe. When apparently about two-thirds of the blooms show signs of ripening is the time to cut. With a heavy crop no little care is necessary in curing. And yet many put up clover quite green. We have done so with good results, and at other times with bad results. One thing is very certain—it must not be put up wet with either dew or rain. It must be entirely free from foreign moisture. One season with another, we like this method. Begin to cut in the morning as soon as the dew is pretty well dried off. Rake up and shock in very tall, slim shocks in the afternoon. Let stand until noon the next day, then haul in and mow compactly in the barn or stack. Of course, the weather is presumably dry and sunny. Heavy clover thus treated may heat some, but if free from external moisture, it will cure nicely, almost like bright tobacco.

We believe in mixed meadows, clover and timothy. We have them and have recommended them. But the time of ripening being several days apart, makes a little trouble. To accommodate both plants, and get the best results, we "split the difference"—let the clover get a little too ripe, and cut the timothy a little earlier than if it stood alone. This mixed hay makes excellent feed for any kind of stock, and each year finds it more popular in the market.

Pure timothy should stand until it is pretty well ripened—until the bloom has mostly fallen, and most of the seed has reached or passed the dough state. If cut too green it cures up lipht and chaffy. If allowed to get too ripe, to stand too long, it is rich in nutrition, but it becomes hard and woody.

We are aware that deep corn culture used to be the popular method, and plowing close even in the last plowings, was favored. We have heard old farmers say men should not plow for them who could not show corn roots on the point of the plow. Corn may stand such culture where there is an abundance of rain exactly when it is needed, but where there is even a remote danger of a lack of moisture, such culture is positively harmful. When corn is young, before it has made much root, it may be cultivated deep and close, but after the roots have reached out for food and drink, they should not be disturbed; every one that is broken and destroyed, weakens the corn. The main object of the after culture is to break up the crust and destroy the sprouting weeds. Hence, corn needs cultivation most as soon as the ground has become dry enough after a rain. Some say, "dryer it is the more you must plow." That may be true if plowing has been done regularly and at short intervals, so as to keep the ground finely pulverized on top so as to hold the moisture; but we would not care to go into a field that had not been plowed much, and but irregularly, in a dry, hot time.

There is a vast difference in roofing materials. Our people should always use the best; it is cheapest in the end even though it costs more. If you want a new roof and want the best at moderate cost, write to F. W. Bird & Son, East Walpole, Mass. Mention Up-to-Date Farming and ask for their booklets describing all that is best in this line.

Orchard Grass

It is questionable if this grass is so popular as it was a few years ago, the principal reason being the fact that it is so inclined to grow in bunches or tufts, and seldom makes a smooth sod. For all that, it is not without merit. It is very nutritious, hardy, easy to get a stand of, and will bear no little tramping and rough treatment. Mixed with red top and blue grass, it makes an excellent pasture.

Controlling Supply

As an example of how prices are made in some lines, we quote from the New York Commercial as follows:

"They will throw thousands of bunches overboard before they will glut the market so as to reduce the prices," said a dealer in Greenwich street yesterday.

The above refers to bananas, whose trade, it is also stated, "is controlled by three dealers."

A trouble with the oat crop is that the seed is rushed in so early that the ground is not well enough prepared, and the seeding is too often not done with sufficient care. It is important that oat seeding be done early, but "what is worth doing at all is worth doing well." Who has had experience with winter oats? Tell us about it.

If we should get more advertisers in Up-to-Date Farming we could print a larger, better paper. The cost of producing a paper like this is very great. The subscription price does not near pay for it. We must have advertisers to make up the difference. They will not continue to advertise if it does not pay. Therefore, if you want a larger paper and a better paper, buy from our advertisers; write for their catalogs.

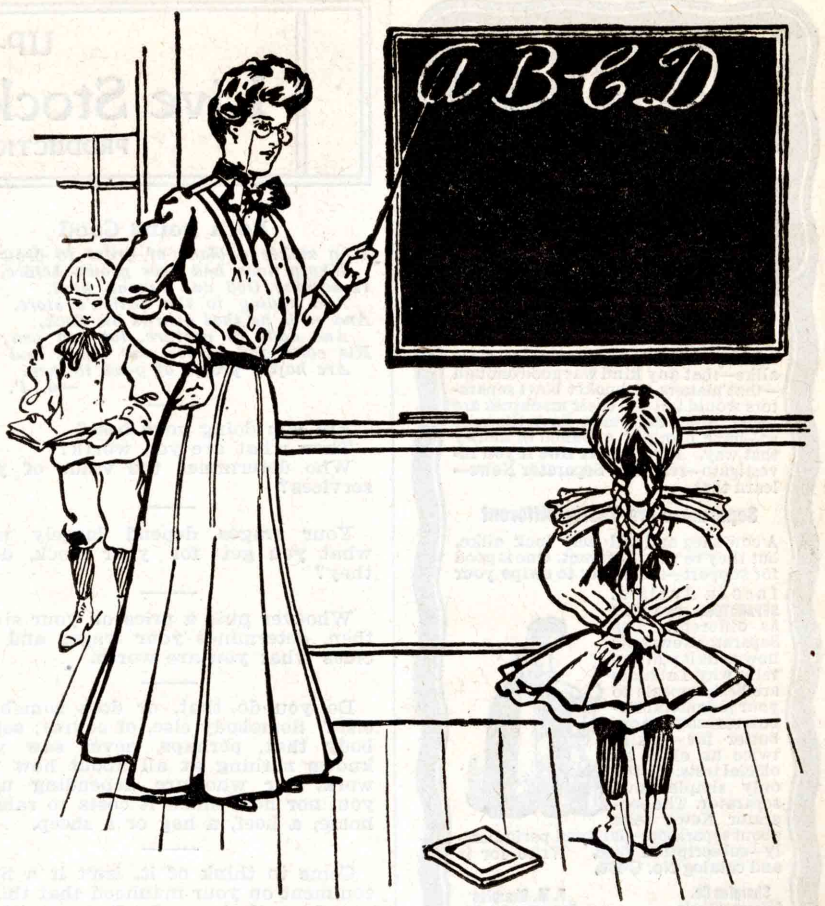
If you see advertisements in other papers that are not in this one, write to the advertisers and tell them you want to see their announcements in Up-to-Date Farming. Do this for your own good, for theirs and ours.

Advertising Costs Money

The page in Up-to-Date Farming costs a considerable amount. The advertiser who has the last page of this issue could not afford the price, if the treatment advertised did not satisfy and the patient paid. Read about it on last page.

Growing all the time—the Business Exchange.

Write "Osgood," Box 100, Binghamton, N. Y., about their "New Idea" ready to weigh "Pitless Scale."



THE FIRST LETTER

A Woman Writes.

THE FIRST LETTER that a sick woman should write or have some one write for her is to Dr. Pierce, of Buffalo, N. Y., asking him if "FAVORITE PRESCRIPTION" is suitable for her case, and he will frankly tell her so if he thinks it is. He may have to ask some questions before he can be sure just what the trouble is.

If you are suffering from uterine disease, the symptoms of which are headache, backache, sideache, pain in various parts of the body, especially in the pelvic region, bearing-down, inflammation, ulceration, then Dr. Pierce will advise you to use his "FAVORITE PRESCRIPTION" for he has had a wonderful experience in the use of this remedy. It is NOT A PATENT MEDICINE but it is a VERITABLE PRESCRIPTION that became his "favorite" when he was engaged in private practice forty years ago and found that it cured more than nine out of ten of all such cases that came under his care.

The doctor even then found scores and hundreds of women who were being improperly treated because their troubles were not understood and he determined to place this remedy that he had used so successfully within reach of the multitudes who were in such sore need of it.

He made it efficient, agreeable to taste, and, best of all, safe for any woman, old or young, to use. It is NEITHER A STIMULANT NOR A NARCOTIC, just a vegetable tonic, composed of roots and herbs of remarkable medicinal virtue in the treatment of this class of diseases, and its RECORD OF A HALF A MILLION OF CURES entitles it to full confidence.

STANDS ALONE.

The one medicine for the cure of woman's peculiar weaknesses and ailments, the ingredients of which are printed and placed upon every bottle leaving the great Laboratory in Buffalo, N. Y., where it is made, is called Dr. Pierce's Favorite Prescription.

It Stands Alone not only in respect to its ingredients, but also as the only specific advertised remedy for woman's diseases which absolutely CONTAINS NO ALCOHOL.

It Stands Alone as the one medicine for women, the makers of which take their patients fully into their confidence and tell them exactly what they are taking. This Dr. Pierce can afford to do, because his "FAVORITE PRESCIPTION" is made of such ingredients and after a working formula that has hundreds of thousands of cures to its credit placing its merits above criticism.

It Stands Alone as Nature's cure for the diseases of women because the earth supplies the ingredients, which are as follows:

Lady's Slipper (*Cypripedium Pubescens*).
Black Cohosh (*Cimicifuga Racemosa*).
Unicorn root (*Chamælirium Luteum*).
Blue Cohosh (*Caulophyllum Thalictroides*).
Golden Seal (*Hydrastis Canadensis*).

Don't Be Hoodwinked, hoodooed, hypnotized or over-persuaded into accepting a substitute for the **Original Little Liver Pills,** first put up by old Dr. R. V. Pierce, **over 40 years ago,** and called **Doctor Pierce's Pleasant Pellets.** They've been **much imitated** but **never equaled.** One or two are laxative, three or four cathartic.

Sharples Tubular SEPARATORS

The Separator News

Did you think all separators were alike—that any kind was good enough—that makers of bucket bowl separators would tell you their machines are poor? Some dairymen have thought so—have dropped a bunch of money that way. But **you'll not** if you investigate—**read** The Separator News—learn that

Separators are Vastly Different

A cow's leg and tail may look alike, but they're very different. One is good for support—the other to swipe your face in fly time.

SEPARATORS are just as different. The Separator News tells how, tells it plainly, tells why Tubulars are best, appeals to your judgment. Tubulars recover more butter fat—skim twice as clean by official tests. It's the only simple bowl separator. The Separator News tells about separators—is issued periodically—subscription free. Write for it and catalog No. C-136.

Both Doing Good

Who makes a blade of grass to grow
Where none had ever grown before,
Is serving God and human kind,
And adding to the nation's store.
And so is he that guards his flock,
And adds to pasture, lot and pen;
His colts and calves and lambs and pigs
Are happy proofs of good to men.
—J. P. S.

Are you doing your best?
Then what are you worth?
Who determines the value of your services?

Your wages depend largely upon what you get for your stock, don't they?

Whoever puts a price on your stock, then, determines your wages and decides what you are worth.

Do you do that, or does somebody else? Somebody else, of course; somebody that, perhaps, never saw you, knows nothing at all about how you work, nor who are depending upon you, nor how much it costs to raise a horse, a beef, a hog or a sheep.

Come to think of it, isn't it a little comment on your manhood that things are done that way? Can you think of anybody else than farmers and stock raisers that permit other people to say what they are worth, and then accept the price without a murmur?

Colic in Horses

There are few more common diseases in horses than colic, and none more recklessly treated. Every one who has handled horses has witnessed cases of it, and almost every one thinks he has a superior remedy—or many of them. We have seen valuable horses treated with different remedies in such rapid succession as to make it impossible to determine which, if either, had any beneficial effect.

The confusion in regard to this disease and its treatment arises from the fact that there are different kinds of colic produced by different causes, and developing the same general, with but few specific, symptoms, and yielding most readily to somewhat different treatment. The general symptoms of colic, present to a greater or less degree, in all the varieties of this trouble, are: Restlessness, cessation of whatever the horse is about, lying down and rolling, looking toward the flank, kicking with the hind feet upward and forward, jerky switching of the tail, frequently change of position and groaning. When the pain is intense the horse may throw himself violently on his side, may sit for a moment upon his haunches like a dog, and at times may sweat profusely. Each of the different kinds of colic has a few special symptoms not present in the others, and by which the veterinarian determines the kind and the cause, but which are not distinguished by the general observer, hence in the general mind colic is colic, and a remedy which proved efficient in some case must be efficient in all.

There are recognized at least five distinct kinds of colic, arising from quite different causes, and requiring different treatment:

1. Engorgement colic. This is caused by an overload of the stomach with food. It is most likely to be brought on by a sudden and reckless change in feed from dry to green, or green to dry. Changes of feed should always be effected with care, but some horses are predisposed to the trouble, and their feeding should be watched with special care. But the worst cases usually result from accident—the horse breaks into his feed, or gets into a rich pasture to which he is not accustomed, or into a corn or other grain field. If these facts are known and colic follows, it is safe to infer that the trouble is engorgement colic, but the following specific symptoms may be observed: Upturned upper lip, contraction of the flank, active motion of the throat, and drawing in of the nose toward the breast causing high arching of the neck. Sometimes the horse stands as if sleepy with his head against the wall or manger; at other times he may be violent, almost like mad.

Treatment that might be excusable, or even paliative, in some kinds of colic, would be absolutely cruel, and possibly fatal, in this. The thing desired is to relieve the engorged stomach. In an animal that can vomit, an emetic would be indicated, but the horse cannot vomit. Horses thus affected, in very extreme cases, may sometimes seem to vomit, but the stomach content is forced up the gullet and out at the mouth by the excessive engorgement, not by a spasmodic action as in vomiting. It is evident that drenching, or throwing anything into the stomach, can but aggravate the case. Veterinarians frequently administer sedatives in hypodermic injections, not as a remedy, but to deaden the pain and quiet the animal until nature may have time to dispose of the engorgement. A lick of salt, if the animal will take it, may be an advantage in that it delays fermentation of the excessive food, and also carries with it into the stomach additional saliva, which aids digestion. Emptying the bowels with a copious injection of warm soap suds, either with or without, is beneficial, as it increases the activity of the stomach.

2. Obstructive colic. This may be brought on by several causes—any obstruction of any portion of the intestines may induce it, and the remedy is to remove the cause. Impaction of the large intestines is the most common cause of obstruction colic, and the much-talked-of cornstalk disease may generally be found to be obstruction colic caused by such impaction. In this case the usual drenches given for colic, the rubbing of the abdomen, the running, etc., are worse than useless. The special symptoms are, that the trouble seems to be a lingering one in its earlier stages. The horse shows symptoms of colic, but then gets better for a while, to be again attacked with greater violence. The feces are passed more frequently than natural, but in small quantities and dry. When down, the horse lies flat on his side, head and legs extending, occasionally raising his head to look toward his flank; he may remain on his side from five to fifteen minutes at a time. Rising, he walks about, paws, looks at his sides, backs up against the wall if near one, which he presses with his tail, and then lies down again to assume his former position.

The remedy, of course, is to relieve the impaction. We know of nothing better than full injections of warm, soapy water. One to three quarts may be used at a time, and should be repeated at intervals, until it is clear that the intestines have been well emptied. So important is this that horse owners should keep poewrful syringes for this purpose. Hand spray pumps with the spray nozzle removed answers well. The writer is certain he has saved the lives of valuable horses in this way, and never lost one so treated.

But space compels us to reserve further consideration of this ailment for a future article.

HAVE YOU COWS?

If you have cream to separate a good Cream Separator is the most profitable investment you can possibly make. Delay means daily waste of time, labor and product.

DE LAVAL CREAM SEPARATORS save $10.- per cow per year every year of use over all gravity setting systems and $5.- per cow over all imitating separators. They received the Grand Prize or Highest Award at St. Louis.

Buying trashy cash-in-advance separators is penny wise, dollar foolish. Such machines quickly *lose* their cost instead of *saving* it.

If you haven't the ready cash DE LAVAL machines may be bought on such liberal terms that they actually *pay for themselves.*

Send today for new catalogue and name of nearest local agent.

THE DE LAVAL SEPARATOR CO.

Randolph & Canal Sts, CHICAGO | 74 Cortlandt Street NEW YORK

It's Easy To Wash

With the special stiff bristled brush which comes with each machine it takes about four minutes to wash the four simple parts that make up the bowl of the

U. S. CREAM SEPARATOR

That's a big saving in time and labor over washing crocks and pans or the complicated bowls of other separators. The cleaning of the separator bowl is an important item, as it affects very materially the quality of the cream. Cream that has been run through an imperfectly cleaned separator does not bring the highest price, and cannot be made into the best butter. All the highest scores on **dairy** butter at the St. Louis World's Fair were won by butter made from cream skimmed by a U. S. Separator.

"Better butter" is only one of its **many advantages.** Our free booklet tells them all fully. Write for one to-day.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

The broilers are coming on, and somebody has the money to pay for them.

Incubator chickens require a great deal of care, but when the trouble with cross hens is taken into account, it is questionable if they are more trouble than the hen-hatched ones.

Aunt Eliza says if Biddy is cross and too handy with her bill, trim the point of it off.

W. J. Bell, of Simcoe, Ontario, likes the Leghorns, and quotes the Canadian premier to the effect that if you get the Leghorns "you won't need statistics to prove they are profitable, you will feel it in your pocket."

Fowls are subject to indigestion. If they have not plenty of acceptable sharp grit they are sure to fail to properly digest their food. We use the word accetpable on purpose, for the fowls will choose what they need and will reject what is not suitable. That there is gravel in reach is not a positive assurance that the fowls have plenty of grit.

There is such a thing as breeding up a laying strain of hens. If you have a hen that you know to be a shy layer, never set an egg from her. Keep tab on the pullets hatched from eggs from the best layers.

Those who raise thoroughbred poultry should get a setting or two of eggs from abroad every season. And be sure that you get eggs from good fowls. This is the most important matter, and it is the hardest thing to be sure of. Big advertisements and high prices are not always a guarantee. Getting eggs for new blood is better than getting a rooster, as so many do, for from a setting of eggs you are liable to have both roosters and pullets. Getting a setting or two from different flocks is still better.

It is not a good plan to feed filth, decaying flesh or vegetables or foul slops to anything. The world of man and beast will be healthier when all such things are burnt or burried.

Hens Kept Close

A writer in the Rural New Yorker gives the following egg record for last January, and tells how he kept his hens:

Thirty-two of my Brown Leghorn pullets laid 532 eggs in January. Is that a fair average? Seventy-five from five years to five months old laid 797 eggs in the month of January, 1905. One-half of this record was due to the coop that I keep them in. I have a basement barn that is 36 x 56, 10 feet high, with a drain under the stone wall and from the stone wall to the hay and grain mow it is double boarded. I have a box stall 15 by 11 feet with one window, two panes 12 by 24 inches, in the southwest corner. This is the place where I keep them; they never get a cold draft, for I have to go through two doors to feed them. I put them in about the middle of November and they have not been out since. They laid about 20 dozen in December.

I feed buckwheat, corn, oats and wheat. I have a kettle that holds about 16 gallons; I boil cabbage, carrots, turnips, potatoes and about three pecks of buckwheat. When boiled I mix it well; they get one feed of this every day, warm. If I feed this in the morning they get all the milk they want at noon, but no grain till four o'clock, and then I feed the four kinds together on about six inches of straw and chaff, all they can eat and have some left to work at the next day.

The poultryman's problems will be solved when the surplus eggs and poultry are stored for the account of the producers to come out between seasons at an equitable price to the consumers. This means organization the plan of the A. S. of E.

Ducks and Geese

Duck eggs may be set as soon as cold weather is certainly past, and the Pekins at least must be set under chicken hens, which make very good mothers for the ducklings. Young ducks grow very rapidly, but they need frequent feeding and must have fresh, clean water in reach at each feeding. They need no water to sport in, and should have none until they are quite well feathered, and even then it is not a necessity. They will desert their hen mother by the time they are half feathered, and then they should have a clean, dry place in which to roost.

Goose eggs may be hatched under the mother goose or under chicken hens, but they should not be set too early. Goslings also need frequent feeding of soft feed, but they very early learn to nip the tender grass, with which they soon fill their throats. They, too, should be kept away from ponds until pretty well grown, and if they then have access to ponds that are infested with tadpoles, eating the tadpoles will kill them sure.

Goslings must not be left out in hard dashing rains. They will not seek shelter, but will stand with their bills stretched up as high as they can reach, and in that position the water runs down into their nostrils and drowns them. We have seen whole broods drowned in this way in a very few minutes.

$25 Cash For anyone reporting the largest gain for a horse or mare in any 60 days.

$50 Cash For anyone reporting the largest gain for 25 sheep for any 90 days.

$25 Cash For anyone reporting the largest wool clip from five sheep.

$25 Cash For anyone reporting the largest gain in ten sheep for any 90 days.

$25 Cash For anyone reporting the largest gain for five goats for any 90 days.

$25 Cash For anyone reporting the largest wool clip from five goats.

$25 Cash For anyone reporting largest number of first prizes won in 1905 for one ram.

These premiums are open to any man, woman, boy or girl in the world on the following conditions: "International Stock Food" is to be fed to all competing animals. The time limit is, for reports on animals and the tests, for any time between May 1st, 1905, and May 1st, 1906. You can select any months for your tests during this specified time. We do not require you to feed any certain amount of "International Stock Food," but leave matter of amount used to your own judgment. Feed as much of "International Stock Food" as you think will give you best paying results. If two or more make the same report the money will be divided equally. At the end of your test we require your written statement as to time you started your test, amount of "International Stock Food" used and the result, and this statement to be signed by yourself and two witnesses. Animals competing for one prize must not be reported for any other prize. Each prize must be won by different animals. If any report appears to contain a self evident error, we reserve right of asking party to make a sworn statement. You Must Send For One Of The Dan Patch Colored Lithographs, Offered Free On This Page, If You Have Not Received One. We would like a photograph of the animals before and after test, but we do not require it. The results, including name and address, will be published in all the leading "Farm Papers," having over Five Million Farmer Subscribers.

You have as good a chance as anyone in earning one or more of these spot cash premiums. They are much larger than any "State Fair" offers and the honor of obtaining one or more of these premiums will be much greater because the results will be published throughout the entire world. Premiums will be decided by us on the written statements which will be open for public inspection at any time. If you desire any further information we will be pleased to have you write us at any time. All letters will be answered promptly as we have 300 people in our office and 150 typewriters. Be Sure And Save This Premium List For Reference.

We do not ask you to send us a cent. Our offer is open to the world on very easy conditions stated below list of cash prizes. The premiums are perfectly free and are open to any man, woman or child. You can compete for one or more, and if successful you may earn several hundred dollars in cash.

Absolutely Free SPOT CASH PREMIUMS To encourage our friends and customers to give a little extra care to their Horses, Cattle, Sheep, Goats, Hogs, Colts, Calves, Lambs and Pigs. You stand as good a chance as anyone in earning several hundred dollars in cash.

A Chance To Make Money

I have berries, grapes and peaches a year old fresh as when picked. I used the California Cold Process. Do not heat or seal the fruit, just put it up cold, keeps perfectly fresh and costs almost nothing; can put up a bushel in ten minutes. Last year I sold directions to over 120 families in one week; anyone will pay a dollar for directions when they see the beautiful samples of fruit. As there are many people poor like myself, I consider it my duty to give my experience to such and feel confident anyone can make one or two hundred dollars 'round home in a few days. I will mail sample of fruit and full directions to any one of your readers for (19) two cents stamps, which is only the actual cost of the samples, postage, etc.

Francis Casey, - - St. Louis, Mo.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

An Apple Year

Hurrah, hurrah for an apple year,
That brings to farmers so much good cheer,
A pledge that winter will not be drear,
With a-plenty of apples handy.
—Adapted from Brooklyn Eagle.

Orchard and poultry are allied in dustries—the true fruits, not berries.

Orchardists have greater need for special methods of marketing than those of any other line of rural production.

Need of Orchard and Garden

Fruit shipping associations, increasing in number each year, have been profitable in some cases, but they have not and cannot solve the market problems of the orchard. They have never yet attempted to reach the main question, price. Increased shipping facilities, reduced freight, and bulk sales cover all the points attempted by the fruit shipping associations. These are proper matters to consider and are well worthy of attention, but they are only paliative, not remedial. They are like putting a plaster on the side of the swollen face while the aching tooth is left undisturbed. What the fruit growers (and the truck gardeners) need is PRICE, a steady market, a means of so distributing the products not only over the greatest possible space of time, but freely among the different points of consumption, so as to avoid and prevent congestion. It is congested markets that ruin the orchardist and trucker. Naturally their market period is short, and the main centers to ship to are few. The products being so perishable these market centers are extremely sensitive, even as points of distribution, and uneasiness manifests itself at the mere suggestion of congestion. What these producers need most of all else is ability to prolong the market period tnd to avoid the centers, the shippers themselves becoming the distributers. It is often the case that the market is dead dull in the large cities bcause of temporary excessive shipment, while half the distance from the producers there may be an eager demand and a hungry market.

Local shipping associations cannot meet these emergencies—only a powerful general organization can do it, an organiaztion that covers not only the entire field of production, but the entire field of consumption also—that can direct shipment not only to the main centers, but to the smaller points that are often compelled to do without these products, though an excess of them may be perishing where they are not needed.

We believe we can say without bias or prejudice, that the American Society of Equity is the only organization which affords perfect facilities for accomplishing these necessary ends; but to make those facilities available, of course, the fruit growers and truckers must be organized. They must be in position to respond to the opportunities offered—to uniformly and immediately withhold from the congested centers, and to divert their shipments to near-by points that may be seeking them.

Thus organized, the problem is not a difficult one, and its solution may easily double the profits of fruit growing and trucking, besides removing from it the ghost of uncertainty that hangs so heavily upon that important industry.

Besides, such organization may readily provide for such storage as shall materially prolong the market season, and in this respect alone add millions to the annual income of these industries. We cannot be accused of selfishness when we appeal to these producers to organize.

We have received from Mr. W. M. Ostrauder, 406 No. American Bldg., Philadelphia, Pa., a list of some recent sales he has made for clients. We give a few of them here. This shows the scope of this great business. Mr. Ostrauder has without doubt the largest real estate business in the world. He spends thousands of dollars annually to find buyers and makes more sales in a week than other large houses do in a half year: One thousand two hundred and eighty acres in Sheridan county, Kas., for The Severns Elevator Company, Chicago, Ill., $7,250; 3 dwellings in Richmond, Philada., for W. M. Dubois, $3,000; 160 acres in Dundy county, Nebr., for Isaac Schofield, Wapello, Iowa, $225; 446 acres timber land in Mechlenberg County, Va., for Mrs. Priscilla Birch, Meadville, Penn., $1,459; 320 acres Stark County, N. D., for Mrs. Jennie Ellis, Fort Smith, Ark., $1,000; 80 acres in Crawford County, Ill., for Levinia Childs, Sedan, Minn., $800; Illinois farm for G. W. Burks, Phillipsburg, Mont., $5,610; 120 acres Putnam County, Mo., for Mrs. E. A. DeKalb, Jamaica Plains, Mass.; 160 acres in Liberty County, Texas, for H. M. Bisbee, Pensgrove, N. J. building lot in Minneapolis for G. A. Parker, Castleton, Vt., $13,325; residence, Kings county, N. Y., for Joseph Kinzig, New York City, $10,000; medical practice in Elba, Nebr., for Dr. M. D. Pass, $900; 160 acres in Kansas for J. D. Worster, Somerville, N. H., 48 lots in Chicago Highlands, $30,000. If you want to buy or sell any kind of property of business anywhere, write Mr. Ostrauder.

Write to every advertiser in this paper, if you want to, with the knowledge that we guarantee them all.

THE LAST WEST

There is no longer a west in the United States, that is, in the sense of a virgin land of opportunity. The land-hungry and the eager seizers of opportunity have taken the best of the west. Those who come now must glean and take what was left by the keen pioneers.

In Canada the development and exploitation of the west are just beginning. A fortune awaits every man who is equal to his opportunities. Each year 50,000 Americans move into the new region of cheap or free lands. There too—in the last west—the land of wheat—the best opportunities for homes, careers and investments will soon be gone forever. Act before it is too late.

Would you like to learn about the vast wheat fields, the great ranges, the business openings, the untold resources of Western Canada; about Winnipeg, Regina, Calgary, Edmonton, Saskatoon, Indian Head, Prince Albert, Dauphin, Medicine Hat, and the other growing towns and cities of the Canadian West?

To get, for the trouble of inquiring, information and literature covering all these points and copies of the handsomely illustrated magazine "Resources," write to U. S. Bureau of "Resources," 229 New York Life Building, Minneapolis, Minn.

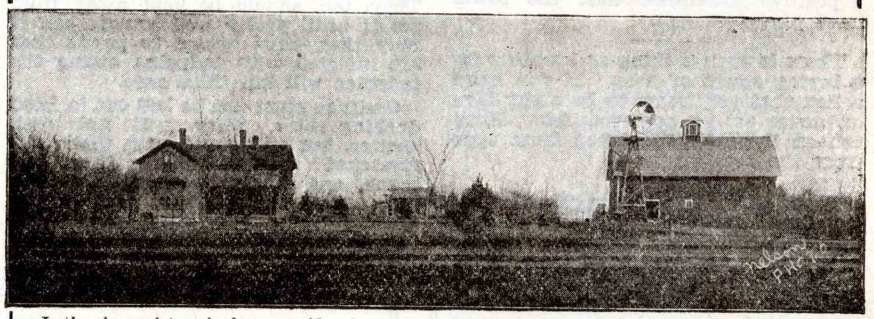
A Home like this for you

In the Garden Spots of Minnesota and Northeastern South Dakota



In the above picture is shown, an ideal home of a prosperous Traverse County, Minnesota, farmer. We have the making of such farms. Do you want one? If so, write us, stating what you would like to have, how much you want to pay down, etc. Do not be afraid to write us something like this: That you have so many dollars and wish to get a farm, state size of farm,—or so much money to invest in good farm land,—as the case may be. We are not selfish, we have made arrangements with other reliable land owners, to supply our customers with what we have not ourselves. Whether you want improved farms, prairie land, hardwood timber land with houses built for you, ready to move into, land on the crop payment plan (no crop no pay) or want to pay on the monthly instalment plan, write us. If you want a free homestead, and wish to buy adjoining lands, now selling at from $8 to $15 per acre, easy terms, write us, we will try to satisfy your wants. We court your good will and that of your friends. For further particulars and booklet, write,

UP-TO-DATE
Home on the Farm
HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

TELL IT

There are better ways of doing things,
If people did but know;
And so 'tis "little helps" we need,
As through this world we go.

If there are ways of making bread
Much better than our own,
A better mode of making "jell,"
Than any we have known;

If one can make a berry pie
And keep the juice ALL in,
If one has got a handy way
Of mending up old tin;

If one has unsurpassed success
In making flowers grow,
Don't hesitate to make it known—
'Tis what we want to know.
—Good Stories.

The best fly trap is to have nothing in or about the premises that flies can breed in, and nothing they can get to in the kitchen or dining room that can furnish them a meal. The housefly breeds in decaying vegetables, and in filthy drains and slop soaked earth, or in horse manure about the barns.

A department store at your door. That is what the advertisements in this paper mean to you. You can order from them with safety because we guarantee them.

What shall we eat, anyhow? A Chicago restaurant recently served "lemon" pies manufactured by a firm that had furnished thousands of such pies to consumers, that, on analysis, were found to contain neither lemon, butter nor eggs. Some of the ingredients were actually poisonous when taken in large doses.

Far too many parents, rather than assume the labor of teaching their boys and girls how to do more difficult tasks of daily life, prefer to do the work themselves and keep the child at the same monstrous routine of petty choring. This is altogether bad policy for both parties. It discourages the child and effectually prevents the parent from reaping the full benefit of the child's capacity.

If the mother cannot have patience to teach her daughter how to make bread and cake, how to sew and how to manage the niceties of housekeeping, who will teach her? And what unkindness it is to let her grow up in practical ignorance of these things, and then suffer the bitter consequences of such ignorance when she goes to housekeeping on her own account!

As a reward for drudgery faithfully done, the growing girl should be allowed to attempt tasks even a little beyond her ability. Supposing she does spoil a batch of bread or a loaf of cake, or fails to give the requisite whiteness and polish to starched clothes; she, like all the rest of us, must attain success through repeated failures; her skill and judgment will grow by exercise, and the sooner this exercise begins the more capable she will be.

The same is true of boys. Those boys who are taken into companionship and fellowship with their fathers, and gradually initiated into the ways of doing business, intrusted according to their capability with the management of important transactions, and instructed how to achieve results—such boys will almost certainly pass, with no unpleasant transition, from boyhood to manhood; they will have no "wild oats" to sow; sympathy with their fathers will act as a perpetual balance wheel to keep them within the bounds of reason and propriety.

Boys and girls are to be treated not only as children, but as prospective men and women. As children, they call on us for constant, patient, unwearying instruction and guidance; as minature men and women, they demand a delicate consideration of their preference, and a hearty recognition of their abilities.

Ten, twenty, and thirty years may reverse the position of parent and child, and demand from the child toward the parent the exercise of nearly the same virtues as were called for when the child, now in middle life, was a helpless dependent on parental love.—Mary M. Hogan.

Readers of Up-to-Date Farming constitute OUR PEOPLE, and thus shall we know them.

Now then, if you have NOT written some advertisers in this paper, do it before you forget. Send for their catalogues, because you will be interested in their bargains.

UP-TO-DATE

Tobacco Department

BY C. HAYES TAYLOR

Goering Local Union Sells Its Tobacco

The members of Goering (Ky.) Local Union, No. 1, sold its tobacco in a body for a price about $2.00 in advance of the prices offered for the same quality in 1904, though a little lower than the prices recommended by the Lynchburg convention for average grades of tobacco. We have received several letters condemning their action as a breach of trust and as disloyalty to the principles of the Society and to their fellowmen.

It is true that unless we stand together faithfully, we lessen our power and place our success in jeopardy. If some of the members break from the position taken by the Society, it may cause dissension among our forces that cannot possibly work to any good purpose. Every member must feel this and realize the importance of a fixed and settled purpose carried out with unwavering courage and unfaltering determination.

We must at the same time be fair and liberal in judgment, and be broad enough of mind to recognize each factor any every condition that has or may have influence over the affairs of our fellow members. We must remember that we are struggling to gain supremacy in price-making over a powerful corporation that is strongly entrenched and reinforced by both capital and co-operation. Before we can hope for the completed success that is the object of our organization, we must be able to co-operate fully. Through co-operation WE must control the supplies. We have not yet reached the point where we can do this sufficietly to make the results as definite as they must be finally. The dark tobacco sections of Kentucky and Tennessee are fairly well organized and Virginia is rapidly falling in line. Yet, in each of these states millions of pounds have been placed on the markets by non-members. Many of our members have not had the facilities to hold their tobacco for the better prices that they were confident would have been paid.

Without question our organization has forced a new condition more favorable to the farmers than that existing hitherto, and this is proof sufficient that when organization is complete, our power will be sufficient to carry the plans forward to a complete realization of our hopes and expectations. Though we deplore the fact that some of our members have been compelled to dispose of their crops before the recommended price was offered, we must consider the causes that led them to take such action. When our organiaztion is complete and our plan put in full operation, our power will be invincible, and any member who willfully takes a course that weakens the organiaztion should be treated as a traitor to his neighborhood and an enemy to the best interests of agriculture. Until that time we must make the best of the actual, not theoretical, conditions that confront us.

We give below the resolutions of the Goering Local Union, No. 1, passed at the meeting deciding the sale of their crops:

Goering, Ky., April, 1905.

Editor Up-to-Date Farming:

Please publish the following account of our business transactions :

We, the members of Goering Local Union No. 1, having rejected by vote the pooling plan of selling tobacco and having been offered an advance of $2 per hundred pounds over the prices of last year, have seen fit to dispose of our crops. We believe that it is better to sell and live than to hold and starve, as we think anything that will cause discontent among the members can only weaken our cause.

We heartily give credit to the organization for the good it has done, and we are more earnest in the cause of equity than ever before, and in the future we will stand, hand in hand, with our brother members in a demand for equitable prices as far as our circumstances will permit. We became members for the purpose of selling our crops for better prices, and we have done so. We will continue as members of the society, fully believing that still better prices will be secured in the future when more farmers are members. We are acting on such principles as we believe will uphold equity and justice and that our course will mean a strong local union of satisfied members rather than one broken and dissatisfied.

Respectfully submitted to a fair and impartial world.

GOERING LOCAL UNION,
W. R. Powers, Secretary.

The Wisconsin Idea

Each tobacco section will eventually have a distinct and definite plan for carrying out the detail work of marketing their own crops. Each different class of tobacco goes to a different market, or is used for different purposes and is handled and marketed by different methods. Each section must perfect the detail work for controlling the marketing in that section. This can be done by executive committees appointed or elected by the unions organized through out each section.

Mr. Wm. M. Connor, a Wisconsin Tobacco grower of fifteen years' experience, suggests the following plan for the tobacco growers of his section:

Every tobacco grower shall be his own salesman.

The minimum price for each grade to be recommended by a vote of the members having such grades for sale, and shall be adopted and approved by the National Union.

After selling, report to the Executive Committee the amount of each grade sold and the price obtained.

Notices of such sales shall be published in the local papers and a copy sent to the official paper for publication.

All the tobacco shall be graded and prized at the raisers' barns, or some suitable storage house.

Should minimum prices not be offered, the tobacco shall be cased in regular warehouse style and a sample of each case kept. A complete record of crops, samples and cases shall be kept by some suitable person selected for this purpose.

From all reports, Wisconsin tobacco will find a ready market at fair prices, in the bundle. An unreasonable price may mean no sale. Therefore, a complete system of classing and grading must be established and maintained. Every man having ten-cent tobacco must receive ten cents. The man who has six-cent tobacco must be content with six cents, but should not sell for less. Organization alone can perfect and put in operation a system of grading, pricing and marketing that can maintain a standard minimum price for each class and grade.

A Finance Committee shall be appointed to make necessary arrangements for prizing, grading and storing tobacco; also to secure loans that may sometimes be required to enable a member in adverse circumstances to hold his crop for a sufficient length of time to secure the minimum price.

The Wisconsin plan is submitted as a simple form for detail work which the members can alter and amend as they see fit.

It is now up to our Wisconsin members to see that organization is completed and the necessary steps taken to put some plan that will meet their needs into operation.

The National Union, through the official paper and through the medium of special bulletins, will furnish to each member the necessary information to enable them to understand the exact condition of the tobacco markets; to know how much of each class and grade is produced and how much will be consumed at fair prices. It will publish to the world the facts as they exist and will forever dispel the ignorance of the average farmer as to actual market conditions, which ignorance is the foundation of the price-manipulators' business, and is the buyers' license for offering starvation prices and securing abnormal profits thereby.

Delegates to the Owensboro Convention

Each county in the tobacco districts should take immediate steps toward selecting one to three delegates to attend the National Tobacco Growers' convention, to be held in Owensboro, Ky., on the 18, 19 and 20th of October. Men of sound judgment, who understand the tobacco business from the producer's standpoint, should be chosen. Each county having three or more local unions is entitled to three delegates. The following delegates have already been elected:

CAMPBELL COUNTY:
R. J. Marshall, Brookneal.
Andrew B. Martin, Concord Depot.

Have you Ordered your Third Power Book?

There is one for you and one for every farmer in the country

¶ The Third Edition of 10,000 sold in 40 days. The Fourth Edition (20,000) is now on sale and going at a remarkable rate.

¶ This is the most valuable book ever written for farmers, and should be read by all other people who want equity and fair dealing to prevail throughout America. Read a specimen letter:

MR. J. A. EVERITT, HARRISBURG, PA., Aprtl 27, 1905.

¶ DEAR SIR:—Enclosed please find one dollar for membership in the A. S. of E. I have read your book The Third Power, and have not been able to find any flaw in your plan to help the farmers. Thir book gives the farmers the key to the whole situation. I believe its teachings are entirely practical and can be carried out. I am ready to help the cause and do all I can to help the organization. I will meet with the Pennsylvania State Board of Agriculture and Farmers' Annual Normal Institute, at West Chester, Pa., in May. I have arranged with the Secretary of Agriculture to address the members on the subject of "How to secure profitable prices for farm crops." Send me a number of copies of Up-to-Date Farming and I will put them in the hands of the right people.

Yours truly, S. F. BARBER, 210 S. 13th Street.

25 cts.—The Third Power Book

Contains 320 Pages

Is bound in handsome cloth. It is a $1.00 book at any book store and 10c extra for Postage. But you can get a copy now for

25 cts.

Postpaid

$6.00 FREE—I mean just what I say. To each person who sends

25 cents

and the Coupon below for a Third Power Book I will also send a bond worth $6.00 in cash—see below. This offer and the extremely low price of **25 cents** I make to educate the people.

Send orders to **The American Society of Equity, Indianapolis, Ind.**

THIS COUPON and 25 cents (value $1.00) will pay for one Third Power book as above.

PROFITABLE PRICES FOR FARM PRODUCTS

THIRD POWER BOND | 75c

Coupon No. 1

The American Society of Equity, of Indianapolis, Ind., will accept this Coupon for *Seventy-Five Cents*, as payment on a Third Power Book. Subject to the conditions as printed on the right.

J. A. EVERITT, *President*. No. 12.

A bond worth $6.00 in gold (or its equivalent in cash) will be sent to the person who sends in this coupon with 25c for a THIRD POWER book.

This Coupon when accompanied by Twenty-five Cents (25c) will be accepted in full payment for one, one dollar ($1.00) copy of the great book The Third Power.

The third edition, revised and enlarged, 320 pages, cloth bound. Sent by mail postpaid, for this coupon and 25 cents.

This book should be read by every person--especially farmers.

"And unless the American farmer rouses himself, he will always be content to have his business controlled by others, to be called a "jay" a "rube" or "hay-seed," and to see himself caricatured in the comic papers and on the stage as the ridiculous victim of the gold-brick swindler and the hay-fork note peddler, and indeed no gold-brick swindle was ever so palpable as that which is inherent in our present organization." * * *

(Specimen illustration from The Third Power.)

I Pay $400 For This Space

In order to direct your attention to the following remarkable statement printed in a recent issue of the Saturday Evening Post:

"WITH a suddenness that must be startling to those who note only the surface of events, Socialism has become a factor in our moral, political and industrial life. The Socialist vote for president last fall attracted a good deal of attention—more, perhaps, than in itself it deserved—but it was in no way a measure of the importance of the Socialistic movement. And year by year, as science compels consolidations and co-operations on a scale impossible in the past, the collectivist proposals formulated by the German Jew, Karl Marx, out of the theorizings of the great French economists of the eighteenth century, are bound to receive more and more attention.

"Whatever one believes about it he must inform himself. For, while Mark Hanna's prediction that Socialism would be the storm center of the next great political battle in this country seemed exaggerated when he made it a few years ago, his farsightedness is already vindicated. To fight for Socialism you must understand it; to fight against Socialism you must understand it."

That's what you are up against, Mr. Up-to-Date Farmer, and I want to urge you to investigate this proposition of Socialism. The

Appeal to Reason

is a Socialist paper, printed weekly, with a circulation of 300,000 copies. It is a bright, snappy advocate of this New Political Giant which is destined to sweep the country. I want you to read it for a year, also five pamphlets, which will give you the gist of the Socialist philosophy. The paper is Fifty cents per year and the books sell for the same price. I will send you the paper for one year for 50 cents and throw in the books FREE, with the understanding that if at the end of three months you are not satisfied that you have the worth of your money, advise the Appeal and your fifty cents will be returned cheerfully, and you may keep the books, and the paper will be discontinued.

J. A. WAYLAND, Girard, Kansas.

WHAT IS YOUR EXCUSE

How Can You Refuse It?

It is offered to you freely, unreservedly, just on YOUR WORD that you want it, YOUR SAYING that you need it, YOUR PROMISE that you will use it. That is all! What is your excuse if you do not send for it?

You need the HEALTH which it offers; you NEED IT to give you the help you ARE LOOKING FOR, to give you the health, the strength, the vigor, the comfort in body and mind THAT YOU OUGHT TO HAVE. It is just what you have long been wanting; it is just what you NOW ARE SEEKING—the means to perfect, absolute, permanent health. What is your excuse if you do not write and TELL US TO SEND IT TO YOU? It holds out a hand to lift you right up to strong, virile, vigorous, happy, disease-free manhood and womanhood, to put you right on your feet—what is your excuse if you do not grasp it?

YOU ARE TO BE THE JUDGE. You want health, your family wants you to have it; Noel, the discoverer of Vitæ-Ore, wants you to have it, the company wants you to have it; the editor of this paper, you neighbors, your friends and associates, all want you to have it. Vitæ-Ore offers all this to you, offers it just as plainly as though health could be placed upon a platter and brought to your table. The Theo. Noel Company is the waiter, awaiting your call, ready, willing and anxious to serve it to you. There need be no tip, no fee, not a penny unless you are satisfied with the service. You have but to ask, but to say the word, but to crook your finger, and you will be helped to your share—A GOOD SHARE. Write for it today! How can you refuse? What is your excuse? Read our special offer!

WE WILL SEND TO ALL

Readers of this paper **a full-sized $1.00 package of VITÆ-ORE, by mail, postpaid,** sufficient for one month's treatment, to be paid for within thirty days' time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. If not, no money is wanted! **We take all the risk, you have nothing to lose.** If it does not benefit you, you pay us nothing. We ask no references, we want no security; just your promise to use it and pay if it helps you. Just say that you need it, that you want it and it will be sent to you, as it has been sent to hundreds of other readers of this paper. We want you to have it, and gladly send it, taking your word for the results obtained. There is nothing to pay, neither now nor later, if it does not help you. We give you thirty days' time to try the medicine, thirty days to see the results before you pay us one cent, and you do not pay the one cent unless you do see the results. **You are to be the judge!** We know Vitae-Ore and are willing to take the risk. We have done so in thousands of cases and are not sorry. Your case, no matter how hard or obstinate it may be, will be no exception.

Vitae-Ore is a natural, hard, adamantine, rock-like substance—mineral—ORE—mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct mineral spring. It requires years for oxidation by exposure to the air, when it slacks down like lime and is then of medicinal value. It contains free iron, free sulphur and free magnesium, three properties which are most essential for the retention of health in the human system, and one package (one ounce) of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water found on the globe, drank fresh at the springs. The mineral properties which give to the waters of the world's noted healing and mineral springs their curative virtue come from the rock or MINERAL ORE through which the water is filtered on its way to its outlet, only a very small proportion of the medicinal power in the ORE being thus assimilated with or absorbed by the liquid stream. The rock contains the much desired medicine, the water serves as the conveyance to carry but a small part of its properties to the outer world. Vitae-Ore is a discovery of this medicine-bearing rock, a geological discovery, to which nothing is added and from which nothing is taken. It is the marvel of the century for curing disease, as thousands testify, and as no one will deny after using. **VITÆ-ORE** has cured more chronic, obstinate, pronounced incurable cases than any other known medicine and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure. If yours is such a case, do not doubt, do not fear, do not hesitate, but **send for it today!**

A Certain and Never-Failing Cure for

Rheumatism
Lumbago
Bright's Disease and Dropsy
Diabetes
La Grippe
Blood Poisoning
Piles, Sores, Ulcers
Malarial Fevers
Nervous Prostration and Anaemia
Liver, Kidney and Bladder Troubles
Catarrh of Any Part
Female Complaints
Stomach and Bowel Disorders
General Debility

Doctors Said: "YOU CANNOT BE CURED."

ONE PACKAGE OF VITÆ-ORE PUTS HIM ON HIS FEET AGAIN AND BACK TO WORK.

Vitae-Ore saved my life, in curing me of Bright's Disease, which had baffled the doctors' skill. One doctor said: "You have Bright's Disease bad, and VERY BAD, too bad to hope for a cure." Another said: "I might give you medicine until doomsday and yet I could not cure you."

I concluded at this time that as long as their medicine could not cure me I wanted no more of it and resigned myself to what looked to me to be the inevitable. My hopes of a possible cure were again raised by reading a Vitae-Ore advertisement and seeing mentioned therein the testimony of a person who had been cured of Bright's Disease and whose condition at the time of his treatment seemed similar to mine. I procured a package and began its use. The first package put me right on my feet and back to my work. I kept it up, with the result that I am entirely cured. Doctors who have lately examined me say: "You have no kidney trouble whatever. Your kidneys are all right."

Vitae-Ore has done all this for me. I am well and working at 65 years and owe it to this remedy and the world to tell what I know of it. I send two photos, an old one taken when I thought I was going to die, and another just taken a short time ago. They tell their own story.

M. M. AMMIDOWN,
South Framingham, Mass.

STRONGER NOW THAN FOR 30 YEARS

CURED WEAK BACK AND CATARRH

ALL SHOULD USE IT

I have been taking Vitae-Ore for a number of months and can truthfully say that it has done me more good than all the other medicines as well as the doctors who treated me ever were able to accomplish. I am now as strong in my back as I was when I was a girl, although previous to taking the Vitae-Ore treatment I suffered continuously from weakness and distress in this region. I have now more flesh and muscle and I am stronger than I have been for thirty years. Before using Vitae-Ore I was troubled dreadfully with Catarrh, which has also been entirely removed, as I do not now experience any trace of it. I advise everyone that has any kind of disease to use Vitae-Ore, believing it to be the best general all around medicine that has ever been discovered. We have proven it to be such in our family.

MRS. M. E. STONE,
Chilhowee, Mo.

How Vitae-Ore Cures Rheumatism

Rheumatism is a deep-seated, dangerous disease, caused by the absorption into the blood of effete refuse matter, which should be carried out of the system through the proper channels. This poison soon destroys the purity of the blood and as it circulates through the body the acid particles that are thrown off penetrate the nerves, muscles, membranes and even the bones.

In Acute Articular Rheumatism, the affection usually commences suddenly; sometimes pain or soreness in the joints precedes the disclosure of the disease. The joints become swollen, particularly those of the knee, ankle, wrist, elbow and the smaller joints of the hands and feet. Acute Rheumatism is always identified with more or less feverish condition and profuse perspiration, especially at night, same being strongly acid, showing the system is attempting to throw off the poisonous particles. Chronic Rheumatism is the same as the acute form, but milder and less extended; though strange to say, more persistent and difficult to cure.

Muscular Rheumatism also exists under two forms, acute and chronic, the latter as in Articular Rheumatism, not so violent in attack but pitiless in its hold on the system. In the acute form, there is first a dull pain in the muscles, which gradually increases, growing almost unbearably violent in movements which require the contraction of the muscles. In the chronic form, pain is excited only when the affected muscles are contracted with unusual force, and is more apt to change its location than in the acute form.

With the blood in an unhealthy condition, exposure to cold, combined with moisture, the night air, sudden changes in the weather, sleeping between damp sheets, sitting in a cold, damp room, especially when heated from exercise, or an acute attack of indigestion is sufficient to bring on an attack of Rheumatism, in those who have never before experienced this difficulty, and cause violent attacks in those who are subject to it.

Vitae-Ore cures Rheumatism, even in chronic, diagnosed as incurable cases. Alkalies and the remedies that are almost invariably prescribed, fail to cure because they weaken the digestion, irritating the delicate lining of the stomach, thus impairing instead of building up the system. Vitae-Ore, being a powerful blood purifier, soon brings about a complete and radical change in the circulation. It is absorbed into the blood, neutralizing the acid secretions, rendering them harmless for evil, and gradually eliminates them from the system. Under its use the thin acid blood is made pure and rich and as it is carried through the body nourishes and soothes the irritated nerve tissues, cools the hot, throbbing muscles, dissolves the hard, calcareous matter that has collected in the joints, and it passes out of the system. Cures with Vitae-Ore are permanent and lasting. In severe cases crutches are often thrown away, never to be used again. It leaves the blood in perfect working order, its occasional use keeps it so and the cure is sure and certain.

Women Are you afflicted with any of the innumerable diseases which are so common and prevalent among your sex? We cannot mention them in this space, but let us assure you that **Vitæ-Ore** is the true "Balm of Gilead" to every sufferer. The many diseased conditions which unfit women for the full enjoyment of life and its duties may be at once alleviated and permanently eradicated by the proper use of this wonderful remedy. Send for a package on thirty days' trial.

Men Is debility taking the place of the vim and fire of youth? In these conditions it proves to be a powerful tonic, a reviver, a vitalizer, a restorer, force-builder. It is not a temporary stimulant, but builds up from the bottom by putting each organ, tissue, muscle and ligament in a healthy, normal, natural condition.

Old People For the aged there is nothing better than **Vitæ-Ore.** The loss of appetite and general break-down of the digestive organs is delayed, the blood purified and enriched, the vital organs are strengthened and a peaceful old age may be enjoyed by the use of this great natural remedy.

Vitæ-Ore will do the same for you as it has done for hundreds of readers of this paper if you will give it a trial. Send for a $1.00 package at our risk. You have nothing to lose but the stamp to answer this advertisement. We want no one's money whom Vitae-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention this paper, so that we may know that you are entitled to this liberal offer.

THEO. NOEL CO. Up-to-Date Dept. Vitæ-Ore Bldg. CHICAGO, ILL.

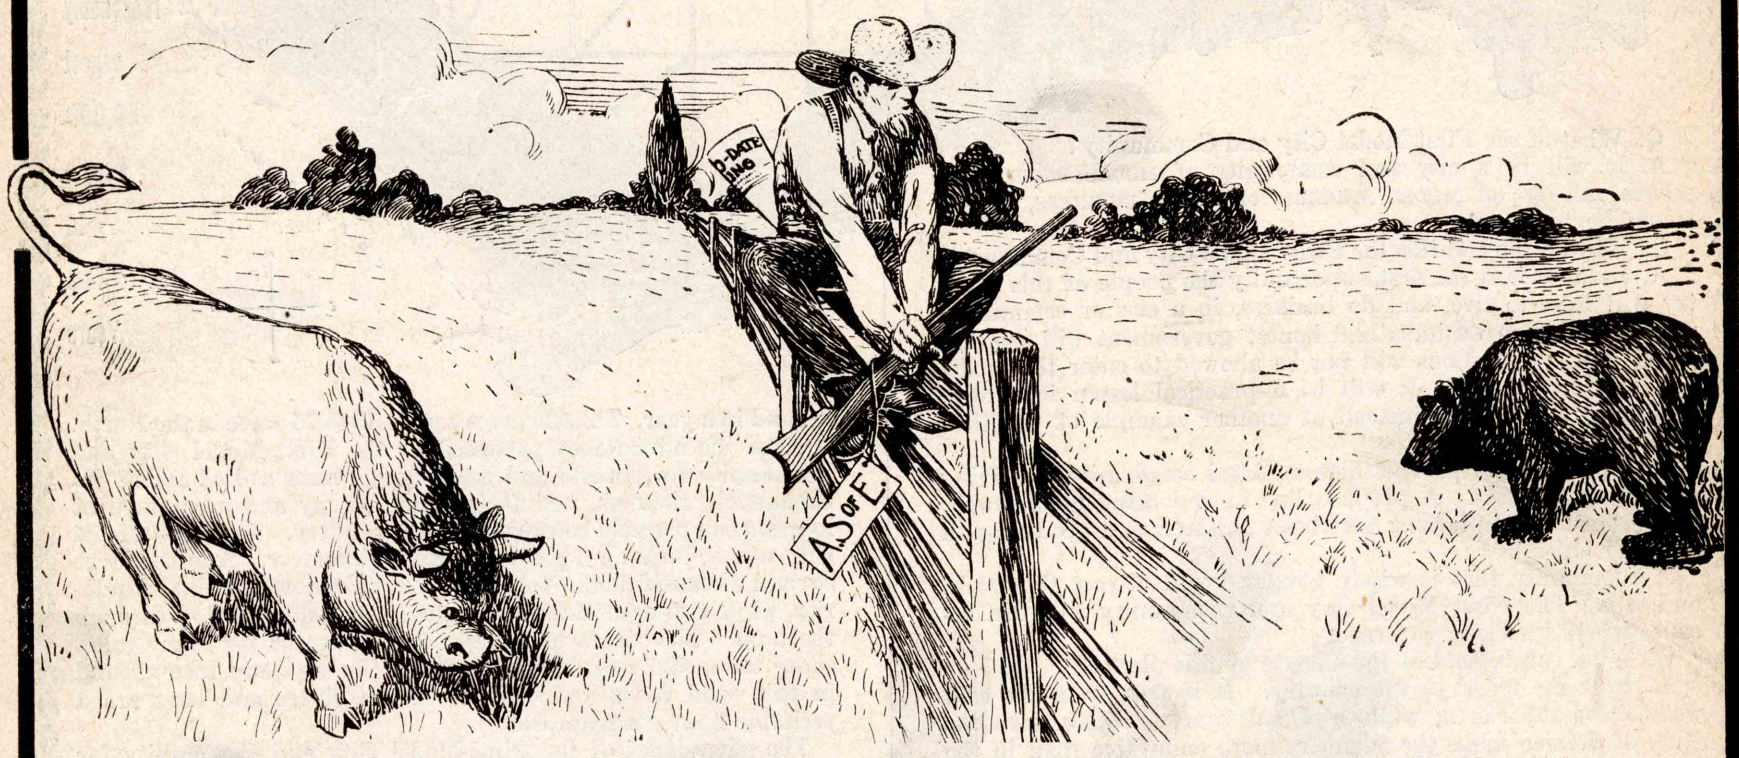
UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, JUNE 15, 1905

The Only Thing in the World That Makes Farming Doubtful

SO CALLED TRADING IN FUTURES



One is as Bad as the Other--But the Farmer Will Get Both

IN spite of too much rain and excessive droughts; in spite of insect pests and blighting fungus; in spite of untimely frosts and destructive storms, the farmer can make his way to success and independence. But there is one thing which enshrouds his business in doubt; one thing he cannot individually overcome; one thing that makes his straightest row an interrogation point, and sows with questions his richest fields—he cannot know what is to be the price of his products, what he can expect for a single day of his labor.

And all because his products are made the subject of the cruelest system of gambling unearned wealth ever devised.

"I will bet wheat, corn, cotton, tobacco—whatever it is—will be worth so much in July, October, December, or at any other specified future time," says a wealthy sport, a rich gambler, cool, calculating and conscienceless.

"I bet that it will not" says another equally unscrupulous. And with a little subterfuge, the bet is thus consumated. Says the second speaker:

"I will sell you fifty million bushels of wheat at 80 cents per bushel, to be delivered in December."

"But you havn't any wheat."

"That makes no difference; I will get it for December delivery.'"

"But there isn't that much wheat now purchasable in the whole country."

"No difference again. You have no use for that much wheat, nor for any wheat; it is the profit on the deal you want, not the wheat. If I sell you wheat at 80 cents a bushel to be delivered in December, and when December comes, if I cannot buy wheat for less than 90 cents per bushel, I must deliver you 90 cent wheat for 80 cents, and your profit is 10 cents per bushel, or $5,000,000. If I pay

FOR THE CO-OPERATING FARMERS OF AMERICA

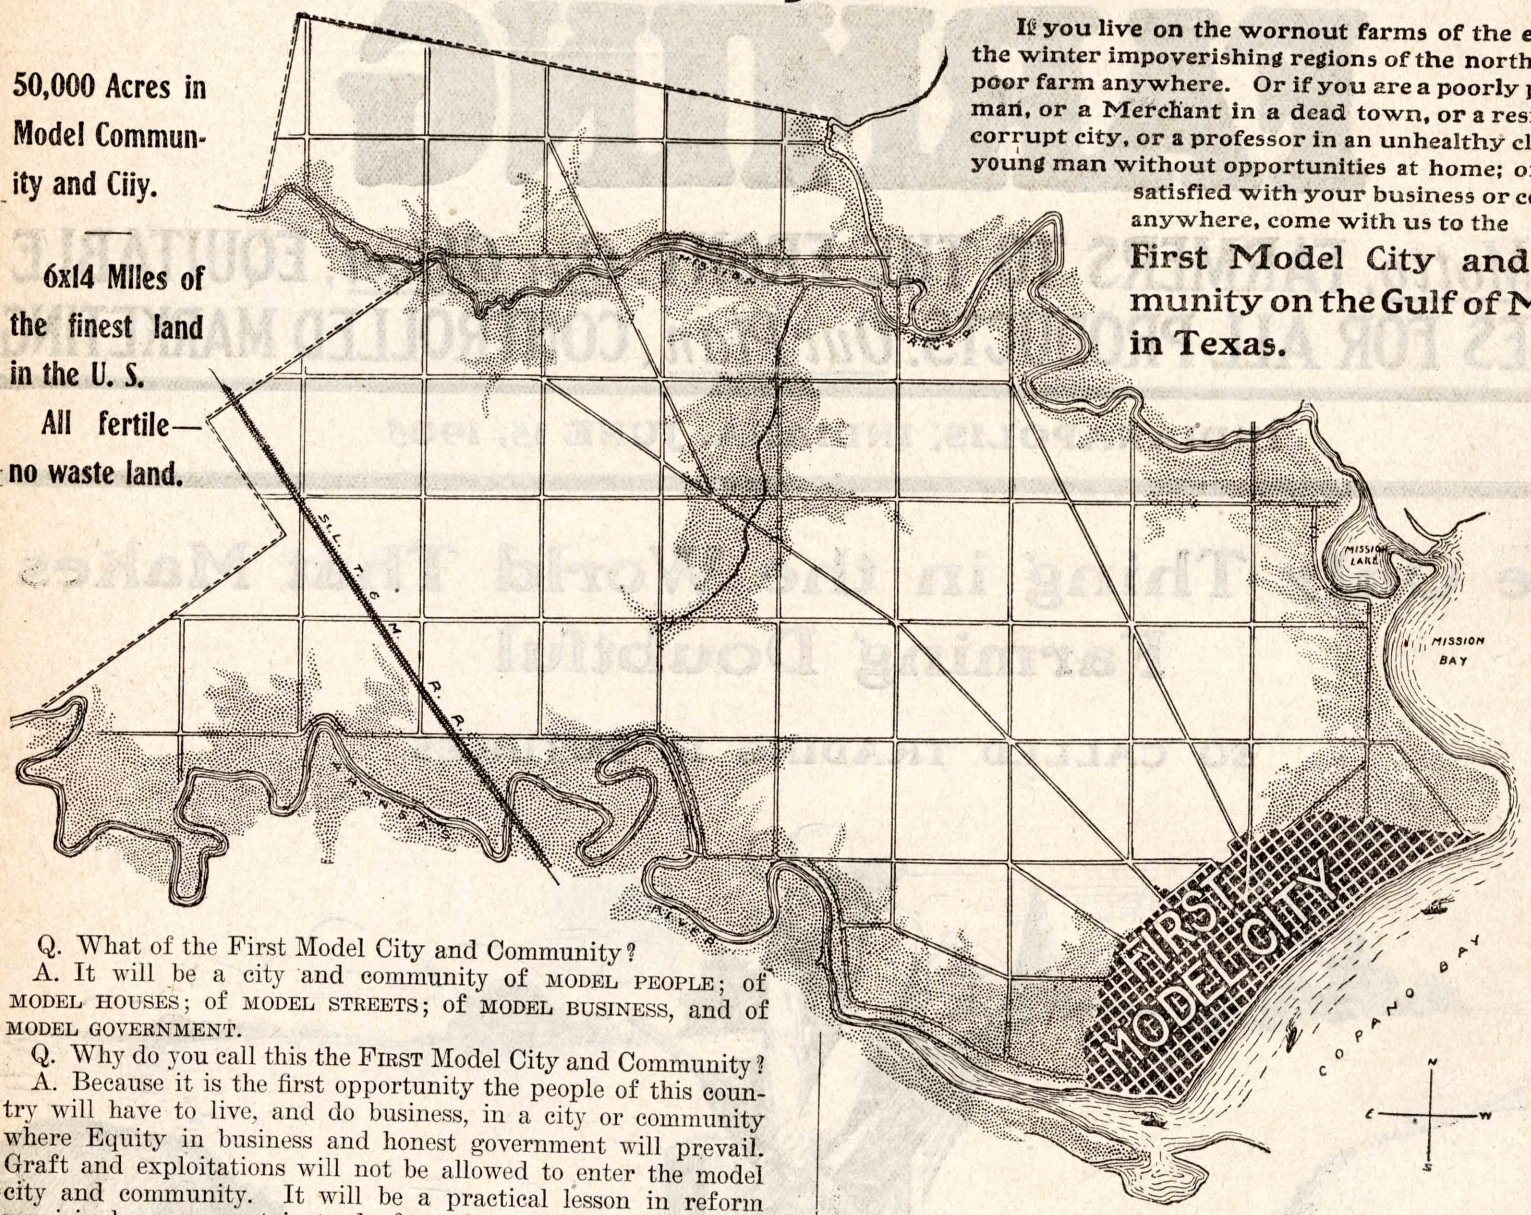
COME WITH US TO THE

First Model City and Community

50,000 Acres in Model Community and City.

6x14 Miles of the finest land in the U. S.

All fertile—no waste land.



If you live on the wornout farms of the east, or in the winter impoverishing regions of the north, or on a poor farm anywhere. Or if you are a poorly paid office man, or a Merchant in a dead town, or a resident of a corrupt city, or a professor in an unhealthy climate, or young man without opportunities at home; or are not satisfied with your business or conditions anywhere, come with us to the

First Model City and Community on the Gulf of Mexico in Texas.

The Model City may reasonably expect 50,000 People in Five Years

Q. What of the First Model City and Community?

A. It will be a city and community of MODEL PEOPLE; of MODEL HOUSES; of MODEL STREETS; of MODEL BUSINESS, and of MODEL GOVERNMENT.

Q. Why do you call this the FIRST Model City and Community?

A. Because it is the first opportunity the people of this country will have to live, and do business, in a city or community where Equity in business and honest government will prevail. Graft and exploitations will not be allowed to enter the model city and community. It will be a practical lesson in reform municipal government instead of another example of practical or professional politics.

It is proposed to provide here an ideal community for living and doing business. A place to live in and bring up a family free from the temptations that beset children and grownups in all other cities.

A community that is wisely governed will attract the world and win. The First Model City and Community will win because it will be wisely governed.

Q. What can be said of the climate of this place?

A. It is the finest in the country. It is free from the cold weather of the North, while cool, salt water breezes from the Gulf of Mexico make the summers more endurable than in the North. People who have poor health on account of the variable weather in the North quickly recover in this equable, invigorating climate.

Q. What crops can be grown?

A. A greater variety of crops can be grown in this section than any other place in the country. We mention corn, cotton, wheat, oats, potatoes, sweet and Irish; tobacco; all kinds of vegetables; nuts; fruit, such as peaches, grapes, strawberries, olives, figs, etc., etc. The great money crops are fruit and vegetables for Northern markets, and they are very profitable. We will particularly mention cabbage and Bermuda onions. This section can put all such fruit and vegetable crops into the Northern markets earlier than any other place in the country, consequently they bring the very high prices that always prevail for the first vegetables and fruits. Two or more crops are grown from the same ground in a year. Thus 25 acres equals 50 to 75 acres in the North. Besides the advantages possessed by the First Model City and Community for climate and crops, it possesses soil of almost inexhaustible richness, and for natural beauty and advantage of location can scarcely be excelled in the country. The First Model City will be built on a great bay and a fine river. Another large bay and a beautiful lake form its eastern and northeastern boundaries, while two beautiful rivers skirt its two sides or flow through the land. The rivers have eight feet of water for many miles above the model tract, while they, and the bays and lake abound in fish, wild fowls and oysters. These rivers and bays are a veritable hunter's paradise.

The advantages of the First Model City and Community for living and doing business, for recreation, sport and health, could hardly be improved upon. It will be the object to make it the most beautiful city in the country. A place that will attract desirable, permanent residents and thousands of temporary visitors seeking health and pleasure, not only from every part of America, but from the whole world.

The brilliant prospects ahead for the First Model City and Community makes this the most promising investment before the public to-day. Also such conditions are made as to insure against possible loss, but early subscribers will find the value of their purchase doubled before they are asked for a cent of payment.

If you are interested, and who will not be? send for a full prospectus and the very favorable terms for farm lands or city lots.

The Model Community will contains about 50,000 acres and averages about 6 miles wide by about 14 miles long.

Address for furt' er particulars **The Model City Land and Improvement Assc.** J. B. Coghill, Mgr., INDIANAPOLIS, IND

EXPLANATION: *To prevent any misunderstanding I want to say that this movement to establish a Model City and Community is in no way connected with, or a part of, the American Society of Equity. True, some reference was made to such a step (clearing houses and headquarters) in recent numbers of Up-to-Date Farming. The members of the Society were not however unanimously ready for the steps to be taken but several members and some others were so completely converted to the idea of the Model City and Community that they are determined to establish them without delay. I cannot do otherwise than heartily approve of the movement, because such an object lesson is needed in this country, and I trust the time will soon come when the A. S. of E. will select the First Model City as a southern headquarters and clearing house.*

This is an advertisement and is paid for at the regular rate.

J. A. EVERITT.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, JUNE 15, 1905 | Number 12

UP-TO-DATE FARMING
PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR
Foreign Subscriptions $1.00 a Year.

CLUBS. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the **LABEL.**

NATIONAL UNION LABEL — UNION FARMERS OF AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel		-	**$ 1.20**
Corn, No. 2	" " " "		
	Until January 1st, 1905,	-	**.50**

Hogs, " per cwt.		-	**6.00 to 6.50**
Cattle, " per cwt.		-	**6.00 to 7.50**

$1.00 a bushel for wheat will be a successful export basis. If the crop is a bumper one we will try it this year.

A little more education.

A little more organization.

A little more co-operation.

And the third power will be the greatest power in America and in the world.

Have you read The Third Power?

Give your full address every time you write. We now have 110 orders ranging from 10 cents to $4 that we cannot fill on account of insufficient addresses.

Give your county as well as post office every time you write to us.

To facilitate delivery of our mail, our correspondents are requested to observe the following instructions:

When writing to the publishing department, address Up-to-Date Farming, or J. A. Everitt, Publisher.

When writing to the Society, address, The American Society of Equity, or, if to any officer, address care of the society.

If you want to write to J. A. Everitt personally, address it to the department or business concerned.

Your pretended, but not real friends are more to be dreaded than your enemies. The latter you give no chance to injure you, the former you do, and like crawling things they enter your homes and approach you when you least expect it. Compel them to be real friends or put them in your list of enemies.

The population of this country doubles every thirty years. What are you going to do to double your crops? The A. S. of E. for profitable prices and the P. S. & P. Co. of A., for superior seeds and pure seeds will supply the answer.

J. A. Everitt will address the farmers of Kansas, Oklahoma and Indian Territory, at Winfield, Kan., June 20th, 10 a. m. This is Farmers day of the Chatauqua Assembly meeting. His subject: "How to Secure Profitable Prices for Farm Products."

Also on June 23d he will speak at Tyler, Texas. The occasion is a meeting of Texas fruit growers. Subject, "How to Market Fruit."

If any particular number of this paper appeals to you as being specially valuable in your state or neighborhood, send for some sample copies and distribute them. This number should appeal to Ohio farmers, who should be started to thinking by the article "Moral Obliquity is no Argument."

The attention of all organizers, all officers of local unions and all members, is particularly called to the notice of Funeral Benefits suspended, as appears in this paper.

A crop of 700 million bushels of wheat uncontrolled would sell for 75 cents (or less) value, 525 million dollars.

If the crop is controlled, 500 million bushels of the crop will sell for $1 a bushel, value 500 million dollars.

If the balance 200 million bushels can be sold for 12½ cents a bushel, the farmers will be even on the deal. If it can be sold for any more than 12½ cents they will ahead. It will sell for $1.00 as a surplus (if we have it) by the plan of the A. S. of E. Read Appendix of The Third Power for full instructions how to Control and Market Crops.

"Ask and ye shall receive, search and ye shall find; knock and it shall be opened unto you." These are the promises of Christ.

Interpreted they mean, if you want anything you must go after it yourself. If you wait on any other person or even on Christ to deliver; without your asking, searching, or knocking; you will wait in vain.

We received a check dated April 3d, drawn on The Citizens' Bank, Blackstone, Va., for $3. Drawer failed to sign his name and we don't know him. If this comes to his notice, please write to the publisher of this paper. The order was filled.

PROCLAMATION!

Funeral Benefit Feature Suspended

Whereas, A new constitution of the American Society of Equity was promulgated May 1st, 1905.

Whereas, One of the features of the constitution was a Funeral Benefit of $100 on the death of a member in good standing; and

Whereas, It is apparent that the majority of members are not ready to subscribe to the funeral benefit feature, judging by expressions received; and

Whereas, The Society was from its inception and is, an organization subject to the will of its members;

Therefore, everything must be done to promote the growth of the Society and nothing must be done to retard it, so its objects may the most quickly be realized.

Now, therefore, it is hereby ordered and declared that everything in the constitution promulgated on the date aforesaid, pertaining to Funeral Benefits, be, and the same is hereby suspended and of non effect, and to remain of no effect unless the members at some future annual meeting shall vote to reinstate it.

In compliance herewith, that part of the quarterly dues pertaining to the Funeral Benefit Fund, shall not be payable or collectable.

By order of the Directors of the A. S. of E., this 27th day of May, 1905.

J. A. EVERITT, President.

Attest: M. W. TUBBS, Sec.

To solve farmers problems.

This is the mission of Up-to-Date Farming.

The Weed Problem is one of the most serious. A plan has been evolved to solve it, see full page announcement in this paper.

Twenty years ago professional seed growers tried to produce seeds of as high quality as possible, now they try to grow them as cheaply as possible. Then they depended upon the quality of their stocks and their reputation for orders. Now they depend upon the cheap prices they can quote. The demand for cheapness has driven them to the necessity of curtailing labor. Consequently in cheapening the product they deteriorate the quality.

Only from thoroughbred seeds, seeds that contains the stored energy of years of careful, intelligent, selection and breeding, can the best crops be grown. Such seeds it is impossible to obtain under the present competitive system of growing and selling seeds.

Figs do not grow on thorns and the finest crops of vegetables or grain cannot be grown from seeds carelessly produced. A large bean and pea seed grower in New York lamented the changed conditions and explained that he cannot afford to rogue his crops as formerly, because of the low price at which he must sell. Any careful gardener will add his lament to the growers.

To grow thoroughbred seeds costs more than to plant and gather mongrel seeds and naturally they will cost the planter more. But no careful planter will begrudge the extra cost if he is sure of getting what he wants. The small saving made in purchasing poor seed never measures up to the loss realized in the crop.

Read the announcements of meetings.

Send the dates of your meetings. Remember they they should reach us two weeks previous to date of the paper in which they are to appear.

The Funeral Benefits feature of the new constitution has been suspended. See notice elsewhere.

Moral Obliquity Is Never an Argument

Farmers Should Beware of Pretended Friends

The above is a truth which the editor of the Ohio Farmer seems never to have learned. At all events, he must have little regard for that which honorable men everywhere respect and honor—truth and fair dealing.

The Ohio Farmer has frequently gone out of its way to malign the editor of this paper and to criticise the A. S. of E., but we have silently permitted it to go before the people, who, of course, are the judges between us. When the press generally was airing an alleged case of extreme moral obliquity very close to that journal, Up-to-Date Farming kept its columns clear of any allusion thereto.

In the issue of that publication for May 13, however, we find the following, which for moral turpitude, distortion and perversion of fact, and disregard of truth, we have never seen equalled in forty years of active journalism. We care little for it personally, but since that publication persists in guerilla warfare upon a society that has made a greater record, and added more to the income of the farmers of this country than has any society that ever preceded it, we feel justified in permitting the people to see the man as he is reflected in the mirror of his own words, as follows:

From the Ohio Farmer, May 13, 1905.

EDITORIAL NOTES

THE SOCIETY OF EQUITY

A Washington Co., O., gentleman writes: "I am just now becoming very much interested in the Society of Equity, and would like to have your opinion as to whether or not it is a good thing, and your reasons for your opinion."

This society has no past, being only about two years old, therefore it has never done anything by which to judge whether it is good or not good. We can judge only by the present-day utterances and efforts of its promoters as to its tendency and probable effect. The burden of their exhortation, such as found in their "official organ," seems to be that there are too many farmers in this country, and that they farm too well. For instance, we read, in their March 1st issue, the following: Last year the corn farmers farmed too well. What sense is there in telling them that they must farm better?" And the "organ" goes on to say that the cotton planters, the stock raisers, potato growers, and fruit and vegetable farmers all raised too much and farmed too well.

It says that, last year, we produced more corn than could be consumed, therefore the price was lower than when less was raised. As a matter of fact, in 1904 we produced 2,467,480,934 bushels of corn, against 2,244,176,925 bushels in 1903. How did the prices compare? The average value per bushel, Dec. 1, 1904, was 44.1 cents, against 42.5 cents at the same date in 1903. We have just averaged New York quotations as given in our firs tweekly report of each month, for the two years, and find that the average price there for 1904, the year when we "farmed too well," and raised too much corn, was 66 cents per bushel, against an average of 57 cents per bushel for 1903, when we produced over 200,000,000 bushels less than in 1904.

When making comparisons it would have been interesting if the Ohio Farmer editor had gone back further to get some figures. For instance, we see that the average prices in the past, when the country raised over two billion bushels of corn, were as follows: 1900, 35¼c; 1899, 30c; 1896, 22½c; 1895, 26c. In considering prices it should be borne in mind that the A. S. of E. doctrine of controlled marketinng is only about three years old.

As to live stock, our Chicago market reporter said, in our January 7, 1905, issue: "Desirable killing cattle averaged higher last year than in 1903, and the export trade was the largest seen in fourteen years." The range of prices at Chicago last year for all kinds of cattle was from $1.50 up to $12.25, the total shipments amounting to 1,326,332 cattle, while in 1903 the shipment of 1,269,455 cattle, 56,877 less than last year, brought from $1.50 up to only $8.25 for the best. Though 173,301 fewer cattle were received at Chicago last year than in 1903 (on account of the strike), there were 56,877 more sales and an advance of $4 per head over the 1903 highest price. The total numbr of cattle, aside from milch cows, in the United States, January 1st of this year, was 43,669,443, the average value being $15.15 per head, while in 1903, with a total product of 43,629,488, only 39,955 head less than last year, the value per head averaged $16.32, or $1.17 more than last year, which advance certainly can not be ascribed to the paltry 39,955 fewer head raised. It was demand that increased the price. Yet the official organ of the A. S. of E. calls the master of the National Grange a "drone," a back number, an out-of-date" because, in his last annual address, he charged farmers to grow larger crops of better quality to meet the demands of the market. It has always been, and always will be, the practice of The Grange to enlarge the market for farm products and feed more people, not to curtail production, consequently the market, and thus starve as many people as possible, as the American Society of Equity seems to advise. The A. S. of E. editor devotes the first part of the article mentioned to saying "the farmers farm too well," but in the last part he forgets what he said in the first part and publishes this strange inconsistency: "We do not admit that farmers farm too well." We advise him to read over his editorials before he puts them into cold print, to see that both ends can meet on good terms with one another.

Of course, the world knows that it has liars, and it places a very proper estimate upon them, but the meanest of all liars is the one that perverts the truth, distorts the words of another, and garbles them maliciously into a meaning they never possessed. To show to what extent the editor of The Ohio Farmer is guilty of this meanest of falsehoods, we reprint in full the article in Up-to-Date Farming of March 1, 1905, from which the Ohio Farmer pretends to quote:

IT MAKES ONE TIRED

"Farmers must farm better, put more of their land into meadows and permanent pastures, grow more stock, make, save and apply more manure, plow less, cultivate better, grow larger crops of better quality, and prepare them to meet the demands of the market; grow relatively less of the staple agricultural crops whose prices are fixed by the peons and serfs of the cheap lands of the world."—Exchange.

In the light of acknowledged events, isn't there just about as much rot in the above paragraph as could be crowded into that many words? And yet it is the instruction given by a prominent agricultural teacher, and has quite gone the rounds of the agricultural press.

"Farmers must farm better." The business of farmers is to cause useful and needed products to grow from the soil, and the better the farming the more of these products are made.

Last year more than two billion bushels of corn was produced in the United States, more, *it is claimed by the buyers*, than can be consumed, and, therefore, the price of corn should be low, *they say*. Last year, then, the corn farmers farmed too well. What sense is there, then, in telling them they must farm better?

Last year, it is claimed, the cotton planters produced a crop of some thirteen million bales, two million bales more than the world needs, the buyers say, and hence the planters should accept a very low price. Is it not adding insult to injury to tell the cotton planters they must farm better?

The live stock market reporters tell us there has been too much stock on the market all the past year, and when there comes a time that there will not be too much, the millennium will be near hence stockmen must accept prices close to, or below the cost of production. What is to be thought of the man who would tell the stock farmers they must farm better?

The potato growers raised a large crop last year, the buyers say entirely too large for the producers to expect usual or remunerative prices. How much would the potato growers pay an instructor to tell them they must farm better?

And so of other crops, especially fruits and vegetables.

In the face of these facts, isn't such teaching absurd, ridiculous, contemptible? And yet that is the burden of the instruction given the farmers all the time and everywhere. The remainder of the paragraph, except the last part of it, all points to increased production as the thing for the farmer.

At the last he is told to grow "less of the staple agricultural crops whose prices are fixed by the peons and serfs of the cheap lands of the world."

We suppose excusable ignorance is to be pitied rather than blamed. But is ignorance ever excusable in those who would instruct others. It is the first duty of educators to educate themselves. Those who instruct as per the above paragraph know little about marketing or price fixing. They know, perhaps, what they pay for articles they purchase for use in their families, but whence the price cometh, or whither goeth the profits, they know not, because they have given this part of the subject no thought, having simply accepted the preconceived opinions of the selfish or ignorant. And upon these opinions they base their instructions!

What prices are "fixed by peons and serfs of other lands?" Not one in America. Where the old system of marketing still prevails, all prices of farm products are fixed by the purchasers, the speculators and price manipulators. On the second day of last December, the ruling price of American cotton to the grower was around 9 cents, being bought in places at 10. On the 3d of December, after the publication of the report of the Department of Agriculture, the price fell with a suddenness that startled the cotton world. What "peon" did that? What "peon of other lands" plays with the live stock market, with the tobacco market, with the potato market, with the broom corn market, with the fruit market, with the hay market, with the vegetable market—with the price of every product not controlled by the organized producers under the new system?

Verily, there needs to be an overhauling of teachers, a change of texts, a revision of sermons. Instead of the old text of "farmers must farm better," try this—

FARMERS MUST MARKET BETTER.

Bear in mind that Up-to-Date Farming does not admit that farmers farm too well; it is the false logic of the old timers that makes it appear so. We do not admit that farmers have produced too much of any good thing. We can, therefore, consistently advise continued and even increased production, but as a matter of first and greatest importance, we urge farmers, through organization, to

MAKE AN EQUITABLE PRICE AND MARKET BETTER.

That is our text. That is our sermon. That is our instruction. That is WHAT CAN BE DONE.

Then the drones, the back numbers, the out-of-dates will have no occasion to tell the farmers they "must farm better."

The most casual reader cannot fail to note that the article we quote above from Up-to-Date Farming is entirely consistent throughout, that its meaning is exactly the reverse of the pretended meaning given it in the article quoted from the Ohio Farmer, and that it is in perfect harmony with the teachings of Up-to-Date Farming and the practices of the A. S. of E.

Another matter the well informed readers of Up-to-Date Farming will not fail to note is, that the Ohio Farmer acknowledges that the larger crops of 1904 brought better prices than the smaller crops of the year preceding. Why? Because the American Society of Equity and the people generally, following the advice of Up-to-Date Farming, held their products off the market—controlled marketing—and compelled a price which they never had received before under like conditions. He says it was "demand" that increased the price. We say it was controlled marketing, or control of the supply. Let the wheat growers, the corn raisers, cotton and tobacco planters and others answer if this is not so. And if the editor of the Ohio Farmer will have some clerk that is competent to do some honest figuring, to estimate the gain to the farmers from these sustained prices, as he himself admits them, he may learn at least something that the A. S. of E. has done for agriculture, and he will find a sum gained in this way sufficient to buy all the goods other farm organizations ever gained by forcing other people's prices down.

But in the face of the Ohio Farmer's malicious perversion and falsification, the editor of that paper is compelled to admit that "The object of this society, which is to secure equitable prices of farm products by concerted action, is certainly commendable." If that is the object of the society, and in another place the paper from which we quote declares it is, and if that object, "is certainly commendable," as it also declares, let the editor's own figuring, as we suggest above, determine whether the society has accomplished anything or not.

"But," continues the same paper, "the promoter and his followers are making a serious mistake when they undertake to build up their project by attacking the Grange." And in another place, "Not until the A. S. of E. ceases to attack the Grange's honorable record of achievement, and ceases to obstruct Grange good works now pending, can level-headed farmers be convinced of the sincerity of its purpose."

Readers of Up-to-Date Farming know that we never have anything but kind words for other farm organizations, no matter what their pretensions or what their treatment of us. To show how we "attack the Grange," we quote from an article which appeared in Up-to-Date Farming of March 15, 1905:

"The Patrons of Husbandry, more familiarly known as "The Grange," was the pioneer of farm organizations, and every subsequent organization of farmers, no matter for what purpose, is indebteded to the Grange, at least for having blazed the way. The Grange, too, has accomplished much. The first agitation for the legal control of railroad rates was a Grange movement, and the laws enacted as a result thereof were universally known as Granger laws. So of Rural Free Delivery of the mail. This was advocated for years by the Grange before its possibility was admitted in official and law-making circles. As an uplifting influence and a promotor of progress and sociability among the rural population, the Grange has set the pace for all other rural organizations, and as such it merits full mead of praise."

In conclusion, we have the kindest regards and utmost respect for men who differ with us on any proposition, no matter how vigorously they may express that difference, and those who honestly criticise Up-to-Date Farming we regard as our friends, while those who are able to point out errors in the A. S. of E. and lead on to improvements, are not only our friends, but they are friends of humanity; but for those who maliciously pervert our words and misrepresent us to gratify their own selfish natures, we have nothing but supreme contempt, and this contempt should also be shown by all fair-minded people, and, particularly by farmers who are the deceived and injured people in this case. Farmers should know their real and pretended friends.

Note—In a recent issue of the Kansas Farmer we also see an article containing perversions and distortions of our communications. We expect to pay our respects to the Kansas gentleman in next issue of Up-to-Date Farming.

"Conspiring to Defraud"

Mr. Theodore H. Price, whose great wealth has every bit been created by the cotton planters of the South, and has come to him in the shape of profits made by forcing down the price paid the planters and by forcing up the price paid by the millers. Of course, he is very much opposed to any movement that would reduce his profits, or make prices too steady for him and his class to manipulate.

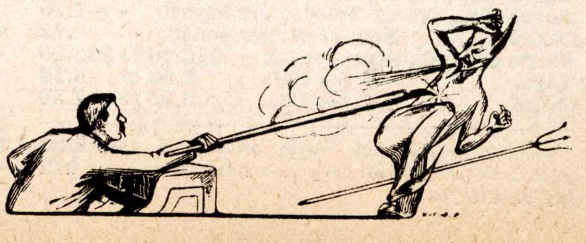
We need not be surprised, then, to hear him declare, as he did recently in New York, that any agreement to not sell cotton below a specified price was a "conspiracy to defraud."

To defraud whom? Not the cotton speculators, for their whole business is a fraud, and one cannot defraud a fraud. Not the millers and operators, because there has never been any agreement to sell them cotton at a lower price, and the cotton is not denied them, but is freely offered at a price of which they have been fully informed, and which no one has ever claimed to be extortionate. The cotton belongs to those who produce it, and if they decide to sell it at two cents per pound they have a right to do so; or if they decide to ask ten cents per pound for it they have a right to do that.

What matters it to Mr. Price? He owns no mill. He uses no cotton. Nor does he plant or produce any. Why has he in cotton more than the common interest of any good citizen in the success of all important interests?

When manufacturers, foundries, mills, mine owners, distilleries, sugar and oil refineries—when any or all of these unite to demand a fixed price for their goods, are they "guilty of a conspiracy to defraud?" Oh, no, that is a horse of an entirely different color, for Mr. Price does not speculate in those things.

But when you scratch the devil you may expect to smell sulpher.



THE COTTON SITUATION AND ITS LESSON

A Notable Victory

The cotton planters have scored another great victory for controlled marketing. The wheat raisers were the first to enter the fight, and the first to win a victory. Acting through the A. S. of E. on the advice of Up-to-Date Farming, the wheat growers changed the world's ridicule to an acknowledgment that controlled marketing had won in the case of the wheat crops of 1903 and 1904.

When the 1904 cotton crop started to the gins and the bearish reports of the United States Department of Agriculture started the price downward at a dizzy pace, Up-to-Date Farming called the attention of the planters to the victory won by the wheat growers, and urged them not to be stampeded. Good men in the South, and an unselfish press, and several strong organizations, took the matter up, and with us urged the planters to stand firm and hold their cotton. They went even further than we did and urged a reduction of acreage, the wisdom of which was doubted, beyond what might properly follow such diversified farming as might better supply the needs of the Southern people. This we have always favored.

The planters rallied, and in spite of conditions that, but for organized controlled marketing, must have ruined them, not only saved themselves, but demonstrated to the world that farmers can control the marketing of their products and secure fair prices in spite of any and all conditions. Mr. Daniel J. Sully, a well known operator on the New York Board of Trade, conceded the victory and approved it, in the following timely letter of a recent date:

To the Farmers:

Victory is yours! Owing to the marvelous ability you have shown to the world in your determination to hold your cotton, you have awakened all the civilized nations to the enormity of the great possibilities of yourselves and of the South. You are masters of the situation, and upon you devolves, now that you have won your victory, that you should reap the results and profits from that wonderful success, which has astounded the civilized world until every day they are echoing and applauding you in your great work. You astonished the world when you told them that you would hold your cotton. They applaud you now when they realize that you have done what you said you would. When you stated to the world that you would also reduce your acreage and your fertilizers they looked on and wondered if you would do it. Now that you have done what you said you would do, and there is sufficient evidence to convince any mortal man that you have made the reduction which you promised you would, they are still more in wonder at your great wisdom and strength. Therefore, now that victory is yours and the whole civilized world is standing and uttering their praise of you, it behooves you to stand firm, reap the full benefits of this great and good victory, and secure the profits to yourself and to your Southern brethren.

YOU SHOULD NOT SELL ANOTHER BAIL OF YOUR COTTON FOR 60 DAYS.

Realize this—that the balance of the cotton which you may hold will regulate the price not only of the balance of this crop, but also regulate the price of next year's crop which you have worked so wonderfully to circumscribe, for by forcing what you now have upon the market it will depreciate the price of not only every bale that you bring in, but every bale that you have left on your plantations and in your storehouses, and also depreciate every bale that you have in the ground and which you have worked so hard and industriously to put there.

Therefore, hold your cotton. Stand firm. Do not sell another bale for 60 days. In that time I can assure you there are plans being perfected that will be of great benefit to you.

Rest assured of this—you are surely the Masters. Be the Masters now, and forever be the Masters.

Yours truly, DANIEL J. SULLY.

Mr. Harvie Jordan, of Georgia, president of the Southern Cotton Growers' Association, confirms the victory, and urges the planters to follow up their advantage to complete success, in the following eloquent appeal:

To Cotton Producers:

The cotton acreage and use of commercial fertilizers under cotton for 1905 has been materially reduced under that of 1904. The farmers throughout the entire cotton belt have made their pledges good and production will be restricted so that the surplus of 1904 can go into the crop of 1905 and both be sold at good prices to meet the demands of consumption for 1906. But the surplus of 1904 must be held by the farmers, because if sold it will be used next fall to depress the price of the new crop. Cotton is now being sold too freely. With victory already in our grasp it is folly to weaken our present strong position by throwing all the cotton that has been so tenaciously held, upon a depressed market. You can't get rid of the surplus by selling it, but you permit your enemies to strongly fortify their positions for the future. The mills have sold their goods ahead until 1907. The crop to be grown in 1905 has already been sold by both exporters and spinners. You have not been consulted, but you are the owners of the cotton. Plans are maturing to assist you in holding the cotton you now have until fairer prices are offered. Make the splendid fight which you have made since December 3, 1904, one of the greatest victories of modern times, by absolutely tying up the present spot market and holding the surplus of 1904 in your own possession. Do not weaken under present bear pressure, but stand steadfast and true to yourselves, your families and your country. You have reduced the cotton acreage and use of guano for 1905; now hold your cotton.

Yours truly, HARVIE JORDAN,
Atlanta, Ga.

What the wheat growers and cotton planters have thus done, the producers of all farm crops can and MUST do. There is no excuse hereafter for farm crops to sell for less than a fairly remunerative price, for the farmers themselves, like other people, can control their own business, because they hold in their own hands the effective means of doing so. They own the products before they enter the market, and organized co-operation can and will control the price, and, like Mr. Sully, even the respectable operators on 'Change will approve it when they understand it.

What Is to Be Done and How

In a recent address to the Southern Cotton Growers' Association, we find the following paragraph:

For the accomplishment of this great and important work our organizations are to be pushed and perfected in every county until the great bulk of our citizens are enrolled as members and banded together for the protection and upbuilding of the business interests of the South until she is able to assert her supremacy financially, commercially and agriculturally.

From that single paragraph every member of the A. S. of E. should receive an inspiration. The cotton growers propose to perfect their own restricted organization to accomplish the great purpose of pricing their staple, and of holding it from the market until the price is paid, even refusing to grow cotton, if necessary, to accomplish their purpose.

When expense money is necessary, it is promptly forthcoming, for they know that any effort, if worth anything must cost something to maintain it.

It is true that the A. S. of E. has a strong membership in the South, which is increasing every day, and they are working in perfect harmony with these local cotton associations. But, now, suppose the South should become thus organized and assert their power, as they can do, under what obligation are they to look after the interests of the wheat grower, the corn grower, the hay producer, the stockman or the tobacco planter? None at all. Will they likely look after those interests? No.

What then? All must organize alike. The equilibrium must be maintained. When one assumes the privilege of making prices, all must do the same, else there can be no equity.

How does the importance of this work, the absolute necessity of it, compare with such a report as this from a local union: This union approves the constitution, all except the provision requiring the payment of dues." Holy Moses! "Go ahead and secure for us good prices for what we raise, but don't expect us to pay any of the expenses!"

They do not mean it that way. They are not so narrow. Many farmers have not been much accustomed to organization. They have had to occupy themselves with other things. But the great school of agricultural organization is in session, and they will learn.

Trust Control of Prices

Our esteemed neighbor, the Indiana Farmer, in a well written article describing and condemning the practices of the packing house trust, and the ruinous effect its control of prices has, not only upon the livestock interests, but upon the consuming interests also, turns to the farm producing interests and indulges in these sage reflections:

Imagine for a moment what would be the result if all the products of the farm were under trust rule, so that the prices of corn, wheat, hay, etc., were regulated, not by the law of supply and demand, but arbitrarily, or according to the notion of some individual. What an uncertain business farming would become. Perhaps it would be as near truth to say that the business that ought to be, and naturally is, the most sure and independent would become exactly the opposite, for the farmer could never be sure that any crop he might care to grow would pay for the labor and expense he put upon it, and he would be dependent on the whim or notion of the agent of one great trust for what he received for all his products.

Really does not the Indiana Farmer know that the prices of farm products are made just as arbitrarily, and with just as little regard to supply and demand, as are prices of live stock and butchers' products?

There is only this difference: The power that makes the prices of farm products is a double-headed monster, the two heads gambling with each other as to what a pretended future price will be, and their warring over the stake involved. Prices are just as unsteady, just as uncertain, made just as arbitrarily, and with just as little reference to the interests of those who produce and those who consume.

And it will be so until these powers of wrong are overthrown. "But how?" By the producers themselves, including the live stock men, in great national meetings or conventions, in an organized capacity, putting equitable prices on all these things, prices below which neither stock nor produce will be sold. Then there will be certainty of reward for production, and there will never be until then.

What could be more certain or ideal than for the prices of farm products to be under the rule of the farmers themselves, and they make the price on an equitable basis once a year? Or if the farmers controlled the supply and let it go out only when the demand sought for it? Did the Indiana Farmer ever think of such rule?

Conventions and Meetings

Send us the dates of your meetings. Write full particulars on a separate sheet from other matters.

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind. (Date to be announced later.) Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

RED MEN'S picnic, Hardinsburg, Ky., July 4. Write to W. A. Walker, C. of R., Hardinsburg, Ky.

FARMERS CONVENTION, Edmonton, Alberta, Canada, July 1, 1905. Write to W. J. Keen, Edmonton, Canada.

STATE CONVENTION OF THE A. S. OF E. OF ARKANSAS, will be held at Hutsons Springs, four and one-half miles north of Clarksville, Johnson Co., Ark., August 17, 1905. This place is immediately off of the Logap road between Logap and Clarksville. The convention to convene at 10 a. m. Matters of importance will be considered. It is expected that each local union be represented by one delegate. Arrangements will be made to care for all delegates free. Everybody invited to come. Camping outfits may be brought. Hutson Springs is a popular health resort. Good spring water and pure mountain breezes. Good speakers and an interesting and valuable program. On Saturday, the 19th, a picnic dinner will be served on thee ground and will be a grand labor day rally. Members of all labor organizations invited. Correspond with T. J. Woodard, Vice President A. S. of E., Clarksville, Tenn.

CHIPPEWA (Wis.) COUNTY MEETING. All local union of the A. S. of E. in Chippewa County are requested to send delegates and be represented by members at a county meeting to be held at Bloomer, Wis., June 24, 1905. Meeting called at 10 o'clock, a. m. The object is to perfect the county union and transact other important business. W. A rahn, County Organizer, Keystone, Wis.

FRANKLIN COUNTY (Va.) UNION will hold its next regular meeting at "Cross Roads," August 11th, at 10 a. m. O. E. Southall, Secretary, Scruggs P. O., Va.

STRONG'S PRAIRIE LOCAL UNION NO. 1 will meet in the W. O. W. Hall in Strong's Prairie, Wis., June 17th. Important business to be transacted. N. V. Keys, Secretary, P. O. as above.

CENTER COUNTY (Okla.), COUNTY UNION will hold its next regular meeting July 22. All unions in Center County to send delegates. R. W. Wadsworth, President, Custer, P. O.

CLINTON COUNTY, ILL., COUNTY UNION will hold its next meeting August 12th at Clarksville. Twenty local unions are represented with a total membership of 469 members. Efforts will be made to double the membership before the August meeting. Albert Wringe, Secretary, Carlysle P. O.

WINFIELD, KANSAS, CHATAUQUA ASSEMBLY FARMERS' DAY, JUNE 20th. Address, Henry E. Kibbe, Secretary for particulars. J. A. Everitt will speak on "Marketing Farm Crops," at 10 a. m., of the 20th.

TEXAS FRUIT GROWERS' ASSOCIATION, TYLER, TEXAS. Sam H. Dixon, President, Houston, Texas. J. A. Everitt will address the association on June 23d. Subject, "How to Market Fruit."

Virginia Meetings

National Organizer H. B. Sherman will soon return to Virginia to complete the organization work in that State. Meetings will be held as follows:

Grand rally at Lynchburg, Thursday, July 13; Amherst C. H., Friday, the 14th; Lovingston, Nelson county, Saturday, the 15th; Buckingham, Tuesday, 18th; Cumberland, Thursday, 20th; Powhatan, Saturday, 22d; Goochland, Tuesday, 25th; Amelia, Thursday,27th; Farmville, Saturday, 29th; West Appomattox, Monday, 31st; Rustburg, Wednesday, August 2; South Boston, Friday, August 4; Danville, Saturday, 5th; Martinsville, Tuesday, 8th, and Rocky Mount, Wednesday, August 9.

After these meetings it is expected to make a tour of North Carolina.

"European home supplies of wheat are smaller than since 1898 and their sources of supply have less to offer them. We look for the European price to advance 20 cents a bushel before September. There are many reasons why cash wheat in July will range as high as last July, when it sold at 94½ cents to $1.12."—O. W. Clapp & Co., Chicago.

Don't sacrifice your fine wheat. Almost the whole world is waiting for it. The world acknowledges its dependance on the American farmers for wheat. They admit the farmers hold the key to the supply of food. They are just waiting and wondering what you will do. What will you do? If you dump your crops the buyers will make the price. If you control your crops you will make the price. This is the situation exactly. In either case it is up to you.

Speculators are beginning to talk $1.00 wheat.

Meanwhile crops are growing. Summer is passing. Market time is hurrying on. What about the price? Surely not a farmer anywhere is willing that the crops of 1905 shall be frittered away under the board of trade grabbing system, as so many crops have been. Imperfect controlled marketing has done wonders; complete controlled marketing will make the farmer master of his own business, put to shame the dumpers and kickers, and put to rout the gamblers and grabbers. Can a farmer hesitate?

It is not necessary any longer to wait for an organizer to organize a local union. Call a meeting in the neighborhood, talk it up and organize; get your charter and prepare for representation in the annual meeting, and have a voice in the making of prices on your own products. This is a privilege that was never before offered to the American farmer.

"Falling off in primary receipts tended to advance prices." So said a recent wheat market report, and so say the reports frequently. Simply an exemplification of controlled marketing. There is no room for doubt that controlled marketing can control prices, and no course is more suicidal than for farmers to rush their products on to an already satisfied market. Let them go as they are needed; let them stay in the farmers' hands when they are not needed at an equitable price.

The Chronicle of St. Clairsville, Ohio, justifies the great expenditure made for the maintenance of agricultural experiment stations by the argument that the addition of a single grain to the ear of corn or to the head of wheat or oats, would add 5,000,000 bushels to the corn crop; 15,000,000 bushels to the wheat crop, and 20,000,000 bushels to the oats crop. Now figure on what each cent per bushel added to the price of these crops as proposed by the A. S. of E. would amount to in benefits to the growers, and you may have something else to think about.

The appeal is to those who are most interested in the benefits to be derived by controlled marketing—by getting fair prices for their products. This cannot be secured without organization and co-operation; with organization and co-operation it can be as certainly secured as effect follows cause. Those who understand it must tell those who do not. Get the people together and organize. No organizer needed, no membership fee required. Get in line at once and help to secure the greatest object ever before sought by an organization.

That article quoted by Uncle Sam Hampton, of Indian Territory, is enough to make a stone image smile. "You equity folks attend to your wheat and let us cotton people alone," says the head of the F. E. & C. U., of Indian Territory. Of all the ghosts and little fishes! "We want high cotton and cheap flour; you want high flour and cheap cotton; so stay on your side and let's fight it out," says this sage of Liberalville. The "equity folks" want an equitable price on cotton, wheat and all other products. We have declared that the price planters ought to receive for cotton is 12 cents, and whenever it sells below that, the planters are not getting enough for it; and but for the A. S. of E. doctrine of controlled marketing the planters of the South would have been ruined this year by the government reports and the manipulations of the cotton exchanges. Such men are so small they should not be permitted to wander alone in the shadow they make at noon-time—they might get lost. Read article page 248, Third Power.

A Cowardly Power

THAT monopolists under present business systems control the prices of food material without any reference to supply and demand, no thinking person will deny. The combined packing houses control the meat prices, and the united boards of trade or exchanges control the bread, fruit and vegetable prices, and not only these, but similar monopolies, composed largely of the same individuals, control the prices of the raw material of which the people's clothing is made, the fuel which cooks their food and warms their dwellings, and the price of travel and transportation.

The cowardice of that power is a feature which has not been considered, and yet, its method is essentially that of a coward. Intrenched as it is behind fortifications of law and money, its victims, the masses of the people, being before it in the open, unarmed, unskilled and unorganized, the merciless raids made upon them by these combined monopolies are essentially cowardly. Some writer, we are sorry we do not know who, speaks of it in this way:

> What is the most striking phase of the conduct of those men who have by chicane got control of the price-lists of so many of our necessaries of life? Is it not the pitiful cowardice of it all?
>
> It is no more a combat of strength against strength, of skill against skill, than is the act of a highwayman in assaulting and robbing a cripple. The people are helpless and, in respect of these intricate matters of great commerce, are ignorant. To rob them requires no great amount of brains, no daring whatever—no more brains or daring than a poisoner shows in mailing a poison to his intended victim with the address written in a disguised hand. Not one of these monopolists but lies about his real business and backs up his lying with bribery. Across the forehead of each one of them is branded in plain letters the word "Coward."

It is from this cowardly power that Up-to-Date Farming is seeking to save the people. To organize them so that they may meet combination with combination is the mission of the A. S. of E. It comes with a plan so simple that the school boy must undersant it, so practical that the sceptic no longer scoffs it, and so effective that its success has already been demonstrated. It comes not asking any capitalization, not trying to absorb the people's money by the sale of stock as most institutions for a similar purpose have done, it simply helps the producers to solve their own problems in the simplest and most practical way. But after demonstrating its practicability and the certainty of its success, it asks those who are benefited to help pay the modest expenses of accomplishment, and even to this some—object! And the powers of monopoly laugh.

"For over a year I have been a persistent and consistent bear upon the cotton market," declared Theodore H. Price in a letter over his own signature and dated April 27, 1905. This is the man who said recently that those who try to get fair prices for cotton are guilty of conspiracy to defraud. Of what is he guilty who conspires with his fellow gamblers on the Cotton Exchange to compel the planters to accept unremunerative prices in order that the conspirators may increase their profits?

A "Sharp" Congressman

Mr. John Sharpe Williams, a Congressman from Mississippi and leader of the minority in the House, is reported by the papers to have recently made a speech at Natchez. His audience was made up, it is said, of bankers, merchants, farmers and ladies, and his subject was the cotton situation in the South. He urged diversification of crops, reduction of the cotton acreage, and favored organization to secure these results. All right.

But what do you suppose this astute congressman advised southern farmers to do as the surest means of freeing themselves from the burden of cheap cotton and hard times? The papers say, "He recommended that the farmers adopt the system employed by Italian immigrants who come here and get rich raising and marketing garden truck!" And we presume the bankers and merchants applauded, and, no doubt, some farmers did, because the bankers and merchants did!

Farmers are sometimes accused of not thinking, but do congressmen and bankers and merchants ever fail to think? Whatever of good anybody may do is worthy of imitation, but it is the setting up of a new ideal to urge American farmers to imitate Italian immigrants. They may do well in this country, one may get rich occasionally, but do American farmers care to adopt their habits of life, living only upon what they cannot sell?

But suppose southern farmers should take their congressman's advice and all go to raising garden truck as the "Italian immigrants who come here and get rich" do. How much would that "garden truck" be worth in less than a year's time? Truckers now claim that they must market with the greates care to make an American living as it is. Add to the present supply, the supply that would come from the Southern farmers, taking Mr. William's advice, and what would it be worth? Not even an Italian immigrant could get rich, though stale bread and doubtful hash might be as plentiful as ever. Verily, even congressmen don't think.

Up-to-Date Farming's advice to Southern planters is, to raise cotton, raise corn, raise whatever your country will produce cheaper than you can buy it, and then join with the other farmers of the country in putting a fair price upon it, and so control the market to get it. Then when you are organized, if you ever find you have a real surplus, hold it over and plant less. If any one says you can't do it, reply that somebody does it; that the products, including cotton, are bought up and held by somebody for a fair price, which it always brings at the points of consumption, and that farmers can do this just as well as the speculators can, and that they are the only ones who have a RIGHT TO DO IT.

The Only One

On a sheet of paper before the editor are written these words:

> "I take at present several other farm papers. Some of them I have read for twenty years. Yet in all that time I do not remember of ever having seen or read an editorial or article in one of them on the subject of farmers organizing to control marketing and thus make their prices."

Will farmers everywhere consider this statement? Have any of theem seen such utterances in any farm paper except this one that you now hold in your hands? Consider the many recommendations made by farm papers to cure farmers troubles and make their business more certain with less drudgery and more profitable, then compare them with the true doctrine of Controlled Marketing, as taught by Up-to-Date Farming.

The Only Thing in the World That Makes Farming Doubtful

(Concluded from Cover Page)

you this sum it fills my contract; that is, it makes you as good as if I brought you the wheat. And likewise, if wheat at that time could be bought at 70 cents per bushel, I deliver to you 70-cent wheat which, under your contract, you must pay me 80 cents for, and my profit is ten cents per bushel, or $5,000,000. You pay me that sum and close the game, without either of us being bothered with wheat."

Suppose this transaction took place in May. Then these two powerful financial forces, and all the lesser gamblers that take sides with one or the other of them, are busy with the wheat market until December, one side trying to hold the price down, the other trying to force it up. Why? Because five million dollars and all the side bets that may be made, are involved.

It is no palliation of the evil to say that if the side betting on the higher price win, it will benefit the wheat raiser. What agriculture needs, what farmers want, is, not excessive prices, but reasonable prices and a steady market, so that when he works he may know what he is doing.

Such transactions keep the market constantly disturbed. When the bear elements prevail the productive interests, the farmers, suffer and may be ruined. When the bull element wins the consuming interests are robbed to make good the loss—the poor may be starved.

The above is option dealing, pure and simple, trading in wind for the money that is staked upon it. Note the effect it has upon the market for actual wheat:

Farmer A in July, for instance, has 2,000 bushels of good wheat to sell. Miller B in his own town needs the wheat to grind into flour to supply his customers. The main crop is harvested, and it is known that the actual supply compared with the normal demand makes wheat positively worth $1 per bushel; but Miller B cannot afford to pay that price, because wheat is selling for 80 cents to be delivered only four months hence. Should he stock up at the legitimate price of $1 per bushel, the flour made from the dollar wheat must presumably compete in December with flour made from 80-cent wheat. True it is not positively certain which of the gamblers will win in December, but the transaction and the side bets (deals) based upon it, puts the price in such uncertainty that Miller B, as a prudent business man, dares not risk it. He must, therefore, stop his mill and cut off his customers' supply of bread, or Farmer A must bend his neck to the yoke of the gamblers and part with his wheat at a price less than the legitimate supply and demand value, thus sacrificing his labor to pay the gambling debt of the loser.

This is a true statement of the effect of option dealing upon legitimate business. Wheat is taken only as an illustration. All leading crops are subject to the same pernicious system. It disturbs and unsettles all business and hangs like a vampire upon the vitals of agriculture.

The legsilatures and Congress have been appealed to, and the courts have been invoked in the name of good public policy. But all in vain. Greed still rules and gambling triumphs.

The case must be taken to the court of final resort—the people. They are the primary source of power in republican government.

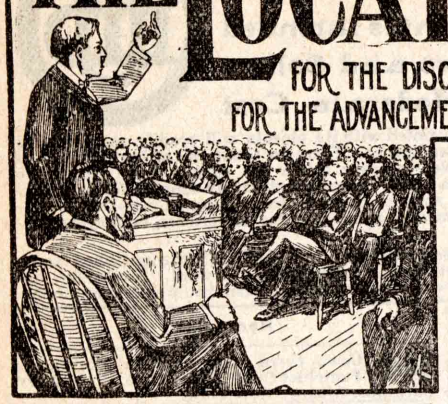
How shall it be tried? Not amid the rattle of guns, and shriek of shells, and groans of death, and carnage of battle, as such questions have often been tried, but with the quiet, peaceful power of organization, of legitimate co-operation in controlled marketing. Let the great class which is most affected, whose sweat and toil and hopes are thus played with, stand up in the strength of their own powerful manhood, fix upon their products fair and equitable prices, sell at those prices and those only, defy the powers of hell, greed and gambling, and appeal to the world as the jury for a verdict.

This is not visionary. The plan is well known and has been tried. The Society this paper represents has put it into execution with results that establish its truth and prove success sure.

Organize to fight wrong. Stay organized to sustain right. Redeem the calling God made divine. Overthrow the system that the devil and human greed have fastened upon it, and remove the only sting in the world that makes farming a doubtful calling, and bless all mankind in doing so.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00 for members at large. Charter members of local unions pay no membership fee, and each member is entitled to receive a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Talk about it.

Discuss it in the union meetings.

The idea that farmers through all the years have permitted their products to be priced and taken by the purchasers!

Why have they done it?

Because it becomes the custom, and no one took the trouble to inquire why until Mr. Everitt sprung upon them the idea of controlled marketing.

Those that are financially interested declare that farmers cannot price their stuff. They say so because their profits depend upon preventing this accomplishment, and they would rather lose their souls than their profits.

But farmers have learned a lesson, an important lesson. They have learned that they have as good a right to price their products as the maufacturer has to price his, and that they can do it by organization and controlled marketing.

All this depends upon organization. It cannot be done without organization. Organization to be effective must be in local unions, and there must be local unions in every agricultural community, and the leading farmers must compose them.

To have such local unions the membership must be active, and the meetings must be interesting. Here is where the responsibility of the officers comes in with ponderous weight.

Farmers are inclined to be impatient. They expect everything at once. They fail to consider that it has taken centuries to build up the system that has all these years, priced their products, and that that system is deeply rooted in greed and gains. Its overthrow is contested inch by inch, both talent and money being employed to sustain it. Talent and money will be necessary to defeat it, but of money only sufficient to meet moderate and necessary expenses in effecting the organization and maintain it. This will be but a trifle for each member, and considering the importance of the work, and the great gains to farmers involved in it, we cannot imagine a farmer who would be unwilling to pay it.

There is some objection to that part of the constitution which provides for the payment of dues. This is for lack of thought, not because of nigardliness. No farmer or any other person of views at all liberal, would ask the performance of so great a work as that undertaken by the A. S. of E. at some one else's expense. The only equitable way to do that is for each one to bear his proportion of the expense, and that can only be done by apportioning it among the members in the shape of dues, and he who is unwilling to thus do his part has no equitable right to enjoy the benefits. We have already said what every body knows, that no society ever existed without incurring expenses, and of raising necessary funds by the payment of dues.

I have written many appeals to farmers. Most of them have been kindly heeded, and all of them when carried out have resulted in good. Never before was there a greater foundation for an appeal, or more important interests involved. A peaceable struggle to secure justice for a great class that for a hundred years has been denied it, presents a spectacle that may well claim the admiration of the world, and it is strange that those most interested should be most indifferent. They cannot afford to be indifferent, cannot afford to halt between opinions, cannot afford to stumble over small things. They must come to the front as men, seize the opportunities offered them, and lead to success a work of more importance to them than any ever before undertaken. The time is ripe, the means are at hand, the plan is perfected, the cost is insignificant, and all needed to warrant absolute success is only the employment of ordinary business ability.

OFFICERS OF LOCAL UNIONS NOTICE

You are urged to call a meeting to consider the new Constitution (with the funeral benefits feature suspended) as early as possible. Cards suitable for notifying members will be furnished by headquarters if requested. Please give this matter attention so that there may be uniformity in the work after July 1st.

Members of Local Unions Notice

Each member of a local union of the A. S. of E. is hereby urged to take an interest in the meeting to consider and ratify the new Constitution of the A. S. of E. (with funeral benefits feature suspended). This should be accomplished by or before July 1, 1905, so that the records at headquarters may be posted at that time and so there may be uniformity in the work and development of the society after that date. If for any reason the officers fail to call the meeting or take the interest in it they should take it upon yourself to get the members together. This appeal is made to each INDIVIDUAL member, and we trust each one will consider the responsibility rests on him or her, because what is everybody's business usually is nobody's b..siness.

With the funeral benefits feature omitted from the new Constitution the quarterly dues of a regular member of a local union is 30 cents; of a Special member is 10 cents. These payments include the official paper to regular members. Out of the 30 cents quarterly due 20 cents is sent to the National Union and 10 cents is retained in the local union treasury. The 10 cents of special members all is sent to the National Union.

Membership at large (outside of local union) is $1 and dues $1 a year, which includes the ocial paper.

The A. S. of E. Celebrate Their Success in a Grand Picnic

The Owensboro, Ky., Messenger gives the following interesting account of a picnic held not long since at West Louisville, Ky., by the A. S. of E. Let others follow the example:

The West Louisville Equity picnic, given on Saturday, was a great success. About 1,200 people were in attendance and a most bountiful dinner had been provided for all of them. The preparations are said to have exceeded the demands and much was left. The managers and the people proved their hospitality in the highest degree. There were many visitors from other parts of the county and all were unstinted in their praise of the people for the lavish hospitality.

The principal address of the day was made by Mr. John Allen, of Tennessee, who spoke on the interests and the defensive methods of the farmers now being attemped. He commanded the attention of all and made a deep impression. He was followed in other talks by Congressman A. O. Stanley, Henry G. Overstreet, L. N. Robertson, John Monarch and Harry Berry. The speakers all dwelt on the farmers' rights and needs and the best methods of securing and defending them, except Mr. Berry, who introduced the subject of good roads, and made a plea for attention being given to this subject to which he is giving so much careful thought that he is recognized over the State as an authority on the subject.

MORE TELEPHONES

Wonderful Growth of the Service Among the Farmers

From present indications this year will witness the largest increase in the use of the telephone by farmers and residents of small towns since the invention of electric transmission of speech thirty years ago.

Figures compiled by the Central Union Telephone Company, operating in Indiana, Illinois and Ohio, show that the increase in the use of the telephone among the farmers has been faster than among any other class of people, and the final connecting up of the farmers is practically the only remaining step until the people of the United States are all within instant reach of each other over the telephone wires.

Farmers in the Middle West were the first to realize the value of telephone service. Conservative New England and other Eastern sections were slower but now there is a general awakening and the rural lines will soon be equally distributed. In many sections of the Middle West 75 per cent of the farmers have telephones in their homes.

In the city the telephone in the home was at first a luxury, but soon became a necessity. in the country the farmer's home is his office and his telephone is at once a business utility and a social pleasure and convenience to himself and family. The question of keeping the boys and girls on the farm is

a serious one. If the farm home is linked to the outside world by telephone wires the problem is manifestly easier. The telephone takes the sense of loneliness and isolation away from the farm home, especially in the long winter months.

The telephone has been found to furnish innumerable advantages to the farmer in a business way. By its use he keeps in direct touch with the market and has the weather predictions always at his command. The telephone saves him the trouble of starting to market in the dead of night with a load of produce that he may reach his customers in the early morning. Instead he calls up his customers, makes his bargains and sends the produce to town as ordered. Some large farmers have even found it to their advantage to conect the different parts of their farms by telephone wires. In other ways almost innumerable the telephone has come to the assistance of the farmer. By its use he can arrange for extra help in harvest time. It calls the doctor in case of accident or sudden illness and summons assistance when fire breaks out. It acts as a guardian of the peace and is terror to evil doers who know that wherever they go they are never far beyond its reach.

In many cases it is to the farmer's advantage to help build the telephone line. He and his neighbors have much of the material. One man contributes the poles and timber for cross arms and another teams and laborers to do the work. Often a pole line is up before an actual dollar in money need be expended. The line is then ready for the wires and instruments. If expert advice and assistance are needed it is the custom to call on the linemen of the nearest telephone exchange, and it is not an infrequent sight to see a lineman of the nearest company working with a group of farmers building their own line. Some of the lines so built would do credit to construction crews of long experience. There are many thriving companies in the country which have been started in this way and are managed by some wide-awake farmer or the proprietor of some village store where the exchange switchboard is located. The manager usually makes arrangements to connect the farmers' line with the general telephone system of the country, giving its subscribers the advantage of long distance conections and the company a share in the profits of the long distance business.

Sam J. Hampton

Mr. Sam J. Hampton, of Durant, Indian Territory, is one of our best organizers and workers. He is strongly recommended by National Organizer H. B. Sherman, who has been with him and seen and approved his work. He is ready to go anywhere to aid the cause, and Mr. Sherman pronounces him an effective speaker, who very seldom makes mistakes, and who never disappoints his audiences, no matter how big their expectations. We are glad to commend such men; they are needed in this great emergency, and we hope the farmers of Indian Territory and Oklahoma and adjoining States will freely avail themselves of Mr. Hampton's valuable services.

Want something quick? Use the telephone. Have none? Get one!

Hay baler—money maker.

LETTER FROM DAVID DOBETTER

Number 53

Near Williamsport, Ind., May 15.

My Dear Mr. Everitt:

Everything looks fine about the farm these days. The trees are all leaved out now. Little slow about it this spring, but all the more welcome now that they have come. That's always the way with things we enjoy most of all. They are a good while on the way. Sometimes we get a little discouraged and think mavbe they never will come at all; but it is worth while waiting after all. Helps us to appreciate the good things that come to us all the better.

The blue birds have found their way back to the old High Sweet apple tree in the yard and built their nests in the hole just where the big limbs begin to branch out. How that hole ever came there I never found out till the other day. We caught a woodpecker digging away at it. I presume he has been pecking at that hole off and on for more than one year. I don't suppose the blue birds ever stop to wonder how the hole came to be just there. It is all right with them if the hole is only there. Just like lots of folks. The old people dig and grub away year after year till life almost slips over the hill to get a little home together, then the boys and girls step in without a thought how it all came around sometimes and so on. They ought to remember the hard work father and mother have done and be grateful enough to care for them tenderly in their last days. But I am sorry to say this is not always so in these days when it does seem a if folks are not as grateful and tenderhearted as they ought to be.

You know I told you Chipper and Sweetheart have a corner in the garden this year? Well, their work is beginning to count already. They have got peas up a foot high now, and their onions and lettuce look better than mine. The little scamps dig in the ground just as faithfully as beavers. Every day they are at it bright and early. Wife and I never call them up in the morning. We believe they should have their sleep out; but we do see to it that they are in bed in time in the evening. I believe that is the right way, too. Don't you remember that old saying that Franklin got off so many years ago?:

"Early to bed and early to rise
Makes a man healthy, wealthy and wise."

Just as true now as it ever was. And we don't have to holler and yell in the morning to get Chipper and Sweetheart out of bed. they are out themselves bright and early and working at their patch in the garden. It has spurred Tom and me to do a little extra work ourselves. Tom says they have got to do a right smart lot of work and keep doing it if they get the start on us and have peas and such stuff before wo do. You can't find a weed anywhere in our garden.

And that's the way it ought to be. What is the use of putting stuff into the ground and then leaving it to be crowded out by the weeds, Lots of folks do that way, though. I don't see what fun there can be in doing just work enough to have it amount to nothing whatever. Kind of discouraging business, seems to me. But there; I must not say such things as that. It is not so very long since I took this view of it myself. Used to be just like all the rest. Would be now if it had not been for your help. I never can thank you enough for saying the words that started me on the right track.

The corn is all in the ground now. We had a few days of splendid weather last week. It dried the ground off nicely and we hustled the seed in like fun. We did more work with the harrow than we ever did before. I remember how, a few years ago, we never even set foot on the corn ground with a harrow; we just went on as soon as the ground was dry enough and planted the corn right on the old stubble. No way to do business, was it? And yet that was the way most of our farmers did, and the way some keep doing now. But they are beginning to get their eyes open now, so that they see that they are going to get left in the race if they do not do more thorough work than they have. They are left already. Why, last year I had at least one-third more of corn to the acre than a man down the river that was following the old way of doing his work. Not only that, my corn was a great deal better than his, more perfect ears and better rough fodder. I don't say this in any boasting way; you understand that. I am only stating the facts as I have discovered them. You have got to get right down to business in these days if you make things go as they should on the farm. No more slipping over work and saying, "It's good enough." It isn't good enough unless it is just right.

We got the potatoes in yesterday. Yes, we put in the late ones and all, except a few we mean to try a little further on in the season. I know there is a theory now that if you plant your potatoes late you will not be so apt to have them struck by the blight, and the bugs will not trouble them so much. But some way I have not quite fallen in with that idea as yet. I would rather get my potatoes in the ground as early as I can, so that they will get up and out of the way before haying comes on. Doesn't seem just right to be hilling up potatoes right in haying time. And as for

(Concluded on page 9)

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. 10% discount when two or more consecutive issues are used. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Farm Lands

A Home For you in Minnesota or South Dakota. Land $8.00 to $15.00 per acre and no better anywhere. Send for full information. Crop payments (no crop, no pay). N. Miller Land Co., Browns Valley, Minn.

Cash for your farm, ranch, home or business, no matter where located. If you wish a quick sale send us description and price. N. B. Johnson & Company, 543 Bank of Commerce Building, Kansas City, Mo.

Exchange 80 acres unimproved Michigan land, $800.00. What have you. J. R. Bell, Paris, Mo.

Guaranteed Double Flue Hot Blast Range only $21.75. Your money refunded if not satisfactory. We manufacture, and sell 1000 other articles at factory cost plus one small profit. Send for catalog. Hapgood Mfg. Co., 616 Front St., Alton, Ill.

Save the temper—Save the Clothes Pins. The Handy Clothes Pin Bag slides on the line—just where needed when the wind is blowing. Postpaid 30c. The Peerless Supply Co., 854-A S. High St., Akron, O.

What is the Result

OF ADVERTISING IN THE BUSINESS EXCHANGE

ORDERS, that's what! Orders from everywhere, for everything. 42 advertisers would not have used the June 1st issue if it were not a PAYING PROPOSITION.

Mr. Anton Honig, Inglefield, Ind., writes:

"I received replies from Alabama, Pennsylvania, Ohio, Kentucky, Indiana, Minnesota, Michigan and Nebraska. Stock all sold."

¶ 1000 farmers should advertise in these columns. Look around you! What have YOU to sell? You can never get the maximum benefit from the Business Exchange if you don't use it. That's what it's for. It was started for our readers.

¶ It does not cost much to try. Consider that 750,000 people read these announcements each issue. It costs 8c a word. See the explanation at top of column. Prepare now to reap some benefit from it and send your order for the NEXT issue.

¶ If you want further information, help or advice of any kind address Advertising Department

Up-to-Date Farming

UP-TO-DATE
Field Crops
PRODUCTION AND MARKETING

Two Crops

The busy farmer, out a-plowing,
Wipes the sweat from dripping brow;
Sees his crops grow up around him,
Day and night, he knows not how.
But he knows at time of selling,
When he seeks reward for toil,
Doubt will cluster 'round the prices,
And his fondest hopes may spoil.

But the wily speculator,
Sweat and toil to him unknown,
Gathers in the farmer's products,
Reaping where he has not sown.
Holding them away from market,
Day and night his profits grow,
Making for himself the prices,
Naught but gains his coffers know.
—*J. P. Stelle.*

War with the weeds.

Toil deserves reasonable reward.

The products of farm toil are the only sources of its reward.

When a man works for himself on his own farm, who fixes his wages? Whoever prices his products.

When a conquering general wants anything he takes it, leaving whatever price he pleases. What is the difference where the buyer prices the goods on the farm and takes them?

In a large portion of the United States there has been too much rain for best farm conditions.

The area of last fall seeding of winter wheat that was abandoned and plowed up this spring amounted to 1,432,000 acres, of which 356,000 acres were in California, and 102,000 acres were in Missouri. This leaves a total acreage to winter wheat of 29,720,000 acres, which is still nearly three million acres more than was harvested last year.

According to the United States Crop Reporter, the condition of meadows throughout the country is nearly ten points better than last year.

The total production of wheat in northwestern Canada last year, of which such a blow has been made, was only 17,407,369 bushels, of which 17,250,450 bushels were spring wheat, and only 159,919 bushels were winter wheat. The yield in each case was a little more than 18 bushels to the acre. No serious danger to United States wheat production in that report and it is official.

During the nine months ending March 31, 1905, there were exported from the United States 6,572,543 bales of cotton, more than half the government's 13-million crop, at a value of nearly $51 per bale, or a fraction more than 10 cents per pound. Planters may now understand what prompted the tremendous effort a few months ago to beat down the price of cotton. Score another point for controlled marketing.

Official reports say that nothing but an unusually early harvest can prevent France from making heavy imports of wheat or flour to meet the actual needs of her people. Does any one want any further proof that supply and demand had nothing to do with the recent flurry in the price of wheat?

The consumption of cotton in the United States since Sept. 1, 1904, says the government May report, was: By Southern mills, 1,492,000 bales; by Northern mills, 1,922,207 bales, an increase in the South over the same period last year of 31,000 bales, and a decrease in the North of 71,057 bales.

There had been marketed up to May 1, 1905, 2,037,778 bales of cotton more than for the same period last year, but it had been marketed more gradually, and, notwithstanding the enormous crop, prices were fairly well sustained. Had controlled marketing been perfected, not a bale need to have sold for less than a remunerative price.

In 1904, Russia produced 205,460,400 bushels of winter wheat and 459,208,200 bushels of spring wheat, making a total wheat production for that year of 664,668,600 bushels, an increase of some 43,000,000 bushels over the preceding year. This still falls several million bushels below the highest United States crop, and exaggerated tales of foreign wheat production that periodically fill the papers are for the purpose of scaring American farmers into selling their wheat cheap.

A comparison of the production of other grain in Russia and the United States is interesting. Last year Russia produced 1,005,289,714 bushels of rye, 1,120,729,235 bushels of oats, 345,174,000 bushels of barley, and 25,986,857 bushels of corn. The United States produced 27,241,575 bushels of rye, 894,595,552 bushels of oats, 139,748,958 bushels of barley, and 2,467,480,934 bushels of corn.

The actual wheat crop of the Uited States last year, as is now officially reported, was: Winter wheat, 332,935,346 bushels; spring wheat, 219,464,171 bushels; total, 552,399,517 bushels. Hence it is seen that the A. S. of E. estimate of the crop at the time of issuing the price bulletin was more nearly correct than the government estimate at the same time.

It was always so. Do you recall 1903, when wheat was selling at 65 cents in May and the A. S. of E. said the next crop should sell for $1, and it did? In 1904, under the influence of splendid crop prospects, in the spring prices went down below 80 cents, yet the year's crop sold for $1.20, as we said it would. It will be so again. Whatever the farmers set their mind on that they will get. Their society is getting stronger every month, and what they did in 1903 and 1904 they can more easily do in 1905.

David Dobetter

(Concluded from page 8)

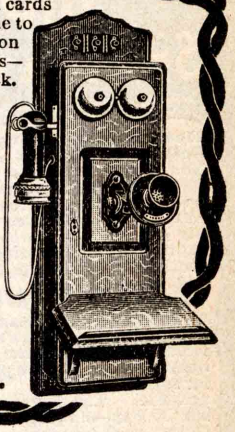
the bugs and the blight, we can manage them pretty well in these days by spraying them in time. We have learned that you do not want to wait till the blight actually comes and the tops of the plants begin to look as black as your hat before you start the spraying outfit. Get the poison on before the blight shows itself. Then, too, the bugs must be settled before they get the leaves all trimmed off the tops. One day may make a lot of difference in the crop. But as I said, we are holding a few potatoes back for the purpose of trying the late planting. If there is any advantage in it we want to be ready to get it.

The meadow is coming on fine, The pieces of new seeding are showing up in good shape. The clover is beginning to head now, and it is going to be heavy, too. One field in particular that we gave an extra dressing of barnyard manure followed by a little commercial fertiliezr, looks grand. I think it is a fact that a little of some kind of prepared fertilizer does add goodness to the home-made article. Makes it richer and stronger. We are trying the same plan with another piece this year. One year is hardly a fair test. It will not be long now before some of the new seeding will have to be cut. Ben writes home that we ought to get at the clover when it is fairly in the blow. Tom and I took a few potatoes we had to spare to the city last Friday and brought home a tedder. It looks as if we might need it this year, the grass standing so heavy in the meadow. Queer looking thing. I never saw one work, but I believe they are all right. The folks along the way home came out and looked the machine over, and some of them kind of laughed at my notion in getting such an expensive farm tool. There never was one anywhere in this section, you know. I have the honor of getting the first one. But they did not trouble me much with their skeptical remarks. They will watch things at Four Leaf Clover Farm this year, and soon will be investing in just such a tool themselves. You see, if I am not right. Now I must close and turn in, so good-bye.

DAVID DOBETTER.

LOST, STRAYED OR STOLEN

The telephone gets the news of your loss all over the country long before you could get to town and get postal cards sent out. You can arouse your neighbors in time to help "catch the thief," besides it's handy on the farm every day, especially in emergencies—when you are in trouble and need help quick.



Stromberg-Carlson TELEPHONES

are the cheapest telephones because they are the best. They pay for themselves in a short time, remove many of the disadvantages of farm life, and extend the farmer's influence. Make home more pleasant for the wife and children and open up new opportunities for the whole family. Write for book F 118 "Telephone Facts for Farmers." It's *free*, and full of just what you want to know—how to organize, build the line, etc. Send for book. Address nearest office.

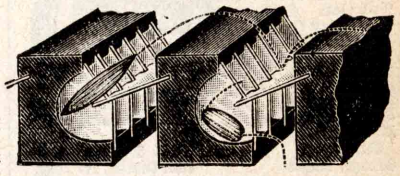
Rochester, N. Y. Chicago, Ill.

OATS FROM WHEAT AT LAST!

Remarkable Chatham Riddle for Succotash



The Chatham Fanning Mill has a new riddle that is guaranteed to make an absolutely perfect separation of oats from wheat. This wonderful piece of mechanism has about 4500 different parts. You can take ¾ oats and ¼ wheat and get a perfect separation, or you can *reverse* the proportions. Above is a cross section of the new riddle. You can see the riddle will let wheat through readily, but oats cannot get through. The riddle has a jumping attachment that keeps the oats jumping until they go over behind on the floor. **GROW SUCCOTASH!** The new riddle will enable you to obtain double crop value by sowing wheat and oats together, as it insures the perfect separation necessary to obtain the highest market prices. We have also invented a Corn Screen that *grades corn 98 per cent* perfect. The accompanying sectional view shows the principle of operation. The new Oats-from-Wheat Riddle and Corn Grader are *new* inventions—only three months old—and obtained by us at heavy expense. They cannot be applied to machines already sold, but our new mills can be equipped with them. The Chatham will separate, clean and grade any grain or seed. Write for Chatham Book at once.

Sharples Tubular SEPARATORS

How would you buy a million dollars' worth of separators? You would learn everything about them. Try them everywhere, everyhow. Investigate from "A" to "Izzard." The John Deere Plow people did so and have bought, outright, after exhaustive trials and thorough examination, nearly

A Million Dollars Worth

of Tubular Cream Separators. They bought to sell—staked a million, and a world wide reputation, on Tubular quality. More positive proof of Tubular superiority is impossible. The low supply can—simple, easy to wash, tubular bowl—are found only in Sharples Tubular Separators. Big implement dealers—the strongest houses in the world, those who get first choice—know this and select the Tubular. Such are the Dairy Outfit Co., England; Richter & Robert, Germany; S. Plissonier, France; Newell & Co., Australia; Runciman & Co., Argentine. In their judgment Tubulars are best and their judgment is dependable—is right. Ask for catalog No. D-136.

FREE FREE FREE

With the first order for 1 gallon or more of

FLY-FUMA

we will give free an Electric Sprayer for applying. Remember **first** orders only. Sprayer alone 50c. **Fly-Fuma** will protect your cattle, horses, etc., from flies at a cost of ⅛ cent per day per animal. The additional product you get will pay several hundred per cent profit. Gallon $1.00; 5 gal. $4.00. Catalog free.

PRAIRIE MFG. CO.
Indianapolis, Indiana

"I used Fly-Fuma last year on 50 cows in dairy. I am now using it with perfect success. The cows like it, will stand quietly and await their turns. One man with Electric Sprayer will go over the entire herd in ten minutes. The cows, after it is used, look as if they had been well groomed. By using night and morning the cows are not troubled with flies at all. I also use it on horses with fine results and found it one of the best things for sore shoulders and all harness galls I ever saw. I used Fly-Fuma on dogs for fleas and on chickens for lice with perfect success." FRANK MCGAVOCK, Nashville, Tenn

Bog Spavin

Lameness resembles bone spavin, but the bunch is in front of the true hock joint, a little to the inner side, and is soft and yielding, hardening sometimes as the case grows old.

Fleming's Spavin Cure (Liquid)

is a special remedy for the soft and semi-solid bunches that make horses lame—Bog-Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It isn't a liniment to bathe the part, nor is it a simple blister. It is a remedy unlike any other—doesn't imitate and can't be imitated. Easy to use, only a little required, cures the lameness, takes the bunch, leaves no scar. Money back if it ever fails. Write for **Free Horse Book** before ordering. It tells all about this remedy, and tells what to do for blemishes of the hard and bony kind.

UP-TO-DATE
Live Stock and Dairying
PRODUCTION AND MARKETING

The Best Horse

Job praised the champing war horse,
The Arab the fleetest steed;
Give me the patient farm horse,
Ever ready for our need.

Are stockmen still in doubt?

Controlled marketing must reach the feed lots and ranges.

You have something to sell. Advertise it in the Business Exchange.

Drop in prices follows excessive shipments. Livestock men must have direct representatives in market centers.

A modern necessity—the telephone. Ask advertisers in this issue.

What sense is there in sending all livestock to four or five large cities to be from thence distributed to the smaller towns for consumption, after going back over the same transportation lines, and of course, paying double freight?. The livestock problem will not be solved until shipments can be made direct to points of consumption, for which the A. S. of E. fully provides.

During the nine months ending March 31, 1905, there were exported from the United States 448,868,367 pounds of lard; a farm product upon which the producer had nothing to say as to its price.

The wool clip of 1905 was remunerative. Sheep did not yield golden fleeces entirely, but good prices were realized, and flock men are encouraged. Sheep husbandry, while not on a special boom, offers fair inducements for expansion.

Ten words in the Business Exchange cost 80 cents. 750,000 people read it. Few orders will pay for the advertisement several times over. And good goods make good customers. Will YOU do it?

Tom and Sally are out of sorts. They are certain somebody carried off one of Old Toby's best pigs—just for luck, perhaps. They are quite concerned about it. But last fall they had ten fine 200-pound hogs to sell. In the morning they were worth five cents per pound, but before they got to town the packing houses had knocked off half a cent, and they brought only four and a half—the ten hogs brought only what nine were worth in the morning. Who got the tenth hog Is it any worse to steal a pig than to seal a 200-poung hog?

Cream Separator Information

We have just received a very handsome book, printed in colors and handsomely illustrated, telling about cream separators. It will prove a very interesting and instructive book for every one who has cows. Say you read Up-to-Date Farming and write the De Laval Separator Co., 74 Cortlandt Street, New York City.

Wise Words

The following from the S. D. Plaindealer must be conceded to be words of wisdom:

"When the cattleman arrives at that point where he sees fit to use the same methods employed by the packers, he will meet with the same success as have the packers.

"Surely, the packers are dependent on the cattlemen for their supplies.

"Every season a flood of stuff comes onto the market at one time. The market is glutted, the supply is heavier than the demand and then some one raises his voice and cries that the packers and commission men are to blame.

"The thing to do is to shake off the old-time customs and use strict business methods."

The pesky fly
Will bite or die,
Fly Fuma lays him low.
He's wise who tries
This death to flies,
They vex the cattle so.

The Farm Cream Separator

The Cream Separator for farm use is here to stay. It has proven its utility, and we want to impress upon those of our readers with milch cows the absolute necessity of making use of its undisputable advantages. In many cases it would be more profitable to sell one of your cows to pay for a Separator, rather than do without one. For we know of instances where farmers with five to ten cows have found that a Cream Separator actually added to the profits as much as another cow would, and remember that this profit kept right along with the use of the Separator. You would have to pay for the keep of the extra cow, but the Separator makes the profit and "keeps" itself.

Some farmers prefer to sell their cream to the creamery, others to churn it at home. Dairymen with a select butter or cream trade have learned that they can only obtain and hold the extra price they receive by producing a high-grade article possible only by using a Separator.

Moreover, a Separator keeps the valuable skim milk right at home in its best condition, ready to feed to the young stock when warm and fresh. Many farmers are now losing the profit from this by-product of their herd, and may be contracting a whole lot of trouble in the cold sour lot of mixed skim milk brought home from the creamery. We certainly advise our readers to purchase a Cream Separator.

In looking at a Separator, pay careful attention to the construction of its operating parts. A cheap Separator, like other cheap apparatus, gives cheap service. A well-made machine will wear for years, soon saving its cost over the old skimming methods by the increase it makes in your product, and the profit continues after the machine has already paid for itself. Be sure the Separator you buy is a clean skimmer. It is prudent to consider the reliability of the makers back of the machine. The VERMONT FARM MACHINE CO., Bellows Falls, Vt., manufacturers of the famous United States Cream Separators, that hold the world's record for closest skimming, have applied to the Separator problem a successful manufacturing experience of over thirty years. Any reader of Up-to-Date Farming may obtain from them a handsome little book, entitled "The Dairy," which contains highly profitable information for every farmer milking cows. Drop them a postal card for one.

A few readers have taken advantage of one good thing in Up-to-Date Farming, and that's the Business Exchange. It can do a world of good for YOU. Just try it. It costs little. It does much.

Certainly you want something that's advertised in this paper. Have you written for catalog? Do it now.

No More Blind Horses For Specific Ophthalmia, Moon Blindness and other Sore eyes. Barry Co., Iowa City, Ia., have sure cure.

HAVE YOU COWS?

If you have cream to separate a good Cream Separator is the most profitable investment you can possibly make. Delay means daily waste of time, labor and product.

DE LAVAL CREAM SEPARATORS save $10.- per cow per year every year of use over all gravity setting systems and $5.- per cow over all imitating separators. They received the Grand Prize or Highest Award at St. Louis.

Buying trashy cash-in-advance separators is penny wise, dollar foolish. Such machines quickly ***lose*** their cost instead of ***saving*** it.

If you haven't the ready cash DE LAVAL machines may be bought on such liberal terms that they actually ***pay for themselves.***

Send today for new catalogue and name of nearest local agent.

Letter Heads and Envelopes for Members

Every farmer should use neatly printed stationery. It is business-like and gives a tone to your correspondence nothing else can do. Orders sent to business houses are often given better and more prompt attention. Some houses sort out the printed envelopes from their mail and open and fill them first. Members of the A. S. of E. especially should use up-to-date letterheads and envelopes. We offer the special stationary containing the seal in a beautiful design. Your name and address and name of your farm or business also, if desired nicely printed. On the reverse side of the paper are printed appropriate circulars, such as "Farming Exists by Divine Right," "Where Duty Lies", etc. You will spread the movement with these messages if you order some stationery. Price, prepaid

100 Letter Heads	100 Envelopes $1.00
250 Letter Heads	250 Envelopes $1.80
500 Letter Heads	500 Envelopes $3.25
1000 Letter Heads	1000 Envelopes $5.25

A PROFITABLE FARM MACHINE

Cream represents cash. Be sure then to buy the Cream Separator that skims the closest—that gets all the cream possible.

THE U. S. CREAM SEPARATOR

takes out more cream than any other because of the unique construction of the bowl.

AN EXCLUSIVE FEATURE

Only two simple parts inside the bowl, one fits into the other, both fit into the steel bowl shell.

When put together there are three bowls in one.

No other separator has this advantage, and that is why no other can skim as close as the U. S.

Our free booklet fully explains and illustrates this feature. It shows, too, the easy-to-fill milk tank, the enclosed light running gears, and self-oiling device found in the U. S. It makes mighty interesting reading. Drop us a line now while the matter is fresh in your mind, and we will send you the booklet by return mail.

And his fondest hopes may spoil.

But the wily speculator,
Sweat and toil to him unknown,
Gathers in the farmer's products,
Reaping where he has not sown.
Holding them away from market,
Day and night his profits grow,
Making for himself the prices,
Naught but gains his coffers know.
—*J. P. Stelle.*

War with the weeds.

Toil deserves reasonable reward.

The products of farm toil are the only sources of its reward.

When a man works for himself on his own farm, who fixes his wages? Whoever prices his products.

When a conquering general wants anything he takes it, leaving whatever price he pleases. What is the difference where the buyer prices the goods on the farm and takes them?

In a large portion of the United States there has been too much rain for best farm conditions.

The area of last fall seeding of winter wheat that was abandoned and plowed up this spring amounted to 1,432,000 acres, of which 356,000 acres were in California, and 102,000 acres were in Missouri. This leaves a total acreage to winter wheat of 29,720,000 acres, which is still nearly three million acres more than was harvested last year.

According to the United States Crop Reporter, the condition of meadows throughout the country is nearly ten points better than last year.

The total production of wheat in northwestern Canada last year, of which such a blow has been made, was only 17,407,369 bushels, of which 17,250,450 bushels were spring wheat, and only 159,919 bushels were winter wheat. The yield in each case was a little more than 18 bushels to the acre. No serious danger to United States wheat production in that report and it is official.

During the nine months ending March 31, 1905, there were exported from the United States 6,572,543 bales of cotton, more than half the government's 13-million crop, at a value of nearly $51 per bale, or a fraction more than 10 cents per pound. Planters may now understand what prompted the tremendous effort a few months ago to beat down the price of cotton. Score another point for controlled marketing.

Official reports say that nothing but an unusually early harvest can prevent France from making heavy imports of wheat or flour to meet the actual needs of her people. Does any one want any further proof that supply and demand had nothing to do with the recent flurry in the price of wheat?

The consumption of cotton in the United States since Sept. 1, 1904, says the government May report, was: By Southern mills, 1,492,000 bales; by Northern mills, 1,922,207 bales, an increase in the South over the same period last year of 31,000 bales, and a decrease in the North of 71,057 bales.

There had been marketed up to May 1, 1905, 2,037,778 bales of cotton more than for the same period last year, but it had been marketed more gradually, and, notwithstanding the enormous crop, prices were fairly well sustained. Had controlled marketing been perfected, not a bale need to have sold for less than a remunerative price.

In 1904, Russia produced 205,460,400 bushels of winter wheat and 459,208,200 bushels of spring wheat, making a total wheat production for that year of 664,668,600 bushels, an increase of some 43,000,000 bushels over the preceding year. This still falls several million bushels below the highest United States crop, and exaggerated tales of foreign wheat production that periodically fill the papers are for the purpose of scaring American farmers into selling their wheat cheap.

A comparison of the production of other grain in Russia and the United States is interesting. Last year Russia produced 1,005,289,714 bushels of rye, 1,120,729,235 bushels of oats, 345,174,000 bushels of barley, and 25,986,857 bushels of corn. The United States produced 27,241,575 bushels of rye, 894,595,552 bushels of oats, 139,748,958 bushels of barley, and 2,467,480,934 bushels of corn.

The actual wheat crop of the Uited States last year, as is now officially reported, was: Winter wheat, 332,935,346 bushels; spring wheat, 219,464,171 bushels; total, 552,399,517 bushels. Hence it is seen that the A. S. of E. estimate of the crop at the time of issuing the price bulletin was more nearly correct than the government estimate at the same time.

It was always so. Do you recall 1903, when wheat was selling at 65 cents in May and the A. S. of E. said the next crop should sell for $1, and it did? In 1904, under the influence of splendid crop prospects, in the spring prices went down below 80 cents, yet the year's crop sold for $1.20, as we said it would. It will be so again. Whatever the farmers set their mind on that they will get. Their society is getting stronger every month, and what they did in 1903 and 1904 they can more easily do in 1905.

David Dobetter

(Concluded from page 8)

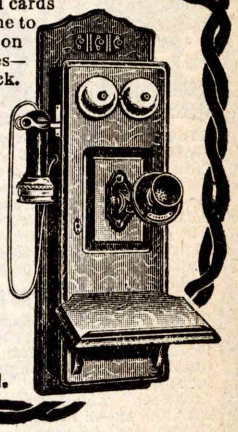
the bugs and the blight, we can manage them pretty well in these days by spraying them in time. We have learned that you do not want to wait till the blight actually comes and the tops of the plants begin to look as black as your hat before you start the spraying outfit. Get the poison on before the blight shows itself. Then, too, the bugs must be settled before they get the leaves all trimmed off the tops. One day may make a lot of difference in the crop. But as I said, we are holding a few potatoes back for the purpose of trying the late planting. If there is any advantage in it we want to be ready to get it.

The meadow is coming on fine, The pieces of new seeding are showing up in good shape. The clover is beginning to head now, and it is going to be heavy, too. One field in particular that we gave an extra dressing of barnyard manure followed by a little commercial fertiliezr, looks grand. I think it is a fact that a little of some kind of prepared fertilizer does add goodness to the home-made article. Makes it richer and stronger. We are trying the same plan with another piece this year. One year is hardly a fair test. It will not be long now before some of the new seeding will have to be cut. Ben writes home that we ought to get at the clover when it is fairly in the blow. Tom and I took a few potatoes we had to spare to the city last Friday and brought home a tedder. It looks as if we might need it this year, the grass standing so heavy in the meadow. Queer looking thing. I never saw one work, but I believe they are all right. The folks along the way home came out and looked the machine over, and some of them kind of laughed at my notion in getting such an expensive farm tool. There never was one anywhere in this section, you know. I have the honor of getting the first one. But they did not trouble me much with their skeptical remarks. They will watch things at Four Leaf Clover Farm this year, and soon will be investing in just such a tool themselves. You see, if I am not right. Now I must close and turn in, so good-bye.

DAVID DOBETTER.

LOST, STRAYED OR STOLEN

The telephone gets the news of your loss all over the country long before you could get to town and get postal cards sent out. You can arouse your neighbors in time to help "catch the thief," besides it's handy on the farm every day, especially in emergencies—when you are in trouble and need help quick.



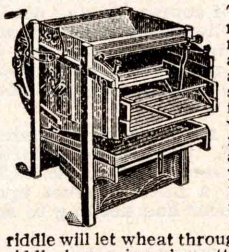
Stromberg-Carlson TELEPHONES

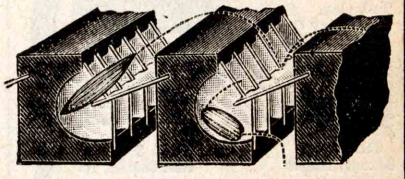
are the cheapest telephones because they are the best. They pay for themselves in a short time, remove many of the disadvantages of farm life, and extend the farmer's influence. Make home more pleasant for the wife and children and open up new opportunities for the whole family. Write for book F 118 "Telephone Facts for Farmers." It's *free*, and full of just what you want to know—how to organize, build the line, etc. Send for book. Address nearest office.

Stromberg-Carlson Telephone Mfg. Co.
Rochester, N. Y. Chicago, Ill.

OATS FROM WHEAT AT LAST!

Remarkable Chatham Riddle for Succotash





The Chatham Fanning Mill has a new riddle that is guaranteed to make an absolutely perfect separation of oats from wheat. This wonderful piece of mechanism has about 4500 different parts. You can take ¾ oats and ¼ wheat and get a perfect separation, or you can *reverse* the proportions. Above is a cross section of the new riddle. You can see the riddle will let wheat through readily, but oats cannot get through. The riddle has a jumping attachment that keeps the oats jumping until they go over behind on the floor. **GROW SUCCOTASH!** The new riddle will enable you to obtain double crop value by sowing wheat and oats together, as it insures the perfect separation necessary to obtain the highest market prices. We have also invented a Corn Screen that *grades corn 98 per cent* perfect. The accompanying sectional view shows the principle of operation. The new Oats-from-Wheat Riddle and Corn Grader are *new* inventions—only three months old—and obtained by us at heavy expense. They cannot be applied to machines already sold, but our new mills can be equipped with them. The Chatham will separate, clean and grade any grain or seed. Write for Chatham Book at once.

R. E. CHALMERS & CO., 356 Dearborn St., Chicago.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

Lime.

Disinfect.

Keep the poultry quarters clean.

Feed wholesome food—give plenty of clear water.

Save young chicks and add to your profits by feeding the chicks where the fowls cannot get to them.

Grape worms don't exist on limed lands.

Disease lurks in filthy places in the poultry yard or pig pen.

Penned poultry must have shade and clean water.

It is very doubtful if even farm poultry get enough of meat foods.

Keep the young chicks growing; there is where the profits are. Market the culls early—get better prices and save future feed.

Midsummer heat is almost as bad on fowls as midwinter cold. Modify the one by comfortable quarters; the other by abundance of shade.

The poultry house must have good drainage, and if it can be built on sandy land it is an advantage.

Don't deprive the fowls of a dust bath. A fair sized box partly filled with road dust and ashes set in a corner of the house may accommodate them in rainy weather. Renew the contents of the box quite frequently.

Feed the poultry at regular times, and give them a variety of wholesome food. Don't let them have access to filthy slops or decaying meats under any circumstances, and keep the feed troughs clean.

Fowls must have exercise. Those having the range of the farm will provide themselves with this necessary element of health; those confined in pens must be induced to exercise in their close quarters.

Be sure that the nest of the setting hen is free from vermin. Always clean and renew the nest before giving the hen the eggs, and after the hatch, provide the brood with new and clean quarters in which to roost, and keep the roosting place clean. Take no chances.

Do you raise thoroughbred poultry or cattle or swine? Some others do. Most don't, but they ought to. Tell them about it and sell them through the Business Exchange.

The best "egg food" is good, healthy, substantial feed, which includes necessary lime and grit; couple all this with healthy quarters and exercise. Too much stimulation may make a few more eggs at this time, but it is no benefit to the hens.

We do not advise mixed poultry breeding. Apparent good results have produced for a season or two, by crossing, because increased vigor may be secured by a new mingling of blood, but this is not necessarily because different breeds have been brought together, but because of unrelated strains, which may be secured without crossing breeds as well as with an assurance of better permanent results. A mixed flock very soon loses the type of both breeds, and degenerates into a flock of mongrels.

If you wish to start in poultry rasing or to begin with a new variety, and wish to invest as much as the cost of a good breeding pen mated by a reliable and skillful poultry raiser, that is the best way to begin. Otherwise we would advise the purchase of eggs, as many settings as you wish to invest in, and each, we would say, from a different breed, but always from a reliable one. From each of these settings you should raise both roosters and pullets. Mark them all carefully and plainly, so that you can not mistake them, and next spring you will be in position to mate up two or three breeding pens of your own.

What do you want? Look for it in the Business Exchange.

If you are a subscriber to Up-to-Date Farming we guarantee our advertisers to you. That makes them safe for any one to deal with, because they are good.

Most families come to the time when they "just have to have a new range." The old one has been a good, faithful old stove and made many delicious pies and good things to eat. But the stove can't last always, and then a new one must be gotten.

We know that any readers of Up-to-Date Farming who need a stove and get one of the famous Kalamazoo ranges or stoves will find them as good as the old "stand by" for dependence and much better for convenience and honest material.

You can buy a stove or range for cooking or heating from the Kalamazoo Stove Co., Kalamazoo, Mich., for less money and with the least trouble, and at the same time get a better quality stove than any other place. They have published a catalog describing all kinds of stoves for all purposes. It is No. 290. Send for it and see what wonderful good stoves you can get, and at surprisingly low prices. A postal card will do.

$1,000 Cash Free

Every reader of Up-to-Date Farming will be interested in the offer made by the International Stock Food Co. of Minneapolis, Minn., in the June 1st issue. They are paying $1,000 in cash premiums to boys, girls, men and women. The contest is simple and easy for any one who lives on the farm. Look up the offer in the paper mentioned. Or send to the company for a list of prizes. You might just as well have some of this money. We want readers of Up-to-Date Farming to get the largest share. Subscribers to some other farm papers are asked to compete, but you should enter as a reader of this paper and WIN.

Have you sent for a beautiful colored picture of Dan Patch—the fastest horse in the world, and the most valuable? The International Stock Food Co. of Minneapolis, Minn., will send you one free if you write for it. Tell them how much stock of all kinds you have and mention Up-to-Date Farming. Now, if you have not had the picture you better send for it. It's worth having.

Our hens laid twice as much."—Mrs. Patience S. Jenkinson. Vicksburg, Mich.* Price, quart 35c; gallon $1.00; 5 gallons $4.00. Order today. J. A. EVERITT, Seedsman, (Inc.) Indianapolis, Ind.

"How Money Grows"

Is the title of a book which tells:

How to invest small sums.
How to tell a good investment.
How you can convert $100. into $358.83.
How to choose between real estate and stocks.
How savings banks make their money.
How to choose your partners.
How to guard against uncertain "prospects."
How to protect yourself in case you should not care to hold an investment indefinitely, etc.

This book is not an advertisement of any particular investment. It is a general "talk" about investments, based upon my experiences and observations. My book will interest all persons who can save $10 or more per month from their income. Write me a postal saying, simply, "Send How Money Grows." You will receive the book, free, by return mail.

BINDER TWINE

To close out. The price is 10 cents a pound
Or at 9½ cents if five or more club together

THERE is binder twine, and binder twine. Some is allright, much is not. You can't afford to take any risk. We sell only high grade binder twine. Every ball guaranteed. If you buy our **STANDARD** twine you will be fixed O. K. when harvest time comes.

Nothing is more annoying than poor binder twine. It is exasperating to stop the harvesting because of a knot or a weak place in the twine. But there is lots of twine that will cause you just this trouble.

We want your order. We also want your Neighbors orders. Get four or more of your Neighbors to join with you and get the special price. See below.

CAUTION The word "Standard" may be used to designate inferior grades. We know of some cases where it is so used. But with us OUR STANDARD is always high grade. We guarantee it to be made from long fiber, run smooth and have the requisite strength.

AGENTS We want a farmer agent in every locality. Write for order sheets, samples, etc.

TERMS Our terms are cash with order or payable on delivery and subject to examination, We will ship at any future date you give. If you need credit let us know and what reference will you give?

Twine is packed 10 balls of 5 lbs. each to a bale—50 lbs. Not less than one bale 50 lbs. shipped on any order.

Remember our price. **10 cents a pound** or if 5 or more join together and order their twine, no matter how much or how little each take, the price will be 9½ cents. Give the address of all the members of the club.

PRAIRIE MFG. CO.

BROWNS VALLEY, MINNESOTA

Vitalize Your HAIR!

Don't let your hair fall out! Don't let Dandruff, scalp poisons and germs eat into the vitals of the roots which give it life! Don't let the coloring pigments lose their vitality for want of proper nourisment and no longer feed the hair with coloring fluids. DON'T BE BALD! DON'T BE GRAY!

NEGLECT IS THE THIEF OF THE HAIR

that steals away its beauty ere you are aware. Take time by the forelock before he robs you of yours. Don't wait until you need a wig or toupee to cover the bald spots; don't wait until you must use a switch or a false front to hide the gaps neglect has caused. Don't wait until you require a filthy and injurious dye to secure a semblance to its own natural color.

SWISS HAIR VITALIZER

gives new life, energy and vitality to the scalp and hair roots, as we give strength and health to the blood and body, by direct nourishment. It is meat and drink to the starving, suffering roots, feeding them through the pores, the thousand tiny mouths of the scalp, and is digested in the thousands of little hair follicles, the stomachs of the roots, each supporting its individual life-cell. Swiss Hair Vitalizer is a food rich in that natural life and color-giving oil which the hair roots demand and crave, which is to them as the gastric juices are to the stomach and without which

THE HAIR DECAYS AND DIES.

Swiss Hair Vitalizer prevents and stops the hair from falling out, cures baldness where there is still a spark of life in the hair-cells, cures and prevents Dandruff and scalp diseases which destroy its life, makes the hair long, thick, luxuriant, soft, glossy and of a natural color, no matter how thin, straggly and wiry it was before using. It does not stain the scalp and is guaranteed to contain nothing that can in any way injure the finest head of hair or the tenderest scalp. It is NOT a DYE or stain, but restores color by a restoration of full vitality.

Agents Wanted

FULL SIZE $1.00 BOTTLE SENT FREE FOR TRIAL.

We want you to try it, to learn for yourself that in this wonderful Swiss hair treatment has been found that which has been the desire of the people for ages and we will pay the cost of the trial. A fair test for four weeks' time and a just verdict is all we ask. If you like it and find it does the work we claim, order more and thereby give us our chance for profit. If not, no harm is done. We know the hair, know its diseases, know our treatment and will take this chance. We do not send a small vial, containing about a thimble-full and of no practical value, but a full size ten-ounce bottle, enough for four weeks' use, selling regularly at the drug stores for One Dollar Each. It is too heavy to go by mail and must go by Express. **Send us 25 cents,** to guarantee express charges, and this full size bottle will be promptly sent you free, Express Charges PREPAID. Nothing to pay on receipt or later. No other hair treatment has been or can be so offered. Don't wait until the roots are dead or dying or the coloring pigments dry or drying, but send to-day for this **one dollar bottle free on trial.** Only one free bottle sent to a family and only to those who have never before used this remedy. Address, immediately,

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

Codling moth.

Fungus—scab and knotty growths.

The pests are now getting in their work.

Note the orchards that were sprayed and take lessons.

After all, the hope of the fruit crop is in plenty of suitable food for the trees, unmixed with bad conditions.

The best sort of pruning is to rub off the sprouts whenever they appear in undesirable places.

Mind you, whatever cultivating is done in the orchard, injure the roots of the trees as little as possible. We adhere to the clover or cow pea theory, and hogs or sheep, or both—after the trees are large.

Blight is abroad in the orchards as usual. Pear trees in rich soil and cultivated, suffer most.

The Coreless Apple

We never feel like discouraging anything that is new, because so many new things that seemed absurd when proposed have been proven such successes as to drive out things of their kind that preceded them, and revolutionize thought and industry in their lines. But this does not prove that every new thing proposed is to be a success, or that the public should recklessly invest in novelties.

Just now a coreless apple is being strenuously exploited, and people are being asked to buy the trees, with all the doubts that hang upon them, at $2 per tree. It is simply an untried novelty, and to invest in it extensively would not be wise. It is being propagated and marketed by a Colorado company, whose object evidently is to make money by selling the trees rather than the fruit, as they are guarding it very carefully, and, as we are informed, using all the fruit so far produced, for advertising purposes.

In reply to some questions asked for information by The Fruitman, Mr. A. T. Bigler, of Colorado, the home of the "coreless apple" and the company that is propogating it, expresses very little confidence in it as a profitable fruit. It is not claimed to be an apple of good quality, nor one possessing merit as a commercial apple. Hence, as we have said, it cannot be classed as anything but a novelty, and one which should not be extravagantly invested in.

Apple Vinegar

Cider from ripe, sound apples only should be used for making vinegar, and it should be put in a tight, clean vessel which has been thoroughly scalded to destroy undesirable germs. Do not fill the vessel too full, nor close it too tight, as the air must have free access to it, and there must be an opportunity for the gas generated by fermentation to escape. The cider must, of course, go through two fermentations, the alcholic and the acetic. The alcoholic fermentation generally requires some months, though the time depends upon conditions. A cool cellar retards fermentation, while being kept constantly in a warm atmosphere hastens it, as also does the use of yeast. The acetic fermentation, or true vinegar state, may also be hastened by the addition of a "starter," or "mother," as it called, or by the addition of a small quantity of sharp vinegar. When the desired acidity has been reached, fill the vessel and cork tightly, to prevent further fermentation, which might injure the quality.

Success with Strawberries

Of course, the measure of success in production is the financial receipts, and by this measure a Mr. Lee made a success with strawberries in South Carolina. Mr. Lee says:

I did not start to raise strawberries until the fall of 1902. I set out two acres of young plants and finished planting them December 30th. I began picking them scarcely four months after planting. I had from them in net returns $580. Last July I planted half an acre more and in October I increased my whole patch to nearly three acres. Although I did not get more than a third of a crop, on account of unprecedented drouth, I still received in net returns $980.

The greatest difficulty experienced by farmers and amateus in growing strawberries in the rich soils of the central United States is the abundant and rapid growth of weeds. It is difficult to get the ground sufficiently clear of weeds, or to keep it so during the growth of the plants and the production of the fruit. Perhaps the best way to do this is by heavy mulching with clear straw or other litter, leaving only the plants uncovered. Then the runners may be permitted to set new plants only where desired. Of course this is not practical for field culture, but only to small beds for home use or local market.

Mulching may be done at any time with good results. The better time is in the fall; next, any time during the winter and early spring; then any other time when it can be done. We place a very high estimate on the good effects of mulching.

Beautiful Picture Free

Can you imagine a more beautiful picture then six well fed, prancing horses as they appeared when running for the championship of the world? You may have a picture like this at not one cent of cost to you except the postal card to write for it. Size 12x25, printed in many colors showing them just as they appeared. There are two conditions: First, What live stock do you own? Second, What stock food have you used? Write a card today for the magnificent picture. Wilbur Stock Food Co., Milwaukee, Wis.

THE LAST WEST

There is no longer a west in the United States, that is, in the sense of a virgin land of opportunity. The land-hungry and the eager seizers of opportunity have taken the best of the west. Those who come now must glean and take what was left by the keen pioneers.

In Canada the development and exploitation of the west are just beginning. A fortune awaits every man who is equal to his opportunities. Each year 50,000 Americans move into the new region of cheap or free lands. There too—in the last west—the land of wheat—the best opportunities for homes, careers and investments will soon be gone forever. Act before it is too late.

Would you like to learn about the vast wheat fields, the great ranges, the business openings, the untold resources of Western Canada; about Winnipeg, Regina, Calgary, Edmonton, Saskatoon, Indian Head, Prince Albert, Dauphin, Medicine Hat, and the other growing towns and cities of the Canadian West?

To get, for the trouble of inquiring, information and literature covering all these points and copies of the handsomely illustrated magazine "Resources," write to U. S. Bureau of "Resources," New York Life Building, Minneapolis, Minn.

Fruit Grower's Trip

June 20th, the Cotton Belt Route will run a special train excursion of fruit and truck growers to and through the wonderful East Texas fruit and truck country. The round trip from St. Louis will consume about a week. The object will be to study conditions of fruit and truck growing in the East Texas country at the height of the harvest season—when they are picking, crating and shipping peaches, plums, tomatoes, potatoes, etc. The big orchards will be visited and every opportunity given to see results.

Extremely low round-trip rate, special train for the party run on fast schedule—only one night on the road.

The chance of a lifetime to see the great East Texas country to best advantage and at trifling expense.

Write for copy of fruit booklet, itinerary and cost of trip and full particulars.

UP-TO-DATE

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Bearing Burdens

Who bears another's burdens
Will find, from day to day,
His own is always lightened,
Or lifted quite away.
—Eben E. Rexford.

Everybody ought to be happy in June.

Are you trying to make everybody happy?

"This is my commandment, That ye love one another, as I have loved you."—Jesus Christ.

I wish the boys and girls of the farm would be more thoughtful of others' interests. Politeness, kindness, courtesy, regard for the rights of others—these are all easy to learn, and they are not difficult to practice, but they are worth more to those who possess them than many things learned at college that cost time and money.

The slouchy dressing too often seen in the farm home is not necessary, is not in good taste, and is not economy. Of course, it is all right to dress according to the work one is doing. Some work is particularly hard on clothing and calls for dress that can stand it best and that is least valuable, but there is nothing in the farmer's calling which makes it incumbent upon him or his family to dress more shabbily than other people. One of the most marked differences in Eastern farmers and those of the Mississippi Valley and farther West is in their "dressed-up" clothing. In the Atlantic States you can scarcely distinguish farmers by their clothing from merchants and professional people at church and other public gatherings. Farmers should not plead "hard times" in the matter of comfortable and respectable dress. If they really cannot afford it they are not getting out of their calling what it should bring, and what they deserve, and it is time for them to "turn over a new leaf."

Even this early it is well to think of the autumn bulbs for next spring's flowering. The beautiful beds in the parks and about the public buildings in the cities, makes one wonder why these early beauties are not more common on the farms. Plan some beds to be set next fall to surprise the entire neighborhood next spring.

A Reliable Heart Cure

Alice A. Wetmore, Box 67, Norwich, Conn., says if any sufferer from Heart Disease will write her, she will, without charge, direct them to the perfect cure she used.

Warm water with a very little boracic acid in it is a good, restful wash for tired or swollen eyes.

Girls, it is June. The men are pushing things to get ready for harvest, and now is that time when mother needs all the assistance you can give her. The little girls are anxious for their first job—to wash the dishes, to sweep the floor, to feed the chickens, to string the beans, or even to rock the cradle or to churn, but it takes no small amount of little philosophy to keep from getting tired of it, and the proof of industry and goodness is not in wanting to undertake a job, but in sticking to it to the finish, and doing it over again from day to day.

Tom and Sally are surprised at the worry they note in those who have longer been fighting life's battles together. That is natural. Beginners are always enthusiastic and hopeful; and they should be. And we are not going to say their worries are not yet come. Worries need not be invited; let them stay away. Life is too short to entertain them elaborately. Be cheerful. The sun shines brighter for cheerful people than for the gloomy and morose. Here's our hand to Tom and Sally. Keep the door closed against the worries.

Whenever you buy something for the farm or home you probably take into consideration price first and then quality. If you think the price is low you naturally investigate for quality. Some "cheap" things you do not want at any price. But there are times when, for good reasons, high-grade goods are sold at low prices. Then it is YOUR time to BUY.

There is one firm that has advertised quite extensively in Up-to-Date Farming that is probably in a better position to supply you with all kinds of Building Material, Wire, Pipe, Plumbing Material, Sash, Doors, Furniture, Household Goods, etc., than any other. This is the Chicago House Wrecking Co., of Chicago, Ill., and St. Louis, Mo.

Just think of one firm buying the entire St. Louis World's Fair that cost $50,000,000 to build. That is what this company did. They also bought the Chicago World's Fair in 1893, and later the Buffalo Exposition. Is it not reasonable to suppose that they can buy cheaper because they buy such immense institutions and can therefore sell cheaper?

In addition to buying all the large expositions of late years, the Chicago House Wrecking Co. also buys at Receivers' and Sheriffs' sales. Large manufacturers' and jobbers' stocks are thus secured at a trifle of their value.

We recommend that you send for their last catalog, No. 204. You will be surprised at the low prices, and if you do not want to buy now, refer to it before you do buy. You are protected in buying from this company, as they come under our guarantee of advertisers on page 3. Write for catalog No. 204 to-day.

When the Business Exchange has 500 advertisers it will pay them all. But don't wait, because it pays now.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did it Gladly Tells You How

Mr. A. S. Hitchcock (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health.

Our advice is to take advantage of this most generous offer while you can do so without cost.

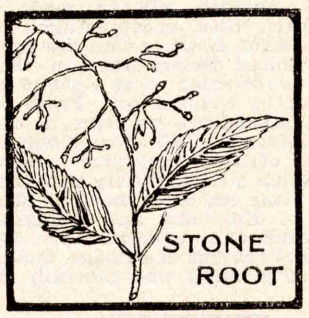
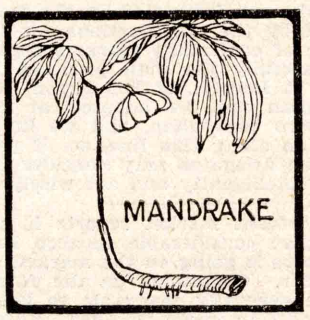
NATURE'S ESSENCE

Extracted From Forest Plants.





Nature's laws are perfect if we obey them, but disease follows disobedience. Go straight to nature for the cure, to the forest; there are mysteries there that we can fathom for you. Take the bark of the wild-cherry tree, the root of mandrake, stone root, queen's root, bloodroot and golden seal, make a scientific, non-alcoholic extract of them with just the right proportions and you have

DR. PIERCE'S GOLDEN MEDICAL DISCOVERY.

It took Dr. Pierce, with the assistance of two learned chemists, eight years of hard work experimenting to make this vegetable extract and alterative of the greatest efficiency.

Just the sort of spring remedy you need to make rich, red blood, and cure that lassitude and feeling of nerve exhaustion. Dr. Pierce's Golden Medical Discovery bears the stamp of PUBLIC APPROVAL, and has sold more largely in the past forty years than any other blood purifier and stomach tonic. The refreshing influence of this extract is like Nature's influence—the blood is bathed in the tonic which gives life to the blood—the vital fires of the body burn brighter and their increased activity consumes the tissue rubbish which has accumulated during the winter. Dr. R. V. Pierce, the founder of the Invalids' Hotel and Surgical Institute, and a physician of large experience and practice, was the first to make up an ALTERATIVE EXTRACT of roots, herbs and barks,

WITHOUT A PARTICLE OF ALCOHOL OR NARCOTICS,

which purifies the blood and tones up the stomach and the entire system in Nature's own way. The "Golden Medical Discovery" is just the tissue builder and tonic you require when recovering from a hard cold, grip, or pneumonia. No matter how strong the constitution the stomach is apt to be "out of kilter" after a long, hard winter; in consequence the blood is disordered, for the stomach is the laboratory for the constant manufacture of blood. Doctor Pierce's Golden Medical Discovery strengthens the stomach—puts it in shape to make pure, rich blood—helps the liver and kidneys to expel the poisons from the body. If you take this

NATURAL BLOOD PURIFIER AND TONIC

you will assist your system in manufacturing each day a pint of rich, arterial blood, that is stimulating to the brain and nerves. The weak, nervous, run-down, debilitated condition which so many people experience at this time of the year is usually the effect of poisons in the blood; it is often indicated by pimples or boils appearing on the skin, the face becomes thin—you feel "blue." Dr. Pierce's Golden Medical Discovery CURES all blood humors as well as being a tonic that makes one vigorous, strong and forceful. Dr. Pierce's Golden Medical Discovery

STANDS ALONE

as the one medicine for stomach, liver and blood disorders that has the ingredients printed upon the wrapper of every bottle leaving the great laboratory, at Buffalo, N. Y., which CURES in nature's own way; not only does it STAND ALONE in respect to its ingredients but also as the only spring tonic and reconstructive which absolutely contains NO ALCOHOL.

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

The 1905 Crop

Conflicting reports from various sources do not give much satisfaction to those who want to know the facts regarding the acreage of tobacco. The Western Tobacco Journal declares that no reduction will be made, as prices have been encouraging. The farmers in the districts that are fairly well organized declare that in those sections a reduction of at least 15 per cent. can be counted on. From our own correspondence we have no reason to believe the 1905 acreage will exceed that of 1904 in any place, and we have it from good authority that there will be some reduction in the "Black Patch" of Kentucky and Tennessee. Heavy rains and cutworms have done their usual amount of damage, and the season of planting was generally delayed.

All who are interested in the work planned by the organizations for the purpose of controlling markets should read carefully the plan proposed by Mr. T. T. Barrett, of Henderson, Ky. Some plan will be adopted at the Owensboro convention, and we invite discussion along this line, so, if possible, the delegates may consider the matter intelligently and act wisely.

From recent market reports it appears that considerable tobacco held by farmers is going on the markets in bad order. Conditions on the farms are not generally favorable to keeping tobacco in warm weather. Farmers should make a study of this, and, as far as possible, arrange to keep their tobacco at home until sold, provided they can keep it in perfect order. Otherwise they should have it prized and stored on some plan similar to that suggested by Mr. Barrett. For some time it will be found necessary to store the largest part of the tobacco grown, either on the farm or in Equity warehouses.

Newspapers are publishing dispatches from Clarksville, Tenn., stating that the Dark Tobacco Growers' Association has made a deal with a New York firm that promises to take the entire crop held by the association at the farmers' prices, provided the condition and quality of the tobacco is satisfactory. The tobacco is to be sold by sample. Statements are made that buyers are offering to contract with certain members of the association for the 1905 crop at 10 cents a round. Does that mean that tobacco is actually worth ten cents straight? Then why sell it for less?

A PLAN OF ACTION

T. T. Barrett, of Henderson, Ky., Sets Forth a Plan in Detail

In a recent letter, Mr. Barrett, a prominent farmer and tobacco grower and member of the A. S. of E. of Henderson, Ky., submits the following:

"The plan that appears most practical is for the growers of each county or section producing a certain class of tobacco to choose an executive committee composed of one member from each magisterial district, and delegate to them the authority to make all arrangements for receiving, classifying, storing and selling the tobacco, and to negotiate loans and advancements necessary.

Each farmer's crop to be valued according to its quality and condition when received at the factory, and he given a statement, specifying the amount and value of each class delivered, and a record made on the books at the warehouse. Each farmer thus becomes a stockholder in the business to the value of tobacco delivered by him; and when the tobacco is sold, receives his proportion of the proceeds. Thus:

"'A' delivers 10,000 pounds rated at 6 cents, average. 'B' delivers 10,000 pounds of a lower grade, rated at 4 cents, average. 'A' has credit for $600 and 'B' for $400. The tobacco is worth an average price of 5 cents, or $1,000 for the crops. Now, if the committee sells that tobacco at an average of 8 cents, or $1,800 for the crop, the percentage of profit is 60 per cent., and for every dollar that each 'A' and 'B' have credited to them on the books, they are to receive $1.60 cash, less expenses. If sold in small lots, the profits to be pro rated among all the holders, and if a surplus is to be carried over, it will be carried by all instead of a few. Each district could own its own storage house, and buyers could purchase in person or by sample, and sales would be made direct. This will effectually prevent manufacturers from laying in large supplies at low prices. (The committees from different sections can meet at the annual meeting, to confer together and adopt a minimum scale of prices.—Ed.) Such a plan would materially shorten the distance between producer and consumer to the benefit of both.—Thos. T. Barrett."

Do not neglect your local union meetings this summer. Discuss the plans for holding and selling your 1905 tobacco crop. Do your utmost to induce your neighbors to stand with you. Make preparations for complete crop report as soon as the tobacco is housed. Get the facts and use them to your own advantage. Choose your delegate to the convention now, if you have not already done so.

Meetings of Tobacco Growers

The County Union of Breckinridge county, Kentucky, is arranging for an immense picnic at Hardinsburg, July 4th, and have invited National Organizer Sherman to make the principal address.

National Organizer Sherman is open for engagements between June 20th and July 13th. On the latter date his series of meetings begin in Virginia.

Mr. Jas. M. Vaughan, who has charge of organization in Cumberland, Buckingham, Goochland and Powhatan counties, Virginia, is preparing for a vigorous campaign in his district. Parties interested should write him at Cumberland, Va.

Organizer Sherman in Virginia

The Virginia meetings being arranged for Mr. Sherman in July and August are in charge of earnest, active gentlemen, who should be given hearty support in preparing for pleasant and profitable meetings. We give below the dates and places of meeting and names and addresses of persons in charge. Write to them:

Grand Rally, Lynchburg, July 13.
Amherst C. H., July 14.
Lovingston, July 15.
VAL. HYLTON, New Glasgow.
Buckingham, July 18.
Cumberland, July 20.
Powhatan, July 22.
Goochland, July 25.
JAMES M. VAUGHAN, Cumberland.
Amelia, July 27.
Farmville, July 29.
West Appamattox, July 31.
E. T. BOUDURANT, Rice Depot.
Rustburg, Campbell county, Aug. 2.
T. W. EVANS, Concord Depot.
South Boston, Aug. 4.
Danville, Aug. 5.
Martinsville, Aug. 8.
Rocky Mount, Aug. 9.
J. R. W. CRUM, Union Hall.

Farmers' Prices Exceeded

From The New Era, of Caldwell Co., Ky., we glean the following:

"Forty thousand pounds of loose tobacco was sold in Princeton markets at very satisfactory prices. The crop of T. W. Wood, 1,320 pounds, sold for an average price of $13 per cwt. This is the highest price ever paid for loose tobacco in Princeton. Another crop of 3,000 pounds sold for $9.75 per cwt. all round."

Princeton was among the first A. S. of E. points in the dark tobacco district.

Franklin County Union, Virginia, held a very successful meeting at Glade Hill, April 29th. Sixteen local unions were represented, and the meeting was earnest and enthusiastic. The following resolutions were passed:

Whereas, The welfare of the farmers depend on their ability to sell more than they buy, and to sell for profitable prices; and

Whereas, Farmers should produce on their own farms all home supplies possible; therefore, be it

Resolved, That we, the farmers of Frankin county, Virginia, fill our corn cribs, wheat garners, smoke houses, cellars and barns with the necessities of life, for the welfare of our families, instead of filling the tobacco factories of Danville, South Boston and elsewhere for the welfare of tobacco merchants; and be it further

Resolved, That the surplus and the tobacco we produce be not sold until a fair and equitable price is offered.

JAMES SUTHERLAND,
G. A. LYLE,
O. E. SOUTHALL,
Committee.

I CURED MY RUPTURE

I Will Show You How to Cure Yours FREE.

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write to-day. Capt. W.A. Collings, Box 93, Watertown, N. Y.

Seed Potatoes For Late Planting

A CROP 6-WEEKS FROM PLANTING

EVERY Summer we have many inquiries for the famous Early 6-Weeks Market Potato for late planting.

This year we put a lot of choice stock in cool cellars which we offer our customers for shipment as long as the supply lasts.

Nearly every body knows this fine potato, hence we will not describe it here. We will however send descriptive catalogue on request.

S. E. FERRY, *842-844 N. Capitol Ave. INDIANAPOLIS, INDINA*

A Farmers' Company, By Farmers, For Farmers

To Solve One of the Farmers' Greatest Problems

The Pure Seed and Plant Company

OF AMERICA

Capital $1,000,000

TO BE INCORPORATED UNDER THE LAWS OF THE DISTRICT OF COLUMBIA

Objects of The P. S. & P. Co. of America

TO grow and sell pure seeds, grain, plants and trees.

To eradicate weeds from the farms of America so that farmers' labor may be reduced, their crops increased in quantity, improved in quality and enhanced in value.

To improve the quality of all farm and garden crops by honest, careful, systematic, scientific selection and breeding of seeds and plants. To educate planters against the planting of mongrel and untrue seeds and those of weakened vitality.

To prevent adulteration of seeds, grain and food products, so the maximum markets for farm products may be secured and so that adulterated and poisoned foods need not be consumed.

To have laws passed to prevent the spread of weeds, and to see that they are enforced until a National curse—harmful weeds—is eradicated from the land.

THE idea of this Company was originated by J. A. Everitt, publisher of ***Up-to-Date Farming,*** author of ***The Third Power,*** founder and president of ***The American Society of Equity,*** and for twenty-four years the proprietor of, or the head of, the seed business known as ***J. A. EVERITT, SEEDSMAN,*** (Corporation.)

No man has ever been as successful as Mr. Everitt in originating plans to benefit farmers, and this latest step is part of the great plan

To Solve All Farmers' Problems

This is not a branch of the American Society of Equity. It is not a part of it in any respect. Membership in the A. S. of E. is not necessary to become a stockholder in ***THE PURE SEED AND PLANT COMPANY OF AMERICA.*** Any farmer who approves of the effort to accomplish the objects as enumerated above may now join with this Company.

Send for prospectus and learn about this movement which is marvelous in its conception, practical in its execution and which will be stupendous for good in its results.

Farmers spend one-fourth of their time fighting weeds. Weeds reduce their crops at least ten per cent. and discount their value ten to fifty per cent. What a fearful tax!

Farmers prefer pure seeds and thoroughbred seeds to impure and mongrel seeds but they cannot always get pure seeds under the present system of growing, handling and selling seeds.

It is our intention to show planters the true conditions under which seeds and plants are grown, distributed and planted, so that their eyes will be opened to a true realization of the great danger that already is present. The trifle that may be saved in buying cheap, adulterated seeds cannot measure up to the loss in labor and discount on the quality and quantity of crops.

But send for a prospectus. Learn what the movement means. Learn how it is to be done, and try to estimate the benefit it will be to you either as a stockholder or simply participating in the benefits that must come to every soil owner and soil worker.

AN APPEAL

AN appeal is made to all farmers, gardeners, truckers, orchardists—all who plont seeds, cultivate plants and harvest crops—to co-operate with each other to overthrow your greatest enemy—the weeds and poor seeds.

Stock holders are desired in every county in the country. It is for every branch of agriculture. When you understand this movement it will appeal with tremendous power of reasonableeess, yes necessity, to the owners and operators of over 8,000,000 farms tn the United States, and to the house wives who manage 20,000,000 gardens. to say nothing about the benefit it will be to foreign countries.

PERSONAL STATEMENT

THIS is one of the farmers' problems (the only one) that controlled marketing and profitable prices cannot solve. To solve the problem of pure seeds, thoroughbred seeds and eradication of weeds absolutely requires the step now being taken. I have taught farmers that if they want any thing they must go after it themselves. This is the plan to solve their most serious problem—one that has become a National curse.

J. A. EVERITT.

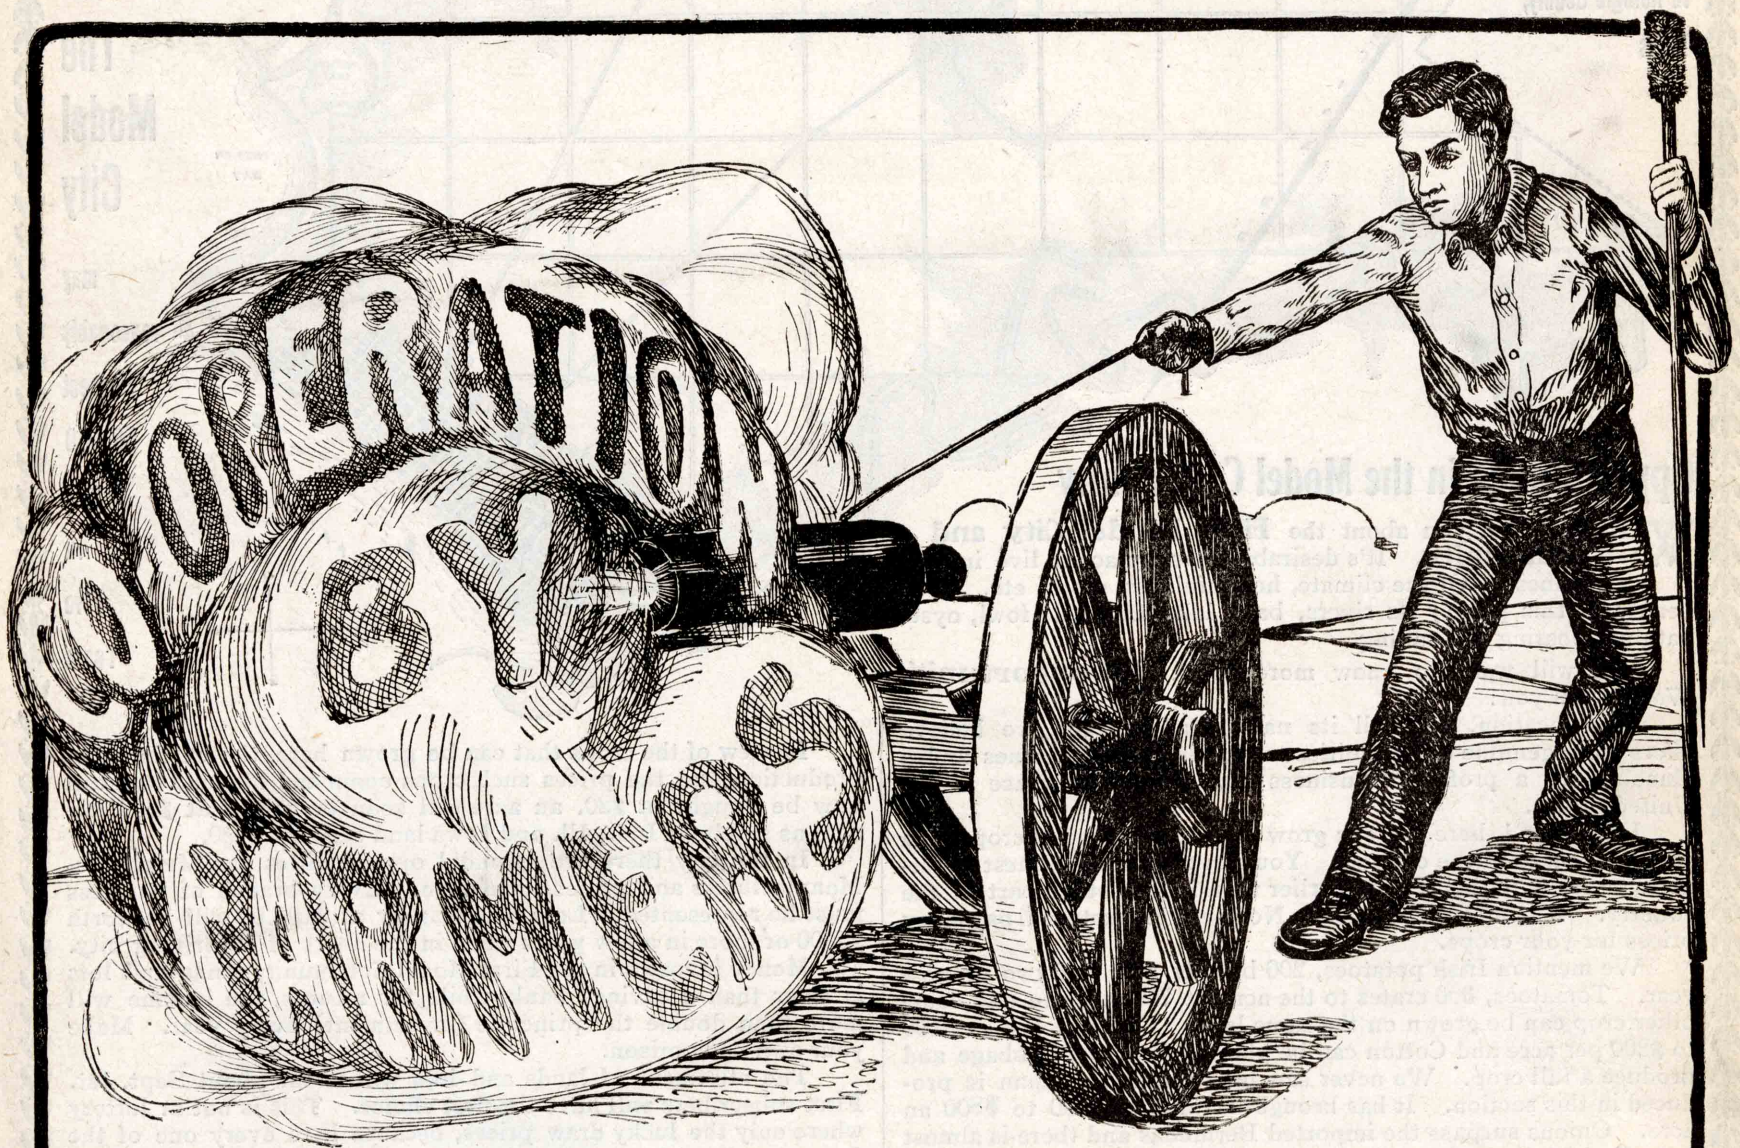
UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, JULY 1, 1905



A NEW DECLARATION OF INDEPENDENCE

UP-TO-DATE FARMING

FOR THE CO-OPERATING FARMERS OF AMERICA

COME WITH US TO THE

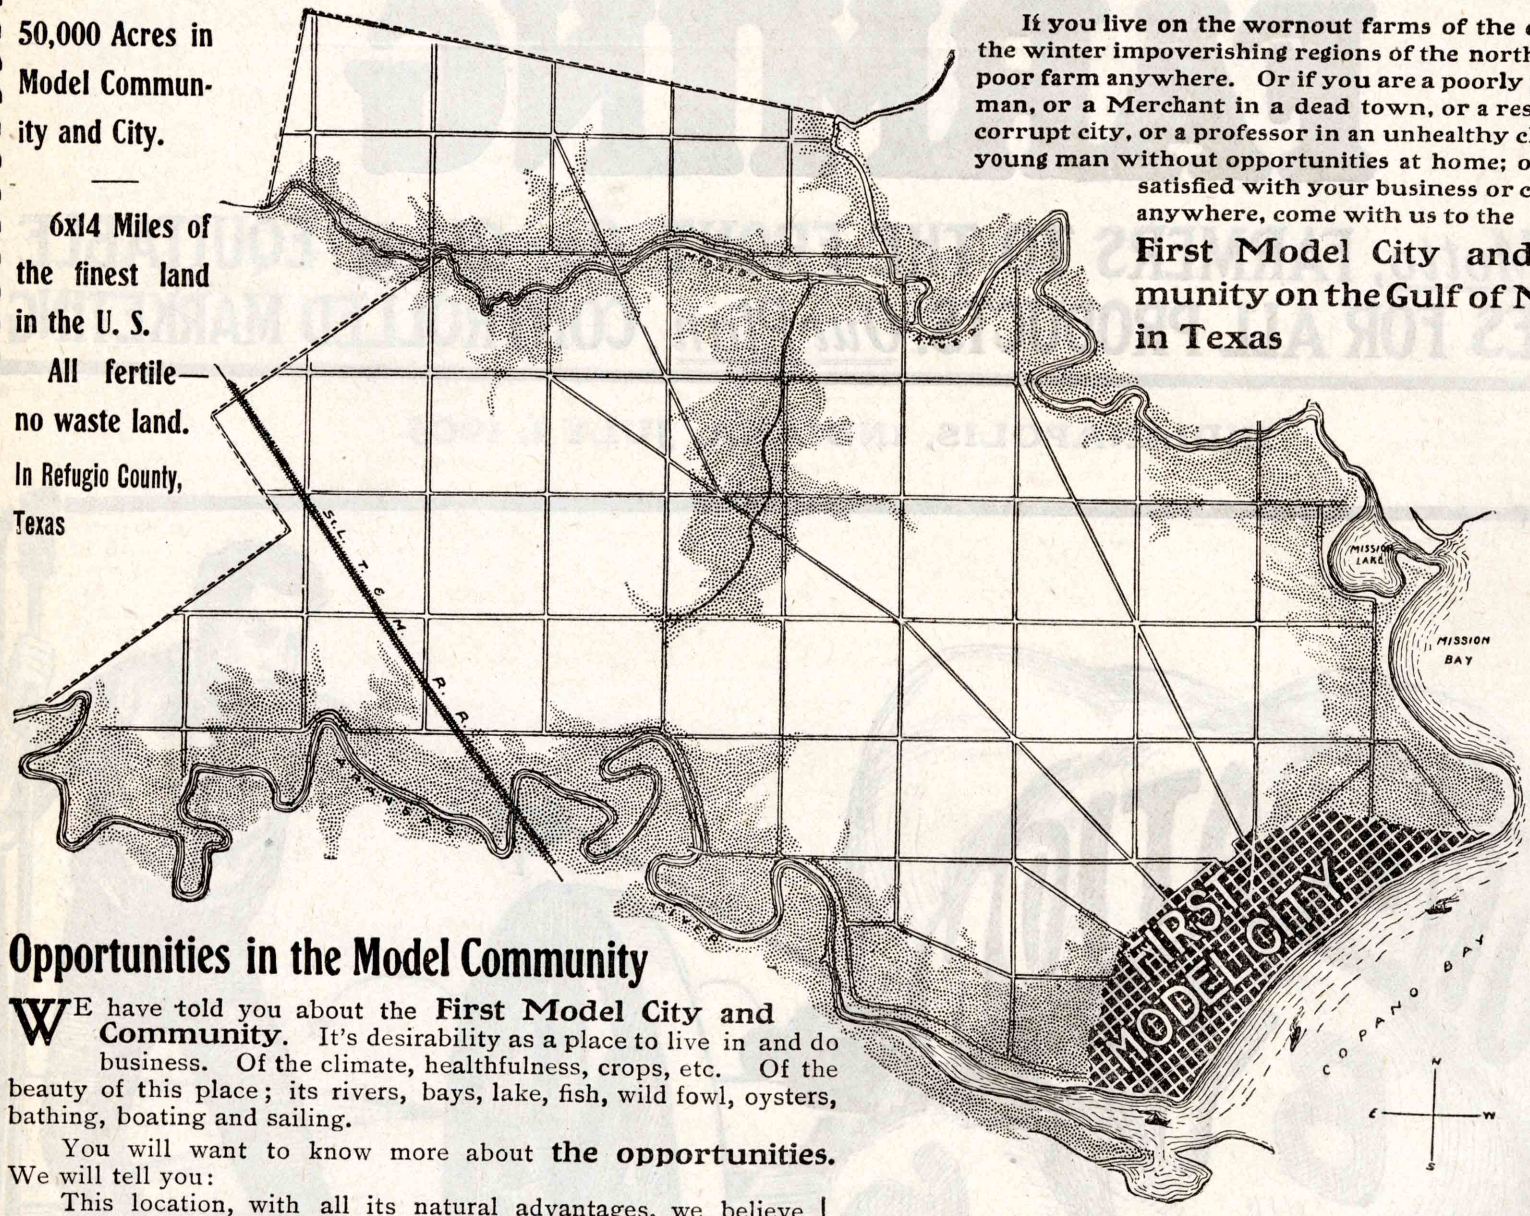
First Model City and Community

50,000 Acres in Model Community and City.

6x14 Miles of the finest land in the U. S.

All fertile—no waste land.

In Refugio County, Texas



If you live on the wornout farms of the east, or in the winter impoverishing regions of the north, or on a poor farm anywhere. Or if you are a poorly paid office man, or a Merchant in a dead town, or a resident of a corrupt city, or a professor in an unhealthy climate, or young man without opportunities at home; or are not satisfied with your business or conditions anywhere, come with us to the

First Model City and Community on the Gulf of Mexico in Texas

The Model City may reasonably expect 50,000 People in Five Years

Opportunities in the Model Community

WE have told you about the **First Model City and Community.** It's desirability as a place to live in and do business. Of the climate, healthfulness, crops, etc. Of the beauty of this place; its rivers, bays, lake, fish, wild fowl, oysters, bathing, boating and sailing.

You will want to know more about **the opportunities.** We will tell you:

This location, with all its natural advantages, we believe offers more genuine opportunities to people seeking homes and a place to do a profitable business than any other place in the United States.

Understand, here you can grow a greater variety or crops than any other place in the country. You can produce the finest vegetables an fruits in this section earlier than in any other part of the country. This means that all the Northern Markets will pay fancy prices for your crops.

We mention Irish potatoes, 200 bu. per acre and two crops a year. Tomatoes, 300 crates to the acre at 75c a crate and some other crop can be grown on the same land. Cabbage brings $100 to $200 per acre and Cotton can be planted after the Cabbage and produce a full crop. We never saw finer Cauliflower than is produced in this section. It has brought returns of $400 to $800 an acre. Onions surpass the imported Bermudas and tbere is almost an unlimited demand for them. New York alone wants 400,000 crates annually as soon as they can be produced. They yield enormously and have sold for $800 an acre. Musk and Water Melons grow to the greatest perfection. You know what fancy prices they bring in the northern markets.

Thus we might enumerate almost every vegetable and fruit grown in this country and they can be produced on the Model grounds and marketed ahead of crops from any other State. Through cooperation our farmers will be able to market advantageously.

In view of the crops that can be grown here, the earliness of production and the prices such crops command the land that can now be bought at $20. an acre will soon be valued at $200. an acre as surely as Ind., Ill. and Iowa land sells for $100.

In the city there are splendid opportunities for Merchants, Manufacturers and professional men. Every branch of business must be represented. Lots bought now at $100.00 will be worth $5000 or more in a few years when in the heart of a thriving city.

Money invested in the First Model Community lands and lots is safer than a savings bank, while for returns, the income will more than double the principle (investment) every year. Make your own comparison.

The allotment of lands and lots will occur about Sept. 1st. First subscribers will have the first choice. This is not at lottery where only the lucky draw prices, because here every one of the first subscribers is sure of a rich prize.

How would you like a 25 or 50 acre tract adjoining the city; or near the city on Aransas river; or on Mission bay or Mission lake or on Mission river; or some lots on the water front of Copano bay where will be the great commercial street of a city that is bound to have 50,000 people in a few years?

Railroads will be built to the city promptly when the move is made to open the First Model City and Community.

If you are interested, (and who will not be?) send for a full prospectus and favorable terms for lands and lots.

For Health, Happiness and Wealth come with us to the First Model City and Community

THE MODEL CITY LAND AND IMPROVEMENT ASSC. J. B. Coghill, Mgr. Indianapolis, Ind

EXPLANATION: *To prevent any misunderstanding I want to say that this movement to establish a Model City and Community is in no way connected with, or a part of, the American Society of Equity. True, some reference was made to such a step (clearing houses and headquarters) in recent numbers of Up-to-Date Farming. The members of the Society were not however unanimously ready for the steps to be taken but several members and some others were so completely converted to the idea of the Model City and Community that they are determined to establish them without delay. I cannot do otherwise than heartily approve of the movement, because such an object lesson is needed in this country. I trust the time will soon come when he A. S. of E. will select the First Model City as a southern headquarters and clearing house.*

J. A. EVERITT.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, JULY 1, 1905 | Number 13

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher

JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR

Foreign Subscriptions $1.00 a Year.

Clubs. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee tbat they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the **LABEL.**

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, 1905 crop	per bushel -	**$ 1.00**
Corn, No. 2 Chicago, 1905 crop	April 1 to next crop -	**.60**
Oats, No. 2 white,	" per bushel -	**.40**
Tobacco, (Price on the farm or at the market town)		
Virginia, dark, average	per cwt. -	**$ 9.00**
" bright,	" " -	**12.00**
Kentucky, dark,	" " -	**8.00**
" burley,	" " -	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit,	per bu.	**2.00**
Cotton,	New York, per pound -	**.12**
Broom Corn, Chicago,	per ton -	**$75.00 to $85.00**
Hogs,	" per cwt. -	**6.00 to 6.50**
Cattle,	" per cwt. -	**6.00 to 7.50**

Your Correspondence

Be sure to give your full name and address, including county, every time you write to us. If you change your address give old as well as new. If you write to more than one department, write on separate sheets. We have over 100 orders that cannot be filled because writer did not give complete address. Write on one side of the sheet only.

"All men are created equal."—Declaration of Independence.

There is no equality when one class of people are denied the right to place a value or price upon the property resulting from their labor while all other classes are permitted to do so.

Upon the result of the farmers' toil the success of all business depends, and yet the farmers are not allowed to say what their products are worth. They are compelled to accept prices fixed by others who are interested in keeping such prices as low as possible; and when the farmers buy they must pay prices also fixed by others who are interested in making such prices as high as possible.

The Illinois Central, the Burlington, the Big Four, the Southern and the Louisville and Nashville, for instance, agree that they will not carry freight or passengers below a certain scale of rates. They stick to the agreement, and people pay the price almost without a murmur. Suppose Bill Jones, Sam Jenkins, Tom Smith, Joe Beasley and Jim Boyd agree that they will not sell an article of product below a scale fixed by them. If it is all right for the railroads and others to fix prices that customers must pay, and it is good business for them to do so, is it wrong for farmers to fix prices on what they have to sell, and is it any less good business for them to do so? But, it is said, those five farmers could not compel the purchase of their products if their prices were above the general market for the same things. That is true. Neither could those five railroads compel the payment of their scale of freights, but when all the other railroads adopt the same scale people must pay it or not ship. If all the Bill Joneses, the Sam Jenkinses, the Tom Smiths, the Joe Beasleys and the Jim Boyds should adopt the same scale of prices, would not the purchasers pay them or not buy? And if they do not do that who is to blame but the Bill Joneses, etc.?

The A. S. of E. furnishes the plan, Up-to-Date Farming teaches it and urges its adoption, a thousand self-sacrificing organizers bring it to the personal consideration of every farmer and stand ready to make assurance doubly sure by organizing them so that they may adopt a scale and act together as the union laborers and all others do. If they continue the miserable one-sided system of piling up products for some one else to make prices on, who is to blame?

This Independence month of July is a good time for farmers to determine whether or not they own what they produce. If they do, they have a right to say what it shall sell for. If some one else is to determine its value, then they do not own it, but have been laboring to produce property for others, those others being authorized by custom to put a value upon the labor necessary to produce it. Now, be candid, this is the effect of the speculative system of price making and market control. Are those independent who must submit to it? But the Government does not require them to submit to it, neither does any law; it is simply a custom enforced by the organized against the unorganized, made possible by the indifference of the farmers themselves. Who is to blame if it continue?

How can farmers make prices? We admit that peaceful revolutions must be worked out by persistent effort, and that great truths must be taught by "precept upon precept," even at the risk of wearisome repetition. Let us repeat the steps to be taken: (1). Farmers organize in order that they may cooperate together. (2). They hold a representative national convention, thoroughly canvas all questions connected with production and consumption so as to get the true relation of each year's supply and demand. (3). They then fix minimum prices based upon the actual comparison of supply and demand, and in equity with the prices put by others upon other commodities or articles of commerce. (4). The organized or union farmers all over the country are informed of these prices, and furnished with the scale the same as the union scale of wages. (5). The union farmers sell when they get the "scale," and withhold from the market when they do not. Thus, no matter how great the crop, the produce goes to the market only as the demand requires it at equitable price; and since every day has a demand, every day may have an open market, and if some be not able to withhold, or be so lost to their own interests as to brand themselves as scabs or dumps, their selling cannot break the scale or seriously impair the prices, and, since the minimum price is the measure of the market supply, there can be no great fluctuations, speculative gambling ceases, prices remain steady, doubt is removed from the farmers' calling, prosperity is secured, and the consuming world is benefited as well as the world of production. There is nothing at all complex in this, and a thousand more difficult business propositions have been worked out. Think it all over on Independence day.

There never were as many facts, such unanswerable arguments, such a flood of reasons for farmers to organize, as now, and upon these propositions. If they refuse to do it, and back on the payment of the insignificant sum required to meet the expenses of the work, they should cease to complain at the disadvantage under which they labor, or at the extortions exacted from them. We wish to make these things especially plain during these days when everybody is talking about INDEPENDENCE.

Another Government cotton report, which seems to us entirely unnecessary and uncalled for, as it cannot carry with it any certainty as to the crop of 1905, has been issued, and has again demoralized the market. It is of benefit alone to the speculators, and is ruinous to the cotton planters. Had those who make the reports a spite against the Southern people, they could adopt no better plan to gratify it. We cannot believe such a thing, and yet President Roosevelt in his effort to secure a "fair deal" might look into this matter a little. The Department reports this year have borne heavily upon the cotton planters.

The A. S. of E. has a constitution equal to the best, and it is so plain that no one need err therein.

The constitution confers the ruling power of this society upon the members themselves, through representation in the annual meeting. In fact the annual meeting is made up of the members themselves. If things are not just what they want, it is their duty and privilege to make them so. Therefore, quit kicking and go to work for success.

Wheat harvest is under way in the Southern states. Our advice to farmers in those states is, "Keep $1.00 wheat before you whether you belong to the A. S. of E. or not."

Whether the price of wheat starts out at the dollar or less, those who hold will get the minimum price. Therefore, if there is not enough organization, enough control, to compel the price on all the crop yet those who act in a common sense way will secure the benefits.

For every dime you withhold from your society, which is needed to build it up, you contribute dollars to the classes of people who have been exploiting your crops these many years. This will positively continue until through organization and co-operation farmers can protect themselves.

There are hundreds of thousands of renters on farms. They almost invariably buy the cheapest seed the market affords. We know of one large district in Illinois, which we have in mind particularly on account of several car loads of nasty clover screenings, weeds and scourings being shipped there. Good clover seed was high in price and the demand from these renters was for the cheapest that could be obtained—anything that had the semblance of clover.

The owners of these farms were non-residents, and could not give personal attention to the selection of seeds. They were, we may say, powerless to prevent this injury to the farms and to the whole section of country. Even if they knew what would occur and had wanted to prevent it, there was no practicable way.

Through the movement that is now being started by the farmers themselves, such land owners can protect themselves by inserting in the lease a clause that all seeds shall be bought of the Pure Seed and Plant Co. of America.

UNFAIR PERVERSION

Kansas Farmer Also Guilty

An unscrupulous method too generally prevalent, is, if a proposition to which parties are opposed is so plainly just, reasonable and practical, that honest argument cannot be made available against it, subterfuge or perversion; often downright lying; are resorted to as a means of thwarting what cannot be met by honest argument.

This course is pursued by many with reference to the A. S. of E, and controlled marketing. Of course we cannot take the time or yield the space to notice all these dishonest attempts to retard this movement, but occasionally one seems so flagrant that we feel justified in noticing it. Such we regard a recent "outburst" of the Kansas Farmer.

The hostile attitude of the agricultural press to the A. S. of E. and Up-to-Date Farming is well known, and the insinuation has been frequently made that the whole thing is a scheme to build up a great circulation for Up-to-Date Farming and thus enrich the publisher. To show that there was absolutely no foundation for such a charge, and to hasten its accomplishment of farm price making by enlisting other farm papers, Mr. Everitt some time ago wrote to several of them, appealing to them to help in so important a work, and, to allay their fears, so far as the official paper is concerned, voluntarily offered them an interest in it without money and without price. It seems, in making this offer, Mr. Everitt used language like this: "You can, if you wish, become a stockholder in what can be made the most valuable publishing plant in the country, and all without a dollar invested on your part." Why? Because Mr. Everitt, as a contrast to their selfish and envious opposition, proposed to share with them a business he had been seven years in building, and which must grow equal to the development of the movement it has so faithfully promoted. Does that look like selfishness on Mr. Everitt's part?

To offset their contention that farmers could not control the markets and make prices, Mr. Everitt said also, "Suppose, after a fair trial, it became evident that farmers cannot control prices, will the farmers be injured for having tried it?" This was so tortured as to be made to appear that those at headquarters have no faith in the accomplishment of the purpose, whereas exactly the reverse is the case, as the personal sacrifice of time and money made by Mr. Everitt abundantly proves.

We make this explanation, not with the hope of preventing misrepresentation and the garbling of our words, nor do we do it in behalf of Mr. Everitt, whose work to this end needs no defense, but we do it in justice to the friends of the movement, who have also made personal sacrifices for the cause, which we all regard so important, and who have a right to know that, whatever our mutual enemies may say, the motives at this end of the line are pure and unselfish. The Kansas Farmer is invited to publish the whole correspondence. Then farmers may judge for themselves. So far as the accomplishment of our purpose is concerned, it has been positively demonstrated that controlled marketing DOES regulate prices, a doctrine which no one advocated or seemed to believe when Up-to-Date Farming three years ago proclaimed it and began to teach it, but which has since been taken up and urged by all the known farm organizations but possibly one, and by many of the less selfish papers. And it has been proven by the actual doing of it, that organized co-operation can control the marketing. But it all depends upon the farmers themselves. If they permit themselves to be baffled by the tricks of their enemies, of course the most unselfish and patriotic efforts may not avail.

But this movement must not fail. It will not fail. It cannot fail, because it is right, and the time is at hand, God's own good time, we believe, when another great injustice and wrong, the withholding of labor's portion (See James 5:1-8), shall be overthrown, notwithstanding the unaccountable opposition of those who should be the farmers best friends.

THE KANSAS FARMER AGAIN

In the Light of More Recent Development

As we have said before, we have no quarrel with the agricultural press. We only regret that they will not join us in this great work to secure justice and fair treatment to the farming masses whose ill rewarded labors make the existence of those papers possible, but if they will not do so we must continue the fight alone. We regret also that once in a while we feel it to be necessary to notice briefly things said by the press, lest, unnoticed, they might have an influence their words do not merit.

This feeling prompts us to once more refer briefly to the Kansas Farmer.

Taken to task by Mr. R. O. Stewart for their declaration that "The last half century is variegated with the wrecks of colossal schemes to control the market price of farm products," and asked to give some specific instances, the editor flounders through a hopeless jumble of words without a single instance as asked for by his correspondent. The "great meeting" in Illinois is well disposed of by our correpondent from near Centralia, which appears in another part of this issue of Up-to-Date Farming. The other instances referred to may or may not have taken place. It is well known that all the organized efforts mentioned were not for the purpose of fixing or making prices on farm products. The Grange, the Alliance (North or South), the F. M. B. A., the Patrons of Industry—not one of them ever had for its object the making of prices by controlled marketing or otherwise. They sought to secure lower prices in buying and better prices in selling, in a local way only, by concentrating their sales and purchases on the regular market or through the regular channels of trade. In this they often succeeded, especially before commercial and capitalistic concentration destroyed competitive bidding for attractive bargains, and their efforts left no wrecks behind them, because there was nothing to wreck, but they did leave in their wake a brilliant line of education and did much good which those must be selfish and narrow indeed who cannot see.

Others, more daring, sought to found commercial establishments and effect their own exchanges and do their own business. These were mostly failures. But not one of them made any attempt to fix prices. If they handled farm products at all they did it on the regular market in the regular way, trying to benefit their customers both in buying and selling by handling the stuff at a smaller margin of profit. In this, of course, they represented the undrilled army of raw recruits against the well drilled ranks of veteran tradesmen, who, in self-defense, concentrated their forces against them, thus placing them at a disadvantage from the beginning.

This is no part of the plan of the A. S. of E. These crude enterprises required the investment of capital, which was always in danger of being lost. The A. S. of E. asks no investment because it needs none, hence it asks nobody to "buy a gold brick," or to furnish capital to offer the temptation or opportunity of "graft." It never has asked more than a few cents to meet very modest expenses since the organization has grown to be a burden to carry, and to aid in the increased educational work.

The Kansas Farmer is equally in error, or viciously false, in regard to the cotton situation. It says in 1898 and 1899, "meetings were held to take measures to influence prices, and the principal means adopted were, first, to hold the crops back from the markets, and second, to limit production." And again: "In the face of the most vigorous advocacy of reduction (of acreage) last year's crop broke the record and the prices." This refers to the crop of 1904, and it takes a tremendous exercise of charity to concede that the Kansas editor did not wilfully falsify in the above declaration. The agitation for controlled marketing was commenced after the crop of 1904 had begun to sell, and the doctrine taught by the A. S. of E. and Up-to-Date Farming led to it, as has been freely and unselfishly conceded by leaders of the movement in the South, and it saved the crop of 1904 from destruction and the planters from ruin. This is also conceded. The agitation for reduced acreage was for the crop of 1905 now growing, not for that of 1904. This is known by every reading person unless it be the editor of the Kansas Farmer.

But our Kansas friend is a peculiar writer. Before getting out of the pit he dug for himself, and into which Bro. Stewart so deftly tripped him, he admits that "It is true in the general struggle for the best speculative profits, combinations are formed which temporarily, at least, influence prices." But he is progressive, progresses rapidly, in fact, for in the very next paragraph he declares: "Speculators do have a pernicious power to influence prices; combinations are able to compel the public to pay them for what is not useful service, trusts fatten at the expense of industry by their monopolization of prices."

That is just about as strong as Up-to-Date Farming could put it, but the Kansas man says it must be prevented by law. Some people never learn anything. To prevent these evils by law would involve the entire curriculum of politics. Were we to begin a political campaign to secure legislation to this end, the Kansas Farmer would doubtless go into a fit of hysterics. Besides, when could it be accomplished that way? Let the beef trust investigation, the standard oil prosecutions, and the railroad rate legislation, dragging their slow lengths along, answer.

We, therefore, return to the plan of the A. S. of E.—simple, practical, comprehensive and sure—no capital to jeopardize, no "gold bricks" to sell, no graft possible, because no capital required or involved. No matter how large or how small the crop, or what the crop, if it be marketed only as consumption calls for it, it must command a steady price. Enough farmers organized and co-operating, refusing to sell except at the price agreed upon, can thus guarantee the steady market and secure the price. We can prove this also by our Kanses friend in the same article we are discussing, for he says: "But the surplus (of wheat) held the price down." If the surplus on the market held the price down, would not the surplus kept off the market hold the price up? And may not this surplus he held by the farmers who bring it from the soil and own it from the beginning, as well as it may be held by speculators who "have a pernicious power to influence prices." He finally flounces out of the muddle (puddle), however, by declaring that "The discussion of this subject is the business of those who speculate in these commodities." Ah! We thought there was a cat in the bag. It is out now. Let it go.

But really, may not the farmers, whose life work depends upon it, discuss this subject just a little bit, please?

Conventions and Meetings

Send us the dates of your meetings. Write full particulars on a separate sheet from other matters.

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind. (Date to be announced later.) Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

RED MEN'S picnic, Hardinsburg, Ky., July 4. Write to W. A. Walker, C. of R., Hardinsburg, Ky.

FARMERS CONVENTION, Edmonton, Alberta, Canada, July 1, 1905. Write to W. J. Keen, Edmonton, Canada.

STATE CONVENTION OF THE A. S. OF E. OF ARKANSAS, will be held at Hutsons Springs, four and one-half miles north of Clarksville, Johnson Co., Ark., August 17, 1905. This place is immediately off of the Logap road between Logap and Clarksville. The convention to convene at 10 a. m. Matters of importance will be considered. It is expected that each local union be represented by one delegate. Arrangements will be made to care for all delegates free. Everybody invited to come. Camping outfits may be brought. Hutson Springs is a popular health resort. Good spring water and pure mountain breezes. Good speakers and an interesting and valuable program. On Saturday, the 19th, a picnic dinner will be served on thee ground and will be a grand labor day rally. Members of all labor organizations invited. Correspond with T. J. Woodard, Vice President A. S. of E., Clarksville, Tenn.

FRANKLIN COUNTY (Va.) UNION will hold its next regular meeting at "Cross Roads," August 11th, at 10 a. m. O. E. Southall, Secretary, Scruggs P. O., Va.

CENTER COUNTY (Okla.), COUNTY UNION will hold its next regular meeting July 22. All unions in Center County to send delegates. R. W. Wadsworth, President, Custer, P. O.

CLINTON COUNTY, ILL., COUNTY UNION will hold its next meeting August 12th at Clarksville. Twenty local unions are represented with a total membership of 469 members. Efforts will be made to double the membership before the August meeting. Albert Wringe, Secretary, Carlysle P. O.

Virginia Meetings

National Organizer H. B. Sherman will soon return to Virginia to complete the organization work in that State. Meetings will be held as follows:

Grand rally at Lynchburg, Thursday, July the 13th; Amherst C. H., Friday, the 14th; Roseland, Saturday, the 15th; Buckingham, Tuesday, 18th; Cumberland, Thursday, 20th; Powhatan, Saturday, 22d; Goochland, Tuesday, 25th; Amelia, Thursday,27th; Farmville, Saturday, 29th; West Appomattox, Monday, 31st; Rustburg, Wednesday, August 2; South Boston, Friday, August 4; Danville, Saturday, 5th; Martinsville, Tuesday, 8th, and Rocky Mount, Wednesday, August 9.

After these meetings it is expected to make a tour of North Carolina.

This paper has a circulation of 150,000 copies. It ought to have a circulation of at least 1,000,000 copies. It may have if you will let your neighbor read it. An average of six and one-half readers (heads of families) will give it the same power and influence as one million subscribers. If you answer the question in this number "Are you doing your duty?" in the affirmative you will see that your neighbors read your Up-to-Date Farming. Get his subscription. If you need a few sample copies send for them.

Missouri farmers: Hold your wheat for $1 at St. Louis. This market is a great factor in making prices through the soft winter wheat section. You can make the St. Louis market. DON'T DUMP.

Typical of Patriotism

A New Declaration of Independence

Typical of Firmness

Typical of Freedom

No one is Free who has not the Right or cannot Exercise the Power to Price his own Products

Typical for Devotion to Principle

So long as the love of freedom dwells in the human breast, the Fourth of July will be a venerated day, and the Declaration of American Independence a revered document. It's author will be honored above writers, and its signers held in fond rememberance and pointed to as examples of loftiest patriotism.

Why? Because their acts and declaration broke the chains of oppression, gave birth to a nation and brought independence to a people.

But the independence of a nation does not always make its people free. Russia is an independent nation, but the Russian people are not free. The United States is independent, gloriously independent, won its independence by noblest achievements, of which the whole world is proud, but its people in many respects are not free.

They are not free from corruption, boodle and graft that a cultivated party prejudice has made possible and excuses or thinly disguises list powerful political combinations be weakened or alienated.

They are not free from an arrogant concentration of wealth that greed makes oppressive if not tyranical.

They are not free from gigantic combinations that destroy competition, impair individual effort, block the way to general progress and widen the breach between the classes—the few great beneficiaries and the many struggling units.

The great majority of our population, and the most useful to the world, are not free to put a price upon their labor or its products, but by a self-constituted oligarchy of speculation, they are deprived of rights which civilization has always held dear and are compelled to labor almost unceasingly, upon farms in which their capital is invested, or upon which they pay tribute to some one else's capital, and after the season's toils are over, they must accept for the results, whatever greed may offer—prices fixed not by themselves as producers and owners, not by their customers the consumers, not in accordance with any rule or law, but by worshippers of mammon, devotes of greed, whose hellish spirit, never satisfied, is best appeased in taking the labor of the farmer for naught and laying such tribute upon others as pours into its coffers the wages of the consuming toiler also.

By falsified reports, the acquiescence of the mediums of communication, the purchased connivance of transportation, the pernicious gambling in "options" or "futures," nullifying the law of supply and demand, this godless spirit of insatiable greed keeps the market disturbed and prices unsettled, and makes doubtful and unremunerative the calling which, of all others, should be most certain and profitable.

FROM THESE OPPRESSIONS WE DEMAND FREEDOM.

We do not expect it at the hands of the nation.

"WE hold these truths to be self evident that all men are created equal " and that farmers have as undeniable a right to put a fair price upon their labor or its products, and to withhold the same from market until the price is paid, as has any other class of laborers whether in the physical, mental or industrial fields

Government is based on political action, which is controlled largely by powerfully organized selfish interests, the strongest of which are the combinations that directly or indirectly, give strength to the methods from which emancipation is demanded.

We do not look to the courts for it. We honor the American judiciary, and hail our judges as the most learned in the world, but judicial conservatism, generally to be commended, hedged in by technicalities of law and practice, makes it almost impossible to break down the barriers that have been built around the powers that thus manipulate and oppress. Hence redemption through the courts is almost if not entirely hopeless.

WHENCE, THEN, SHALL WE SEEK THIS NEW INDEPENDENCE?

In the sterling good sense of the farmers themselves. In the matchless qualities they have so often displayed. In the patriotism which gave the world a Washington from the farm. In the love of liberty which made Monticello famous. In the heroic firmness and determination which makes the Hermitage a Mecca; and in the self-sacrificing devotion which Lincoln absorbed from the cabin and clearing—in the sense of justice and fairness and right, which, planted in the common schools, buds and blossoms in the fields, and bears its richest fruits in the great agricultural centers.

Yes, we depend upon the farmers themselves.

AND THEY CAN DO IT.

Organized in the simplest, most liberal, and yet most effective way, they meet in great National Convention, as the politcal parties meet. But instead of studying questions of government and putting favorites in office, they study the question of production and consumption; they study in truth and in deed the law of supply and demand, and apply its principles to the market; they strike an annual dividend, so to speak, as do the trusts and corporations; and they determine on that basis, fair and equitable prices for all farm crops, including orchard and garden, range, pasture and feed lot, and poultry yard—prices fair to the producers and equitable to the consuming world.

They then go home, knowing that RIGHT and REASON are both on their side, and that JUSTICE approves their action. Their products are open to the markets of the world, and readily accessible to the purchaser, but, like the wages of the organized laborer, they must bring the "scale."

We challenge any one to show an unfairness in such action, or to demonstrate that it cannot be done. In fact, it HAS BEEN DONE, and farmers have been benefited without oppression of consumers. IT WILL BE DONE AGAIN, all the more perfectly as the organization is perfected. We DEFY the powers of Greed and Speculation to prevent it.

"Wheat Wanted"

"Wheat Wanted," will be the subject for our illustration on the first page of July 15th issue.

It is a fact that the world is waiting for the American wheat, supplies of wheat and flour are at the lowest point ever known. Do the farmers realize their opportunity? Will they embrace it? Or will they dump their crop at less than $1?

We implore them to not sell for anything under the dollar. ONE DOLLAR AT CHICAGO FOR CASH WHEAT, and your price will be less freight and you may allow a fair commission to the handler. Farmers in the east keep the New York and Baltimore markets in their eyes and they should be higher than Chicago.

Farmers can make the price. Farmers will make the price if they keep $1 wheat before them. Tell all your neighbors. Remember you have done it before when conditions were not nearly so favorable. Buyers admit that it all depenls on the farmers. The world is watching the farmers. We will soon see what they will do.

Booklet E 37

Wonderful to educate the people; 64 pages and cover. We have 25,000 to give away. All we ask you is 6 cents a dozen to pay postage. Order a lot and distribute them. This is one way for you to do your duty.

Corn 60 Cents

Keep your mind on the A. S. of E. price of corn. It has sold at 60 cents (for the real article) in many markets. If owners of corn will stand out for the price it will soon come to stay.

Talk About It

The best way to interest people in any movement is to talk about it. If any subject should interest any people, the subject of marketing prices on farm products should interest farmers. An equal chance in the business life depends upon it. The class that is not permitted to put a price upon their products or labor have not an equal chance with those who do. Farmers are not permitted to do that; all other people are, hence farmers have not an equal chance with other people. The whole country is now repeating "All men are created equal." Then farmers, by modern systems of speculative prive making and market control, are deprived of the equality of privilege with which they were created. Talk about it. Awaken an interest in the subject. Educate the masses. Prepare them for organization. That alone can restore to them the rights of which they have been deprived. It is a fearful thing to toil one's life away, a fearful thing for a whole class of men, women and children, to toil their lives away, knowing that all other people have advantages which they have not—advantages which take hold upon their very substance, and decides the question as to whether their labors shall redound to their comfort and independence, or merely go to increase the colossal fortunes of those who "toil not, neither do they spin, and yet Solomon in all his glory was not arrayed like one of them." Talk about it. Keep it before the neighbors. Better disgust them with its constant repetition than that they should sleep their lives away under such fearful disadvantages.

The A. S. of E. is not in favor of preliminary reports. It wants to deal only with facts. It don't believe in making prices monthly on estimated or imaginary yields. One price to prevail one year, on one crop. This is the A. S. of E. plan.

Are You Doing Your Duty?

Are you independent, or are you like a sheep, following a bellweather?

Are you depending on some other person to do the work that will benefit you every whit as much as others?

DO YOU SHARE. If you will not you need not expect to have a share and who knows, you may prevent others from working out their salvation.

Solving Farmers' Problems

The Pure Seed and Plant Co. of America, which is to solve the farmers greatest problem (eradication of weeds), does not need to establish a trade. It succeeds to a business already established for twenty-four years and has customers in nearly every county in the country. Have you sent for a prospectus?

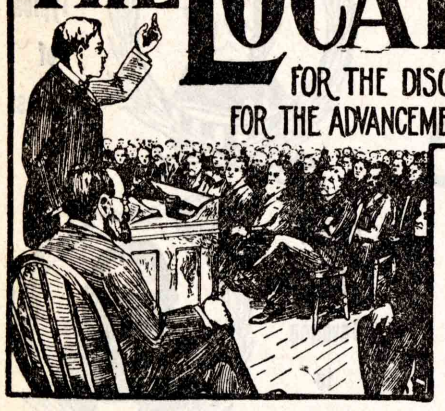
Crop Reporting

A crop report blank is printed in this number. Use it. Fill it out honestly, and send it to headquarters direct or through your local union. We want as complete crop reports as possible. Farmers who are not members of the A. S. of E. are invited to join with us in crop reporting. If any reader of Up-to-Date Farming will secure reports we will send blanks free on request.

Now Has the Backbone

Have you ratified the new constitution? (with funeral benefits feature omitted). If you have not, use your influence to have your local attend to it at once. One secretary in reporting the ratification said: "The A. S. of E. now has the backbone."

THE LOCAL UNION



FOR THE DISCUSSION OF ALL FARM PROBLEMS FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00 for members at large. Charter members of local uni ns pay no membership fee, and each member is entitled to receive a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

1776—Independence as a Nation.

1905—Shall it be independence as a calling?

We wish every local union could meet on Independence Day. What a time for reflection it is!

How much tribute do you pay each year to the speculative price makers?

Under the new Constitution SPECIAL members stand in all respects the same as REGULAR members. This in reply to several inquiries.

July 1st. Ratifications are in order. July 4th, Declarations on this day. July any day, Picnics and meetings.

Under the new Constitution seven (7) members constitute a quorum. This in answer to inquiries.

Who knows how much "wind" wheat was sold and bought? The time has come when the kind the farm has to sell is the market factor.

Farmers are the most liberal people on earth when the interests of others are involved, and pour out their earnings like water when others are getting rich off them, but when persons undertake to establish means to benefit the farmers more than anybody else, they are suspicious and quibble over pennies. This is not the spirit that animated the heroes of the Revolution.

We never tire of reasoning with reasonable people, but with mere quibblers we lose patience.

The quibbler and the dumper are very close related, both are obstructionists, and retard the progress of controlled marketing.

Many objections against the Constitution are mere quibbles, unworthy of leaders in a great movement. There has really never been a national representative meeting held by the A. S. of E., and none was ever provided for until the Constitution of 1905 was promulgated. Such national representative conventions give all powers of government into the hands of the society membership, and yet there are some so narrow as to halt and quibble over little things. Local unions should promptly ratify the Constitution, and then bring their objections, if any, to the annual meeting.

The funeral benefit, an excellent thing to cement and hold the society together has been suspended in deference to those who disapproved it. It is a matter of absolute indifference on the part of the workers at headquarters whether it be made a feature of the society or not. We are animated by but one purpose, and that is to secure for farmers an equal chance with others in life's great struggle. This can only be done by solid and compact organization, and to accomplish this farmers must do as other organized people do.

Under the Constitution of 1905 every local union is entitled to a representative in the annual meeting, the governing body of the society, and every county assembly is entitled to a representative at large, and an additional one for each 200 members in the county. Does any one think persons who wished to divert the society to their own benefit would have thus placed all power in the hands of the members through such liberal, almost universal, representation? Note that no previous rule or law provided for anything of the sort.

One member writes a lengthy letter in opposition to giving county unions power to raise revenue to meet their own expenses. Who are the county unions? Simply the members themselves, representatives of the local unions. Who but they should control these matters? Are the members afraid to trust themselves? The National Union believes farmers are sufficiently intelligent and honest to manage these things themselves, and they are the proper ones to do so.

We believe that every local union should promptly line up within the pale of the Constitution, whose provisions are fair, liberal, plain and reasonable, and which places in their hands all power, and thus get ready for the great price making convention of 1905.

The writer is certain that there is not a local union which may not, under the new Constitution of no membership fees, organize several strong locals in their immediate vicinities. Each local, you know, is entitled to retain an organization fee of $4, and the charter fee for the new union may be made up in any way to suit the members, and it may be entirely paid back to those who advance it by the local itself as funds accumulate in its treasury. Please consider this and let us have some active summer work done.

The A. S. of E. makes very liberal terms with its organizers, because it believes the laborer is worthy of his hire, and it is so important that the organization be strengthened and solidified at once, so as to secure beyond question prices for the crops of 1905. We appeal to them to do their best. A more important question was never before submitted to a people.

Let us urge local unions everywhere to set committees to work to visit near-by localities to make up and organize new local unions. Every local union should thus report at least one new union every week.

The Hancock News, Hancock, Wis., criticises the new Constitution in as much as it provides as follows: "The Board of Directors may do in vacation whatever the annual meeting might properly do if in session, etc." We might ask the editor of that paper what a board of directors is for at any rate. If it is not for the purpose of doing whatever comes up to do, then what is the use of a board? Does that editor recommend calling the members together if the National Union needs to buy some postage stamps, hire a hand, rent a building in which to do business? People who are so suspicious of others are worth watching themselves.

First to Pay Quarterly Dues

Parier Springs Local Union No. 1 met on June 3d, ratified the new Constitution with the funeral benefit amendment and paid the July 1st quarterly dues. They will meet again the first Saturday night in July for a big rally.

Commenting on the new Constitution, Mr. Robert Kimmons, Secretary, says: "The backbone is in the society now. It is here to stay forever."

The "Trust" Is Growing

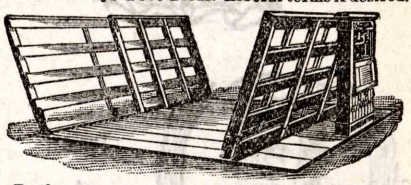
Of course the A. S. of E. is not a trust, and does not possess a single element of one, but the papers continue to call it so, and we don't care. Under the heading "Organizers Welcomed With Open Arms in the Northwest," the Philadelphia Record publishes the following dispatch from Bismark, N. D.:

"Throughout the Northwestern States the scheme to organize the farmers into a giant trust is being pushed untiringly and the agriculturists are taking to it with avidity. All over the Dakotas, Minnesota, Wisconsin, Iowa and Nebraska meetings are being held. Altogether the American Society of Equity, or the National Farmers' Union, as it is sometimes called, is gaining headway rapidly. Organizers in all parts of the Northwest have little difficulty in getting the ear of the farmers. Incidentally, the country towns are making a good thing out of the movement. They are like unto county fairs, these meetings. In the county seat the local band sees an opportunity to make fame for itself and volunteers its services. The business men decorate their stores. Flags are taken from drawers in which they have been packed since last Fourth, and they are unfurled to the breeze and the mayor thinks out a long speech of welcome. The organizer goes on and some day the American Society of Equity may be IT.

SUBSCRIBE now. RENEW now. Up-to-Date Farming will be a power in 1905.

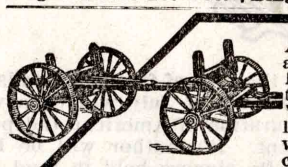
New Idea Pitless Scale

Is the name of Osgood's Steel Scale, just out. Send for full particulars today. Brand new. You will like it. Correct construction. No wall; no pit; no lumber (except platform plank.) In sections ready to bolt together. Friend, you admit you need a scale and have been losing money every year by not having one. Now don't put it off another day. We will send you one on **30 Days' Free Trial.** Liberal terms if desired.



By the way, we want a good agent in your town. If you know one, do us and him a favor by showing him this ad. We need him now to introduce our **New Pitless.** Remember, we make all kinds of scales. Write today sure.

Osgood Scale Co. Box 100, Binghamton, N.Y.

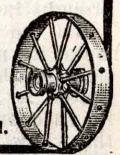


A low wagon at a low price. Handy for the farmer. Will carry a load anywhere a horse can travel.

Low Down Wagons

soon earn their cost on any farm.

Steel Wheels



for farm wagons. Straight or staggered spokes. Any size wanted, any width of tire. Hubs to fit any axle. For catalogue and prices, write to

Empire Mfg. Co., Box 68 H Quincy, Ill.

BUSINESS FARMERS

Use Printed Letter Heads and Envelopes

Every farmer should use neatly printed stationery. It is business-like and gives a tone to your correspondence. Some business houses sort out the printed envelopes from their mail and open and attend to them first. Members of the A. S. of E. especially should use up-to-date letterheads and envelopes. We offer special stationery containing the seal in a beautiful design. Your name and address, and name of your farm or business also if desired, nicely printed. On the reverse side of the paper are rinted appropppriate circulars, such as "Farming Exists by Divine Right," "Where Duty Lies", etc. You will spread the movement with these messages if you order some stationery. Price, PREPAID

100 Letter Heads	100 Envelopes $1.00
250 Letter Heads	250 Envelopes $1.80
500 Letter Heads	500 Envelopes $3.25
1000 Letter Heads	1000 Envelopes $5.25

Give your express office. Write very plainly AND ORDER NOW.

AMERICAN SOCIETY OF EQUITY

INDIANAPOLIS, INDIANA

LETTER FROM DAVID DOBETTER

Number 54

Near Williamsport, Ind., June 15, 1905.
My Dear Mr. Everitt:

We received some interesting letters last week. Speaking about letters, I can't help thinking what a change there is at our house in that respect. I can remember when the only way we had of getting the mail at all was to go to the store two miles away, at first once a week and then later twice, on Tuesdays and Saturdays. Whoever went was expected to bring the mail for the whole neighborhood. And we didn't get much to pay for our long trips generally, either. Very few letters ever came to us. We did not miss them, because we never had had them to miss. Once in awhile Uncle Ben Dobetter would write from down East and about once a year we would write back to him. And we had no papers of any account. It was a queer way to live, wasn't it?

But now—well, the mail carrier put it like this when he put the big bundle in our box this morning: "Do you get time to read all the mail that comes to your folks? Shouldn't think you could begin to! I'll bet there are a dozen papers this morning. And look at the letters!"

We got to counting up after that and found that we have twenty papers and magazines coming to our house every month, and we get a score of letters where we used to get one. And all brought right to the door, too. No tramping away two miles and back to get them. Things have changed with us and no mistake, and for the better in many respects.

But about the letters I spoke of. One of them was from Ben. He is enthusiastic about the new law, giving Purdue University five thousand dollars this year and the promise of five times as much every year after that, all to be used in the interest of the farmers of the State. "Hurrah for the Indiana Legislature!" he says. "Talk about the Hoosier State being behind the times! We are right up to date, and will stay there from now on, I feel sure. Think of knowing what can be done in live stock feeding, in growing grains and other crops when the experiment station has looked into those things as thoroughly as it will look into them and published the reports everywhere! I am glad I live in this great old State. Glad I am a farmer and was born on Four-Leaf Clover Farm!"

Makes any one feel good to have a boy talk that way. Ben appreciates all that has been done for him at the university. Just see how ready he is to pull off his coat the minute he gets home and get at the farm work! The past few months he has been doing some work at the school so that his expenses have been much less than formerly. But we never have complained about the money. It will surely be well expended. Money never is lost if it is spent in educating a good boy or girl.

And, then, we had letters from John and Mary—such good, kind, encouraging letters, telling us how well they are doing in their work. But they both love the farm as much as ever. I think they will want to live on the farm after they get through at school, just as though they never had been away. I was reading the other day an article about the tendency of the Indians of this country to go back to their old ways of living after the government had been to the expense of educating them. And the writer said that was the way with the most of the men and women who went through college. So he argued that it must be a waste of time and money to send boys and girls to the higher schools.

That seems to me a queer idea. You can't spoil a good boy or girl by giving them a thorough education. If they go back to the farms with new and better ideas than they had before, the world surely will be made better by it. I have always been sorry I could not have seen the importance of getting an education earlier than I did. But all I can do is to give my own boys and girls a chance to get what I never had. I will do the very best I can at it, too!

But the best thing the children wrote home was that they will all be here in a few days. How the old place will ring again then! Wife and I will renew our youth then. Mother has already begun to fix up for their coming. God bless the young folks! They are the mainstay of the world!

The farm work is going on nicely. This week we are putting the finishing touches on the potatoes. The soil has been in good condition to do the hilling up. Dug into a hill of early potatoes this morning. They are all right. Next Monday we will begin to get them into market. I have one kind that grows wonderfully fast. Never saw anything like it. Such fine grain and sweet flavor, too. I think I will plant more of that kind next year.

I see that Tom is beginning to watch the blows on the timothy heads, too. I judge that he is thinking about commencing haying. The clover is fine this year. The big kind stands almost up to a man's waist. That is beginning to blossom, too. It really will be only a few days before we will get out the mower.

Tom and I have kept our eyes on the wheat right along, but it is out of the reach of danger now. Came through the winter all right, and the fly has not done it a bit of damage that I can see. Looks fine. Glad of it, because a good deal of wheat was plowed up last spring in this section. I think the low prices that have prevailed will soon pass away, and wheat bring a paying price this year as it did last. We expect to have a nice lot of it to sell, anyway.

The corn looks nice this year, too. There was such a big crop last year that some did not think it best to plant as much as usual this time; but I believe the time to plant corn, or anything else for that matter, is right away after a bumper crop. Then a great many folks will think that it does not pay to raise corn or whatever it happens to be, and next year prices will be high again. We have been faithful with the cultivating, and I just wish you could see our fields as they stand to-day. Clean as a whistle and growing like fun every day.

Wife jogs my elbow and says to be sure and thank you for the beautiful roses you sent in April. They were all budded when they got to us. We set them out on the lawn near the house and they are thriving nicely. We do thank you very much for them. It was kind of you to send them. We anticipate a great deal of pleasure from them.

It pays to make the old home look the best we can, doesn't it? Scarcely a day goes by that somebody does not go along the road by our house and stop to admire the yards and the trim apearance of things around here. But there! If I do not look out I shall be bragging myself up. But, really, don't you think a farmer ought to be proud of his home, if it is a home to be proud of? And if it is not, he ought to get at it as soon as he can and make it so. The trouble with a great many is that they are satisfied to live along, never stopping to think that the living is not what we are here for, but the life.

Wife has gone up to bed, Mr. Everitt. The clock strikes ten and I must join her so as to get rested up for to-morrow. So good-night.

Yours sincerely,
DAVID DOBETTER.

SOME VIEWS ON WHEAT

Gleanings from the Press

"I believe there is nothing in a crop of 650,000,000 bushels to make cheap wheat," said E. W. Wagner. "Our own wants are pretty well demonstrated to be about 550,000,000 bushels, and the output I have named will be necessary more than one year to supply empty bins in a very moderate way. Do not think that the only men (the farmers) with wheat for sale in this country next July, August and September will not know what to ask for it."

Watson & Co., Minneapolis, say: "The wheat market is again on fighting ground. It swung too low, apparently, when July wheat reached 9½ cents in Minneapolis, and is now threatening to advance to 98 cents or $1. The owners of cash wheat in Minneapolis and millers generally do not want a quick advance at this time. They are hoping the market will hold steady until a good flour business can be done; then, if the market advances reasonably, no objections will be offered."

If your local union has not been meeting it is the duty of each member to urge a revival of interest at once. We want every local union that was ever organzed to ratify the new Constitution and be a factor in the million that is now bound to come.

Members of labor organizations invariably are taxed more to keep up their society than farmers are in the A. S. of E. Every class of people pay liberally to market their products, and it is time the farmers pay a little, since it has been demonstrated that they cannot get steady, good prices without.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. 10% discount when two or more consecutive issues are used. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Agents Who are making less than $25.00 weekly and want to engage in a high-class business write Dr. Haux Spectacle Co., Haux Bldg., St. Louis, Mo., and mention this notice in Up-to-Date Farming.

Men Wanted to sell the best line of scales made, Osgood Scale Co., Box 100, Binghamton. N. Y.

Start A Mirror Factory! We teach you this business. Our Prospectus, terms, and sample Mirror postpaid for 10c stamps. Part. Stamp. Hullinegr's Mirror School, Francesville, Ind.

Farm Lands

A Home For you in Minnesota or South Dakota. Land $8.00 to $15.00 per acre and no better anywhere. Send for full information. Crop payments (no crop, no pay). N. Miller Land Co., Browns Valley, Minn.

Cash for your farm, ranch, home or business, no matter where located. If you wish a quick sale send us description and price. N. B. Johnson & Company, 543 Bank of Commerce Building, Kansas City, Mo.

For Sale Excellent stock and fruit farm. Address R. E. Cooper, Hedrick, Ga.

For Sale Five first class, black soil corn farms, 160 to 200 acres each. Good buildings. Send for descriptions. Chas. W. Butler, Defiance, Ohio.

For Sale at a bargain a nice little home 5¼ acres conveniently located at the foot of the Peaks of Otter, 4 miles from R. R. Station on Rural Route. Good buildings, fine water, plenty of fruit of all kinds. A. S. Johnson, Bedford City, Va.

Home Seekers, write sellers. I send printed descriptions, and owners addresses, for stamp. Maben, Wealthwood, Minnesota.

Oklahoma Farms, write for prices. H. F. Stephenson, Kingfisher, Oklahoma.

Sell Your farm through W. M. Ostrander, 406 N. Am. Bldg., Phila. Pa. Largest real estate dealer in the world.

Household Supplies

Canning Business information for a 2c stamp. Warford, Newburgh, N. Y.

Cook Stoves and Ranges from our factory are made better and cost less than others. To prove it we send them on 30 days approval test and pay the freight. Can you afford to overlook this opportunity? FARMERS FORUM

Lost in the Shuffle

Editor Up-to-Date Farming:

I note that the editor of the Kansas Farmer, in his tortuous shuffle to get out of the "variegated" dilemma he placed himself into in his attack upon the A. S. of E., makes it appear that "in the fifties" a great meeting was held at Centralia, Ill., to make prices on farm products.

The Illinois Central railroad was built in the middle fifties, and Centralia was laid out as a station on that railroad, hence throughout the fifties it was only a village, a mere station on a new railroad, surrounded by an open prairie but sparsely settled, and not at all capable of taking care of any such meeting. I was brought up near Centralia, and I can confidently say that no such meeting was ever held there in "the fifties," or, indeed, at any other time. In later years meetings have been held there, as elsewhere, to discuss farm organization and co-operative buying, and even selling, in the ordinary way of combining purchasing and shipments, but never until the American Society of Equity was organized did we hear mentioned the idea of making prices on farm products by means of controlled marketing. But we are now quite well organized on that basis, and have already achieved notable successes. We are absolutely confident that through the simple means of controlled marketing prices can be made on all farm products, and steady markets secured, and we are indebted to J. A. Everitt and the American Society of Equity for it.—T. J. L., near Centralia, Ill.

Plans Entirely Practical

Editor Up-to-Date Farming:

The plans of the A. S. of E. are entirely practical, which I have not been able to say of any other society that I have yet investigated, and I have looked into many in the last ten years. I see it something like this: The A. S. of E. will organize the farmers into unions, and, as a body, will send encouraging words to all organized labor, and also to local dealers, desiring the best of fellowship and hearty co-operation as brothers in the strife for equity. Each will aid the other in moral influence to form perfect organizations among their fellows, and then the national officers can learn to what extent they may assist each other as bodies of organized wealth producers. They may then say to the parasite, "Get off the back of honest toil and earn your own living." The wealth producers have built all the cities with their great structures and paved streets; they have constructed all the railroads and public highways, having paid for them many times over, and yet they do not own any of them. This teaching is not pleasant to organized monopoly, and if it has not already tried to get hold of the A. S. of E., it is keeping track of you, and will soon try to destroy it by bribes. There should be the most rigid provision for the expulsion of any one who shows the least inclination to pander to the enemy.

Local unions tributary to the smaller towns and villages should have joint committees to meet with like committees of the business and professional men to devise means by which they could help each other, on a basis of equity and economy in the expenditure of energy and money. What a salutary power might thus be exercised over prices both in buying and selling.

These combined unions of farmers and business men would virtually control the business of the counties. Under their auspices there might be experimental farms if desired. Roads could be improved and lined with fruit and forest trees, and every union home in the county ultimately connected, through the towns and villages, by telephone with every other union home. What an ideal community might thus be had, and it is legitimately within the possibilities of the A. S. of E. Who can imagine any one so stupid or selfish as to remain out of the society?—C. W. McDade, Ceylon, Minn.

The Broom Corn Crop

Editor Up-to-Date Farming:

It seems to me the broom corn situation furnishes an object lesson which may well be presented in Up-to-Date Farming.

Some of our short-sighted farmers are jubilant over the fact that we have virtually put Illinois out of business as a broom corn growing State, but it is a deplorable fact that, while there was no overproduction, and the buyers are now talking famine, we cut the price into half by our senseless way of marketing. Our broom corn had nearly all been put upon the market before Christmas, and buyers stayed as long as a ton could be heard of, but it brought less than $35 on an average.

The situation was specially distressing in Western counties. The farms are new and farmers in debt; wheat was a failure, and broom corn was the main dependence. When time came to harvest the crop, hands cost us $1.50 per day, with board, and there were not enough hands at that. So that our wives and daughters by dozens worked in these fields from morning till night, in hope of some reward and better homes to live in, or to supply some other pressing need. But the "hold up of labor's portion" was effected as usual by the organized against the unorganiezd. Farmers went to market in good spirits, but came back looking like they had been to a funeral. Our market places afforded a pitiful sight. Ragged, dejected, disheartened farmers, with their fine broom corn, product of their own and their wives and children's toil, and buyers offering barely enough to pay the cost of harvesting. It was the old story, the organized against the unorganized.

The corn growers have been there. So have the fruit, cotton and tobacco growers. And the wheat growers have, too, and will be again, unless, as the boy said of the 'possum, they "come alive." Factories can well afford to pay $75 for broom corn, because they have done that and more when the price of their output was no better than now; but they will not pay it so long as they can get it for less.

Is it any wonder that the A. S. of A. appeals to Oklahoma farmers. A surprise will be in store for those who expet to absorbe our next cropccccccc88 broom corn, if farmers keep on enlisting as at present. When the roll is called at the great national convention I think Oklahoma will be able to answer "Present" by a mighty force.—C. W. Maxey, Gage, Okla.

We are requested by Aaron Bennett, Secretary of Paul, Okla., L. U. No. 1, to print a list of manufacturers of brooms, which we do below. Mr. Bennett says the wheat prospects are poor in his neighborhood and that they must depend on broom corn and cotton. He fully appreciates the advantage of organization and says last year's crop sold for $35 a ton while manufacturers paid $75. The list follows. There are others which we will print if requested:

American Broom and Brush Co., Amsterdam, N. Y.
H. B. Gross, Akron, O.
Grand Rapids Brush Co., Grand Rapids, Mich.
E. B. Howard Co., Columbus, O.
Merkle-Wiley Broom Co., Paris, Ill.
John Otis & Co., Richmond, Va.
Perry Broom Mfg. Co., Indianapolis, Ind.
J. Finley Smith & Son, 116 Chambers street, New York.
Southwestern Broom Mfg. Co., Evansville, Ind.
John Wendling, Jr., New Orleans, La.
White, Valentine & Co., Urbana, O.

New Aspirations

Editor Up-to-Date Farming:

I have carefully read the constitution and by-laws of the American Society of Equity, and to my view it is in keeping with the general principles and teachings of the Society. It gives me new aspirations and quickens my zeal to go forward more earnestly in my work.—T. C. Kasson, Tunnell, N. Y.

Organizing Fast

Editor Up-to-Date Farming:

I am deeply interested in the plan of the A. S. of E. We are organizing here in Huron county as fast as we can educate the farmers that within the next 90 days grow upon their farms all that forms the basis of real wealth in the Northern Hemisphere. How are the farmers going to dispose of this wealth? For money. But money is created by government, while wealth is created only by labor, and its supply is regulated solely by intelligent husbandry and the giant forces of nature. Government may determine the volume of money, but who can fix the volume, quality or intrinsic value of the products of the soil on which the whole world depends? It must be plain to the farmer that he alone should say what should be the equity price of his products, the result of his labor, the reward for his care and the wearing fear that after all he may lose in his struggle with the contingencies of nature. The farmer at least must take long chances, and assume great risks, and must combat forces over which he has never had, and perhaps never will have, more than imperfect control.

Accumulated wealth is organizing more strongly every day to get more and more of the good things of the land. The mere fact that there are fortunes, vast accumulations of wealth, is proof that farmers and other laborers, producers of wealth, have not been idle. Without the products of their toil the most of those fortunes would not exist. I speak of these money holders with respect, and claim it is their right to use their money as they see fit, but at the same time I make the claim that the owners of the products of the soil, so necessary to man and beast, have also the moral and legal right to name an equitable price for their wealth as represented by those products. As the accumulators of money have raised themselves to positions of affluence by organization, so can the tiller of the soil better himself by organizing for the same purpose, that is for equity.—E. Richardson, Port Hope, Mich.

The Only Thing

Editor Up-to-Date Farming:

I have read what you have said in the case of certain farm papers, and, to say the least, it is to the point and well deserved. It seems to me that those papers, and many others of their class, have done more in the interest of speculators than they have done in the interest of farmers, from whom they are making their living. It is too bad that these farm papers are unwilling to teach their special patrons to do what everybody else does, put a price on their labor, and I begin to believe there is such a thing as carrying water on both shoulders.

But Up-to-Date Farming has already opened the eyes of a great many farmers, and I believe, too, that you will soon be able to show all the farmers in the country that the A. S. of E. is the only thing farmers need to belong to in order to get their rights.—J. C. Metzger, Sr., Yulan, N. Y.

UP-TO-DATE

Field Crops

PRODUCTION AND MARKETING

Accuse not nature, she hath done her part. Do thou but thine.—Milton.

The results begin to show.

The ripened grain, the waving meadows, the rustling corn! Nature tries to reward your labor, and will, if you don't allow some one else to get it.

In the midst of just such scenes in the fields our fathers declared they were FREE AND INDEPENDENT. What do you say? It don't take any fighting; simply stick to business and HOLD YOUR OWN.

The usual scareheads about the wheat crop have appeared in the papers. Be not alarmed. No matter how great a crop may be threshed, not a grain should sell for less than $1 at Chicago, and will not if the growers exercise but a half degree of independence.

"Profit taking lowered price." This expression often appears in market reports. What has supply and demand to do with it, or what has it to do with supply and demand? And yet it lowers prices. What is it, anyway? A person may to-day order bought for him on 'change 5,000 bushels of wheat or 50,000 pounds of cotton. The next day he notes that the price has gone up a cent, which makes him $50 profit on the wheat or $500 profit on the cotton, and he decides that he will take these profits rather than risk the results of another day. The profits are paid, and the transaction is closed, the effect being the same as dumping 5,000 bushels of wheat or 50,000 pounds of cotton on the market, though not a pound of either was offered. Can such playing with property values be much longer tolerated?

Large scopes of the country report weedy meadows. Good, clean timothy is likely to be scarce. Keep an eye upon the price.

The prospectus of the Pure Seed and Plant Company of America is out, and its statement of the purposes of the company is clear and comprehensive. In previous issues we have spoken of the serious losses farmers have sustained through impure seed, and how greatly their farms have been damaged thereby. We can think of no more important object than that outlined by this company. Besides it affords an opportunity for farmers themselves to share in the business, not by taking stock in some wild promotion enterprise, but in an already established business, certainly profitable and doing a work eminently necessary to be done.

We again invite attention to our advertisers. We do not ask you to purchase things you do not need, but it often occurs that readers are anxious to get the very things we advertise. In such case, you can very safely deal with our advertisers for what your home people may not be able to supply you. We guarantee that they will do as they agree.

Passing through the village of Dahlgren, Ill., recently the writer noticed alfalfa growing and in full bloom wild on the railroad right of way. This looks like alfalfa may be easily grown in Southern Illinois.

We are fully convinced that meadows, to be really profitable, must be often seeded. To reseed old meadows, turn the sod as soon as possible after cutting. Roll and let lie a week or so, then disk and harrow. Let lie again until early in September, then disk and harrow again and roll, and seed with about a hundred pounds of bone meal or ammoniated bone to the acre. An ordinary wheat drill with a seeder and fertilizer attachment does the work well, and the gain in the first crop, quantity and quality, will pay the extra cost. If you desire a mixed meadow, sow lightly to clover in the spring.

CROP REPORT BLANK

JULY 1, 1905 WHEAT AND HAY

Do not send in this report until the crops are saved. If you thresh wheat before July 20th report as soon as threshed. If you do not thresh before July 20th then estimate the yield.

	WHEAT	HAY
Acres Harvested in 1904		
" Sown in 1904		
" Harvested in 1905		
" Lost by any cause		
Yield per acre in 1903		
" " 1904		
" " 1905		
(If not threshed by July 20th estimate the yield)		
Quality of 1905 crop, Excellent, Good, Fair, Poor		
Amount on hand of former crops		
Average price received for 1904 crops		

What do you think would be a fair price for crops of 1905.....

Must you market immediately regardless of price.....

Can you hold until December if necessary to get the A. S. of E. price.....

*Are you a member of the American Society of Equity.....

Are you a subscriber to Up-to-Date Farming.....

*Non-members who have this blank may use it, but be sure to fill blank above where question is asked.

Please have report in by July 20th so the result may be printed in August 1st number. In the meantime wheat growers are informed that the price of No. 2 Winter wheat will not be put below $1.00 a bushel at Chicago.

Reports may be sent through local union secretaries, or direct to The American Society of Equity, Indianapolis. Ind.

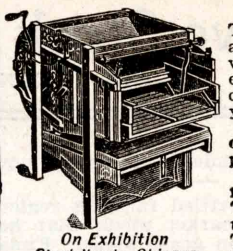
The Chatham Takes Oats From Wheat

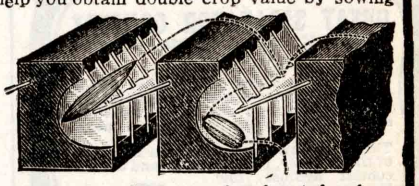


On Exhibition Stock Yards, Chicago

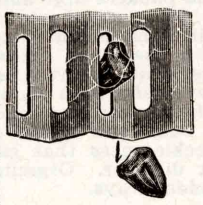
Every farmer who grows succotash will be glad to learn that THE CHATHAM FANNING MILL has a new riddle that is guaranteed to make an absolutely perfect separation of oats from wheat. This wonderful piece of mechanism has about 4,500 different parts, yet is as solid and compact as a one-piece affair. You can take ¾ oats and ¼ wheat and get a perfect separation, or you can *reverse* the proportions.

With this Wheat-and-Oats Riddle you can ***go ahead and sow oats and wheat together***—as we guarantee you can make a perfect separation.

Here is a cross section of the new Riddle. You can see the riddle will let wheat through readily, but oats cannot get through. The riddle has a jumping attachment that keeps the oats jumping until they go over behind on the floor. **GROW SUCCOTASH!** The new riddle will help you obtain double crop value by sowing wheat and oats together, as it insures the perfect separation necessary to obtain the highest market prices.



HERE'S MORE GOOD NEWS! We have also invented a Corn Screen that ***grades corn perfectly.*** The Iowa Agricultural College has recently demonstrated that it will grade corn 98% PERFECT! The accuracy of drop of the best Edge Drop Planters depends upon the perfect grading of corn used. The highest degree of accuracy has heretofore been 60 to 65%. The new Chatham Corn Screen has raised the record to 100%! This increased accuracy of drop means an ***increased yield*** of at least ***20 bushels*** of ***corn*** to the ***acre!*** The accompanying sectional view of Corn Screen shows the principle of operation.



The Chatham, in addition to the above improvements, has seventeen screens and riddles and will separate, clean and grade ***anything*** that can be handled by machinery. It runs by hand or power. It has a patent bagging attachment. The Chatham will add largely to the profits of any farmer. It will prove a money-maker for ***you.*** Write at once for free book. Every Chatham is GUARANTEED FOR FIVE YEARS. Easy terms. Send for free book "How to Make Dollars out of Wind."

We have Distributing Agencies in all Grain Growing States.

The Manson Campbell Co., Ltd., 15C Wesson Ave. Detroit, Mich.

FERTO-INSECTONO

FERTILIZES AND KILLS THE BUGS

FERTO-INSECTONO is an inexpensive fine powder preparation. It completely covers all plants on which it is sprinkled. It is very powerful and deadly for bugs but will not injure the plant in the slightest degree and is perfectly harmless to human beings. It is an absolute annihilator of all insects, bugs or beetles that prey on vegetation. Positively kills Potato Bugs, Squash Bugs, Pumpkin Bugs, Melon Bugs, Currant Worms, Cabbage Worms, etc., etc. You will not be bothered with pesky insects if you use Ferto-Insectono.

This chemical compound is very beneficial as a fertilizer. It extracts ammonia from the air as the wind passes over the plants. The ammonia combines with the powder and forms sulphate of ammonia. All that gets on the ground makes excellent fertilizer. Full directions with each shipment.

PRICE—5 lb. package 20c; 10 lbs. 35c; 50 lbs. $1.25; 100 lbs. $2.00; per ton $35.00. Send for catalog. Hundreds of testimonials.

Sharples Tubular SEPARATORS

GREAT SEPARATOR CONTEST
Held Dec. 17, 1903, at Minnesota Dairymen's Convention

Our Claim
We will place a Sharples Tubular beside any other separator and guarantee the Tubular to cut in half any record for clean skimming the other machine can make.

The Challenge
Three competitors, each beaten hundreds of times singly, band together and enter a contest against the Sharples Tubular Providing the "combine-of-three" are allowed to furnish the milk. Providing the "combine-of-three" dictate temperature of milk. Providing the "combine-of-three" dictate quantity of milk. Providing the "combine-of-three" run three machines, and if any one leaves less than double the fat of the Sharples Tubular they win. The "combine-of-three" select cold, hard-skimming cows' milk (62° to 70°) 200 lbs. at a run.

The Result

Sharples Tubular		.05
"The Combine of Three"	Alpha De Laval	.175
	United States	.125
	Empire	.450

The report was signed by Robert Crickmore, Creamery Mgr.; A. W. Trow, Pres., Minn. Dairymen's Ass'n.; and E. J. Henry, Babcock Tester Expert, the judges mutually agreed upon. Write for complete report and catalog E-136.

FOR $25.00 we sell the celebrated DUNDEE CREAM SEPARATOR, capacity, 200 pounds per hour; 350 pounds capacity per hour for $29.00; 500 pounds capacity per hour for $34.00. Guaranteed the equal of Separators that retail everywhere at from $75.00 to $125.00.

OUR OFFER. We will ship you a Separator on our 30 days' free trial plan, with the binding understanding and agreement if you do not find by comparison, test and use that it will skim closer, skim colder milk, skim easier, run lighter and skim one-half more milk than any other Cream Separator made, you can return the Separator to us at our expense and we will immediately return any money you may have paid for freight charges or otherwise. Cut this ad out at once and mail to us, and you will receive by return mail, free, postpaid, our LATEST SPECIAL CREAM SEPARATOR CATALOGUE. You will get our big offer and our free trial proposition and you will receive the most astonishingly liberal Cream Separator offer ever heard of. Address,

SEARS, ROEBUCK & CO., CHICAGO.

UP-TO-DATE
Live Stock and Dairying
PRODUCTION AND MARKETING

Water and shade for the stock now.

The thickly settled farming regions should never market stock that has been fattened on grass alone. Finish up on grain. Make weight.

We want to urge stock raisers to organize to control the marketing. It is far more important than securing a few minor concessions in transportation.

When dealers and packers urge shippers to withhold their shipments in case of "gluts," it must mean something. Commission men are willing that stock raisers shall receive fair prices; in fact, they prefer such should be the case, but the unwise and unorganized shippers rush the stock to market with a recklessness that can mean nothing but disaster. Organize and quit such suicidal ways.

We wish once more to urge the most intimate relations and perfect understanding between local buyers and shippers and the stock raisers. We do not ask either to bring stock to an exorbitant price; reasonable and steady prices are required by the best interests of both classes of these people, and their relations with each other should be of the most cordial nature, because they must co-operate together if they secure what is so important to all of them.

Sheep are still holding their position as the steadiest element in the live stock market, and it would be well to increase the breeding flocks by holding from market the best ewe lambs.

Desirable horses are in better demand than for a number of years, and prices are ruling higher. Once more the prophets of evil, who declared that the bicycle and auto would drive the horse out of business, have proven false. So long as the money circulation remains high the demand for horses will be good.

Feed the pigs well, but don't plan to feed them too long. The heaviest hog at the fewest months is the most profitable one, and this result cannot be secured on pasture alone. No matter how good the pasture. Feed grain.

Young stock gain faster to the amount of feed than older stock. The same feed will make more pounds in the yearling than in the two year old, and so on. Hence, if one wishes to get the highest possible price for his feed, he should give it to calves and yearlings—let others feed the three and four year olds.

Bear in mind that the world is demanding better stuff than it did in former years, and to meet that demand better stuff must be made. The straw stock calf no longer goes. It has been turned off with the hazel hog, the smart weed steer and the blue mud cow. "Old things have passed away." Let them go.

The large farm is passing, or should pass, with the rapid increase of population. The tendency which sometimes manifests itself, of increased land holdings to be divided up into tenant farms, should be discouraged, we may say opposed, in every possible way. Let the land be divided and subdivided, as population requires it, into smaller farms to be owned by the occupant. Our laws of inheritance, in distinction from the old English rule of primogeniture, works this out naturally and automatically, if not interfered with by the artificial machinery of combination and concentration. The multiplication of farms and their reduction in size point to different systems of farming—more intensive farming, which, we think, must necessarily lead to an increase of dairy farming, small dairy farming, would, perhaps, be the better way to put it. Small fruits and dairy has long been our hobby for small farms—the dairy part furnishing the fertilizer for the small fruit and truck part. But in all thoughts in this direction, the question of marketing becomes one of the most important factors, and that involves organization, not mere organization to secure shipping rates and other matters of minor consideration, but organization to secure equity in dealing so that all may have a fair show, a square deal, as Mr. Roosevelt puts it, and reasonable prices through controlled marketing. With this system of farming and that kind of organization, we need not dread to see our children marry, for there is plenty of room for many more homes than we now have in this country.

Beautiful Picture Free

Did you send for one of the handsome pictures the Wilbur Stock Food Co. is offering free? It was announced in June 15th Up-to-Date Farming. If you have not sent for one, do so now. It is a beautiful picture of the champion team of the world, showing six fine horses hitched to a wagon. All printed in many colors true to life. The company wants you to answer these two questions: What live stock do you own? What stock food have you used? Send for it at once, because it costs only the postal card or stamp to send your request. Wilbur Stock Food Co., 60 Second street, Milwaukee, Wis.

The horses will sometimes get hurt. It is then you need a good remedy like Absorbine in the barn. It cures lameness, allays pain and removes all swelling, enlarged tissues, etc. The time to get a bottle is now, and you will have it when needed. Send for free book that will be valuable to all horse owners. Write W. F. Young, 102 Monmouth street, Springfield, Mass., and say you read Up-to-Date Farming. You might regret delay.

No More Blind Horses For Specific Ophthalmia, Moon Blindness and other Sore eyes. Barry Co., Iowa City, Ia., have sure cure.

INCREASED CAPACITY CREAM SEPARATORS

In line with its established policy of always keeping FAR IN THE LEAD of all possible competition by further improving its separators every few years, the DE LAVAL COMPANY has just let out another "link" of superiority, which still further widens the gulf of practical efficiency between the DE LAVAL and the best of imitating cream separators.

Seemingly perfect as they have been before, the MAY, 1905, DE LAVAL machines are still further improved, run still easier, have lower-down supply cans, and LARGELY INCREASED CAPACITIES, all for the SAME PRICES as heretofore.

STYLE	OLD	NEW

A Durable Machine

To be a permanent benefit a Cream Separator must be durable. The improved

U.S. Cream Separator

will outwear any other. We'll tell you why:

All the working parts are enclosed and protected from dust, grit and damage. Those moving at high speed run in oil on steel balls, which greatly reduce wear.

All the steel, bronze and tin used is carefully inspected, and is of the highest quality money can buy.

Throughout the whole machine the parts are few, simple and easy to get at. Each completed machine is put to a thorough test before shipped.

The U. S. Factory is supplied with the most accurate and efficient machinery to produce exact duplicate parts, and only skilled workmen are employed.

PRACTICAL PROOF

But the best proof of durability is what the machine has done in actual use. In our "Dairy Separator Catalogue" we have printed a few of the thousands of letters received from satisfied users. (Some of them have used the U. S. for ten years or over.) Their testimony is worth something to You. *Write for this book now. It will interest you.*

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

Even young chickens need a variety of feed, and if they do well they must have it. They will not grow strong and vigorous on one kind of feed alone. Crumble corn bread, cracked wheat, or wheat screenings, cooked potatoes and kitchen scraps make a good variety.

Of the American breeds the Wyandot follows the Plymouth Rock very closely in popularity, some placing it at the head of the list. Of this fowl there are five varieties, distinguished alone by color—Silver, Golden, White, Buff and Black. For farm and market purposes they have few superiors, being excellent table fowls and prolific layers. They rank high as winter layers. Their standard weights are: Roosters, 8½ pounds; hen, 6½ pounds; cockrel, 6½ pounds; pullet, 5½ pounds.

Of the large or Asiatic breeds, the Brahma leads in popularity. Of these there are two varieties, Light and Dark, the Light seeming to be preferred. The chicks are hardy and easily raised. The standard weights are: Roosters, 12 pounds; hens 9½ pounds; cockrel, 10 pounds; pullet, 8 pounds.

Even in farm poultry raising there should be some means of marking the chicks. Keeping fowls without any idea of selection is out of date. Egg production is the main source of poultry revenue, and the pullets and the young hens are the layers. Hens should never be kept beyond two or three years unless they possess some special excellence. Besides, fowls now command so good a price that it is worth while to fatten and market them whenever they pass the period of their greatest usefulness. One cannot keep the age of the fowls without some distinguishing mark. Poultry raising is a business and successful poultry raisers must adopt business principles.

Modern methods look to by-products for a leading source of profits. Among the most important of these in the poultry yard is the manure, which is richer, and more nearly a complete fertilizer than any of the commercial fertilizers on the market. The greatest trouble about it is that it is generally mixed with trash, but even this is not a serious objection, if it be plowed under, as the trash adds to the humius in the soil.

The hen is as old as the settled home, and covers as much of the earth's surface. "As a hen gathereth her brood under her wings," said Christ as He wept over Jerusalem, and whenever the pioneer has penetrated the wilderness, the coop of fowls has been an indispensable part of his load. One of the first sounds that greeted the American when he landed upon the Philippines was the crowing of the cock, and wherever there is a home may be heard the cluck of the hen. That its value and the profits of its production constantly increase can scarcely be said of anything else of such universal production.

Poultry in the orchard is all right but in the garden—no. Between the hen and the mellow garden beds there is an irrepressible conflict. Like a great many good people who get into mischief, the hen means well. She does not go there to destroy the plants, or to vex the gardener, but to get food she knows is there, and that ought to be got, but in getting it she destrops the plants she cares nothing about, and thus does more harm than good. The hen and garden must be kept apart—fence her out of the garden or into a pen of her own. On the farm, fence her out of the garden.

Poultry cinfined in small yards must have grit or gravel, crushed shell or bone, cut vegetable feed, an occasional feed of finely cut meat scraps, constant access to clean water, and a place where they may take a dust bath at pleasure. These are points essential to the health of the fowls. It is also important to have some portion of the run covered with litter, and in this should be scattered their grain feed, for which they will then scratch and get exercise. The litter should be frequently renewed so as to keep it clean. To suspend lettuce or cabbage heads just above the reach of the fowls is another good way to secure exercise—the fowls will jump to pick at it.

The Wyandotte is rapidly growing in popularity. It is a finely shaped bird of elegant carriage, beautiful plumage, and in general utility it has few superiors. The silver laced and the white vie with each other in popularity.

Roosts in the poultry house should be moveable, and there should be an extra supply, so that those in use may be removed and fresh ones substituted at any time. If a strip of woolen be tacked upon top of the roosts, and this be once in a while dampened with coal oil, it just about solves the mite and louse troubles and the poultry will not have scaly legs.

Uncle Threadbare says this thing of running after thoroughbred poultry is nonsense; that his mother and even his grandmother kept only the common kinds, and they are good enough for him. But when Neighbor Thrifty gets more eggs and better prices for his fowls, Uncle Threadbare declares the "world is dead sot agin him, and never did treat him like it did other people."

Push the young roosters for broilers. More money in them that way than any other. Save the early pullets for winter layers.

THE LAST WEST
There is no longer a west in the United States, that is, in the sense of a virgin land of opportunity. The land-hungry and the eager seizers of opportunity have taken the best of the west. Those who come now must glean and take what was left by the keen pioneers.
In Canada the development and exploitation of the west are just beginning. A fortune awaits every man who is equal to his opportunities. Each year 50,000 Americans move into the new region of cheap or free lands. There too—in the last west—the land of wheat—the best opportunities for homes, careers and investments will soon be gone forever. Act before it is too late.
Would you like to learn about the vast wheat fields, the great ranges, the business openings, the untold resources of Western Canada; about Winnipeg, Regina, Calgary, Edmonton, Saskatoon, Indian Head, Prince Albert, Dauphin, Medicine Hat, and the other growing towns and cities of the Canadian West?
To get, for the trouble of inquiring, information and literature covering all these points and copies of the handsomely illustrated magazine "Resources," write to U. S. Bureau of "Resources," 229 New York Life Building, Minneapolis, Minn.

Three Farms Wanted
We have three customers who each desire to buy a farm in some good agricultural section, they wish to locate at once and settle near each other with their families, they are all experienced farmers and will buy only good farms with splendid soil and good title. These Premiums are open to any man, woman, boy or girl in the world on the following conditions: **"International Stock Food"** is to be fed to all competing animals. The time limit is, for reports on animals and the tests, for any time between May 1st, 1905, and May 1st, 1906. You can select any months for your tests during this specified time. We do not require you to feed any certain amount of **"International Stock Food,"** but leave matter of amount used to your own judgment. Feed as much of **"International Stock Food"** as you think will give you best paying results. If two or more make the same report the money will be divided equally. At the end of your test we require your written statement as to time you started your test, amount of **"International Stock Food"** used and the result, and this statement to be signed by yourself and two witnesses. Animals competing for one prize must not be reported for any other prize. Each prize must be won by different animals. If any report appears to contain a self evident error, we reserve right of asking party to make a sworn statement. **You Must Send For One Of The Dan Patch Colored Lithographs, Offered Free On This Page, If You Have Not Received One.** We would like a photograph of the animals before and after test, but we do not require it. You stand as good a chance as anyone in securing several hundred dollars in cash. The results, including name and address, will be published in all the leading "Farm Papers," having over Five Million Farmer Subscribers. Premiums will be decided by us on the written statements which will be open for public inspection at any time.

"International Stock Food" is sold by over One Hundred Thousand Dealers on a "Spot Cash Guarantee" that the use of one ton will Make You $360.00 net profit over its cost, or that one hundred pounds will make you $18.00 net profit. If it ever fails your money will be promptly refunded. **"International Stock Food"** is prepared from powdered, medicinal Roots, Herbs, Seeds and Barks and is equally good for Horses, Cattle, Sheep, Goats, Hogs, Colts, Calves, Lambs or Pigs. It is fed in small amounts mixed with grain and purifies the blood, tones up and strengthens the system and greatly aids digestion and assimilation so that each animal obtains more nutrition from all grain eaten. It will always make you more money than you can possibly make without its use. It also Cures and Prevents Many Forms of Disease and is absolutely harmless even if taken into the human system. In addition to the use of **"International Stock Food"** making you a large extra profit with your stock we offer $1000 in cash premiums as an incentive for you to give your stock a little extra care. **"International Stock Food"** is endorsed by over Two Million Farmers who have been constant users for over fifteen years. The Editor of your "Farm Paper" will tell you that we always do exactly as we agree.

You have as good a chance as anyone in earning one or more of these spot cash premiums. They are much larger than any "State Fair" offers and the honor of obtaining one or more of these premiums will be much greater because the results will be published throughout the entire world. Premiums will be decided by us on the written statements which will be open for public inspection at any time. If you desire any further information we will be pleased to have you write us at any time. All letters will be answered promptly as we have 300 people in our office and 150 typewriters. Be Sure And Save This Premium List For Reference.

We do not ask you to send us a cent. Our offer is open to the world on very easy conditions stated below list of cash prizes. The premiums are perfectly free and are open to any man, woman or child. You can compete for one or more, and if successful you may earn several hundred dollars in cash.

UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

Pear blight is much in evidence this year.

The coreless apple does not meet favor among the Washington authorities.

Don't reject a thing for no other reason than its newness, but don't invest in it extensively until its value has been proven.

This is the usual season for heavy growths in the orchard, growths that are neither useful nor ornamental, the most useless grasses, the sharpest briar, and the scrubbiest sprouts and bushes. They'll all be terribly in the way of harvesting the apples, if, indeed, there be any apples to harvest in such orchards.

The grape crop promises to be very large in many localities, and the wild blackberry crop at least in Southern Illinois, is a heavy one.

Prepare the ground early for the strawberry bed that is to be set this fall. Set in September.

It is important to think of the reason for everything; one may do it so much more intelligently. The reason canned fruit does not spoil is that the air is so rarified by heat that so little is left in the jar when it is properly filled that there is not enough to induce fermentation, and the sealing of the jar prevents the outside air from entering. This being the case, it is clear that the more completely the air is driven out the more perfectly will the fruit keep. Hence fill the jar entirely full of fruit and its juice, and see to it that no air bubbles are left inside of it.

If any of the trees are too full of fruit, try to get courage enough to thin it out. Extra fine fruit is more profitable than inferior grades though in larger quantities.

Rub or clip off the tender water sprouts as soon as they appear. You will save the vitality of the tree, give it greater power to perfect its fruit, and may save heavier pruning later.

A little attention during July and August may save the spring-set fruit trees. If weeds and grass are permitted to grow up around them they will absorb the moisture the trees should have and impede their growth, if it does not smother them entirely. On the contrary, if the bare ground be permitted to bake and crust around them, the moisture will dry out from the roots and the trees will perish. A little hoeing will remedy both troubles, keep the ground pulverized on the surface so that it will retain moisture, and prevent the growth of weeds also.

Buying orchard trees not true to name involves a loss which a lifetime can scarcely make good, as the wrong cannot be discovered until the trees have come into bearing. The movement for pure seeds and plants is calculated to prevent such irremediable wrongs. Trees bearing the guarantee of a great company must needs be true, else there would not only be the certainty of recovery for damages, but the charter provisions would be violated, and the company would be amenable to the power which granted it.

An insect not very well known is attacking strawberry beds in some localities. It is a leaf eater, and is a distant relative—not very distant, either—of the Colorado potato beetle. No serious trouble is apprehended from it, as it has not proven very destructive, and it is quite irregular in its returns. Besides, being a leaf eater, it may readily be destroyed by poisonous sprays.

A Missouri railroad has agreed with orchardists along its line on the following scale of prices for apple trees destroyed by fire for which the railroad is responsible, and pays the scale in settlement for damages: A one-year-old tree, $1; a two-year-old tree, $2, and so on up to ten years, when the tree is considered at its best and worth $10. At this valuation, a ten-year-old orchard would be worth from $600 to $1,000 per acre. This in the aggregate seems excessive, but a tree in full bearing ought to easily produce a barrel of apples worth not less than $2, or 20 per cent. on $10 valuation.

A WONDERFUL NEW RIDDLE

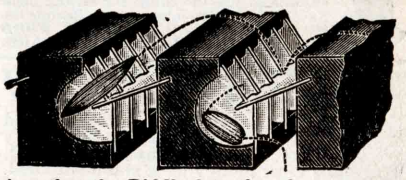
Perfect Separation of Oats from Wheat Now Possible with the New Chatham.—Corn Grader also Invented that Sets New Record.

We are in receipt of a great many letters regarding the difficulty of separating oats from wheat. In many sections farmers are compelled to sow oats with wheat on account of Chinch bugs, which will attack a field that is sowed solid with wheat, but do not bother when oats and wheat are mixed and sown together. They do not seem able to find a machine that will make a perfect separation of oats from wheat or wheat from oats, and the grain buyers take advantage of the fact that a little oats is mixed with the wheat and force them to sell it under the market price. This means a serious loss, as in many cases both the oats and wheat are as good as are raised anywhere.

The Manson Campbell Co., Ltd., of Detroit, Mich., makers of the famous Chatham Fanning Mill, have only recently perfected a new invention by means of which an absolutely perfect separation of wheat and oats is made. It is in the form of a new Riddle, with an ingenious jumping attachment, and has 4500 different parts. The Riddle has been perfected within the last three months, and already the Company, with characteristic energy, has equipped its plant with new machinery for turning out Chatham mills that will take this Riddle and jumping attachment.

Realizing the importance of these inventions to farmers and grain men everywhere, we have obtained from the Company full particulars regarding the principles upon which they operate, and they are so simple that you will have no trouble to understand their working from the illustrations we give herewith.

Here is a piece of the Oats-from-Wheat Riddle. You will notice by studying this sectional

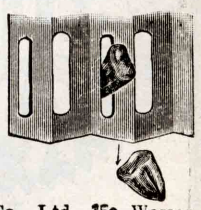


view that the Riddle lets the wheat go right down through, where it is then cleaned and graded, just as in the original Chatham. The oats, however, cannot get through, but is kept jumping back by the rapid jerking movement given to the Riddle by the jumping attachment, until it falls out behind.

This Riddle represents a vast amount of experiment on the part of the Company's experts, and a large outlay for patents and the new machinery necessary to manufacture the new style Chatham. But the demand for an oats-from-wheat separator in connection with a standard Fanning Mill, coming from every part of the United States, leads us to predict a very largely increased sale for the Chatham, which is already far in the lead of both, in point of efficiency and volume of sales.

This season the Chatham Fanning Mill is also furnished with a newly invented Corn Screen, which grades corn perfectly.

We have before us the report from the Iowa Agricultural College, which tested and proved that it will grade corn 98 per cent perfect, this being the highest average ever reached in grading corn by machinery.



The illustration shows how it works. The perfect kernels will pass through the screen, but the inferior kernels will not, and are jumped back by the same vibrating apparatus that handles the Oats-from-Wheat Riddle.

We suggest that parties interested send to The Manson Campbell Co., Ltd., 15c Wesson Avenue, Detroit, Mich., for the new Chatham Book, which has a full description of the new Chatham Fanning Mill and Grain Grader, and explains just how it is operated, capacity per hour, etc. We have known this company for years and can highly recommend them for good goods, liberal terms and honest business methods.

These new patents are owned and controlled exclusively by The Manson Campbell Co., and the Oats-from-Wheat Riddle or Corn Screen can not be obtained from any other concern.

HAY-FEVER
AND
ASTHMA
CAN BE
CURED

The Kola Plant

The African KOLA PLANT is Nature's Positive Cure for HAY FEVER and ASTHMA. Scince its recent discovery this remarkable botanical product has come into universal use in the Hospitals of Europe and America as an unfailing specific.

Mr. W. H. KELLEY, 317 48th St., Newport News, Va., writes Jan. 23d, was a helpless invalid and was cured of Hay-Fever and Asthma by Himalya after 15 years' suffering. Mrs. J. E. NORDYKE, of Hill City, Kan., writes Jan. 25th, had Hay-Fever and Asthma for ten years and could get no relief until cured by Himalya. Mr. D. L. CLOSSEN, 126 Morris St., Philadelphia, writes Jan. 16th, Doctors did me no good but Himalya cured me. Mr W. F. CAMPBELL, Sanbornville, N. H., also writes Feb. 6th, that Himalya cured his son, REV. FREDERICK F. WYATT, the noted Evangelist of Abilene, Texas, writes April 15th, 1905, I never lose an opportunity to recommend Himalya as it cured me of Hay-Fever and Asthma and have never had any return of the disease.

Hundreds of others send similar testimony proving Himalya a truly wonderful remedy. As the Kola Plant is a specific constitutional cure for the disease, Hay-Fever sufferers should not fail to take advantage of this opportunity to secure a remedy which will positively cure them. To prove the power of this new botanical discovery, if you suffer from Hay-Fever or Asthma, we will send you one trial case by mail entirely free. **It costs you absolutely nothing.** Write today to the Kola Importing Co., No. 1164 Broadway, New York.

CANCER CURED BY ABSORPTION. No knife or plaster. Book free. T. M. CLARK, M.D. Pittsburg, Pa.

THE NEW IDEA FLY TRAP Catches 60,000 flies a day. AGENTS WANTED. NEW IDEA FLY TRAP CO., Dept. U, Cissna Park, Ill.

UP-TO-DATE

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

"Countrified"

Do they call you "countrified"?
Let it be your joy and pride,
You, who love the birds and bees,
And the whispers of the trees!
Trust me, friends of flowers and grass,
Little brown-faced lad or lass,
Naught in all the world beside
Equals being "countrified."
—*James Buckham.*

Get out the flags.

The children are saving up pennies—peanuts and popcorn at the celebration.

The revolutionary heroes and heroines must never be forgotten, but there is some freedom yet to win—freedom to put prices on our own property.

Do you suppose that Washington, and John Adams and Thomas Jefferson, and Patrick Henry would have been willing for a lot of conscienceless gamblers to put arbitrary prices on everything raised by the farmers? Well, whatever you may think about it, I don't believe they would, and it is no part of the heroism they displayed for the enlightened farmers of to-day to permit it.

Little boy or little girl, living away out on the farm and watching the flowers open and the corn and potatoes grow, while you read Up-to-Date, can you do anything George Washington couldn't do? Yes, you can; you can stand in your room at home and talk to your cousin away over in the next township. Wonderful, isn't it?

It's not too hot to seek for bargains. Answer the advertisements.

But this is a busy time for the farmer's wife. Farm work is pushing. The cultivated crops are trying to lap over into the harvest, and the men folks have little time to help about the house, and there may be extra hands (mouths it would be better to say) to provide for. Three meals a day must now come with methodical precision. But then there is the garden at its very best to draw upon, and the early fruits, and possibly some early fryers. Then the mud is gone, and there is not so much cleaning up to do. After all, the cheerful, well-balanced mind finds things quite evened up, and this old world, with all its cares, is a very good place to live in.
all about it.

Do you know how easy it is to organize a local telephone line? Read the special editorial in last issue. Write to manufacturers of telephones and their books will explain it all.

Is the boy we now see sweating in shirt sleeves out in the fields the same that sat so prim and studious in the country school house last winter? Sure. And when a few more snows have fallen and roses bloomed, we may see him again, and he'll be at the head somewhere, it may be of a prosperous farm or of a business enterprise. In whatever place, he will be at the head. The boy whose make-up is earnestness, honesty and sincerity, who does his best wherever he is has a place at the head of his class, whether as a boy in school, or as man in business, and there is where he will be.

Some one gives this method of sewing on buttons. Place a hair-pin across the button, and let each thread as it comes through the button and returns, pass over the hair-pin. When enough threads have been passed through the holes in the button, withdraw the hair-pin, pull the button as far as you can from the goods, and wind the thread several times between the button and the goods, then fasten securely on the under side. That button will stay.

Make potato puffs this way: Mould warm mashed potatoes in balls about the size of an English walnut. Place in a buttered tin, brush with a well-beaten egg and set in the oven to brown. Serve hot. Garnish with greens.

The papers call the following a peach pot pie, but our farmer readers will instantly recognize it as a peach cobbler, and a good one at that: Line a baking dish with good, rich paste; turn in sliced peaches, sprinkle with sugar and a little cinnamon or other flavoring. If the pan is deep enough, several layers may be put in; bake slowly, and serve with whipped cream or sugar and rich, thick cream. Let the crusts and the partitions between layers be very thin.

Try this for beet hash: Use an equal amount of boiled beets and potatoes; hash up with a little meat cooked very tender.

Before you forget it, think about the Business Exchange. Where's YOUR order?

A Reliable Heart Cure

Alice A. Wetmore, Box 67, Norwich, Conn., says if any sufferer from Heart Disease will write her, she will, without charge, direct them to the perfect cure she used.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did it Gladly Tells You How

Mr. A. S. Hitchcock (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health.

Our advice is to take advantage of this most generous offer while you can do so without cost.

8 Tools FREE

ONE OF THE most ingenious and valuable of recent inventions is the

C. & F. Wonder Knife—
9 TOOLS IN 1

It is the size of an ordinary three bladed knife but is a little workman's outfit in itself. It combines nine useful tools in one. Everyone who gets one of these great tools is enthusiastic over it. We receive letters with expressions like these: "Greatest little article I ever saw," "Never saw its equal," "All my friends want one," "Don't see how I ever got along without it." You will agree when you see the knife.

"C. & F. Wonder Knife received. It is certainly a wonder. I want to buy them by the dozen."—J. Barnhart, Wilmington, O.

THE C. & F. Wonder Knife—
9 tools in 1—
is sold at the price of a high class knife alone.

Therefore when buying it you get absolutely free 8 other useful tools that you will use several times a day.

All the tools of a work bench included in this one handy article.

THIS IS A LIST OF THE TOOLS:

Wire Cutter One of the tools is a perfect wire cutter. It will easily cut wire ⅛ of an inch thick. As useful as regular eight inch wire cutters. Will cut barbed fence wire.

Wire Pliers How often do you want some thing like this—a pair of pincers. Ordinarily this one thing will be used a couple of times a day.

Swedging Awl LEATHER PUNCH AND GIMLET. An Awl is a useful little thing to have. You will often need it when repairing. With this you can make holes in leather and do many odd jobs. There is nothing better for starting screws.

Screw Driver At one end is a strong screw driver. Just imagine how often you will use it. You will use this part as often as you will use the knife blade itself.

Alligator Wrench A handy little wrench always in your pocket. A size that will handle almost any nut you want to tackle. Strong and convenient.

Hoof Hook This is something new. It is an implement to clean out the hoofs of horses. Every farmer and stockman will recognize at once the usefulness of this one tool. To any person around horses it is easily worth the price of the outfit.

THE KNIFE itself is made of finest razor steel. No one will be without a knife and when you know the value of this one you will always have a C. & F. Wonder Knife—9 tools in 1—in your pocket.

The regular price of a

C. & F. Wonder Knife—9 tools in 1

is $1.50. We have made a low price of only $1.25, so that we may introduce them quickly. This is your opportunity to get one at 20% reduction and then your friends will want to buy. With each order for sample we send wholesale prices.

AGENTS who want to get a good seller should order sample.

C. & F. Wonder Knives—9 tools in 1—are made to sell on their merits. Made to gain friends and keep them. One sold sells many others. Write us.

J. A. Everitt, Seedsman, Inc. Indianapolis

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

The Outlook

Late rumors in tobacco circles indicate a scarcity of stocks on hand in all classes except Burley. Lynchburg, Virginia, reports a decrease in sales of 1905 over those of 1904 of 3,570,800 pounds. The average price paid the past two weeks has been in advance over those paid for some weeks previous. Danville brokers are said to have a large amount of unfilled orders and are buying all grades offered at firm prices. Richmond reports that stocks of dark lugs and Old Brights will soon be exhausted. Planters around Petersburg say the crop for 1905 is nearly all sold and tobacco for the foreign markets is in good demand. At Hopkinsville, Ky., and Clarksville, Tenn., the growers are holding their crops and are making arrangements looking to selling direct to foreign markets. In Baltimore, stocks are much less than at this time in 1904, and word has just been received that the French Government wants to contract for a much larger supply than usual. Rocky Mount, N. C., reports a decrease of 3,025,228 pounds. In Wisconsin but little business is being transacted in tobacco circles on account of lack of material to do business with.

Under these conditions the only reason why those who have sold tobacco did not receive better prices is because they did not demand them. If the owners of tobacco will remain firm they will prove that the power that controls the supply dictates the price.

The acreage outlook, as we have before stated, indicates an increase in some sections, an average in most sections, and in a few sections, where organization is strong, a decrease is insured. About an average planting may be expected.

There was sold in Danville, Va., during the eight calendar months ending with April, 1905, 32,807,000 pounds of tobacco for $2,825,691.31. For the same period in 1904 there was sold 33,595,697 pounds for $2,636,476.28. This is $218,215.03 more than was received for the smaller amount than for the larger one. These figures point out a safe business policy for tobacco growers.

The Owensboro Convention

This convention will be composed of the leading tobacco men in each tobacco district in the United States. Each one of the 139 counties producing more than one million pounds should have a representative in attendance. This is to be the most important meeting of tobacco men ever held, and promises much for the men who plant tobacco.

The little city of Owensboro will extend a royal welcome, and the tobacco producing business is to be put on a sure and solid foundation.

At this convention the following facts will be ascertained and made public. The amount of each class and grade of tobacco consumed annually; the amount in the hands of dealers and manufacturers; the amount in the hands of the farmers; the prices paid by the consumers; the cost of manufacturing and handling tobacco; the profits secured by each class of dealers and handlers; the amount required for consumption during the succeeding year. With these facts before them it will not be difficult for the representatives of the tobacco growers to say what each class and grade is worth.

After this is done the delegates will turn their attention to ways and means of grading, storing and holding tobacco, and will provide for all emergencies. Steps will be taken to finish the work of organization at once.

Now, friends, this can all be done. The men who think "can't" and act out their thought are the only obstacles that will prevent success. If our members will work earnestly for a few more months we can remove the doubts and fears of most men and have them working for, rather than against, us.

Delegates to this convention should be chosen and qualified not later than August 15th. These delegates should be chosen in time to make complete reports of the conditions in their county, the amount of tobacco produced, its grade, quality, etc.

Committees will be appointed, a program arranged, excursion rates secured, and all preliminary work will be properly attended to, and notice given in these columns.

Farmers, will it not be worth something to you to know just how much tobacco of the kind you produce there is; how much is wanted for consumption, and how much it is worth to the dealer? Will there not be great satisfaction in giving dealers to understand that their power to pull the profits from your pocketbook and wool over your eyes has been taken from them? Will you not feel more like the business men you ought to be when you realize that you understand the situation and all other tobacco growers are standing with you in your honest demands, knowing that without the tobacco your organization controls the dealers are powerless to make a penny of profit, something not at all to their taste? We implore you to do all you can to interest every farmer in the coming convention and to see that your own county has a capable and efficient representative in this first great congress of tobacco producers.

Delegates to Owensboro

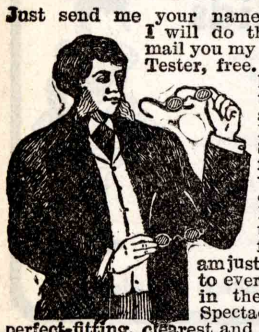
Campbell County, Va.
R. J. Marshall, Brookneal.
Andrew B. Martin, Concord Depot.
Select your delegates and send in their names.

As the season's work approaches its finish, attention may be profitably turned to the waste nooks, corners and creeks. These should not be permitted to grow up and become unsightly thickets. In the first place, every inch that is capable of it should be reduced to cultivation, and what is not should be cleaned off and encouraged to grow up in some of the useful grasses. Midsummer is the prime time to kill out the foul growths.

DO THIS NOW

SPECTACLE WEARERS.

Just send me your name and address and I will do this: First I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test) I will mail you a Perfect Fitting Five Dollar Family Set of Spectacles for only $1, which will include a pair of my Handsome Rolled Gold Spectacles, absolutely free of charge. I am just doing this to prove to every spectacle wearer in the world that my Spectacles are the most perfect-fitting, clearest and best in the world today, and I will return your dollar as cheerfully as you send it, if you yourself don't find them to be the finest, clearest and best you have ever bought at any price, anywhere. Address:—



I WANT AGENTS ALSO.

And any man or woman (also storekeepers), without any previous experience whatever can fit the weakest eyes with my Improved Metal Eye Tester, which is so simple that anyone can test with it with absolute correctness. If you are not earning at least $25.00 weekly don't delay another minute as my agents are making from $25.00 to $100.00 every week, selling my famous Spectacles, either in their homes, traveling, or in stores. My Agent's Outfit includes my Latest Improved Metal Eye Tester, a Handsome Traveling Spectacle Case and everything else necessary to start you right, also the necessary documents showing that Agents need no license anywhere.

Write me at once as this is the best time to begin. Address:—

DR. HAUX SPECTACLE CO., Haux Bldg., St. Louis, Mo.

NOTE.—The above is the largest Mail Spectacle House in the United States, and perfectly reliable.

Two Car Loads

Of That Superior

BINDER TWINE

To close out. The price is 10 cents a pound

Or at 9½ cents if five or more club together

THERE is binder twine, and binder twine. Some is allright, much is not. You can't afford to take any risk. We sell only high grade binder twine. Every ball guaranteed. If you buy our **STANDARD** twine you will be fixed O. K. when harvest time comes.

Nothing is more annoying than poor binder twine. It is exasperating to stop the harvesting because of a knot or a weak place in the twine. But there is lots of twine that will cause you just this trouble.

We want your order. We also want your Neighbors orders. Get four or more of your Neighbors to join with you and get the special price. See below.

CAUTION The word "Standard" may be used to designate inferior grades. We know of some cases where it is so used. But with us OUR STANDARD is always high grade. We guarantee it to be made from long fiber, run smooth and have the requisite strength.

AGENTS We want a farmer agent in every locality. Write for order sheets, samples, etc.

TERMS Our terms are cash with order or payable on delivery and subject to examination, We will ship at any future date you give. If you need credit let us know and what reference will you give?

Twine is packed 10 balls of 5 lbs. each to a bale—50 lbs. Not less than one bale 50 lbs. shipped on any order.

Remember our price. **10 cents a pound** or if 5 or more join together and order their twine, no matter how much or how little each take, the price will be **9½ cents.** Give the address of all the members of the club.

PRAIRIE MFG. CO.

INDIANAPOLIS . . INDIANA

Co-operation Wins for Tobacco

They have the scalps of their oppressors dang ing from their belts.

"CO-OPERATION WINS"

From a leading member of the Tobacco Growers' Association comes the following words of good cheer and victory:

"* * * You will find me ready at all times to raise and defend the banner of the A. S. of E. because it has given us the victory over a giant power. No trouble now to sell tobacco at OUR prices in this district. The dark tobacco belt is the gainer by three millions of dollars, through the movement started by the A. S. of E., and what it has done for us it will do for others on every product of the farm. Now for dollar wheat, as tobacco and wheat are our money crops.

"I am reliably informed our tobacco will be shipped direct to foreign countries via New Orleans, in lots of 500 and 1,000 hogsheads. The organized farmers control at least 80 per cent. of the tabacco, and this controls the situation. The fight has been fierce, but victory is complete. The "hill-billies" have gone all around the trusts and boycotters, and have come in on the home stretch with a triumphant shout that rings from the Mississippi River to the Cumberland Mountains. They have the scalps of their oppressors dangling at their belts."

This letter portrays a condition that MUST follow when the farmers every where act together in the disposal of their produce. There is no other result possible. People will have—MUST have the products of the farm, and the only way under Heaven for them to supply their needs will be to pay the price. Press forward with increased vigor in the hope that farming will be freed from the uncertainties that have attended it in the past.

A Farmers' Company, By Farmers

To Solve One of the Farmers' Greatest Pr

The Pure Seed and Plant Company OF AMERICA

Capital $1,000,000

TO BE INCORPORATED UNDER THE LAWS OF THE DISTRICT OF COLUMBIA

Objects of The P. S. & P. Co. of America

TO grow and sell pure seeds, grain, plants and trees.

To eradicate weeds from the farms of America so that farmers' labor may be reduced, their crops increased in quantity, improved in quality and enhanced in value.

To improve the quality of all farm and garden crops by honest, careful, systematic, scientific selection and breeding of seeds and plants. To educate planters against the planting of mongrel and untrue seeds and those of weakened vitality.

To prevent adulteration of seeds, grain and food products, so the maximum markets for farm products may be secured and so that adulterated and poisoned foods need not be consumed.

To have laws passed to prevent the spread of weeds, and to see that they are enforced until a National curse—harmful weeds—is eradicated from the land.

THE idea of this Company was originated by J. A. Everitt, publisher of ***Up-to-Date Farming,*** author of ***The Third Power,*** founder and president of ***The American Society of Equity,*** and for twenty-four years the proprietor of, or the head of, the seed business known as ***J. A. EVERITT, SEEDSMAN,*** (Corporation.)

No man has ever been as successful as Mr. Everitt in originating plans to benefit farmers, and this latest step is part of the great plan

To Solve All Farmers' Problems

This is not a branch of the American Society of Equity. It is not a part of it in any respect. Membership in the A. S. of E. is not necessary to become a stockholder in ***THE PURE SEED AND PLANT COMPANY OF AMERICA.*** Any farmer who approves of the effort to accomplish the objects as enumerated above may now join with this Company.

Send for prospectus and learn about this movement which is marvelous in its conception, practical in its execution and which will be stupendous for good in its results.

Farmers spend one-fourth of their time fighting weeds. Weeds reduce their crops at least ten per cent. and discount their value ten to fifty per cent. What a fearful tax!

Farmers prefer pure seeds and thoroughbred seeds to impure and mongrel seeds but they cannot always get pure seeds under the present system of growing, handling and selling seeds.

It is our intention to show planters the true conditions under which seeds and plants are grown, distributed and planted, so that their eyes will be opened to a true realization of the great danger that already is present. The trifle that may be saved in buying cheap, adulterated seeds cannot measure up to the loss in labor and discount on the quality and quantity of crops.

But send for a prospectus. Learn what the movement means. Learn how it is to be done, and try to estimate the benefit it will be to you either as a stockholder or simply participating in the benefits that must come to every soil owner and soil worker.

AN APPEAL

AN appeal is made to all farmers, gardeners, truckers, orchardists—all who plont seeds, cultivate plants and harvest crops—to co-operate with each other to overthrow your greatest enemy—the weeds and poor seeds.

Stock holders are desired in every county in the country. It is for every branch of agriculture. When you understand this movement it will appeal with tremendous power of reasonableeess, yes necessity, to the owners and operators of over 8,000,000 farms tn the United States, and to the house wives who manage 20,000,000 gardens. to say nothing about the benefit it will be to foreign countries.

PERSONAL STATEMENT

THIS is one of the farmers' problems (the only one) that controlled marketing and profitable prices cannot solve. To solve the problem of pure seeds, thoroughbred seeds and eradication of weeds absolutely requires the step now being taken. I have taught farmers that if they want any thing they must go after it themselves. This is the plan to solve their most serious problem—one that has become a National curse.

J. A. EVERITT.

e to Be the Judge!

BRIGHT'S DISEASE

A Positive Cure for This Dangerous Malady, as Well as All Other Forms of Kidney Troubles, Dropsy, etc.

BRIGHT'S DISEASE, an affection of the Kidneys, is so called from the English physician, Dr. Bright, who first investigated its character and experimented for its cure. It consists of a degeneration of the kidney into fat, which degenerated condition impairs the excreting powers of the organ, so that the urea is not sufficiently separated from the blood. The blood becomes charged with this urea, is retarded through the minute vessels, congestion ensues, and exudation of albumen and fibrin is the result. Persons so afflicted present a flabby, bloodless look, are drowsy, and easily fatigued.

The causes of this terrible malady are any which bring about congestion of the kidneys, which is its original stage, indulgence in strong drink, exposure to wet and cold, eruptive fevers and pregnancy.

The treatment is to remove any of those causes which may be present, rectify the other secretions, relieve any temporary congestion, at the same time endeavoring to increase the number of red blood globules by the administration of iron and hematinic tonics, and in the advanced stages, where the blood is poisoning the nervous centers, to restore the secretions of urine by the administration of a diuretic.

As a cure for Bright's Disease, the value of Vitæ-Ore has long been demonstrated. It has proven its worth in hundreds of cases. Its combined diuretic, tonic and hematinic properties constitute it the ideal remedy for this disease. It contains iron, easy of solution and capable of being assimilated with the blood with the greatest facility. Many physicians have testified to its great superiority over artificial products of iron in its blood-making qualities. By its diuretic action it rectifies the secretions, and assists the kidneys to perform their natural function. It is absorbed into the blood, eliminates all foreign matter from the circulation, and soon restores the patient to a condition of perfect health.

Vitæ-Ore, as well as possessing strong hematinic, tonic and diuretic properties, exerts a powerful astringent effect, which serves to prevent and stop excessive action on any part of the mucous membrane and effectually cures all discharges of blood, mucous, etc., attendant upon catarrh of the urinary organs, relieves the urine of all unnatural sediment, and restores the proper functional activity throughout.

Its value as a corrective and cure in all manner of kidney and bladder troubles is well established. It has cured hundreds of old chronic cases of diabetes, has brought relief to case after case where patients suffered excruciating agony through the passing of gall stones, has done more for prostatic trouble with elderly and feeble men than other remedies advertised for that purpose exclusively have accomplished, and has robbed the grave time and again where dropsical troubles were hastening the patient to speedy dissolution.

It makes no difference whether you have tried three or a dozen doctors and as many advertised remedies, whether you have been ailing for one year or twenty, Vitæ-Ore will reach your case more rapidly, with a more powerful corrective action, than any other remedy, and establish a sure and certain cure. Send for it on 30 days' trial.

YOUR BODY

is not a CHEMIST'S CALDRON, your stomach is not a TEST TUBE. You cannot afford to have both experimented with by the makers of patent nostrums. IF THE DOCTORS have been using them for this purpose and have not passed the experimental stage, it is time for you and them to quit experimenting. TAKE YOUR STOMACH OUT OF THEIR HANDS!

Vitæ-Ore, nature's remedy, IS NOT AN EXPERIMENT! It is not being tried out to see if it is good, your body in using it, your stomach in taking it, is not being used for experimental purposes. It is known, established, demonstrated and proven beyond the shadow of all doubt, beyond any possible denying. A quarter of a century of successful existence, hundreds of thousands of cured patients, cured soundly and effectually, permanently and positively, of all manner and kind of diseases, substantiates it. You are not experimenting in using it, not with your body, not with your stomach, not with your money—only a little time to take it, and what is thirty days to all eternity? You don't pay a cent unless it benefits you. You are to be the judge! You do as have done thousands—send for it, USE IT, and then judge it. The evidence will be strong—either for or against. You will know plainly whether you ARE BETTER, are well, or no better. You cannot be worse! It cannot harm you. If better, if benefited, if cured, you pay for it. If neither, you don't pay for it. It is a test, BUT NOT AN EXPERIMENT. The results are too sure, too certain, have been evidenced in too many cases, to make it experimental.

If you have been using other treatments without the results that were promised or that you expected, don't fool away any more time, don't endanger your chance of recovery, don't lose your possibility of future health. Quit experimenting; THROW THE CONTENTS INTO THE SINK; THE BOTTLES INTO THE ASH-BOX. Begin with this natural curing and healing ORE, nature's own remedy. IT WILL NOT FAIL YOU. READ OUR SPECIAL OFFER.

SENT ON THIRTY DAYS TRIAL

READ THIS SPECIAL OFFER:

WE WILL SEND to every worthy sick and ailing person who writes us, mentioning this paper, a full-sized $1.00 package of VITÆ-ORE by mail, POSTPAID, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. **We take all the risk, you have nothing to lose.** If it does not benefit you, you pay us nothing. We give you thirty days' time to try the medicine, thirty days to see results before you need pay us one cent, and you need not pay us the one cent unless you do see the results. **You are to be the judge!** We know that when this month's treatment of VITÆ-ORE has either cured you or put you on the road to a cure, you will be more than willing to pay. We know Vitæ-Ore and are willing to take the risk.

FROM THE EARTH'S VEINS TO YOUR VEINS.

What Vitæ-Ore Is: Vitæ-Ore is a natural, hard, adamantine, rock-like substance—mineral—Ore—mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct mineral spring. It requires twenty years for oxidization by exposure to the air, when it slacks down like lime, and is then of medicinal value. It contains free iron, free sulphur, and free magnesium, three properties which are most essential for the retention of health in the human system, and one package—one ounce—of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water drank fresh from the springs. It is a geological discovery, in which there is nothing added or taken from. It is the marvel of the century for curing such diseases as

Rheumatism,	Bladder Ailments,
Bright's Disease,	Stomach and
Blood Poisoning,	Female Disorders,
Heart Trouble,	La Grippe,
Dropsy,	Malarial Fever,
Catarrh and	Nervous Prostration
Throat Affections,	and
Liver, Kidney and	General Debility,

as thousands testify, and as no one, answering this, writing for a package will deny after using. **VITÆ-ORE** has cured more chronic, obstinate pronounced incurable cases, than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescriptions which it is possible to procure.

Vitæ-Ore will do the same for you as it has for hundreds of readers of this paper, if you will give it a trial. Send for a $1 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vitæ-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it would hesitate to try Vitæ-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; but two or three for chronic, oostinate cases. We mean just what we say in this announcement, and will do just as we agree. Write to-day for a package at our risk and expense, giving age and ailments, and mention this paper, so we may know you are entitled to this liberal offer.

READ THE TESTIMONY!

Read it again and again. No such words have ever been said or written about any other medicine; no such expression can be commanded by any other treatment. Vitæ-Ore is as different from other remedies as is pure milk from chalk and water, or the brilliant sunlight from a tallow candle. It does not take FAITH, does not take CONFIDENCE, does not take BELIEF, does not take even HOPE to cure with Vitæ-Ore. It takes only a trial—all we ask. THIS MEDICINE FROM THE EARTH'S VEINS ENTERS THE VEINS OF THE SICK AND SUFFERING PERSON AND CURES whether the sufferer believes in it or not, whether he wants it to or no. Its elements enter the blood, the vital organs, and WORK, WORK, WORK—a work that means your cure. Send for it!

STOMACH TROUBLE

COULD NOT DO AN HOUR'S WORK FOR THREE MONTHS.

ONE TRIAL PACKAGE OF V.-O. WORKED WONDERS; THREE PACKAGES BRING COMPLETE CURE.

For over two years I suffered untold misery with my stomach; I was unable to eat anything without it distressing me, in fact I could get scarcely enough nourishment to keep me alive. I did not do an hour's work for over three months. I tried two different doctors, but got no relief from either, and was then urged to try Vitæ-Ore and sent for a trial treatment. Before I had taken half of the package I could eat anything and was able to go to work before the trial package was entirely exhausted. After taking three packages I could call my CURE entire and complete. I gained in weight from 136 to 162 pounds in that time. We have never since been without Vitæ-Ore in the house and find it invaluable not only for Stomach Trouble, but also for Sore Throat, Colds, Catarrh, Rheumatism and Neuralgia; as a blood maker and purifier it has no equal.

It has also performed a like wonder in the case of my sister-in-law, who lives with us. She was all run down, had no color in her face, could not eat or sleep and was so weak that she could hardly get about the house. She had catarrh and rheumatism and what little blood she had seemed nothing much but water. She would not take Vitæ-Ore at first, saying it would not do her any good, but decided to try it in the end, after taking doctors' medicine for three months. She began to improve at once and after using three packages, found her weight had increased 15 pounds. She never in her life looked or felt better than she does now. She is working again regularly, sleeps well and eats anything put on the table. My wife and I are sure that Vitæ-Ore saved her life, as it made mine worth living.

P. J. DYE,
589 So. Emerson St. Denver, Colo.

KIDNEY AND BOWEL DISORDERS

ALSO RHEUMATISM, STOMACH AND FEMALE TROUBLES

IS TODAY SOUND AND WELL

My kidneys were badly affected, my bowels were out of order and my stomach was in such a bad condition that I could not eat anything without its almost killing me. I also had rheumatism and had gone down from 225 pounds to 175 pounds. I had been in this state for a year, but the first of October, 1903, I grew worse; my back and side pained me so much I could hardly go about, my kidneys acted continually, day and night, as did my bowels; there seemed to be a fire in my stomach and at times the suffering was so great it seemed I could not live. I took everything I knew of, including several kinds of patent medicines; some relieved me for a short time, but none cured me. My periods lasted from two to three weeks, and no one but a woman can know what I suffered. In February, 1904, I saw the Vitæ-Ore advertisement and as I could try the medicine without any risk to me, I decided to see what it would do and sent for a package. It helped me right from the start, I kept on using it and today I am sound and well because of it and think it the grandest thing on earth. We now use it for every ailment in the family and it always helps. Too much cannot be said of it.

MRS. J. B. MAHAFFEY,
Cumby, Texas.

THEO. NOEL CO. UP-TO-DATE DEPT. Vitæ-Ore Bldg. **CHICAGO, ILL.**

UP-TO-DATE FARMING

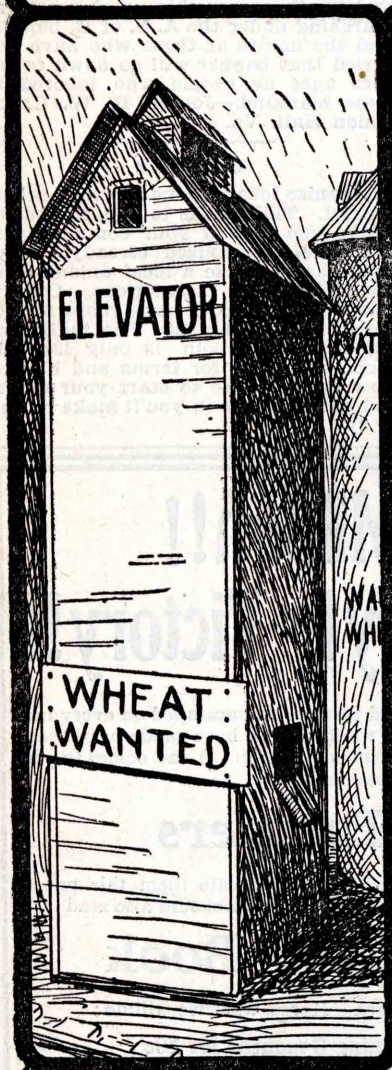
Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

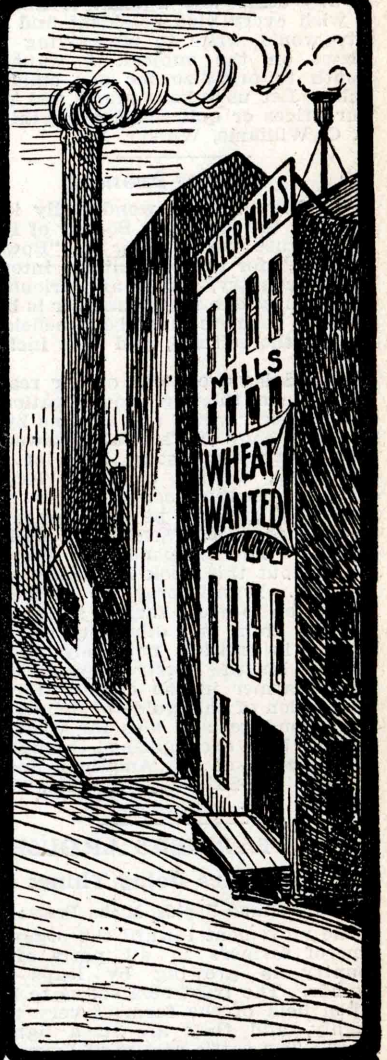
INDIANAPOLIS, INDIANA, JULY 15, 1905

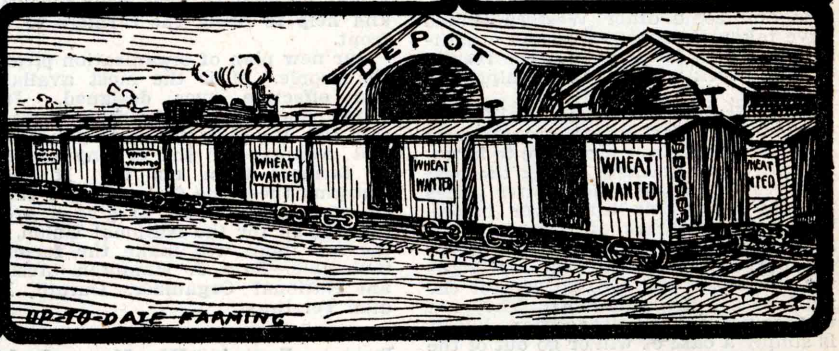
WHEAT WANTED

THE eyes of the world have been turned toward America and its wheat crop. The supply of flour and wheat is the lowest in all countries ever known. Mills have been closed down waiting for the new crop. The tension is very high and any holding back of supplies by farmers will quickly be followed by the payment of their price.

Farmers, now is your opportunity. There is not the bumper crop that the government, millers and speculators have been telling you about. Every bushel of your wheat will bring you $1.00 a bushel on basis of Chicago, St. Louis and Minneapolis markets if you really want it. You will get it if you refuse to sell for less.







FOR THE CO-OPERATING FARMERS OF AMERICA

Bountiful Production Bankrupts Them

Editor Up-to-Date Farming:

I live in a part of the Cotton Belt where great men of wisdom and education live; where the people work hard and live hard; where, if they produce bountifully it bankrupts them; where they say thirteen million three hundred thousand bales of cotton were produced in 1904; and are, after all, the poorest people I ever saw. Where people work hard, and where God blesses their labors. They let the devil take it away from them, and yet they keep even the land in pledge to get supplies to raise big crops on; where farmers are sold out of a home when they raise too much. The most miserable men are we. What we thought to be unto life, we find is unto death.

Now, I know, if the farmers will organize and price their products and hold them until the market needs them, we will get our price and reverse all the above conditions, and just as sure as we don't do it, and control the market, we will still live in the same ruinous uncertainty. If there is any other way I want to know it. I wish every vice president and deputy would write to me, giving their views on the subject. I want the South to organize for our children's sake. Let us take a stand and make our prices or quit making anything.—J. C. Williams, Walker, La.

Bow of Promise

We have become wonderfully interested in the American Society of Equity because we consider it "Bow of Promise" for the agricultural interests of our country, and in an agricultural community like this, whatever is beneficial to farmers must be beneficial to every other citizen, and that includes us.

We advise every one of our readers to make a thorough investigation of this subject, which can be done by securing a copy of The Third Power, an exceedingly interesting book of over 300 pages, written by J. A. Everitt, founder of the society above mentioned. It ought to be worth its weight in gold to every farmer. In fact we don't see how a farmer can afford to be without this book for many times its cost. It will prove to be such a revelation to every farmer as he could not get from any other source. The author is entitled not only to the thanks, but the hearty co-operation of every farmer in the country for the production of this guide of deliverance from bondage, and also for what has already been accomplished through the organiaztion of the American Society of Equity.—Saturday Herald, Fort Branch, Ind.

THE FARMERS AROUSED

They Are Doing Things

From the Grand Rapids, Mich., Press:

The movement toward the organization of farmers in all parts of the country is growing by leaps and bounds. The trust idea seems to have taken hold of the farmers very thoroughly, and they are in a fighting mood. The cattle raisers of Iowa, Illinois and some other Western States have taken thousands into the organization, and it is likely that the results of their work will be felt in shipments this fall.

Then fruit growers in California, Oregon and Washington are strongly organized, and have been able to largely control the markets during the past two years, and got much better prices for their products than ever before. The peach growers of Georgia, New Jersey and Florida have organized for the purpose of fighting the refrigerator car trust, and also to control the markets for their products. They are up against a hard proposition, but it is simply a case of win or go out of the peach business.

The growers of sweet potatoes on the eastern shore of the Chesapeake bay in Virginia have 2,700 members in a combination, and every barrel of their products is shipped by the officers of the association, and the market in New York, Philadelphia and Boston is almost entirely controlled by them. This business last year reached a total of $1,500,000, and they have raised on sweet potatoes from 12 to 20 per cent. since 1902.

The truck growers of Virginia in the Norfolk district are strongly organized, and they have been able to reduce freight rates on their stuff from 10 to 25 per cent. in three years, besides getting much better prices for their products.

The tobacco growers in Wisconsin, Connecticut, Virginia, Kentucky and the Carolinas are organizing rapidly. In Virginia and North Carolina the acreage was reduced fully 25 per cent. last year through the efforts of the officers of their organizations. Prices are consequently from 20 to 50 per cent. higher than last year.

In Iowa there is a movement to organize all farmers in every school district, and a similar movement is just starting in Kansas and Nebraska.

The sugar beet growers in Colorado and Nebraska are organizing, and the men back of the plan say they will control prices for the crops and tell the manufacturers what they must pay inside of two years.

The cotton growers of the South are strongly organized, and 12,000 growers have signed iron-clad agreements to reduce the acreage 25 per cent. this year.

Have to Take A. S. of E. Thunder

Editor Up-to-Date Farming:

About eight months ago I heard the message of glad tidings to the farmers, as heralded by the A. S. of E., and boldly championed by the great paper, Up-to-Date Farming. I espoused the cause and have been carrying the banner to the front in the Indian Territory and Oklahoma, and some in old Arkansas. My work has been chiefly pioneer work, sowing the seed, and now the harvest is on and the country is ripe for organizers everywhere.

The plan of price making and controlled marketing is growing fast, and the grafters in other organizations, who have been fighting the A. S. of E., are forced to retreat, and it is funny to see them get on the platform of the Up-to-Date farmers and swear that it is their program. They have to take the A. S. of E. thunder or go out of business, and they don't know how to use it, as they have not the key to co-operation. Up-to-Date Farming, and the teaching of the discoverer of the plan, J. A. Everitt. They had just as well line up with us as to steal our thunder.

My plan of procedure is to make an open air street talk to all the farmers, distribute literature, and present our plan, then follow up with a few days school house campaign, and organize a few local unions. I then appoint some competent organizers to finish up the county. I visited Grayson county, Texas, recently, organized several locals and secured three of the best and most competent farmers in the county to push the work rapidly.

I want to inaugurate a general campaign and I call upon all readers of this article to correspond with me at once, looking to future work, especially in Indian Territory, Oklahoma, Texas and Arkansas, so I can be in touch with all the A. S. of E. people. I will be glad to visit your localities and help to bring the farmers to the front.

Our new plan of organization pleases the people. It is the most available and effective ever designed. Just think; one hundred or more farmers can get together in a neighborhood and organize for $12, or any number or farmers from ten up. It beats charging them one dollar each. I think all our people ou ht to give a great big hurrah for the National Union, as the new plan will make the farmers invincible.—Sam J. Hampton, Assistant National Organizer, Durant, Indian Territory.

Because Farming Was Unprofitable

Editor Up-to-Date Farming:

A sad tale I have to write this morning. On the 22d day of April, 1905, my son, J. W. Williams, a railroad conductor, was caught between two cars, and was so crushed that he lived but a few minutes. He was a farmer boy that left his home because there was no profit in farming. He was 29 years old, and leaves a widow and a babe to make their way in life without him. He was very well educated in the common schools, and was two years in the Louisiana State University at Baton Rouge, and he was well loved by all who knew him.

Now, brother farmers, wherever you are: Have you boys that might be driven from the farm by no profits, no price, no protection. Take heed. In union there is strength. Divided we fall. Consider well your ways, and stand up for reasonable prices and controlled marketing. Will you not give me your hand to keep the boys on the farm, by joining the A. S. of E. and secure our rights in the making of price? May God help you to do so.—J. C. Williams, Walker, La.

Spreads the Work

Mr. J. B. Rick, Numa, Iowa, in a personal letter writes: "Send me more copies of Up-to-Date Farming. I have mailed all I had, and I have a number of addresses and no papers to send. The way I do is to carry a book and pencil with me, and whenever I meet a man I ask him about the A. S. of E. I may not have time to explain it, nor he to listen, so I secure his name and address and then send him some papers and pamphlets. After I have met a man he cannot truthfully say that he has never heard of the American Society of Equity." Don't that sound like business? Good things for farmers would be near if the county was full of such men.

The Rights of Farmers

Editor Up-to-Date Farming:

I want the people to know that I stand for the rights of farmers, and I wish to ask farmers if we have not a right to sell a cow, a hog or a horse, or a bale of cotton or a bushel of corn at what we think is a reasonable price, or, are we going to sit still and let the buyer pay half its value and take it off? I say no, because it is not right, for we have to pay the manufacturer, the merchant, the speculator, the price he wants for his stuff, and it is right, therefore, that he should pay our price for our products. I live in a cotton country, and I want every cotton grower to read what I say. Controlled marketing is the only way we can secure this just privilege. It is a shame the way we have to live, and you all know it as well as I do. We can raise most of our living at home, and what we raise to sell, hold to it till we get the minimum price.—E. T. Gay, Hiram, Ark.

It Provides the Remedy

Editor Up-to-Date Farming:

Union Hall Local No. 1 is progressing nicely. We are in proper working shape after all the pullbacks, hindrances and opposition that we have had to encounter. We have a very strong membership, 73 including complimentaries. Our neighborhood is solid, only four persons that have not joined, and I think they will join soon. I think the official paper, Up-to-Date Farming, is one of the greatest and grandest farm papers I ever read in my life. It brings out more plain and practical truths than all the other papers I have ever read, and I have read a great many. And the plan that you have so forcibly set up I consider one of the greatest deliverances since the children of Israel were led from under the hand of Pharaoh.

I hope that every farmer will bear in mind that the only way to obtain profitable prices is by controlled marketing. Feed the market as it will consume the products at the set price. This is simple and easy to do once the farmers are organized and properly educated as Up-to-Date is educating them. To this end every farmer in the United States should read the paper and become up to date. Many single numbers are worth more to farmers than the cost of a year's subscription. I am heart and soul in the cause, and I think the time has come for this move to be made permanent. Eucation and organization is all we need, and then we shall see the multitude as they fall in line to stand by their rights under the flag of Equity. I shall be glad to see the farming class of people from the East, West, North and South across this great continent marching under the A. S. of E. banner, and the names of those who have unfurled that banner will go down to future ages as people who labored to bless mankind.—Joseph R. W. Crum, Union Hall, Va.

Organize

Organize local unions in every school district. This call is to you, no matter where you live, if your community is not solidly organized already. Anybody can organize a local union. Send for blanks and instructions. On the new terms the cost is no more for 100 members than for 10. The individual expense, if 100 join, is only 12 cents each. But send for terms and blanks. Now is your time to start your union, and our word for it, you'll make money by it.

A Million! A Million!! Victory! Victory!!

DEAR READER; The army of organized farmers is encamped on every hill and in every valley. They are doing valient work. They have made prices better on every farm crop, but they cannot control completely. A call comes to you if you are out of the army. There must be one million

Organized Farmers

This means that the million must be educated, and to educate them this paper must have a million readers. Or better yet a million people should also read

The Third Power Book

We will do our part. We want you to do yours. Here's what we will do:

We will send Up-to-Date Farming 3 months for 10c
Or 10, 3 months subscriptions for 75c
Or 20, 3 months subscriptions for $1.00

Just think, this paper 3 months for 5c. Who will refuse to embrace this offer and help farmers to the front? He is a traitor to the best army ever organized and to his own business and family. Go out and make up a club or send $1.00 of your own and twenty names.

Note this Great Educational Offer

Up-to-Date Farming 3 months and a copy of The Third Power, all postpaid, 35 cents.
Or 10, 3 months subscriptions and 1 Third Power Book to each, all postpaid, for $3.00 (30c each).
Or 20, 3 months subscriptions and 1 Fhird Power to each, all postpaid, for $5.00 (25c each).

Read the poem "Help One Another" in this number.

We will look for a rousing big club from every neighborhood and hope to see it soon. Thus 1,000,000 farmers will be educated and then they will be organized. Reading Up-to-Date Farming three months and the Third Power will convert the worst doubting Thomas.

UP-TO-DATE FARMING, Indianapolis, Ind.

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, JULY 15, 1905 | Number 14

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher

JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR

Foreign Subscriptions $1.00 a Year.

Clubs. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL INDIANAPOLIS 18 The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the LABEL.

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, 1905 crop	per bushel -	$ 1.00
Corn, No. 2 Chicago, 1905 crop	April 1 to next crop -	.60
Oats, No. 2 white,	" per bushel -	.40
Tobacco, (Price on the farm or at the market town)		
Virginia, dark, average	per cwt. -	$ 9.00
" bright,	" " -	12.00
Kentucky, dark,	" " -	8.00
" burley,	" " -	12.00

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit,	per bu.	2.00
Cotton,	New York, per pound -	.12
Broom Corn, Chicago,	per ton -	$75.00 to $85.00

Cattle,	" per cwt. -	6.00 to 7.50

Booklet E 37

Wonderful to educate the people; 64 pages and cover. We have 25,000 to give away. All we ask you is 6 cents a dozen to pay postage. Order a lot and distribute them. This is one way for you to do your duty.

$1.00 Wheat

New wheat is selling for $1 a bushel in many markets. Did it pay to take our advice?

Grab game.

Whose fault?

Every eye is now turned on the field.

Every dishonest hand is reached out for a grab off the farm.

If the farmers' products are seized by the grabbers, whose fault is it?

No one likes to be reminded of his short comings, but the farmers' stuff cannot be taken without his consent.

If farmers consent to be plundered, and turn their products over to the plunderers in open daylight, then who is to blame for the plundering?

We are saying these words in all seriousness. They really express the situation. The prevalent system of price making is a grab game, pure and simple, and farmers could defeat it if they would. If they will not, we again ask, who is to blame?

Do not misunderstand us. When we speak of grabbers, we do not mean local dealers. It is true they are the parties to whom the farmers surrender their products, but do not make conditions; they simply comply with them because there is no other way open to them. They get, as a rule, no excessive part of the grab, and would be glad if the system were changed, for, as it is, their business is one of constant risk and uncertainty. With the elimination of speculative price making and dealing in "futures," prices would be steady, and the risks local dealers now run would be reduced to the minimum. Hence we are persuaded that local dealers everywhere must support the movement to give stability to the market.

What, then, can farmers do? Organize and co-operate. Up-to-Date Farming has made this so plain that "the wayfaring man, though a fool, need not err therein." But some are for Paul and some for Appollus. Eeach one thinks he knows the best. One is startled by an imaginary fear that some farmer may get pay for helping to organize farmers. Another thinks some man living at a distance must put out thousands of dollars to solve these problems, while he refuses to pay out ten cents, but without a murmur pays dollars on every load of wheat or bale of cotton he takes to market to sustain the system that is plundering him. Still another is afraid some constitutional provision may be abused, or may not work out just as he thinks it should, so he goes ahead paying tribute to the known thieves that he confesses are absorbing his profits. Who is to blame?

We are not discouraged; nor are we saying these things in a spirit of fault finding or of impatience. But we have spoken plainly of the system that is ruining agriculture, and of those who keep up that system to enrich themselves. It is just as necessary for us to speak plainly of those who stand in the way and obstruct the movement to overthrow that system. Get out of the way. If you can't pull in the front, push in the rear. Keep the car moving. Only small people stumble over small things. Great men overcome great difficulties. We know under what wrongs the farmers have labored, and so do you. We know that the burdens placed upon them by speculative manipulation are made heavier every year, and so do you. We know that there is not another business on earth thus cruelly wronged in the pricing of their products, and so do you. We know that the system which thus wrongs the farmers may be overthrown. This is not guess work or theory. We have proven it and we know it; and we are persuaded that you must be convinced of the fact. What about it? It is up to you farmers. If it continue, who is to blame?

The echoes of independence that reverberate adown the years as sounds leap from peak to craig among the hills, are still heard upon the breezes of this July, 1905. Are the sounds without the substance? Has the spirit of independence fled with the men who won it? Has injustice been felt so long that the burden no longer galls us? We do not believe it. There will come a day of reckoning. God grant that it do not delay until the score becomes so great that its liquidation brings a convulsion. Let us move quietly, but irresistably, as the deeper rivers move, and right the grievous wrongs without so much as a jar to society.

12c Cotton

Have you noticed the A. S. of E. price of 12 cents on basis of New York market, standing in the table of Minimum prices on page 3 for several months? Cash cotton sold in New York on July 3, as follows: Middling Uplands, at 10.80 cents and Middling Gulflands at 11.05 cents. Predictions are freely made that the price will go to 12 cents and stay there.

Does it pay to take Up-to-Date Farming? Does it pay to take its advice?

Can it be necessary for us to once more refer to the irresistible power of the farmer—to their weakness when alone and their more than giant strength when organized and acting together? Need we again urge the importance of such organization, and the ease with which it may be accomplished. The A. S. of E. has not a single plan which imposes burdens upon farmers. Its every aim and purpose is to remove them. But something must be done; something by every one; co-operation by enough to control the market. This is not a formidable task, not a difficult matter, as we have conclusively proven. Now, what is the situation? The wheat of 1905 is ready for the market. The hay is being made ready for it. The apples are swinging on beckoning boughs, and will soon be ready to drop into the speculators' baskets. The corn is lifting its plumed head, and, with ears erect, apparently listens to know whether it is to reward the men who tilled it, or whether it is to go into the cribs and its profits into the tills of those who lost not a drop of sweat and whose muscles felt not a moment of fatigue in its production. "What shall the harvest be?" Farmers, the answer to this question is up to you. Shall these crops and others so rapidly maturing, be hurried into the dump piles as former crops have been, while you toil on without just reward? Or will you exercise a common freeman's right, and market as demand requires it, thus controlling both the market and the price? God grant the toilers wisdom in this one act in this one year of 1905, not in ours or any one else's interest, but in the interest of all.

The circulation of Up-to-Date Farming has outgrown its facilities for production. Because of this, delays occur in reaching readers. We regret this very much and want to remedy it as soon as possible.

The present circulation is 150,000 copies each issue. When the next subscription season comes we confidently look for the circulation to double. This means that the producing facilities must be doubled.

How this will be accomplished is a serious problem. If we would have a very small per cent. of the advance in farmers' produce that this paper has been responsible for, the problem would be simple. But, while through the teachings and advice of Up-to-Date Farming farmers have made hundreds of millions of dollars more we have always been spending all the money they sent to us for subscriptions to extend the education.

Farmers have not been liberal in providing for their institutions, except in the form of taxes they were compelled to pay. Probably the reason has been because the institutions have not paid them good dividends. But here is an institution that has paid them big dividends, and has only just begun its good work for them.

Therefore Up-to-Date Farming should be supported generously. We are not asking for charity, don't think so for a minute. But there are many subscribers in arrears with their subscription. If these would pay up we could order, pay for and in four months have a great publishing plant installed ready to take care of the increased circulation that is bound to come. We only ask for what is earned.

Or if not convenient to remit all you are in arrears and a year in advance, if some of you will remit only 50 cents we can order the machinery and make the first payment thereon.

We know you will pardon us for bringing this matter up. We know each reader wants the paper out

promptly, and we know they want it weekly. Also thousands of subscribers and many thousands who are not subscribers want a German paper. We want to put in a plant that will accomplish all this and produce a better paper in all respects than in the past.

Mr. E. L. Vincent, one of our occasional writers and a true friend of equity, writes: "I have a vision of a splendid Up-to-Date Farming with cover, illustrations, fine paper and good press-work, with a perfect banquet of good things for its readers every week. Will not that be great?"

This is what we have in prospect. Farmers are learning as they never did before and one of the lessons they must learn first, is that they must pay a little to their own institutions. They can afford to do this now, because they can pass the tax along to the next person in the prices they get for their crops.

Send what is due the publisher, or at least send 50 cents to apply on the New Press Fund.

The imaginary record breaker, bumper wheat crop that did such valiant service to break the price of wheat down has dwindled to a very moderate one indeed. This is another illustration of the folly of counting your chickens before they are hatched. But we are glad we can say that very few farmers were fooled into contracting their wheat in advance. The gamblers played both sides of the game and we have the satisfaction of knowing what one side gained the other side lost. When will the gamblers tumble to the fact that they cannot play their game with the old time certainty, since the farmers have learned to shuffle the deck so they are always bound to hold the winning cards.

Indianapolis millers put the price of cash wheat down 20 cents a bushel one day recently to, as they said: "put it on the new crop basis." We notice also that a couple of days after they were offering 15 cents a bushel more than the cut price and getting none. One car load only was bought at a secret price. The time is past when farmers can be fooled by these old games. They know the mills have been idle for quite a while and they are all anxious to start up. How will they start if the farmers don't come to their relief? Who will say that the demand won't seek the supply if the supply is shy and bashful and hides away?

In nearly every paper that prints market news you can see admissions by millers, brokers and speculators that the price of grain, cotton and produce all depends on what the farmers do.

They admit that the farmers have the power, and more, they acknowledge that they are exercising it to make prices. But have any farmers seen such admissions or encouragement in any farm papers?

To secure profitable, but equitable prices for his product is the dearest ambition of every producer. Manufacturers, financial and professional men all have their journals to advise them about their markets and how to make and maintain their rates, but not so with the farmers. The farm papers (with one exception) appear to think, work and production are all the farmers ought to know. Work! Work! Work! Produce! Produce more! Is this the measure of your ambition?

Cotton Prices Too Low

Notwithstanding the government report, the slump in the cotton market early in the season was not justifiable, and every dollar thus taken from the planters was a steal. Of course their unorganized condition enabled the purchasers to do it, but that is not sufficient reason. A door might be left unlocked, and give an opportunity to plunder the house, but the chance does not justify the thief.

Aside from many other reasons we have given for the maintainance of better prices for cotton, the wool situation affords a strong one. Not for years has the demand for wool been so keen, and buyers so eagerly watching the market. "Manufacturers realize," says a commercial reporter, "that there is no chance for cheap wool this year, and that induces them to purchase any lots they can find." Prices have been well sustained, and very favorable to sellers.

This, of course, is a condition entirely favorable to cotton, and shows that while the crop of 1904 may have been large, the deficiency is large also, for a dearth of wool means an increased demand for cotton, and high prices for wool accompany at least fair prices for cotton. Hence, we repeat, the great depression in cotton prices was not justified by the conditions. They were purely artificial and millions of dollars in value were taken from the Southern people because those who would do it had a chance to do so. What is that but robbery?

Let all growers of staple farm crops be encouraged that the markets will take your crops at fair prices if they control them.

Department of Agriculture

Oh, that investigation would investigate! The more a trust is "investigated" the stronger it becomes, and the deeper does it pierce society with its merciless fangs! If we could only believe that the investigation vindicates the thing investigated, and proves the charges groundless, we could rejoice, but nobody believes that. The investigations don't say that. The reports find somebody guilty and justify the accusers—but—the eternal "but" ends the matter. The beef trust violated the law and conspired to rob both producer and consumer, but ——. The Standard Oil is a monopoly, and uses its power to plunder society, but ——. The land sharks have outrageously abused the homestead and other laws, and have stolen the public domain, but ——. The Santa Fe Railroad corporation is in open contempt of court, and the officers should be prosecuted, declare Messrs. Judson and Harmon, the lawyers chosen to do exactly what they did do, but—one of those officers is a member of the President's cabinet, and ——. Punish the crime, but the criminals, being officers of great corporations and members of the cabinet instead of officers of labor unions, are not amenable to the law, and the services of Judson and Harmon, who believe they are, are no longer needed.

Now, we may remark parenthetically, that it is no pleasure to us to say these things. We are not prejudiced against the administration, but for it rather, on account of the bold things that have been said in the interest of the people at large. We are like the teacher who disliked to remind her favorite pupil that his face was dirty, and the pupil did not like to be reminded of it; but his face was truly dirty and it was not the teacher's fault. The moral of it is, keep your face clean, and save the teacher an unpleasant duty, and the pupil an unpleasant reminder.

But we have wandered considerably from our text. The Department of Agriculture is now up for some investigation. In former issues we have referred to the tremendous losses a single report of that department last December caused the cotton planters of the South. The Charleston earthquake was a great calamity; and so was the Galveston flood. But these pale into insignificance in money or property losses compared with the losses to the cotton planters in the reduction of price brought about by the report above referred to. Nobody claimed that the planters were getting too much for their cotton, or that consumers were having to pay too much for it, or that cotton fabrics were extravagantly high. Everything was moving smoothly on in the undisturbed channels of trade, when here came the department's report like a clap of thunder, and cut the price of raw cotton almost in half, nearly ruining the planters and benefiting no one else except cotton speculators—having the effect of a sheer act of wantonness.

But the cotton planters are not the only ones who have suffered on account of the government crop reports. Several weeks ago, before the wheat crop was near maturing, the daily press was full of scare heads as to the tremendous crop of wheat 1905 was to produce, quoting government reports as authority for the statements. Of course, these publications had but one effect and but one intention—to reduce the price of wheat, a direct injury to the wheat grower, without a corresponding benefit to the wheat consumer. We contend, as we have contended before, that these reports are unnecessary, unfair and unjust. Even if true, they benefit no one except the bear side of speculation, and they incalculably injure the producers. However sincere the authorities, they cannot be known to be true. They are based at least upon multitudinous reports, every one of which is an estimate and even then subject to future weather. The reports made by the government being no more than estimates made upon these estimates, a species of guesswork and estimation that should not be indulged in by the United States Government.

Besides, in what way can these reports benefit the farmers? If the reports during cultivation show a probable deficiency, do the farmers increase their efforts so as to overcome the deficiency? Or if the preliminary reports show a bumper crop as the probability, do the farmers relax their efforts so as to prevent the disturbance of values by cutting out the prospective excess?

Of course not in either case. The farmer goes ahead and does his best regardless of the reports. They have no effect upon his actions. Indeed, he pays less attention to them than does any other class of people. How can he? He sets his crop in the spring before any reports are made, and having set it, he must cultivate it regardless of whether the general result is to be a large or a small crop, the price a low or a high one. These reports then, we make bold to say, are not made for the farmer, but for the speculator, and it is time they were discontinued or made on a different basis.

But, as before intimated, the Department of Agriculture is now up for its turn of investigation. The secretary of the Southern Cotton Growers' Association has made charges to the effect that the cotton reports are not only not true, but that alleged facts are given to speculators in advance of publication, which enables them to place their bets with the same certainty that the race track gambler might place his if he knew in advance which horse was to be the winner.

In addition to these charges, it is said there are now pending charges of graft in the free seed section of the Department, and that this nonsensical excrescence is to be overhauled also.

While we are glad these things are being looked into, we regret the necessity for it. We would much prefer that every department and bureau of the government might go smoothly on in the quiet discharge of its important functions, and we realize in these days of so nearly universal complaining, complaints may become chronic, and too often be made without foundation, but so many wrongs are developing, that we cannot but hope exposure may check them. But again we must exclaim: Oh, that investigation would investigate!

Since the above was in type the charges against the Department of Agriculture have been substantiated. Through Chief Clerk Holmes the figures have been manipulated and advance information given. Of course he was dismissed and Secretary Wilson promises it shall never occur again.

We ask farmers to write to James Wilson, Secretary of Agriculture, Washington, D. C., protest against the preliminary, and subsequent-to-harvest, market reports and demand that they be discontinued. Your reasons for this demand can be gleaned from Up-to-Date Farming.

Lubin's International Institute

Mr. David Lubin, of Sacramento, California, is working with commendable zeal to secure the establishment of an International Farmers' Institute. He has already secured favorable action by the King of Italy, and other national rulers have the matter under consideration.

While we favor this movement, at least to the extent of not objecting to it, we do not expect any great results to come of it, at least not so far as the average farmer is concerned. International Institutes on Mr. Lubin's plan, should they assemble, will be made up of parties "known to the king"—we mean known to the powers that appoint them. In monarchies they will be composed of parties near to the throne, and in republics of persons high up in political life. In either case they will but poorly represent the agricultural masses. They will be indoctrinated with prevailing market systems and will know nothing of any other. The subject of price making will not be one for their consideration, because they will know nothing about it, nor will they care to learn. The false notion of supply and demand as preached by the speculative dealers in "futures," will be to them the "natural system of regulating prices," and their deliberations will leave it as they find it, perhaps a little more firmly intrenched.

Like our own national Farmers' Congress, made up of persons appointed by the governors of the States, they will present some valuable papers, make some splendid addresses, report some wonderful investigations, and come to some rare and highly applauded conclusions. They will then go on a jolly junket, and return home surprised that farming is done in the same old way, and that prices dance the same familiar jigs in the Board of Trade buildings! Good men they, but who ever derived any benefit from the wisdom that oozed out of them between drinks and junkets. (With apologies, gentlemen; this is figurative language founded on fact.)

But the nations should join in a movement for the uplift of agriculture, but it will have to be one that shall commence with the common farmer rather than with the kings. The farmers of all nations know that there is something wrong with their business. They may not know just what it is, but when they take their produce to market and ask the buyer what it is worth, and then when they buy something and ask seller what he will take for it, they look in the glass to see if they are really the same kind of being the "other one" is, and when they see that they are, they begin to wonder. These are the people that desire to learn something, and that will do something if given a chance.

The international movement that will accomplish something is the joint organization of these masses who realize that things should be different. Organized thus under all flags, their own representatives will meet in international bodies, and go directly to the root of the matter. Preconceived notions will not hold them in the old ruts worn by speculation, but they will be free to take action, radical or conservative, as the conditions they find may seem to warrant. They will act from the standpoint of farmers, not from that of mere favorites of the powers that be.

Organize for a Purpose

We certainly can say nothing stronger than we have said as to the necessity for farmers to organize; and our strongest arguments have been emphasized by the current events of almost every day. Organization on the part of farmers is no longer an experiment, a convenience or merely a thing proper to do. It is more than any of these; it is an absolute necessity. Other combinations, every one of which feasts, directly or indirectly, upon the farmers, have become so powerful as to defy the government, and we regret to note that the government itself seems to stand abashed before them.

These great arbitrary, and so far, unrelenting powers can only be restrained and held in check by the compact organization of the only unorganized force in the country—the Third Power—the farmers. Hence the necessity for the organization of that force should appeal not only to the farmers themselves, but to every class of citizens that desires to see maintained the equilibrium of power so necessary to the purposes of civilization.

But in addition to this general reason for the organization of farmers, there are special reasons which should appeal to the farmers with a force irresistible. The organization of the other forces while farmers remain unorganized, places the latter at a disadvantage which industry, energy, good management or any other quality or effort cannot overcome. In modern society farmers cannot live alone any more than other classes can. They must make use of the products of others' toil just as others must make use of the products of their toil. In primitive society, farmers could have in their own products all the necessaries of life, and were independent of all other classes. They may live on what they produce now, but not according to modern requirements. Hence they must now maintain business relations with all the rest of the world. With the rest of the world organized, therefore, while the farmers plod on in ways a century old, each as an individual, in no sense acting with and supporting each other, their disadvantages are too apparent to be unseen by the most ignorant or perverse.

Add to this the fact that a system has fastened itself upon society which in the most arbitrary way, and without the least regard to cost of production or supply and demand, fixes a price upon every marketable product the farmers may grow, while every other producer prices his products. The wonder is that agriculture has not long since gone into bankruptcy. In the aggregate, counting at a high value the world which he owns, the farmer is wealthy, but individually he is poor in the midst of wealth, and is driven to greater self-denial than any other class, unless we may except the floating accidental day's work hunter in the larger towns and cities.

Farmers, then, can and should organize for a purpose. No people ever had greater cause to organize. None were even up against greater problems that can be solved only by organization. It is impossible for any class to live in anything but doubt and poverty, when others—the purchasers—exercise the right to put a price upon what that class must sell as a reward for toil and means on which to live and buy the enjoyment of life, while they are required to pay for what they must buy prices fixed by the seller.

Here is the purpose. Organization can change that system. It requires no great capital to be furnished by those who have little capital to furnish, but it does require organization—co-operation. Each farmer must help the other, as does each miner his "buddy," and each monopolist his fellow. A nation of farmers must agree upon minimum prices and stick to them—sell when the prices are paid and refuse when they are not.

For farmers to say they cannot do that is to plead the baby act pure and simple. To halt on this detail and hesitate on that, and quibble over the other, is to sin away their day of grace, and weaken their own position while they strengthen the opposition.

The commonest plea of all is that farmers must sell to live, and cannot hold for a price. Such a plea is absolutely without foundation. We have shown its fallacy in these columns time and again. They can hold if they will. A fraction of the sacrifices they have been forced to make all through their lives will enable to do it and make them independent. Ask yourself if this is not true. The few cases of actual necessity may be provided for in each neighborhood, if necessary, by the local union, some in one way and some in another. But we claim it will not be necessary, as the market will readily absorb all this part and prices be maintained if only those hold who can. Forming capitalized companies, or funds at headquarters, to buy such stuff, is scarcely a step removed from the old system, and would soon be as bad, for every product would soon be dumped on the new buyers the same as now on the old. A little manhood, a little self-reliance, a little independence, a little looking after such matters by the local unions, will stop the dumping, and secure the prices.

Organize for a purpose. Stand by that purpose. Be men. Solve the greatest problem of the age, save trade and civilization and secure agriculture from the grasp of injustice that has held it for a century.

Cheap Wheat Predicted

Evansville, Ind., June 21.—The annual meeting of the Southwestern Millers and Grain Association, composed of millers and grain dealers in Southern Indiana, Kentucky and Southern Illinois, was held here. Leading members of the association think this year's crop of wheat will be thrown on the market at 80c. and 82c.

Notice the last sentence: "Leading members of the association think this year's crop of wheat will be thrown on the market at 80c and 82c." Those wise millers know how farmers have marketed in the past and expect them to repeat the operation. Will they? Farmers are too prone to think the world is just overflowing with wheat when they have a good crop in their neighborhood. Their view is not broad enough. We want to tell them again that throwing (dumping) their wheat on the market does not reduce the supply. Somebody must hold it. If the millers are glad to catch and hold it, when farmers throw it until the demand needs it, why would it not be as well for the farmers to hold it?

One dollar per bushel can be realized for every bushel of wheat if the marketing is controlled. The more wheat is thrown on the market at the beginning of the season the lower the price will go. But all those who hold will get their price when the dumpers have sacrificed their crops. The world needs all the wheat, not a part of it. It has needed it in the past and will need it now. The 1905 crop is not the biggest crop raised by a long ways. While the supply of old wheat and flour is smaller than ever before, the bread consumers are more numerous than ever before and their ability to consume greater than ever before.

Don't dump and you'll get your price. Has not our advice been good on wheat twice before, on corn, on cotton, on tobacco, on everything. Some claim the A. S. of E. missed it on potatoes. It is not true. The plan of the A. S. of E. (Controlled Marketing and scientific distribution) would have secured profitable prices for all the potatoes. The plan of A. S. of E. was all right but the farmers failed to work it out because they were not sufficiently organized. The A. S. of E. don't promise to perform miracles, it only teaches the plans and farmers must put them in operation.

Don't dump. See your neighbors and prevail on them to not dump; $1 a bushel at Chicago, St. Louis, Indianapolis, Evansville, etc., is the price now and will not be made less no matter how large the crop is. Watch for bulletin August 1st. In the meantime keep **dollar wheat** before you.

Controlled Marketing Bound to Win

Enough farmers hold for the minimum prices of the A. S. of E., and they represent such a large part of every staple crop, that they are certain to get the price after the dumpers have marketed. The world must have all of the crops, not a part. Hence it will pay the minimum price when it cannot get its supplies at prices made by boards of trade. This is clearly shown in the last corn crop. To illustrate it we cannot do better than to reprint a dispatch from Chicago July 5th date, as follows:

For the first time in twenty years or more stocks of contract corn in public elevators in Chicago have been practically cleaned out. The large elevators of the Armour Grain Company, which seldom are emptied, have not had a bushel of corn for two weeks. Last Saturday only 107,000 bushels of the 137,000 bushels of call grades of corn were in public houses, of which 107,000 bushels were contract. Of this 63,000 bushels were withdrawn in the first two days, leaving only 42,000 bushels, being out of condition, so that the elevator operator bought them in to protect his interest. THIS LEFT ONLY 24,000 BUSHELS HERE.

Considering the size of the crop last year, there is a phenomenally light supply at terminal points. In the visible supply there is less than 3,000,000 bushels. Farmers are getting 50 cents for corn at Illinois points and some obtain more. West of the Mississippi River they are receiving proportionately good prices, and are not selling freely. The farmer for the present is the dictator of grain values, and is holding back for good prices.

Note particularly the last sentence "The farmer for the present is the dictator of grain values and is holding back for good prices."

Compare this admission with the cry of derision that went up all over the land a little more than two years ago when we promulgated the new doctrine of Controlled Marketing, and declared that farmers could be factors in shaping values of their crops. We cannot imagine any person so dense as not to be able to read the handwriting on the wall. We can hardly believe that any farmer will be so dead to his own interests as to refuse to join in this movement that makes it possible for him to gain everything with no possibility of losing.

CONTROLLED MARKETING is all powerful. Study the plan—it's simple. Join the army of co-operating farmers without delay.

There is work for all, and each should be willing to do his part.

The system of keeping records of local unions and members at headquarters is very excellent. All that we need now is the co-operation of officers of local unions to realize definite and valuable results, and a steady and permanent growth.

See Conventions and Meetings in Local Union Department.

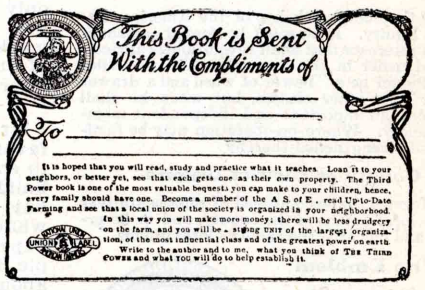
VICTORY! VICTORY!!

Reforms come through the people. No great reform is accomplished until the people are back of the movement. To secure their co-operation they must be educated. after education (and only after it) then organization is possible, after organization then comes co-operation.

Now we have in the farmers movement first the necessity for education. Millions are to be educated. To accomplish this there has been provided the very best mediums any movement ever had. We refer to this paper, Up-to-Date Farming and The Third Power book. No other great movement ever had such powerful mediums of education. Wherever they are read they "make new minds," as one of our readers said, and carry conviction that the farmers temporal salvation depends on him following their teachings.

A special educational offer is made in this paper of Up-to-Date Farming and The Third Power. It should appeal to every reader. Thousands should be persuaded to take of their own money and place these instruments of education into the hands of all their acquaintances. It will be like bread cast upon the waters and will return.

For all who will order Third Power books to distribute in this way we will write the name of the giver and receiver in the front of the book and dispatch with your compliments. See reduced fac simile below.



In this way the giver's name will be seen each time the book is taken up. Also, since the reading of this book will open up a new era on every farm, the giver will be held in grateful remembrance. Farmers should give them to other farmers, merchants to customers, professional men to clients, manufacturers to users of their goods; and all will be benefited. There is not a printed work in existence that can do as much good if widely distributed, as will The Third Power.

Second. After education, organization is easy, therefore let us have a million or more names on the educational offer. Then organization will sweep over the country. We have always found the lack of understanding to be the great hindrance to organization. Therefore, spread the knowledge, extend the education. No person can do this as easily or as well by word of mouth as it can be done through the means we have provided.

Third. Co-operate. Need we prove that farmers can and will co-operate for profitable prices and everything they are entitled to when organized? We need not. There are many examples where they have done everything called for in the first object of the A. S. of E. With more organization they will simply do it more easily and with more certainty.

The reasons are obvious; the way is made clear; the results are with the farmers themselves. Turn to "A million! A million!! Victory! Victory!!"

Packers Indicted

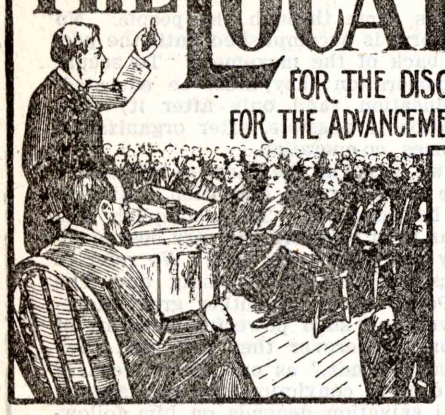
The following named officers and employes connected with the leading packing houses have been indicted for various unlawful practices:

J. Ogden Armour, president of Armour & Co.; Arthur Meeker, general manager for Armour & Co.; T. J. Connors, director, Armour & Co.; P. A. Valentine, treasurer of Armour & Co.; Samuel McRoberts, assistant treasurer of Armour & Co.; Louis F. Swift, president of Swift & Co.; Charles Swift, of Swift & Co.; Lawrence A. Caston, treasurer of Swift & Co.; Arthur F. Evans, attorney for Swift & Co.; R. C. McManus, attorney for Swift & Co.; A. H. Veeder, general counsel for Swift & Co.; Edward Cudahy, of Cudahy & Co.; D. E. Hartwell, secretary of Swift & Co.; Edward F. Swift, vice-president of Swift & Co.; Edward Morris, secretary of Nelson Morris & Co.; Ira W. Morris, of Nelson Morris & Co.; Samuel Weil, of Schwarzchild & Sulzberger; B. S. Cusey, of Schwarzchild & Sulzberger; C. E. Todd, of Schwarzchild & Sulzberger; V. D. Skipworth, of Schwarzchild & Sulzberger.

It is, however, a long ways between indictment and conviction and then the penalty when such offenders are considered. The public will wait with concern the next move.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

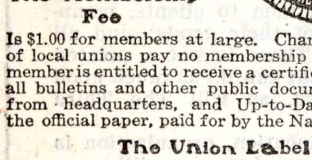
of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00 for members at large. Charter members of local unions pay no membership fee, and each member is entitled to receive a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, onletters, advertising matter, etc.



It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports or committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

What of the local?

Have you ratified?

Are you meeting regularly?

There are some important questions to discuss now.

The time for the national meeting is coming on.

The minimum price of all crops must be fixed on a fair basis, and then those prices must be adhered to to take the uncertainty out of farming.

Men organize for almost every conceivable purpose. It would be strange if they could not organize to price their own property when buyers have so long been pricing it and taking it without any reference to the interests of the owners.

Mr. Erdman, of North Dakota, proposes that farmers agree to marekt only an equitable portion of their crops per month, and thus distribute the marketing throughout the year, instead of dumping it all in a pile for manipulators and storers to gobble up.

Mr. E. J. Naylor, of Minnesota, is in favor of organization among farmers to control prices, but he wants them to build elevators so that somebody can buy their grain and store it. That is what they tried in Kansas, and the papers now tell us the elevator people have come to grief in a loss of about $30,000. When wheat is bought to be stored in elevators, it is bought under the prevailing market system, and must take the risks attendant upon that system. When it is simply held by the farmers until the price is offered, the market is controlled and the price secured without taking the risk. That's the difference.

J. J. Corbin, Mill Creek, Ind. Ter., sends for forty sample copies of Up-to-Date Farming, and says he believes he can get at least three dozen subscribers in his neighborhood. There is certainly enough to arouse the farmers, and each day's developments multiply it.

Pay quarterly dues promptly. The A. S. of E. is making money for every person in the country by well maintained prices.

Farmers had been in the habit of not paying a cent toward marketing their crops and lost hundreds of millions of dollars. The A. S. of E. now asks them 30 cents each three months to make and keep the prices good, which means hundreds of millions of dollars extra. Cheap enough, isn't it? Who will be so stingy as to withhold it?

Quarterly Dues

We have several questions, as follows:

When are quarterly dues payable and how long after non-payment before a member is delinquent?

Answer—The dues are payable July 1st, October 1st, January 1st and April 1st. Members are delinquent after these dates, and payments should be made as early as convenient. No penalty attaches, however, until a member is in arrears for two quarterly dues. We print from Article IV of By-Laws, as follows:

"A member six months in arrears for dues or other charges shall stand suspended without action of the union, but the secretary must report the same to the local union and to the National Union, and correct the membership roll. A member suspended for nonpayment of dues may be reinstated by the payment of arrearages, not to exceed one dollar, which shall be apportioned to the various funds the same as dues are apportioned."

Are you really treating other people as you think other people ought to treat you?

COUNTY CLEARING HOUSE

Delegates from local unions in all parts of Woodward county met in Woodward, May 17th, at 10 o'clock a. m. It was evident from the first that the meeting was for business, and subsequent events gave proof that such was true. The meeting was called to order by I. J. Teeters, of Greenwood, and after disposing of the minutes of the previous meeting and other preliminaries, they took the purpose of the meeting in hand in a businesslike manner.

Interst centered in plans for establishing a county clearing house to assist in providing means for the sysatic marketing of farm produce. A board of directors was immediately chosen, and promptly went into executive session. In a short time they reported a plan for the establishment of a county clearing house that was unanimously adopted by the delegates, and copies of the plan were ordered printed and sent to each local union in the county.

The union next proceeded to elect E. R. Williams, of Stockholm, to edit the Equity columns in the local papers for the ensuing quarter.

The meeting was enthusiastic, but marked throughout with that earnestness and businesslike conservatism that, coupled with enthusiasm, carries success in every action.—John Leasure, Doris, Okla.

Cass County (Iowa) A. S. of E. Convention

From the Massena Echo.

"The county convention of the American Society of Equity, which was held in the opera house in this city last Saturday, was attended by a good representation of delegates and members of the local and neighboring unions from Cumberland and Atlantic.

"A short session was held before noon and then the convention adjourned for dinner. Most of the delegates brought their families and dinners, and when the noon hour came they spread their tables in the hall and about 250 ate together.

The meeting was called to order again at one o'clock by the president, W. D. Bell. Brief speeches were made by F. D. Kerkmann, John Tatge, Rev. Chambers, W. C. McCurdy, H. E. Holen, L. R. Temple, S. D. Wyckoff and others, and their choir of young folks furnished lively songs, which added much to the enjoyment of the meeting.

"The program was concluded about four o'clock, and the delegates took up the work of the business session and adopted strong resolutions in support of the regulation of railroad freight rates and calling upon our representatives in Congress, especially our Senators, to support the policy of President Roosevelt in that direction. The question of where to hold the next county convention was settled without any contest in favor of Cumberland as a meeting place, and the date was fixed at August 26, 1905.

"There was amongst the members of the society a feeling of great satisfaction that the farmers as a class are awakening to a sense of their power and organizing to secure more equitable treatment from great corporations and other classes."

Hardinsburg L. U. Bereaved

On May 1st, Hardinsburg Local Union No. 5 suffered the loss of one of its leading members, when death called Brother Wm. M. Furrow to the silent tomb. The union tenders its sympathy to the bereaved family, and sincerely mourns the loss of a neighbor, friend and brother.

Hardinsburg, Ky., June 28th.

Signed:
C. M. BASHAM, Pres.
D. S. MILLER, Sec'y.

Local Union Growth

The success of the American Society of Equity depends almost entirely on the local unions. As we have said many times, "the country must be saturated with local unions;" also we have called for local unions "in every school district." And why not? It is possible. There is not an agricultural community in the entire country that will not be benefited by a local union of the A. S. of E. We might estimate the benefits as 25 per cent. from a financial standpoint, but there will be social benefits also that are so much needed in most country communities and which cannot be worked out except through this movement.

But after a local union is organized the work don't end. For a fact, it has just then begun. We want every officer and every member to realize this. They have only built the machine that is to work out their problems; but a machine is not valuable unless it runs, is operated. You know this as well as we do. Hence we want you to operate your local union machine. Put it to work first at getting every available and eligible citizen as a member. Make it a social machine; have meetings, parties and picnics for the whole family; make it a business machine, to get good crops and good prices for them; make of it a machine to help in buying your supplies, such as binder twine, oil, etc., etc.; make it work for good, pure and honest local government.

Herewith we show how the record of your local union will be kept at headquarters. Complete, isn't it?

We want each secretary of a local union to send a report of his local union as it was on July 1, 1905. We want the officers, such other data as the card covers, and number of members then or now. Then a report will be required each quarter and we can see how each union grows. Back of this card will be a record card for each member, where will be kept a complete record of his or her connection with the society.

Some members were slow about comprehending the necessity for the new Constitution, and change from our temporary plan to the one of precision and system. But the changes were all duly considered and a study of the system now prepared and some reflection on the results that we proposed to obtain will convince each person that the steps taken were necessary. No person will appreciate them more than the secretaries of local unions.

Next in importance to keeping your own local union growing is to see that others are organized all about yours. When three or more are in your county, then organize a county union.

Jacob Smith, Caldwell, Mich., writes: "We are taking in new members right along in Isabella county. The farmers here are very eager to join. I am well pleased with the organization, for I have gained many dollars since I joined. Wool buyers offered only 24 cents for wool before shearing, but we remembered your advice and got our price, thanks to the society. It will solve the problem."

A CARD

Mr. J. A. Everitt,
President of the A. S. of E.,
Indianapolis, Ind.

Dear Sir:—I find my large land and stock interests together with the fact that I must make a trip to the far West, such as to make it necessary to resign as State Organizer of the A. S. of E.

I regret the necessity for this step as I am in full accord with the teachings of the society and believe it offers the only plan to solve the farmers problems. During the two years that I have been State Organizer we have secured a fine membership and I look to see the society grow very rapidly under the direction of our many organizers. The foundation has been well laid. I will continue to work for the society in such a sphere as my other duties will permit. Faithfully yours,

GEO. G. WINANS,
Hamburg, Mich., June 19, 1905.

Conventions and Meetings

Send us the dates of your meetings. Write full particulars on a separate sheet from other matters.

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind. (Date to be announced later.) Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

STATE CONVENTION OF THE A. S. OF E. OF ARKANSAS, will be held at Hutsons Springs, four and one-half miles north of Clarksville, Johnson county, Ark., beginning August 17, 1905. The convention will convene at 10 a. m. Matters of importance will be considered. It is expected that each local be represented by one delegate. Arrangements will be made to care for all delegates free. On Saturday, the 19th, a picnic dinner will be served on the ground and will be a grand labor day rally. Members of all labor organizations invited. Correspond with T. J. Woodard, Vice-President A. S. of E., Clarksville, Ark.

FRANKLIN COUNTY (Va.) UNION will hold its next regular meeting at "Cross Roads," August 11th, at 10 a. m. O. E. Southall, Secretary, Scruggs P. O., Va.

CENTER COUNTY (Okla.) UNION will hold its next regular meeting July 22. All unions in Center county to send delegates. R. W. Wadsworth, President, Custer P. O.

CLINTON COUNTY, ILL., COUNTY UNION will hold its next meeting August 12th at Carlysle. Twenty local unions are represented with a total membership of 469 members. Efforts will be made to double the membership before the August meeting. Albert Wringe, Secretary, Carlysle P. O., Ill.

Virginia Meetings

National Organizer H. B. Sherman will soon return to Virginia to complete the organization work in that State. Meetings will be held as follows:

Grand rally at Lynchburg, Thursday, July 13th; Amherst C. H., Friday, 14th; Roseland, Saturady, 15th; Buckingham, Tuesday, 18th; Cumberland, Thursdty, 20th; Powhatan, Saturday, 22d; Goochland Tuesday, 25th; Amelia, Thursday, 27th; Farmville, Saturday, 29th; West Appomattox, Monday, 31st; Rustburg, Wednesday, August 2d; South Boston, Friday, August 4th; Danville, Saturday, 5th; Martinsville, Tuesday 8th, and Rocky Mount, Wednesday, August 9th.

Missouri Meetings

Hon. Thos. J. Braswell, Organizer, has planned an active campaign in Oregon and Howell counties in July and August. He has appointments as follows:

Thomasville, July 17th; Smyrna, July 18th; Bethany (near Greer P. O.), July 19th; New Salem, July 22d; Thomasson, July 24th; Myrtle, July 25th; Rosehill, July 26th, Black Jack, July 27th; Two Mile School July 28th; Alton, July 29th.

The meeting at Alton will be for the purpose of organizing a county union. Farmers of Missouri who have their own best interests at heart will rally to the support of the organization that will bring profitable prices. Address Thos. J. Braswell, Braswell, Mo.

MUHLENBERG COUNTY (Ky.) will hold its next regular meeting at Central City, July 28th and 29th. Arrangements are being made for a grand barbecue on the 28th, which will be farmers' and miners' day. Five thousand people are expected to be in attendance.—E. L. Davenport, Cisney, Ky.

Barbecue at DOBSONS SPRINGS, YELL COUNTY, ARK. Barbecue, July 20th. This will be given by members of the A .S. of E., but non-members are especially invited. C. C. Simpson, Secretary, Yell County Union, Dardanelle P. O., Ark.

Territory Meetings

Sam J. Hampton, General Organizer, will organize local unions of the A. S. of E. at the following places and times: Farmers are urged to advertise the meetings and insure a large attendance. Tahlequah, Ind., Ter., July 15th; Ft. Gibson, Ind. Ter., July 19th; Braggs, Ind. Ter., July 21st; Wagoner, Ind. Ter., July 22d; Claremore, Ind. Ter., July 26th; Tulsa, Ind. Ter., July 29th; Sapulpa Ind. Ter., August 2d; Okmulgee, Ind. Ter., August 5th; Henrietta, Ind. Ter., August 9th; Holdenville, Ind. Ter., August 12th; Shawnee, Okla., August 16th; Romulus, Okla., August 18th; McComb, Okla., August 19th; Etowah Okla., August 19th; Norman, Okla., August 23d; Pauls Valley, Ind. Ter., Aug. 26th; Wynnewood, Ind. Ter., August 30th.

How Reports and Prices are Made

Our readers remember a peculiar flurry in the wheat pit not long since. We do not vouch for the story, but it illustrates how these things are done, and we republish it from an Indianapolis daily:

"A crop 'expert' is a man who goes forth at the behest of a Chicago Board of Trade house, looks at the growing crops and then sends in such reports as the aforesaid house may want. He is about the best hand at 'seeing things' that is going. He can fail to see, however, when not to see it what is wanted.

"Nature is too slow for the crop expert. If the changes in the manipulative markets were governed solely by the whims of nature the fellows who reap their harvest in the Chicago grain pits would starve to death. A little instance that happened in this city a few days ago serves to show how reliable are these reports.

"A local grain man one day last week received some samples of wheat from an out county. The wheat appeared healthy, the grains were well filled and all in all it had the appearance of excellent wheat. The grain man is one of these eternal practical jokers and here was a chance he could not afford to let get by him. The wheat was of the bearded variety. He took two or three heads into his private office and getting down a stick of dark red sealing wax heated one end and allowed two or three drops of it to fall on the beards. When the substance cooled they were effectually stuck together. He gathered up the doctored wheat and took it out for the crop experts who were sitting around the quotation room discussing the latest figures and grain gossip in a highly authoritative manner. Observing that he had some wheat that appeared to be blighted, he submitted it to their scrutiny, and at the same time asking for an expert opinion as to what was the matter with that wheat. The grain experts studied the specimens closely and finally arrived at the conclusion that this wheat was suffering from scab.

"That night the report from the Chicago wheat market said that the traders had been greatly exercised by a report that wheat in all Southern Indiana was being ruined by the scab and that the prospects were that the yield would be less than a peck to the acre.

"That report which caused such commotion in the pit was a direct result of the grain man's joke with the sealing wax."

The American Society of Equity is out after a dollar a bushel for 1905 wheat and may get it.—Record, Fayette, Ohio.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. 10% discount when two or more consecutive issues are used. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Agents Who are making less than $25.00 weekly and want to engage in a high-class business write Dr. Haux Spectacle Co., Haux Bldg., St. Louis, Mo., and mention this notice in Up-to-Date Farming.

Men Wanted to sell the best line of scales made, Osgood Scale Co., Box 100, Binghamton, N. Y.

Start A Mirror Factory! We teach you this business. Our Prospectus, terms, and sample Mirror postpaid for 10c stamps. Part. Stamp. Hullinegr's Mirror School, Francesville, Ind.

Farm Lands

A Home For you in Minnesota or South Dakota. Land $8.00 to $15.00 per acre and no better anywhere. Send for full information. Crop payments (no crop, no pay). N. Miller Land Co., Browns Valley, Minn.

Canadian Lands are worth investigating. Send for our handsome magazine "Resources." U. S. Bureau of "Resources," 229 New York Life Bldg., Minneapolis, Minn.

Cash for your farm, ranch, home or business, no matter where located. If you wish a quick sale send us description and price. N. B. Johnson & Company, 543 Bank of Commerce Building, Kansas City, Mo.

Cash for your real estate or business no matter where located. If you desire a quick sale send us description and price. Northwestern Business Agency, C313 Bank of Commerce Building, Minneapolis, Minn.

For Sale Excellent stock and fruit farm. Address R. E. Cooper, Hedric', Ga.

For Sale at a bargain a nice little home 5¼ acres conveniently located at the foot of the Peaks of Otter, 4 miles from R. R. Station on Rural Route. Good buildings, fine water, plenty of fruit of all kinds. A. S. Johnson, Bedford City, Va.

Oklahoma Farms, write for prices. H. F. Stephenson, Kingfisher, Oklahoma.

Reward $1,000, for equal of our Two Wheel Power Wind Mill, Self Oiled Pumper or Armsaver Husker. Ask for booklet forty-eight. Double Power Mill Company, Appleton, Wis.

Sell Your farm through W. M. Ostrander, 406 N. Am. Bldg., Phila. Pa. Largest real estate dealer in the world.

Send for our Illustrated Catalogue of Central Missouri Farms. Geo. W. Hamilton & Son, Fulton, Missouri.

Write J. D. S. Hanson, Hart, Mich., about fine farming and fruit growing lands.

160 acre level, improved farm for sale in the wheat belt of Kansas; $2,000 cash. Write J. N. Stinson, Hoxie, Kansas.

Household Supplies

Cook Stoves and Ranges from our factory are made better and cost less than others. To prove it we send them on 360 days approval test and pay the freight. Can you afford to overlook this opportunity? Send for large complete catalog No. 290, mailed free on request. Kalamazoo Stove Co., Kalamazoo, Mich.

Guaranteed Double Flue Hot Blast Range only $21.75. Your money refunded if not satisfactory. We manufacture, and sell 1000 other articles at factory cost plus one small profit. Send for catalog. Hapgood Mfg. Co., 616 Front St., Alton, Ill.

Save the temper—Save the Clothes Pins. The Handy Clothes Pin Bag slides on the line—just where needed when the wind is blowing. Postpaid 30c. The Peerless Supply Co., 854-A S. High St., Akron, O.

Implements and Farm Supplies

Best Feed and Ensilage cutter and shredder on the market today is the "Blizzard." You can get a machine on trial at our risk. Joseph Dick Agricultural Works, Box 80, Canton, O.

Binder Twine for farmers, local unions and dealers. From factory to you at wholesale prices. Anti-trust twine. Orders accepted and filled now at 9½c per lb. Sold in bales of 50 lbs. each. Twine guaranteed. None better at any price. Samples free. Prairie Mfg. Co., Indianapolis, Ind.

Blizzard Feed and Ensilage Cutter will do your work better than any other. It will make more money for you. Latest improved and best on the market. Write for free catalog telling all about it. Joseph Dick, Agricultural Works, Box 80, Canton, Ohio.

Catalog describing the famous Eclipse Hay Presses sent free. Eclipse Hay Press Co., 547 W. 7th St., Kansas City, Mo.

Cider Machinery. Catalog free. Boomer & Bochert, 474 West Water St., Syracuse, N Y.

Farmers Save money. Buy your cedar fence posts direct from producer. Write for prices to J. Reed, Clark Fork, Idaho.

Free Trial of the Chatham Fanning Mill for 30 days. This is the only mill sold that way because it is the best. We have a book for you; send for it—free. Manson Campbell Co., Dept. 15C, Detroit, Mich.

Paint from the manufacturer insures you better quality at lower cost. Before painting read my book and get samples, etc. My book will help you with whatever paint you use. It's free. O. W. Ingersoll, 234 Plymouth St., Brooklyn, N. Y.

Roofing For any building on the farm. Paroid and Neponset have years of satisfaction. Send for free sample and booklet on "Building Economy." F. W. Bird & Son, East Walpole, Mass. and Chicago.

Save Money, mend your own roof, tanks, etc., with Stop-A-Leke. Stick form. Always ready. Results permanent. By mail 25 cents. Breese Bros. Co., Cincinnati, Ohio.

Scales Official Scales at all Stock Shows. Highest award at all Expositions. Require no pit. Only Scale arranged to hang in heavy Steel Frame. Information free. Chicago Scale Co., Chicago.

Stump Pullers, tree pullers. Something new. Will pull an ordinary stump in 1½ minutes. All sizes. Send for free illustrated catalog. Milne Mfg. Co., 835 Ninth St., Monmouth, Ill.

Live Stock and Supplies

A Gift for you if you answer two questions: How much live stock do you own? What stock food have you used? Large picture, without advertising, of the Word's Champion Six-horse Team mailed free for your answers. Printed in many natural colors; suitable for framing. Wilbur Stock Food Co., 60 Second St., Milwaukee, Wis.

Fleming Bros'. Vest Pocket Veterinary Adviser, valuable to every farmer, mailed free. Write a postal to Fleming Bros., 207 U. S. Yards, Chicago.

Free a valuable book for every farmer and horseman. Write for our Vest Pocket Veterinary Adviser. Fleming Bros., 207 U. S. Yds., Chicago.

Tamworth Swine Immense size, prolific breeders, grand suckiers and economical feeders. Quality of bacon unsurpassed. W. Warren Morton, Russellville, Ky.

Poultry and Supplies

Catalog describing thoroughbred poultry, pigeons, etc., printed in colors 10c. List free. Plymouth Rock Squal Co., 338 Howard St., Melrose, Mass.

Fine Barred Rock eggs—$1.00 per 15, $2.50 per 45. Mrs. E. E. Glass, Rockdale, Ky.

Hamburgs, Leghorns, Minorcas, Reds, Rocks, Wyandottes. Eggs and stock bargains. Albertville Poultry Farm, Albertville, Ala.

Leghorns Rose Comb Brown, fine stock, best layers. Carefully selected Eggs, $1 per setting of 15; more than one setting in same order 75 cents each. Mrs. J. P. Stelle, Dahlgren, Ill.

Remedies

Barren Cows cured and abortion prevented. Pamphlet free. Moore Bros., Veterinary Surgeons, Albany, New York.

Horse Owners are safe with Absorbine in the barn at all times. Our valuable book 6-B is free. W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.

Warts Removed. No pain, no burning, no cutting, no trouble. You have the remedy in your house. A common vegetable used raw. Nothing added. I will tell you how to use it for 25c. I have absolutely nothing to sell but this information. J. B. Fentony, Indianapolis, Ind.

Telephones

Free Book on Telephones for farmers. Write for book F118. Stromberg-Carlson Telephone Mfg. Co., Rochester, N. Y. or Chicago.

Telephones We make farmers lines a specialty. Instruction book free. Central Telephone Co., 2143 Lucas Ave., St. Louis, Mo.

Miscellaneous

Barns of plank cheapest, strongest. Book for stamp. Shawver Bros., Bellefontaine, O.

Boats that can't sink! From $20.00 up. Handsome catalog free. W. H. Mullins Co., 164 Franklin St., Salem, O.

Consumers Union mutual help system. Leaflets 2 cents, lessons 10 cents. Every farmer write Consumers Union, 317 W. Randolph St., Chicago.

Gun catalog free. You will find valuable information in it. Union Fire Arms Co., Desk T, Toledo, O.

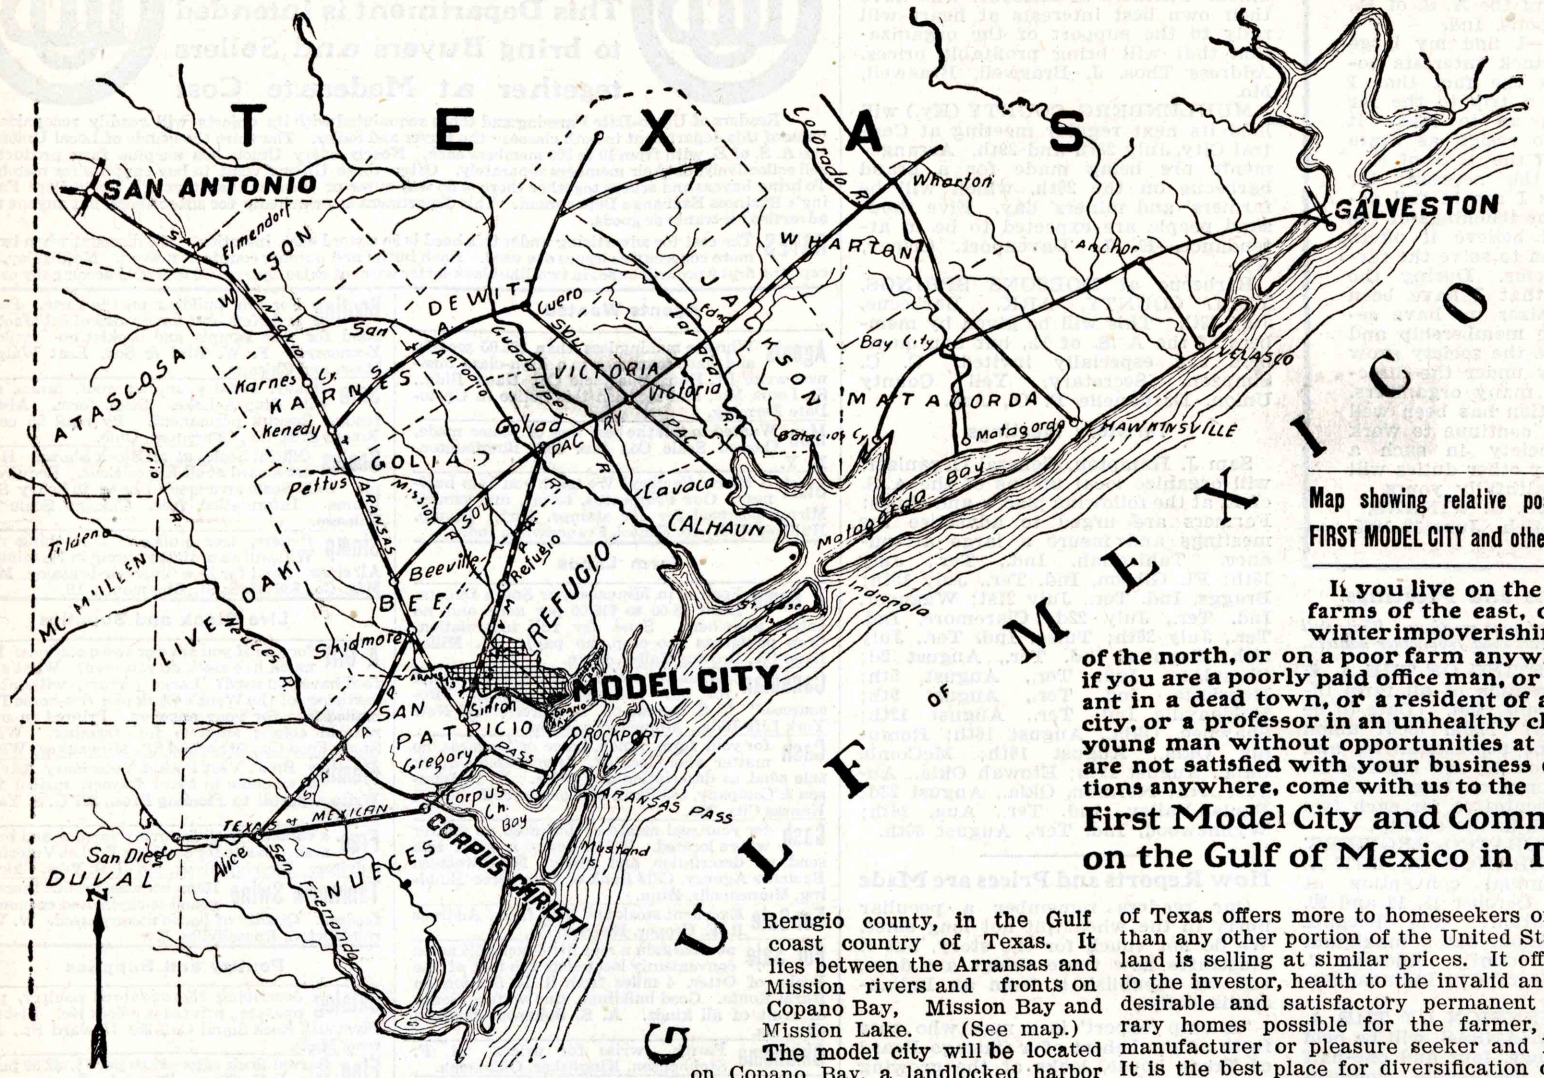
Mushrooms —Complete instructions for raising them profitably, 50c. Mrs. C. G. Doty, Middletown, Ohio.

Watch stamped 23 jeweled adjusted, only $3.98. Sent subject to examination. If not satisfactory do not accept. If O. K. take it and pay express agent $3.98 and charges. You can't lose. We take the risk. R. E. Chalmers & Co., 356 Dearborn St., Chicago.

Every Farmer Who is up-to-date should have something to advertise and sell through the Business Exchange. It may be thoroughbred cattle, or horses, or swine, or poultry. It may be plants or eggs. Also wheat, corn, oats, hay, etc., for consumers. Your advertisement is read by 750,000 peoplec—ounting five readers to the copy. Those who have used these columns have received excellent results. Try a little ad, and see for yourself how good returns are. Rates etc. explained in the heading at top of column. The cost is extremely moderate. Write Advertising Department

UP-TO-DATE FARMING Indianapolis, Ind

COME WITH US TO THE FIRST MODEL CITY AND COMMUNITY



The Model City

may expect 50,000 People in Five Years

Map showing relative position of the FIRST MODEL CITY and other Texas cities

If you live on the wornout farms of the east, or in the winter impoverishing regions of the north, or on a poor farm anywhere. Or if you are a poorly paid office man, or a Merchant in a dead town, or a resident of a corrupt city, or a professor in an unhealthy climate, or young man without opportunities at home; or are not satisfied with your business or conditions anywhere, come with us to the

First Model City and Community on the Gulf of Mexico in Texas

MORE REASONS WHY YOU SHOULD JOIN THIS MOVEMENT TO THE FIRST MODEL CITY AND COMMUNITY

The first Model City and Community is in an ideal locality, with unsurpassed agricultural, commercial and sanatary possibilities. Where the industrial, educational and religious privileges shall far excel those of the most favored localities of today. Where every family may literally dwell under its own vine and fig tree. Where the principles of truth and right living may be inculcated and parents may dedicate their children to noble purposes and feel secure from all evil contaminating influences. Where every obligation of organized society will be courageously discharged. Where the utmost freedom consistant with social integrity may be exercised and every faculty and instinct that man is heir to stimulated to a perfect, healthful development. Where abundant remunerative labor adapted to each particular individual can always be secured; vagrancy is strictly prohibited and idleness as vigorously discouraged. Where no pleasure or recreation will be denied that is not inherently evil of itself but where all activity will be restrained within healthful bounds. Where profitable labor and healthful sports may be indulged to the heart's content. In a word, where the principle of doing unto others as we would have them do unto us will permeate all industrial, commercial and social activity, and the principles of pure esthetic and ethic culture will be made the dominant influence in the community, so that the greatest possible prosperity and happiness may be enjoyed by all who become residents of the Model City and Community.

Promoters and Incorporators

The Model City Land and Improvement Association has incorporated under the laws of the District of Columbia. The incorporators are men of large business experience, including practical agriculturalists, manufacturers and professional men, who will give their entire time to locating the colonists and providing for their needs, make public improvements, establish business enterprises, organize the educational work and promote the general welfare of the city and community. In fact, make a beautiful and profitable place to live in and do business and turn it over to the citizens.

Location

The First Model City and Community will be established on a large tract of land comprising nearly fifty thousand acres in the eastern part of Rerugio county, in the Gulf coast country of Texas. It lies between the Arransas and Mission rivers and fronts on Copano Bay, Mission Bay and Mission Lake. (See map.)

The model city will be located on Copano Bay, a landlocked harbor opening into the Gulf of Mexico, affording easy communication with all gulf ports and ready access to the markets of the world. This tract has been a large ranch and never under the plow. The soil is very rich. A railroad is now built across the western part of the tract of land and a line will be constructed to the Model City as soon as the proper surveys can be made and the first residents located. The land will be divided into twenty-five acre tracts, each fronting on a well made public highway, and sold only to bona fide settlers, or those who will place settlers thereon.

Soil—Climate—Rainfall—Crops

The soil is a sandy loam, well drained, easily worked and surpassingly fertile. These qualities combined with a season earlier than other part of the country, will make the model community the greatest truck and fruit farming section in the United States. There is little danger of frost and truckers can plant and harvest crops the year round. Understand, here you can grow as great a variety of grain, vegetables and fruits as in any section of the south and ahead of California or Florida; thus always being assured of the good prices.

Among the products we mention Irish potatoes, 200 bushels per acre and two crops a year. Tomatoes, 300 crates to the acre at seventy-five cents a crate and then some other crop can be grown the same year. Cabbage brings $100 to $200 per acre and cotton can be planted after the cabbage and produce a full crop. We never saw finer cauliflower than is produced in this section. It has brought returns of $400 to $800 an acre. Onions surpass the imported Bermudas and there is almost an unlimited demand for them. New York alone wants 400,000 crates annually as soon as they can be produced. They yield enormously and have sold for $800 an acre. Musk and water melons grow to the greatest perfection. You know what fancy prices they bring in the northern markets. Pecans, plums and many other fruits and nuts, also a great variety of berries are native to the country and grow in great profusion, while apples, pears, peaches, apricots, oranges, lemons, olives and berries of all kinds can be cultivated with great profit.

Thus we might enumerate almost every vegetable and fruit grown in this country, and they can be produced here and marketed ahead of crops from any other state; also our system of marketing will excel any in vogue in the past.

This particular section of the "coast country" of Texas offers more to homeseekers or investors than any other portion of the United States where land is selling at similar prices. It offers wealth to the investor, health to the invalid and the most desirable and satisfactory permanent or temporary homes possible for the farmer, merchant, manufacturer or pleasure seeker and his family. It is the best place for diversification of crops to be found in the United States. It equals Iowa for CORN, excels all other states in growing ALFALFA, LEADS the Carolinas in producing COTTON, beats the BERMUDAS for ONIONS and PENNSYLVANIA for CABBAGE. Oranges are among its products, while lemons grown in this district were awarded first prize at the St. Louis World's Fair.

It is cooler in summer than Iowa and the winters are about like the month of May in the north. There is no humidity, for the trade winds blow constantly from off the salt water, making it a healthful place for people suffering from rheumatism and lung trouble. The land is well watered. Has SAME AMOUNT OF RAINFALL as TOPEKA, LINCOLN, SIOUX CITY and ST. PAUL, about thirty inches.

Markets

Shippers already have access to three railroad lines by using the water a short distance in the M. C. L. & I. Association's own ships, besides water navigation to the great eastern markets. New York and the east are reached in six or seven days by water, while the middle west and north can be supplied in forty-eight hours by rail. Our crops will reach the northern markets the earliest part of the season at a time when the demand is eagerly waiting for the supply and high prices are always assured. Docks, railroad terminals and warehouses will be constructed by the association and shipments will be made to the best advantage. Also through organization advantages will be secured in marketing never realized before.

Specific Openings

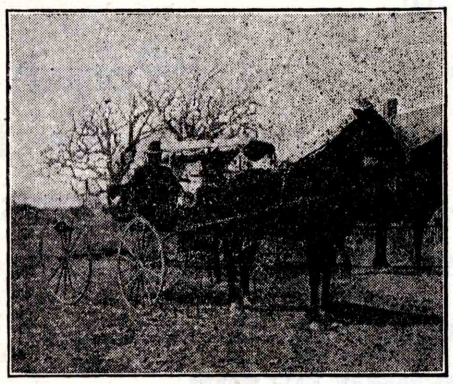
There are splendid openings for mechanics, merchants, manufacturers, farmers, orchardists, stockmen, and in every line of legitimate industry. Men are wanted to develop the resources and establish the industries required in the MODEL CITY AND COMMUNITY.

Educational, Social and Religious Advantages

Among the paramount purposes of the promoters of the MODEL CITY AND COMMUNITY is to make it the mecca of industrial, intellectual, social and religious activity. A system of graded schools will be established and conveniently located. Because of the smallness of the tracts into which the farm land is divided the districts will be densely populated, furnishing one hundred or more pupils to each school. These will be graded according to their attainments and ability and as the training proceeds a careful record or chart

(Continued on Page 9)

will be made of each child's tendencies and qualifications so that when they enter the higher educational institutions of the MODEL CITY each may pursue a course that will prepare them for a life's work to which they are peculiarly adapted. When the education is completed this chart will determine the holders future career instead of the young man or woman skirmishing for years for an opening to which they are adapted. We will teach each person to know himself and start them aright and in this way we believe most of life's failures will be prevented.



Showing the former owner and his ranch wagon

Each building will be provided with a large auditorium to be used by the community for its public functions. Lectures, lyceums, choral societies and social functions of various kinds will be encouraged and organizations for mutual improvement formed. The principal of each school will direct the spiritual training of the child as well as the intellectual. A small experiment station will be provided for at each school under the society and absents himself from certain great general supervision of the larger station adjoining the city. In the MODEL CITY the educational work from the start will be organized according to the best approved methods and the foundations of a great and superior educational system established culminating in a great university.

Here too an immense auditorium will be provided for the great convocations of the entire people—industrial, intellectual, political, social and religious—for whatever the peculiar political or religious affiliation of any individual may be his obligation to the community is not met if he refuses to recognize the solidarity of business and public functions.

Instead of education being made an adjunct of religion, religion will be made an adjunct of education and in the MODEL CITY the educational system, to a large extent, will be held responsible for the moral and spiritual welfare of the community. The educational institutions will also be made the centers of social activity. Reading circles, lyceums, dramatic clubs, musical societies, lecture bureaus, physical culture and athletic organizations and social societies of various kinds will be fostered by the Department of Education.

The social instincts of the young must be directed into right channels and developed if we would have a strong, vigorous manhood and womanhood. If children, boys and girls; youths and maidens; young men and young women; could commingle more upon a rightly supervised social plane, a large percent of the incongruities of socity would be eliminated and the race would enter upon a new era of esthetic and ethic power and development.

Here will be accomplished what the greatest philosophers and educators of all time have desired to see, but did not have the force to achieve. Here Froebel's maxim will be realized, which says: "Education should give children employment suited to their nature, strengthen their bodies, exercise their senses, employ the waking mind, make them acquainted judiciously with nature and society, cultivate especially the heart and temper, and lead them to the foundation of all living—to unity with themselves." And we will add, when their education is completed in the MODEL CITY, they need not waste time in the choice of what to do. Their chart clearly displays what they can do and what they cannot do. In other schools the hardest job of all is for the young man or young woman to find out what they the fitted for after the education is acquired. More than half the people simply plunge into something and find out in after life that they were not fitted for it.

Denominational Concessions

Liberty of worship will be granted. Building lots in the city and country will be set apart for church purposes.

The Sportman's Paradise

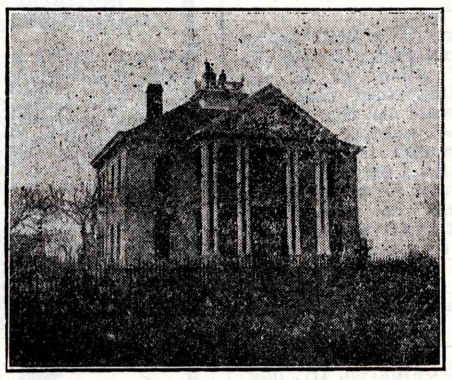
The sport to be had here is almost beyond what any hunter or fisherman would dream. Besides an unlimited supply of Tarpon, the bays and streams abound with Jew and June fish, Jack fish, red fish, king fish, trout, mackerel, pampano, sheepshead and other varieties; all fine for table and some of them of the gamiest kind. Here also in winter is the home of the redhead, blue bill, mallard and several other species of the duck family. The bays abound with ducks and geese, and the sportsman can have ideal shooting here from October to March.

Bathing

The surf bathing is unexcelled, a smooth sandy beach reaching far out into the breakers of Copano bay, making it an ideal spot for those who enjoy bathing in the sea, with no danger attached.

Climate

The climate is ideal, the prevailing winds being from the southeast, sweep over the Gulf of Mexico, making it cool and healthy along the coast through the summer months and an ideal winter resort such as must attract thousands of northern people for winter residence alone.



The old Homestead cost $15,000. This is the only building of importance on the tract

Invest Now

We offer this land in twenty-five-acre tracts. It is the choicest trucking land in the world and the price is only $20 per acre. City lots are offered at $100 apiece. The terms are as follows:

When 200 subscriptions for twenty-five-acre farms have been received at headquarters, the first division will close and the first allotment will be made. Note this carefully: The first 200 subscribers for farms will get the choice of all the tracts and those who subscribe for lots up to the same time will get the choice of all the city lots. These people will then be taken on the ground to make their selections or they may select from a carefully prepared plat at this time. The balance of the lands and lots may then be advanced in price. If so, the selected lands will also advance. We predict values will double in value as soon as opened up. An assessment will be made at this time amounting to one-third the value of land and lots subscribed for in accordance with the clause in the application blank herewith. When this one-third has been received a certificate of deed will be issued to you. The second payment will be due and payable when you arrive on and take psosession of the land subscribed for. We will then issue a guarantee deed; the final one-third will be due and payable one year from date of the certificate of deed. One-third of all the money paid in for land and lots will be used to improve the MODEL CITY AND COMMUNITY.

In view of the crops that can be grown here, the earliness of production and the prices such crops command, the land that can now be bought at $20 an acre will soon be valued at $200 an acre, as surely as Indiana, Illinois, and Iowa land sells for $100.

In the city there are splendid opportunities for merchants, manufacturers and professional men. Every branch of business must be represented. The first choice of lots, bought now at $100, will be worth $5,000 or more in a few years when in the heart of a thriving city. Business lots will be 25x150 feet and for residences 50x150 feet.

Money invested in the FIRST MODEL COMMUNITY land and lots is safer than a savings bank, while for returns the latter pays 3 per cent. annual interest while the income from the former will more than double the principal (investment) every year, to say nothing about appreciation in value. Make your own comparison.

The first allotment of lands and lots will occur about August 20th or before. First subscribers will have the first choice. This is not a lottery where only the lucky draw prizes, because here every subscriber is sure of a rich prize. The earlier your subscription is received the more valuable will be your prize.

How would you like a twenty-five or fifty acre tract adjoining the first model city, or near the city on the Arransas river, or on Mission bay, or Mission Lake, or on Mission river; or some lots on the water front of Copano bay, where the principal business streets will be located?

The advantages of the FIRST MODEL CITY AND COMMUNITY for living and doing business, for recreation, sport and health; could hardly be improved upon. It will be the object to make it the most beautiful city in the country. A place that will attract desirable, permanent residents and thousands of temporary visitors seeking health and pleasure; not only from every part of America, but from the whole world.

The brilliant prospects ahead make this the most promising investment before the public today.

How to Proceed

Read carefully this advertisement, then fiill out the accompanying application blank stating just what you want, then mail it to the address given. It will be numbered beginning with No. 1 and when the required number of applications have been filed (200) the first allotment, in accordance with the agreement, will be made, and a certificate of deed will be issued which will entitle you to make a selection of property your number entitles you to.

A Request

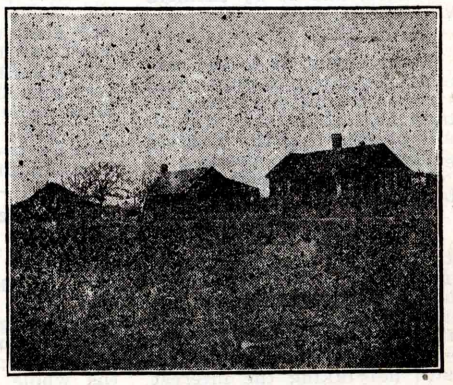
You will no doubt like to have some of your neighbors go with you to the MODEL COMMUNITY. Get them interested. If you want papers and literature send to us for them, FREE.

A STATEMENT OF FACTS ABOUT TEXAS

By R. H. Thompson, Henderson, Texas.

Texas contains 262,290 square miles. When you read about the size of the great State of Texas, and see the cold figures before your eyes and see that the distance across same is nearly 900 miles east and west, while the distance north and south is nearly 800 miles, you yet have but a slight conception of its magnitude. You must travel across its great area and see its many resources, which are bringing about wonderful prosperity to faintly comprehend the opportunities present in this great commonwealth "The whole has not been told" is what visitors who have been in this State report when they report to their friends.

With an area of 262,290 square miles and a population in 1900 of 3,082,288 that to-day will reach more than 3,250,000, with an increase greater than any other state in the Union, she stands out first in area, first in railroad mileage, first in production of cotton, cattle and horses, and second in production of hogs. She contains more prairie land than Kansas, more fine timber than Michigan, more oak than Virginia, more iron than Alabama, more marble than Vermont, more granite than New Hampshire, more corn land than Illinois, more wheat land than the Dakotas, more rice land than Louisiana, more fruit land than California, with a rainfall of 30 to 48 inches in the eastern part of the State and lessening as you go west, which makes it suitable for any kind of crops grown.



A Ranch House and Buildings

For Health, Happiness and Wealth come with us to the First Model City and Community. Address,

Model City Land and Improvement Ass'n.

J. B. Coghill, Mgr.

Dept. 3 **INDIANAPOLIS, IND.**

No.

CUT OUT and send promptly. YOU MAY BE FIRST if you mail this today

Applications are numbered as received—No. 1 has first choice of all farms or lots, No. 2 Second Etc.

To Mr. J. B. Coghill, Mgr.
Dept. 3, Indianapolis, Ind

I hereby subscribe for.... farms of 25 Acres each. And ....lots, all in Refugio Co., Tex. and in the tract of land known as **The Model City and Community.**

For such farm land and lots I agree to pay to **The Model City Land and Improvement Assc.** $20.00 per acre for the farm land, and $100.00 each for the lots. One third to be paid in cash as soon as two hundred (200) 25 Acre farms are subscribed for; another one third in cash when I take possession of the property and on delivery of the deed. agree to take possession of the property or place some person in possession within six months from the time of notice of subscriptions for 200 farms is received. The balance one third is to be paid in one year from same date. Deferred payments to bear interest at 6 per cent per annum. If it is not convenient to make the last payment at time specified it is agreed that the time will be extended another year. In the case of city lots the condition to take possession is waived.

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Pure Seeds for Farmers

We cannot express in terms too strong the importance of pure seeds for farmers. The losses from this source alone, though seldom taken into account, are enormous. One great source of loss is from imperfect stands. The same labor must be expended in cultivation whether the proper number of plants be growing or not, and the places made vacant by missing plants will grow weeds, making the work of cultivating actually greater where there is but an imperfect stand. Then when the percentage in loss of yield is counted the damage is apparrent, all of which could have been saved by planting only good seed.

Great as this loss is, it is not the greatest. The damage of having a farm inoculated with certain specially noxious weeds, is beyond estimation. A New York court a few years ago awarded a farmer we believe, $20 per acre damages against a seedsman for selling him seed oats that were mixed with wild mustard seed. This judgment, of course, was rendered upon evidence, and is a fair index to the damage foul seeds may be to a farmer.

We have known valuable farms ruined in this way. Meadow sorrel, buckhorn, wild mustard and other like seeds, once set on a farm, are almost impossible to get rid of, and it is now difficult to get grass or clover or millet seed that is not foul with some or all of these, and their hold upon some of the richest farms of the country is a matter serious to contemplate.

These facts make us look to The Pure Seed and Plant Company of America with a very high degree of hope. If they can reach their ideal and guarantee to the people strictly clean and pure seed, and seed, a high and uniform percentage of which will germinate, will be of untold value to the farmers and the country; and those who become stockholders in the company will undoubtedly make good investments. So long as farming is done, there must be seeds to plant and if guaranteed good and pure seeds can be had, no others will be purchased.

Corn improvement, breeding up, is still attracting much attention. Science has made its mark for the farmer in the cornfield, and careful selection has taken the matter up on lines that science has pointed out. Note the fields all through the growing season, and mark the specially promising hills or stalks. Keep them under special observation, and from those that do the very best, take the best ears and save them for seed next year. Not many will do this, but those who do, though they may be laughed at by their neighbors, will add to the importance of the corn crop.

There are 815,453 farms in the Philippine Islands, averaging a little less than nine acres each. Of these farms 778 are occupied by white farmers, 308 by farmers of mixed blood, 813,382 by brown (native) farmers, 959 by yellow (Chinese) farmers, and 26 by farmers of unknown blood.

There is disagreement as to the cotton acreage and condition of crops; and and prices through controlled marketing have been held above the "slump" level. It is important that the planters as soon as possible, get in position to absolutely control the marketing, when all other factors will be of minor moment.

It is quite sure that the hay crop of 1905 will not equal, either in quantity or quality, that of 1904; but the hay growers made less effort last year to secure the minimum price than did any of the producers of staple crops. They are still not taking the interest their product demands, and what effect they may have upon the crop of 1905 is yet to develop.

The corn crop of 1905 is promising well. There can be no doubt that organization helped to hold up the price of the bumper crop of 1904. Witness cash corn selling at the A. S. of E. price in Indianapolis and many other large markets. If the time has been taken proper advantage of to strengthen the organization, the price of the 1905 crop may be made remunerative no matter how large the crop.

The tobacco crop is properly treated in that department of this paper, but our advices clearly indicate that the crop of 1905 will not be so large as that of 1904; and the growers of that crop are getting so well organized as to easily influence the prices. Tobacco that has changed hands brought the highest prices for years, while what is unsold is in the hands of organized farmers who have their minds settled on the value.

The potato crop of last year was evidently too large, unless transportation facilities had been better. In many of the centers of production prices ruled below the remunerative mark, though in many of the centers of consumption there was an unsatisfied demand at prices fairly remunerative. A problem in front of us concerning the potato crop is to get the producer and the consumer together which is largely a problem of transportation. The A. S. of E. can solve this problem, but first let us have more members.

Broom corn growers learned a great deal last year. There will be about the same demand for that product this year that there was last, but the "advance agents" will not find the task of buying at cut-throat prices so easy as heretofore. Broom corn growers do you take heed?

TheA. S. of E. may be a little below the equitable in temporarily fixing the minimum price of wheat at $1 per bushel; but that important cereal is one which cannot wait for the annual meeting, and if the annual meeting were held early enough to meet the marketing of the wheat crop, it would be too early for almost all other crops. Hence a price must be named for wheat in advance of the national meeting, and it is well to make that price conservative. It is, therefore, fixed at a dollar, based on both Chicago and St. Louis, and not a bushel should sell below this basis.

Dr. W. F. Dale, of Dahlgren, Ill., has been successfully treating red sorrel, or meadow sorrel, as it is variously called (Rumex acetosella), with coal oil as a spray or sprinkle. He is of the opinion that the coal oil follows the stems through the cell formation to the roots and destroys them, but this is not given as a demonstrated fact. This species of Rumex is the very worst pest of the meadows and pastures of the Ohio, Wabash and Mississippi valleys. The seed is quite small, of a rich, glossy brown, and it is triangular in shape like a grain of buckwheat.

All progressive farmers want to make more money—that is why they are in business. To make the most out of farm products the latest and best machinery is required. Farmers who are always up-to-date have Blizzard Feed and Ensilage cutters. We advise all subscribers who want the best cutters and shredders to write to Joseph Dick Agricultural Works, Box 80, Canton, Ohio. It is well to always mention Up-to-Date Farming in writing to manufacturers.

A Telephone Trial Offer

Farmers everywhere are putting in telephones because they are a convenience that cost but little and are just about indispensable. They bring farmers right up to the town and put them in close touch with the markets, doctors, depots, merchants and, in fact, the whole community. It don't pay, however, to put in a cheap 'phone; a good one does not cost much and will never get out of order. The Standard Telephone Co., 205 Jefferson street, Milwaukee, Wis., make a dandy and sell them right. Write to them and get their 30 days' trial offer.

ALL crops should be well supplied with a fertilizer rich in POTASH. The benefit will be seen in the grain and also in the crops to follow.

"Plant-Food" and "Potash in Agriculture" are two books full of interest to every progressive farmer; we will mail them to you free of all cost.

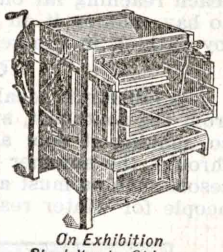
The Chatham Takes Oats From Wheat

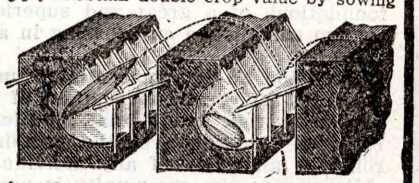


On Exhibition Stock Yards, Chicago

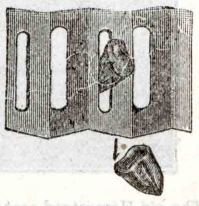
Every farmer who grows succotash will be glad to learn that THE CHATHAM FANNING MILL has a new riddle that is guaranteed to make an absolutely perfect separation of oats from wheat. This wonderful piece of mechanism has about 4,500 different parts, yet is as solid and compact as a one-piece affair. You can take ¾ oats and ¼ wheat and get a perfect separation, or you can *reverse* the proportions.

With this Wheat-and-Oats Riddle you can *go ahead and sow oats and wheat together*—as we guarantee you can make a perfect separation.

Here is a cross section of the new Riddle. You can see the riddle will let wheat through readily, but oats cannot get through. The riddle has a jumping attachment that keeps the oats jumping until they go over behind on the floor. **GROW SUCCOTASH!** The new riddle will help you obtain double crop value by sowing wheat and oats together, as it insures the perfect separation necessary to obtain the highest market prices.



HERE'S MORE GOOD NEWS! We have also invented a Corn Screen that *grades corn perfectly.* The Iowa Agricultural College has recently demonstrated that it will grade corn 98% PERFECT! The accuracy of drop of the best Edge Drop Planters depends upon the perfect grading of corn used. The highest degree of accuracy has heretofore been 60 to 65%. The new Chatham Corn Screen has raised the record to 100%! This increased accuracy of drop means an *increased yield* of at least *20 bushels* of *corn* to the *acre!* The accompanying sectional view of Corn Screen shows the principle of operation.



The Chatham, in addition to the above improvements, has seventeen screens and riddles and will separate, clean and grade *anything* that can be handled by machinery. It runs by hand or power. It has a patent bagging attachment. The Chatham will add largely to the profits of any farmer. It will prove a money-maker for *you.* Write at once for free book. Every Chatham is GUARANTEED FOR FIVE YEARS. Easy terms. Send for free book "How to Make Dollars out of Wind."

We have Distributing Agencies in all Grain Growing States.

The Manson Campbell Co., Ltd., 15C Wesson Ave. Detroit, Mich.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

We have not noticed a drop in the live stock market for a long time that was not prefaced with the remark that excessive shipments was the cause. Prevent excessive shipments, and the market is controlled, and steady prices are secured. Organization can prevent excessive shipments.

Range operations are narrowing every year. The "all out door" system of stock raising will soon take its place with other things this generation has seen step to the rear. It will not be long until farmers will only have to compete with farmers. All stock raisers can then meet on a common level, co-operate and control the marketing, and thus secure steady and remunerative prices.

No one has yet heard of any punishment of the beef trust or of any change in its methods of doing business, nor yet of any nearer approach to equity in the price of live stock and of the finished product on the consumers' tables. The periodic talks as to the suppression of flagrant wrongdoing, and the better adjustment of these matters, may serve to lull into submission the producing interests, but they never lead to serious interference with the wrongdoers.

It is wonderful how a wrong will wiggle along after its back is broken. Oleo, you know, used to be colored and sold as genuine butter in competition with the honest old cow. But congress in a fit of righteousness, said oleo mustn't be colored like butter. Then the oleo makers changed their formula, and made palm oil an ingredient, just to make it better, of course. But palm oil is highly colored, and the palm oiled oleo looked just like butter. Somebody kicked, and said the palm oil oleo violated the law against coloring oleo. The court said that's true. The oleo makers then asked the higher courts, and the higher courts have said yes, too, and the palm oil oleo is placed on the shelf. Now wait for the next move.

Do live stock prefer "lean" pastures to "rich" ones? No one has failed to notice the rich bunches of grass that are left in every pasture, while it may be that the herbage is closely nipped everywhere else. These bunches of luxuriant growth are spots that have been highly manured, most likely, by droppings of animals pastured there last year. If the whole surface had been as highly manured, the entire growth would have been equally luxuriant. Would it have been as good a pasture? A passerby would have remarked, "What a splendid pasture!" But would it have been? We think not, and the moral clearly is that raw manure is not good for a pasture. How may the growth of pasturage be encouraged without resorting to barnyard manure? And is hay taken from meadows that have had rich top dressing of barnyard manure as palatable as that grown without it? Think about it. Can you answer these questions correctly?

Lay in a supply of clover hay for the milch cow. It will pay. You keep the cow for milk. Good clover hay and the cow will make it. But timothy won't. The best cow in the world can't make a generous flow of milk out of dry timothy hay.

The stockraiser and dairyman is almost as much interested in the pure seed movement as is the grower of grain and other soil products. No fields suffer more from weeds than the pastures do. We know many rich pastures that are almost entirely overrun with red sorrel (Rumex acetosella) and buckhorn (Plantago lanceolata), sometimes called English plantain or rib grass. These two are specially persistent, and there are many others almost as bad. It will be a happy day for those who pasture live stock when no more foul seeds are sown.

There is no let up in the fine prices paid for good horses. Take extra care of the colts. It is just about as easy to have good horses as inferior ones. The horse is made in the colt. What we mean is that the treatment the colt receives largly determines what the hore is to be. Carl was riding a fine two-year-old the other day—worth $150, and would bring it. His father bought the colt at weaning time about a year ago for $30, a decidedly unpromising colt. The change was made in the subsequent treatment. The second year of that colt's life increased its value over 500 per cent. Treat the colt right.

A Word About Milking

If it is true that the cow elaborates the most of the milk during the process of milking, it must be evident that the rough and tumble, rush and rattle milker, who keeps the cow in a state of constant nervous strain will not get the most milk. He is always in a hurry, buzzes around like a cyclone, wants to jerk the milk all out at once, and when the flow begins to slacken he quits. He is not only failing to get the milk, but he is ruining the cow in not giving her time to elaborate the milk, and spoiling her temper besides.

Always approach the cow gently, speak to her kindly, give her to understand you are her friend, commence to draw the milk gently, milk steadily and regularly, but never in a hurry—you will soon have a cow that will enjoy being milked, and that will do her very best.

Now, don't jump to the other extreme, and become a sluggard on the milking stool. One may be so slow as to wear out the cow's patience. Be sensible.

THE SEED QUESTION.

Do You Own a Fanning Mill? If Not Why Not? It Pays.

How many of our readers are there who do not own fanning mills?

A good fanning mill fills such an important place among the equipment of an up-to-date farmer that we would just like to know what proportion of our subscribers are making use of these really wonderful machines.

We have at various times called your attention to the necessity of cleaning and grading grain and seed. This is a matter that touches the pocket of every farmer, of every stockman, of every seedsman, of every planter. The fanning mill does more than clean foul seed—it grades any kind of grain so that you can get more for it in the market or produce vastly improved crops by using only your best grain for seed. Farmers everywhere are awakening to the great opportunity for added profits by grain-breeding. Are you alive to the importance of this question?

Those of you who are looking for more light on this subject should write to The Manson Campbell Co., Ltd., Dept. 15C, Detroit, Mich., the manufacturers of the Chatham Fanning Mill, and they will be glad to send you valuable literature on the cleaning, separating and grading of grain and seed. They have been in the fanning mill business for a great many years, and have done more, we believe, to advance the interests of the grain growers of the United States than almost any private concern in the country. They have distributed, free, millions of copies of books, giving the most practical and complete information on scientific grain breeding—how to sow, how to clean, how to grade, etc. They will, upon request, send you their book, "How to Make Dollars Out of Wind," and answer fully any questions you may wish to ask. We could not refer our readers to a more reliable source of information. Write them while you have their address, which is Dept. 15C, Detroit, Mich.

A Reliable Hay Press

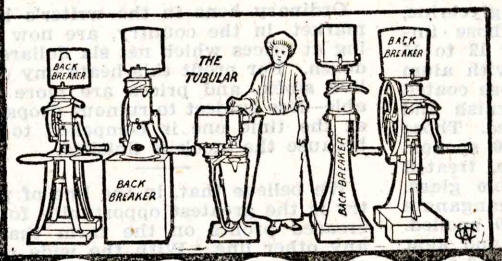
The "Big 4" Hay Press, manufactured by the DeLoach Mill Manufacturing Company, Box 850, Atlanta, Ga., is meeting with a remarkable sale, due to its undoubted merit.

With one good horse it will bale two tons of hay per hour, and keep it up just as long as you wish to run it. Another desirable feature of the Hay Press is its ease of running. One horse can easily do the packing on the "Big 4" Press. The smaller size machine has an easy capacity of sixty 70-pound bales per hour, each bale being 14x18x36 inches.

TUBULAR--or "Back Breaker?"

When you see the waist low Tubular you can't be driven into buying a back-breaking, "bucket bowl" separator. **Can and crank are just the right height on the Tubular.** Here is the largest Dairy Tubular along side four "back breakers." The girl with her hand on the Tubular is 5 feet, 4 inches tall. This is an exact reproduction from a photograph. **Which kind for you?** Makers of "back breakers" try to get their cans low by setting the cranks low. **High cans** break your back backward—**low cranks** break it forward. Unless you are a double jointed giant, you'll find a high can is no joke. To show you how high these "back breaker" cans really are, when the machines are set high enough to turn easily, we raised these "back breakers" 'til their crank axles were level with the Tubular crank axle. "Back breaker" makers don't like this picture—**it's too true.** They try to squirm out of it. **You wouldn't like turning cranks as low as "back breaker" makers put them.**

The low can is only one of many advantages Dairy Tubulars have over all others. Dairy Tubular bowls are simple--"back breakers" are complicated. Tubulars are self-oiling--no oil holes to fill up. "Back breakers" are oil drippers and oil wasters. To learn a lot more about Tubulars, write today for catalog N-136



The Sharples Separator Company

Chicago, Ill.
Toronto, Can.

$25.00 Cream Separator

FOR $25.00 we sell the celebrated **DUNDEE CREAM SEPARATOR**, capacity, 200 pounds per hour; 350 pounds capacity per hour for **$29.00**; 500 pounds capacity per hour for **$34.00. Guaranteed the equal of Separators that retail everywhere at from $75.00 to $125.00.**

OUR OFFER. We will ship you a Separator on our 30 days' free trial plan, with the binding understanding and agreement if you do not find by comparison, test and use that it will skim closer, skim colder milk, skim easier, run lighter and skim one-half more milk than any other Cream Separator made, **you can return the Separator to us at our expense and we will immediately return any money you may have paid for freight charges or otherwise.** Cut this ad out at once and mail to us, and you will receive by return mail, free, postpaid, our **LATEST SPECIAL CREAM SEPARATOR CATALOGUE.** You will get our big offer and our free trial proposition and you will receive the most astonishingly liberal Cream Separator offer ever heard of. Address,

SEARS, ROEBUCK & CO., CHICAGO.

RUPTURE

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated upon. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write today. **Capt. W. A. Collings, Box 1012, Watertown, N. Y.**

No More Blind Horses For Specific Ophthalmia, Moon Blindness and other Sore eyes. Barry Co., Iowa City, Ia., have sure cure.

FLY-FUMA

Sprayed on horses and cattle will bring more comfort than anything else you can do. It will make dollars out of dimes for you by increasing milk and quality. Horses easily do more work. No flies, bugs, etc. will stay where it is applied. We send FREE with first order for one gallon or more an electric sprayer for applying. Quart 25c. Gallon $1.00; 5 gal. $4.00. Circular free.

PRAIRIE MFG. CO.
Indianapolis, Indiana

ABSORBINE

Cures Strained Puffy Ankles, Lymphangitis, Bruises and Swellings, Lameness and Allays Pain Quickly without Blistering, removing the hair, or laying the horse up. $2.00 per bottle, delivered, with full directions. Book 9 B free.

ABSORBINE, JR., for mankind, $1.00 Bottle. Cures Strains, Gout, Varicose Veins, Etc. Mfd. only by

W. F. YOUNG, P. D. F., 102 Monmouth St., Springfield, Mass

"I received the sample of Fly-Fuma and am greatly pleased with it. Enclosed find $1.00 for which please send me another gallon. I am going to try to get some of the dealers here to handle it for it is a good thing."
Brookneal, Va., C. D. ASHER.

NEWTON'S Heave, Cough, Distemper and Indigestion Cure. A veterinary specific for wind, throat and stomach troubles. *Strong recommends.* $1.00 per can, of dealers, or Exp. prepaid. **The Newton Remedy Co., Toledo, Ohio.**

"Cheapest" doesn't always mean the lowest priced, certainly does not when applied to cream separators. Numerous makes of separators nowadays are offered for less than the famous and improved

U. S. Cream Separators

Which hold World's Record for Close Skimming.

A very short use of those cheap "job-lot" machines proves it costs so much to keep them "going" during their short life that they're not "cheap"—even as a gift—(not to mention their poor results) Time has conclusively proven that U. S. Separators

ARE LEAST EXPENSIVE

because the cost to maintain them is so small in comparison with their long and unequalled service.

FOND DU LAC, WIS., September 15, 1904.

"To whom it may concern:—I have used one of your U. S. Separators for the past twelve years and it has given the very best satisfaction. I have paid 75 cents for extras since getting the machine. I cannot recommend the U. S. too highly.—J. BALSON."

Our handsome Dairy Separator catalogue tells all about the splendid construction that makes possible such testimony as this. Get it now, it's free, and you'll find it interesting, we know.

VERMONT FARM MACHINE CO., Bellows Falls, Vt.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

Egg Preservation

The Neisse Agricultural School, in Germany, has just closed some experiments in egg preservation. On the first of July equal quantities of eggs were put up in seventeen different ways. The last of February they were examined and the result noted. Merely wrapped in paper, 80 in 100 were spoiled, as were also those kept in a solution of salicylic acid and glycerine. Those rubbed with salt, those packed in bran, and those painted with a solution of salicylic acid and glycerine, 70 in 100 were spoiled. Those immersed in boiling water for 12 to 15 seconds and those treated with alum water, 50 in 100 spoiled. Those coated with soluble glass, with varnish and with collodim, 40 in 100 spoiled. Those rubbed with bacon, 30 in 100 spoiled. Those packed in wood ashes, treated with boracic acid and soluble glass, and those treated with permanganate of potassium, only 20 in 100 spoiled. Those coated with vaseline and kept in lime water, all were good, and those kept in soluble glass (water glass), all were very good.

This fully confirms other experiments that to keep eggs immersed in a water glass solution, as we have previously described in this paper, is an absolute preservative of them, and that so immersed they will remain entirely fresh for an indefinite time.

It is said that 7,200,000 eggs, 600,000 dozen, come into New York every day. This is about two eggs a day for every inhabitant of the city. New York does not consume that many eggs. Many of them are preserved, put in storage, and used in other ways.

Poultry in close quarters may be handled profitably, but they cannot compete with poultry that has the run of the farm. The trouble with farm poultry is that too often it has to "live by a scratch." If farm poultry had the attention given to penned poultry, there would be no comparison of results.

The Leghorns are scratchers. No chance to scratch that out. We have a potato patch alongside of our Leghorn pens. That patch is thoroughly "worked" every day when we turn the fowls out to scratch and exercise. A bug or beetle would be lucky that got beyond infancy in that patch. The Leghorns are Rooseveltian—they live the strenuous life.

Eggs afford an object lesson as to what may be done with other perishable products. A few years ago, during the laying season, when the eggs were recklessly dumped on the market, the price went to a point that scarcely paid for gathering them up. Now the price maintains a fairly reasonable level throughout the year. It is because eggs are now preserved in cold storage and otherwise, and held off the market only as consumption takes them at remunerative prices. What is done with eggs can be done with almost any other product.

There is a good opening in this country for duck and goose farming. The demand for these fowls at fair prices is seldom supplied, and the same is true of feathers.

The turkey was a profitable fowl last year, and it will likely be so again this year. The wise farmer notes the demand for these things and sets his stakes to supply it.

Strange as it may seem, the writer of these notes has never used an incubator. Always with abundant room on a large farm, he and his folks have preferred the hen method. But right now he is convinced, with modern appliances, it would be less trouble to raise one or two or three or more hundred chickens hatched in incubators than with the usual number of cross old hens to go with that many chicks. Yes, sir, he's a convert, but Aunt Eliza suggests that I am a convert untested.

The Rhode Island Reds are coming into favor. They belong to the laying breeds, and are larger than the Hamburgs or Leghorns.

The Australian experimenters are booming the Silver Wyandottes. That they should win for two successive years in egg production over the Leghorns and many other varieties is a feather in their cap that shows quite prominently.

Ordinary hens in the writer's home market, in the country, are now selling at prices which net six dollars per dozen. For profit this beats any other live stock, and prices are more reliable—less subject to ruinous drops just at the time one is compelled to sell, because the stock is finished.

We believe that, in the line of poultry is the greatest opportunity for increased profits on the farm than in any other line. With the wide range of the farm increased poultry production is almost unlimited. But farmers are slow to enlarge their poultry business because they have an impression that large flocks do not do well. This impression is created by excessive crowding in small houses. Build additional houses. We believe that is better than to have single large houses. What matters it if two or three flocks run together during the day if breeding only for the egg and chicken markets. They will very soon learn to seek their own quarters to roost, and their own nests for laying. Costs money to build houses? To be sure, but poultry houses are ordinarily the cheapest buildings, and it costs money to house and care for other live stock. Do a little ciphering. Which costs the most?

It does pay to keep good stock. One of our poultry advertisers, who uses only a card in the Exchange Department, has had cash orders and sent fowls this season from Southern Illinois into Louisiana, New York, Missouri and Maryland, besides sending eggs in large and small quantities to many other States.

Turning eggs is necessary to a good incubator hatch. An observing poulterer suggests that on putting the eggs into the incubator they be numbered on four "sides," 1, 2, 3, and 4, and that the eggs he so placed that the same number is up. Then in turning the eggs place them so that another number is up. Take these numbers in rotation, and one cannot make a mistake in turning the eggs—that is, cannot leave any unturned.

This is a honey year. In all white clover regions the honey flow has been abundant.

By the way, why not have more bees? They are not difficult to care for in a small way, and when they fail they cost nothing; when they do well they are a miniature bonanza.

After the usual interval, it is now time to set hens for fall chickens. It is a fact, though, that there is a question whether fall chickens are profitable. The pullets will not lay until spring, and the roosters are slow in getting ready for market. We suspect that farmers' families try to raise fall chicks more from habit than from profit.

Don't forget that the early pullets are to be the winter layers. Give them a good chance, that December may find them well matured. They should begin laying during that month, and should keep it up all winter, except during the very worst weather, and they will not stop then if well housed and fed proper feed.

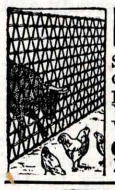
Another season in the poultry yard convinces us of several important facts, which, in the hope of benefiting some, we mention, not in the order of their importance, perhaps, but as they occur to us at this writing: The poultry house cannot be cleaned out too often. Mites and lice will appear at unexpected times and in unexpected places, and chickens will not and cannot thrive where they are. Movable perches are a great advantage over fixed ones, because they may be easily moved and fresh ones substituted, if an extra set be provided, thus doing much to keep the house free from pests. Dry lime scattered about the house and yard, and dusted on the walls and perches, is a valuable aid in combatting both insects and disease. Dusting is better, perhaps, than whitewashing, if carefully done. There is not so much difference in the variety of fowls, though thoroughbreds of any variety are better than scrubs; the purpose should determine the variety. If fed on corn alone fowls soon tire of it, and do not do well. This is not so apparent in fowls running at large as in those confined in yards and runs. The hen mothers are responsible for much of the young chick mortality, and for still more of the annoyance in caring for them. Even where chicks are hatched by hens we believe if proper runs and roosting places (brooders) were provided, a far greater per cent. of the hatch could be raised, and with less trouble, by taking the little chicks from the mothers as soon as ready to leave the nest. Our experience this summer will prompt us to try that plan another year, anyway. It could be made to lead to a bit of cruel economy, also; the nesting might be thoroughly renewed, and the same hen set again. Many of them would go ahead and do their work over, but some would rebel. Young chicks may be fed too much even when kept in runs, perhaps more easily than otherwise, and even young chicks need an occasional meaty feed. Such feed is indispensable to fowls kept in pens. Meat scraps run through a cutter or sausage grinder, and then mixed up with corn meal, make an ideal meaty feed for either chicks or fowls, but they should not be given too much at a time. Fowls consume quite large quantities of water, and it should be clean and fresh, and kept constantly before them. Sand and gravel must be easy of access both to the fowls and chicks, and a "wallowing place" or dust bath is indispensable. A little slaked lime or ashes in the dust bath makes it better. Cleanliness about the quarters, and the frequent use of lime, almost insures healthy and thrifty poultry.

THE NEW IDEA FLY TRAP Catches 60,000 flies a day. AGENTS WANTED. NEW IDEA FLY TRAP CO., Dept. U, Cissna Park, Ill.

GET LAMBERT'S Death to lice—the kind that successful poultrymen have used for 20 years. Kills lice anywhere—just the thing for sitting hens. Never disappoints—always sure. Sample 10c. 100 ounces $1.00. O. K. STOCK FOOD CO., 444 Monon Building, CHICAGO.

SQUABS are raised in one month; bring big prices. Money makers for poultrymen, farmers, women. Send for our FREE BOOK and learn this immensely rich industry. Plymouth Rock Squab Co., 338 Howard St., Melrose, Mass

LEAKE'S LICE EXTERMINATOR will give your feathered friends rest and comfort from tormenting lice and insects. No poultryman or stock raiser can afford to be without it. Two or three dozen eggs will pay for a quart and by its use you will get many, many times its cost. *"I had a gallon of your Leake's Lice Exterminator last season—it was the best I ever used. Our hens laid twice as much."—Mrs. Patience S. Jenkinson. Vicksburg, Mich.* Price, quart 35c; gallon $1.00; 5 gallons $4.00. Order today. J. A. EVERITT Seedsman, (Inc.) Indianapolis, Ind.



FENCE Strongest Made

See how closely it is woven. Sold direct to the farmer at factory prices, on **30 Days Free Trial.** Your money back if not satisfied. Write today for free Catalogue.

COILED SPRING FENCE COMPANY Box 88, Winchester, Indiana.

Bone Spavin

Know it by the lump and the limp—a hard, bony growth on the inner side of the hock joint, usually low down and a little forward of the center of the leg—a quick hitch with the sound leg, and a stiff movement of the lame leg, bearing the weight on the toe, most noticeable in starting.

New cases, old and bad cases, the very worst cases, cases where firing has failed, are cured by

Fleming's Spavin and Ringbone Paste

Guaranteed to cure the lameness for good—may or may not take off the lump. Easily used by anybody, and a single 45-minute application usually does the work—occasionally two required. Write for **Free Horse Book** before ordering. It gives all the particulars, and tells you what to do for other kinds of blemishes,

FLEMING BROS., Chemists, 207 Union Stock Yards, Chicago, Ill.

CROP REPORT BLANK

JULY 15, 1905 WHEAT AND HAY

Do not send in this report until the crops are saved. If you thresh wheat before July 20th report as soon as threshed. If you do not thresh before July 20th then estimate the yield.

	WHEAT	HAY
Acres Harvested in 1904		
" Sown in 1904		
" Harvested in 1905		
" Lost by any cause		
Yield per acre in 1903		
" " 1904		
" " 1905		
(If not threshed by July 20th estimate the yield)		
Quality of 1905 crop, Excellent, Good, Fair, Poor		
Amount on hand of former crops		
Average price received for 1904 crops		

What do you think would be a fair price for crops of 1905.....

Must you market immediately regardless of price.....

Can you hold until December if necessary to get the A. S. of E. price.....

*Are you a member of the American Society of Equity .....

Are you a subscriber to Up-to-Date Farming.....

*Non-members who have this blank may use it, but be sure to fill blank above where question is asked.

Please have report in by July 22nd so the result may be printed in August 1st number. In the meantime wheat growers are informed that the price of No. 2 Winter wheat will not be put below $1.00 a bushel at Chicago.

Reports may be sent through local union secretaries, or direct to The American Society of Equity, Indianapolis. Ind.

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

The beautiful roses.

Now comes the duller shades of the midsummer bloomers, a kind of lull preceding the burst of autumn's golden glory.

The Petunias and verbenas, morning glories and balsams, nasturtiums and multiflora, that keep on their Sunday clothes all through the summer, are now asserting their supremacy.

And it is time to encourage the chrysanthemums. When they are eight to ten inches high, pinch out the top, so as to secure more branches. Then to have the largest flowers allow only the center buds on each branch to remain.

Those who have a bed of tuberous rooted Begonias will not be without flowers during the summer, and the brilliancy of their color will make them a delight amid the duller blooms of the summer time.

Palms and palm like plants are very popular for midsummer ornamentation. Of these the various Dracenas are perhaps the most beautiful. The ferns are also much used for this purpose.

During July and August it will be necessary to water plants if they do their best. Skill is necessary even in this simple operation. What the suffering plants need, you will agree, is a heavy rain, a "good soaking." That is exactly what you should give them when you water them. A little water that only moistens the surface, is no watering at all, and often does more harm than good. Water thoroughly, and see that it settles down to the roots of the plants. Take time and notice what you are doing. You will often find it necessary to break the crust that is apt to form around the plant before the soil will "take water." When you do this, and it should always be done when there is a crust, leave the crust in small, uneven lumps, rather than to pulverize it; a new crust will not so soon form. Such treatment as this is almost equal to a good rain, and it will answer in the dryest time for several days. I think potted plants should seldom, if ever, be watered on the surface, beyond spraying or dampening their foliage. Set the pots in a tub or pan of water and let them absorb the water from beneath. The surface will soon show moisture and then the plant has had a thorough watering and will promptly respond to it.

Let attention now be centered in the fall blossoms—the asters, dahlias, cosmos, chrysanthemums, etc. Keep them well fertilized and vigorously growing; they are laying up your reward. Both the chrysanthemums and cosmos may be given a dwarf habit by pinching out the top buds when they raise their heads beyond a desired height. This also causes them to branch more and increase the number of flowers they will produce.

Many farm homes will be represented in the Pure Seed and Plant Company, because the whole country is intereted in pure seeds.

How many members of your family belong to the local union? It will cost father 30 cents a quarter, but mother and the boys and girls and grandmother and grandfather can be members at 10 cents a quarter. You see, one copy of Up-to-Date Farming does for all in the family.

Uncouthness

There is another matter of personal improvement to which attention may be called, we believe without offense, and that is the matter of general carriage. Too many farmer boys, and, with apologies, we believe we may say girls, also, are slouchy in their general movements. They do not mean to be so, but their attention, perhaps, has never been called to it. We refer to an awkward, suffling gait, slovenly, lounging positions, and uncouthness generally. Often are men and boys seen riding in wagons or on horseback, and sometimes even sitting in chairs, or seatts in public gatherings, their bodies representing curves that would tax the rim of their wagon wheels to equal. Such positions are health destroying, vitality impairing and life shortening, as well as awkawrd appearing.

Now, understand, we are not speaking derogatorily of farmers or farmers' children. Among no class of people has so much of our life been spent. Their ways have been our ways, and their customs our customs, but these unattractive distinguishing features are mere matters of habit which require only a little thought and observation to correct. Farm work means hard hands and sun-browned skin, and these are respectable badges of a most honorable calling, but there is nothing in farm labor which predisposes to the habits of which we have spoken.

Three Essentials of a Home

Some time ago a large company of women in the city of Chicago discussed the three essentials of a home; that is, three things without which there could not be a home. Of course, they differed. One thought it was a good temper, a good mother, and the right to carry the pocketbook—certainly a silly idea of a home. Another thought the three essentials were a good mother, a good cook and a trained nurse. A minister who was called upon said the three things necessary to a home were "a man, a woman and a cook stove," and, strange to say, the five hundred women present applauded the idea, certainly not because they believed that worldly, chilly aggregation was the essential features of a home, but because a preacher had said it. That minister must have been very thoughtless or else he was unkindly making sport of the ladies who had invited his opinion. That aggregation might exist in an earthly hell.

A modest publication afterwards took up the discussion and declared that the three essentials of a home are a husband, a wife and love, and that is the definition we endorse. A home can scarcely be a home without this combination, and with it any place is home. "By their fruits ye shall know them."

Try a bowl of simple green corn soup: Cut the corn from three medium-sized roasting ears; boil till well done in two quarts of water, add a pint of fresh milk in which a heaping tablespoonful of flower has been stirred, enrich to suit with butter, salt and pepper to suit the taste, and boil few minutes longer.

A Beautiful Ambition

Says a writer who gets very near the truth: "Probably the most beautiful ambition in life is to acquire a comfortable home. Every young man and young woman should look foruard to this. Whether plans looking to this end be laid in early life or during the mature years matters little. The important thing is to exercise intelligence in the choice of a life companion, and happiness and prosperity are likely to follow as a matter of course. The man who establishes and maintains a good home is not a failure, no matter what his pursuit is, and the man who has failed to do that has unquestionably missed the best that life has to offer."

Home Feature of Married Life

We commend the following to the thoughtful consideration of aspiring young people: In the mad pursuit of wealth and influence many quite lose sight of the home feature of married life. The possession of riches is not the most desirable thing in life. Wealth is power, but happiness is possible in the humblest cottage. The possession of a home should be the ambition of every young person who does not possess one. There is a tendency to estimate at too high a figure that which is necessary to maintain a home. A home can be maintained comfortably and well at comparatively small expense.

The Home Life of Parent and Child

It is a great deal easier, as many of us know by experience, to do a large proportion of household tasks than to teach children how to do them. Through ignorance, lack of judgment, want of skill, they waste time and material, and tax our patience sadly. They always want to do the very things they cannot do, and such tasks as are suited to their capacity they complain of as drudgery.

To Cut a Bottle

There are few farm homes that have not bottles, large and small, lying around in the way. If cut in two smoothly two useful articles might be made—a glass and a funnel. Mrs. H. M. Woodward gives this plan of "cutting" round bottles: Wind common wrapping thread or cord two or three times around the bottle about half an inch below the place where it is to be cut. Drop alcohol slowly on the cord until it is thoroughly wet with it all around; set fire to it, and when the flame has died out pour a few drops of water on it—the bottle will break as smoothly as if it had been cut.

But not many farmers keep alcohol. Thoroughly wet the string with turpentine or coal oil, and burn it as before. As soon as the flame goes out, dip the bottle in cold water—the result will be the same.

HELP ONE ANOTHER

(Mr. S. S. Williams, of Walker, La., sends us the following very appropriate and expressive verses.) If farmers would follow the example set by inanimate things, what mighty results would follow!

"Help one another," the snowflakes said,
As they cuddled down in their fleecy bed;
"One of us here would not be felt;
One of us here would quickly melt.
But I'll help you and you'll help me,
And then what a big white drift we'll see!"

"Help one another," the maple spray
Said to its fellow leaves one day.
"The sun would wither me here alone,
Long before the day is gone;
But I'll help you and you'll help me,
And then what a splendid shade there'll be!"

"Help one another," the rain drop cries,
Seeing another drop close by its side.
"This warm south breeze would drive me away,
And I should be gone ere noon to-day;
But I'll help you and you'll help me,
And we'll make a brook and run to the sea."

"Help one another," a grain of sand
Said to another grain close at hand.
"The wind may carry me into the sea,
And then, oh, what would become of me?
But come, my brother, give me your hand;
We'll build a mountain, and there we'll stand!"

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

1904 Tobacco Increasing in Value

We desire to call attention to the statement made on page 49 of the booklet—The American Society of Equity.

"A slight increase will be made each month in prices to offset interest, shrinkage, etc. This is not intended to be enough to be particularly profitable, but for protection."

Tobacco that has been properly kept loses nothing but weight and gains in quality. Therefore, tobacco that is in good condition now, should be worth more per pound than it was worth eight months ago. The Lynchburg convention in setting prices at eight and nine cents declared that those figures should represent the minimum market values of the 1904 crop. If tobacco was worth that in November, 1904, it is undoubtedly worth more now. Besides, all indications are that no material increase in production is to be expected in 1905 and stocks in warehouses are smaller now than for years. The tobacco now in the farmers hands will be very much needed before long.

In view of these statements, be they facts or theories, the writer hopes that an advance in price will be realized on all old tobacco. The farmers who have held thus long and made it possible for others to secure better prices by preventing glutted markets should have some consideration and should receive additional compensation for shrinkage of their crops and for the additional value that age has imparted to the weed.

When the farmers are more thoroughly organized, this plan of increasing the market price as the age increases will be fully carried out. And another suggestion worth considering is this: All old stock should be marketed before any of the new is offered. This course has much to recommend it. Buyers will understand that the longer the crop is held the more it will cost them and that they cannot secure the new crop until the old has been disposed of. When thoroughly organized members will understand that the longer they hold the more they will receive, and there will be no undue haste to sell. When it is an established principle that the old crop must be disposed of before the new will be offered for sale, every crop will be sold for good prices and all surplus stock will be taken care of. In this connection I would call your attention to the plan of holding, storing and selling tobacco proposed by T. T. Barrett, of Henderson, Ky., published in the June 15th issue. Some such plan will doubtless be adopted by the delegates to the Owensboro convention, and all local unions should consider these matters previously.

J. W. Roberts, of Lewisport, Ky., himself a large tobacco grower, recently purchased 4,500 pounds of tobacco from a tenant and will store it with the tobacco held by the organized farmers in Equity warehouses where it will remain until Equity prices are offered. This is one of the ways out of the dilemma in which many poor tenants find themselves.

Prices for Tobacco Advance

In the western part of Kentucky where dark export tobacco is grown the farmers are still holding the 1904 crop. Much of it remains in the barns where it was cured. More of it is safely stored in the farmer's warehouses where it will stay until the stocks in the buyers hands are exhausted, or the price meets their demand. Arrangements are being made to hold the crop now growing in the same manner and the more that is withheld the sooner the price will advance. Nearly all the tobacco grown by unorganized farmers has been marketed and prices maintain a much higher average than a year ago. The buyers stubbornly protest against raising the prices more but there is nothing else for them to do. Stocks are rapidly diminishing and the tobacco is wanted.

We cannot urge too strongly the importance of early appointments of delegates to the Owensboro convention. Every county that produces tobacco to any considerable extent should have representation in what should be the most important meeting ever held in the interest of any farm crop. As we have repeatedly announced, plans to enable every tobacco grower to hold their crops until the prices are satisfactory will be discussed, and a plan adopted in all counties having a working organization.

Consumptive Demand Increases

"All lines of tobacco production are now in excess of the same period of 1903-1904, and the fiscal year will undoubtedly close with a fine showing. The increase in all lines are as follows: Tobacco (smoking and chewing), 11 per cent; cigars, 2 per cent.; small cigars, 21 per cent.; cigarettes, 5 per cent.; snuff, 1 per cent."—Western Tobacco Journal.

The above paragraph refers only to manufactured goods. There are two facts that we should at all times keep in view. First, the production in 1904 was below the average and it is altogether improbable that the total amount produced in 1905 will exceed that of 1904. Second, consumption has increased considerably in 1904 and there is no reason why it should not continue to do so. It is demonstrated, therefore, that the demand has increased and that the supply has not. The only thing that can prevent the price from advancing will be dumping the 1905 crop by the tobacco growers. Do not do it, farmers. It is worse than folly, for it injures your neighbor as well as yourself.

The tobacco growers around Clarksville, Tenn., are better organized than any other class of farmers. The price of tobacco in the Clarksville market climbs steadily upward. The farmers have held their tobacco with tenacity of purpose surprising to the farmers themselves, and astonishing to the buyers. Those farmers will let loose only when they get their price and another upward step will put the buyers and sellers on a level—the farmers' level.

Information from the Richmond, (Va.) Tobacco section indicates that the farmers there have sold their tobacco for much less than they should. Our informant states that the farmers are very much dissatisfied with the prices. There is nothing more disappointing than to learn, after a transaction has been made, that much better could have been done. This seems to be the case in this instance for tobacco stocks are very low in the Richmond warehouses and factories. The 1904 crop has turned out much smaller than was expected. There is something significant in the fact that the cry of overproduction nearly always comes before the crop is marketed.

False Reports originated by the Trusts

"There will be a great reduction from the 1903 crop, and I do not think the acreage will be over 75 per cent. of the 1904 crop, Secretary Wilson's report of a 20 per cent. increase to the contrary notwithstanding. The report of an increase is not true and had its origin in the camp of the trusts. Tobacco is increasing in price steadily here, and if there was a pronounced increase in acreage this would not be."—Hon. D. T. Hamill, Kentucky.

Mr. Hamill, who is a member of the Tennessee legislature and also a farmer who has been one of the leaders in the farmers organization, has an excellent opportunity to observe crop conditions in the dark tobacco districts of Kentucky and Tennesee. We place great confidence in his opinions.

Tobacco selling well

From various places come reports of sales of tobacco at or above the minimum prices. It is significant to note that the best prices are obtained where the best organization exists. Prices of $11.00 $12.00, $12.50 and even $13.50 come from the dark tobacco districts of Kentucky and Tennessee. These same grades sold last year at $4.50 to $5.00 per cwt.

THE LAST WEST

There is no longer a west in the United States, that is, in the sense of a virgin land of opportunity. The land-hungry and the eager seizers of opportunity have taken the best of the west. Those who come now must glean and take what was left by the keen pioneers.

In Canada the development and exploitation of the west are just beginning. A fortune awaits every man who is equal to his opportunities. Each year 50,000 Americans move into the new region of cheap or free lands. There too—in the last west—the land of wheat—the best opportunities for homes, careers and investments will soon be gone forever. Act before it is too late.

Would you like to learn about the vast wheat fields, the great ranges, the business openings, the untold resources of Western Canada; about Winnipeg, Regina, Calgary, Edmonton, Saskatoon, Indian Head, Prince Albert, Dauphin, Medicine Hat, and the other growing towns and cities of the Canadian West?

To get, for the trouble of inquiring, information and literature covering all these points and copies of the handsomely illustrated magazine "Resources," write to U. S. Bureau of "Resources," 229 New York Life Building, Minneapolis, Minn.

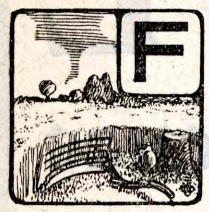
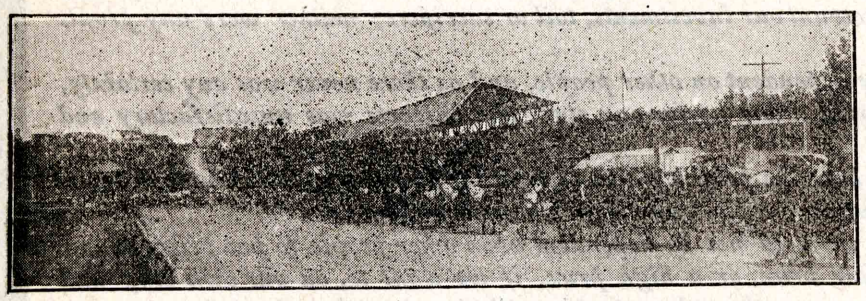
The Coming Wheat Country

By Theo. M. Knappen.



OR the last year or two there has been much interesting speculation in regard to the part that will be played in wheat production by the wheat lands of western Canada. Four or five years ago no one paid any attention to this country that was certain in the near future to produce an immense amount of wheat from its countless acres capable of cultivation. The western Canadian crop has reached 70,000,000 bushels of the best quality of wheat, and may this year be 100,000,000. The students of the wheat question in the United States have had their attention directed to western Canada.

All of the conditions in western Canada now favor a very rapid increase in acreage and production of wheat. For several years past the annual increase in acreage has been about 20 per cent. If this should be kept up for five years more, the acreage in 1910 will be 10,000,000 acres—almost as large as the wheat acreage of Minnesota and the Dakotas. At twenty bushels to the acre, which has actually been the average yield in western Canada, the crop will be 200,000,000 bushels in 1910.



Stock Parade at Edmonton, Canada, Fair. 350 Miles north of Boundary.

Whether this increase shall keep up depends, primarily, upon the amount of railway building done during the next few years, and, secondarily, upon the proportion of the immigration. At present more than a hundred thousand people a year are going into western Canada. It is altogether within the realm of probability that in 1910 western Canada will be raising more wheat than the northwestern spring wheat States. At present the railways are building 1,000 and 2,000 miles of new line annually.

It scarcely seems possible that there can be much of a falling off in immigration into a country that is so fortunate as to have the last large bulk of free or cheap and fertile land left in the humid region of America. It has what our West had not long since, but no longer enjoys. Inasmuch as these first American settlers in a new country were drawn there in spite of many prejudices and much misinformation, it is reasonable to expect that the 175,000 Americans now settled will have an influence that will stimulate the movement towards Canada of their compatriots.

Until the latter part of the nineties, immigration into western Canada was small. Now it is large and will be larger. Canada is the last new wheat country on this continent left to the wheat farmer. It is inevitable that the vast areas of free or cheap lands will attract hundreds of thousands of farmers from the United States. Hence there will be no lack of the necessary population to break and cultivate the prairies.

Frost is the great bugaboo of wheat raising in western Canada; it has been too much of a bugaboo. In regions where the soil has not been long under plow there is danger of frost hurting the wheat, but as the ground is tilled year after year, the danger of harmful frosts largely disappears. The average yield of wheat on the Canadian prairies is so high that even if 20 per cent. be allowed for frosted wheat, there is still a good profit in wheat raising. Moreover, in a country that does not raise corn, frosted wheat fits in very handily in the economy of the farm, as it is an excellent food for hogs, cattle and poultry. Frosted wheat has a regular market value.

Mysterious Stammering Cure

The people of Indianapolis are wondering how Benjamin N. Bogue, the professional speech specialist, has been able to build such a large institution for the cure of stammering, stuttering and other impediments of speech in such a short time. This institution, known the world over as the Bogue Phono-Logic Institute for Stammerers, has been the fastest growing institution of it's kind in the world. Within the past few weeks persons have entered from all parts of the country, and a few days ago a young man from Philippapolis, Bulgaria, a distance of about five thousand miles from Indianapolis, placed himself under Mr. Bogue's care to be relieved of his troublesome affliction. The foundation of Mr. Bogue's success lies in the unfailing powers of his method of cure, which is constructed upon scientific principles, and founded upon an educational basis, and when observed will transform an impediment of speech into perfect articulation as sure as daylight follows darkness. The method which Mr. Bogue employs was originated and copyrighted by him, and is best known to the general public as the Bogue Phono-Logic Method and the standard and best of all methods. Mr. Bogue has managed the institution in a highly commendable manner. He is a man of boundless energy and possesses to the highest degree the confidence and respect of his patrons and of the community at large.

ADVICE TO

STAMMERERS

200 page book giving history of discovery and many signed testimonials sent free to any person

BENJ. N. BOGUE. S. S.

Since the discovery made by the noted Indiana Professor, known as America's greatest and most expert speech specialist, it is no longer necessary for any person to continue stammering. By his new method he can cure any case of stammering or stuttering, no matter how severe, or of how long standing. His method will cure any person of stammering regardless of the cause or origin of the difficulty, whether acquired from catarrh, scarlet, typhoid or brain fever, measles, whooping cough, diptheria, fright, mimicry, accident, heredity or an unknown cause.

By his method a return of stammering is impossible. It cures to stay cured for life and does so in a simple, sure and scientific way.

This celebrated specialist has had wide experience in dealing with the most severe, obstinate and difficult cases of stammering, and as a result of his discovery he published in the month of July a really wonderful book on the subject at considerable expense. This book is printed on a high grade of enameled paper, profusely illustrated with beautiful half-tone engravings and with a deckel-edge cover, and as its valuable contents are from the pen of the ablest speech specialist of modern times, no stammerer should be without it. Book, together with practical advice regarding treatment, can be secured free of charge by simply asking for them on a postal card. Address **BENJ. N. BOGUE, 235 State Life Bldg., Indianapolis, Ind.**

8 Tools FREE

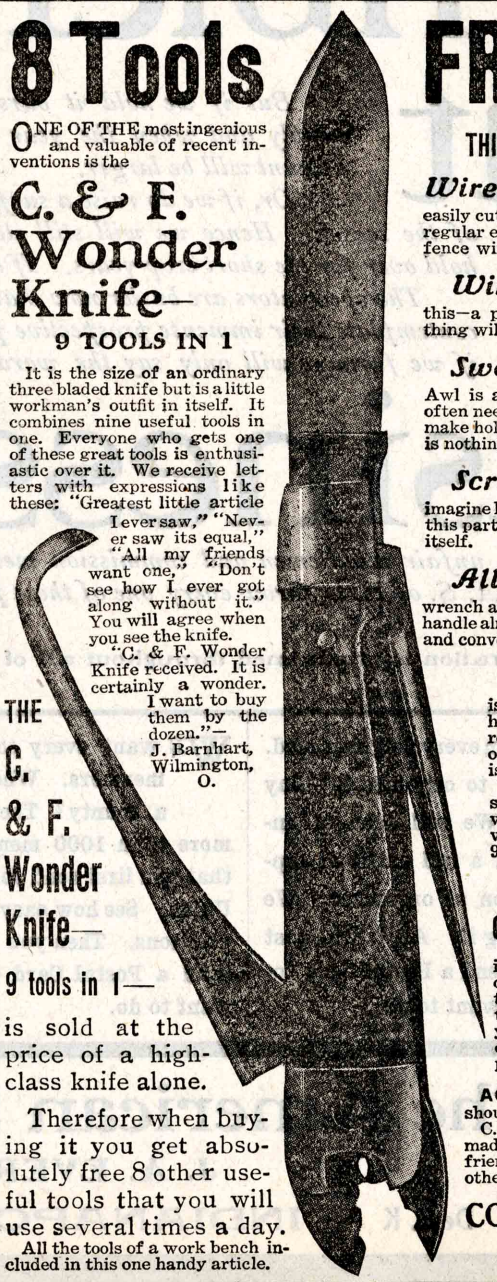
ONE OF THE most ingenious and valuable of recent inventions is the

C. & F. Wonder Knife—

9 TOOLS IN 1

It is the size of an ordinary three bladed knife but is a little workman's outfit in itself. It combines nine useful tools in one. Everyone who gets one of these great tools is enthusiastic over it. We receive letters with expressions like these: "Greatest little article I ever saw," "Never saw its equal," "All my friends want one," "Don't see how I ever got along without it." You will agree when you see the knife.

"C. & F. Wonder Knife received. It is certainly a wonder. I want to buy them by the dozen."—J. Barnhart, Wilmington, O.



THE C. & F. Wonder Knife— 9 tools in 1— is sold at the price of a high-class knife alone.

Therefore when buying it you get absolutely free 8 other useful tools that you will use several times a day.

All the tools of a work bench included in this one handy article.

THIS IS A LIST OF THE TOOLS:

Wire Cutter One of the tools is a perfect wire cutter. It will easily cut wire ⅛ of an inch thick. As useful as regular eight inch wire cutters. Will cut barbed fence wire.

Wire Pliers How often do you want some thing like this—a pair of pincers. Ordinarily this one thing will be used a couple of times a day.

Swedging Awl LEATHER PUNCH AND GIMLET. An Awl is a useful little thing to have. You will often need it when repairing. With this you can make holes in leather and do many odd jobs. There is nothing better for starting screws.

Screw Driver At one end is a strong screw driver. Just imagine how often you will use it. You will use this part as often as you will use the knife blade itself.

Alligator Wrench A handy little wrench always in your pocket. A size that will handle almost any nut you want to tackle. Strong and convenient.

Hoof Hook This is something new. It is an implement to clean out the hoofs of horses. Every farmer and stockman will recognize at once the usefulness of this one tool. To any person around horses it is easily worth the price of the outfit.

THE KNIFE itself is made of finest razor steel. No one will be without a knife and when you know the value of this one you will always have a C. & F. Wonder Knife—9 tools in 1— in your pocket.

The regular price of a

C. & F. Wonder Knife—9 tools in 1

is $1.50. We have made a low price of only $1.25, so that we may introduce them quickly. This is your opportunity to get one at 20% reduction and then your friends will want to buy. With each order for sample we send wholesale prices.

AGENTS who want to get a good seller should order sample.

C. & F. Wonder Knives—9 tools in 1—are made to sell on their merits. Made to gain friends and keep them. One sold sells many others. Write us.

To Put All The Gamblers Out Of Business

IN THE PAST we have worked hard and long to produce as good crops as possible.

When the crops were produced, and even before, a lot of people who produce nothing assumed to sell our crops at prices made by themselves, and expected us to deliver to them at these prices.

The prices set never took into account our investments, toil or sacrifices; neither were any profits considered for us.

By this plan we were absolutely dependent on other people, and as there never was any certainty, one year with another, what they would allow us for our stuff, our business was unsatisfactory and uncertain.

But knowing that we first have the property on which all the business of the country depends and even the life and comfort of the people, and all the domestic animals.

Therefore, we know that we need not be dependent upon other people to put prices on our goods, but that we can put a fair price, or a high price, if we want to, on our own stuff and the other people will pay it rather than starve or go unclothed.

Also we know that all we produce goes into consumption; hence there is not much danger of having any left over if we quit dumping our stuff and letting the other people hold it.

But if we hold it ourselves until the demand comes, the demand will be as strong as the supply and when the year is around our barns and graneries will be empty and our bank account will be larger.

Or, if we do raise a surplus of any crop, we cannot know this for a certainty at the beginning of the season. Hence we will still start out with a good price and if all our supply is not taken, we will hold over for the short crop years. If a perishable crop, we will let the surplus spoil at home!

The speculators are busier now than for years. They are gloating over our fine crop prospects. They contemplate their immense prospective profits while we should be astounded at our prospective losses. Yet, if we farmers will only say the word "Organize," and back it up by action, those selfsame speculators, gamblers and grafters would never more despoil us of our legitimate rewards.

Now, therefore, as the American Society of Equity supplies a simple and practical plan to remedy our troubles, we do hereby declare ourselves free and independent from all speculators, gamblers, unfair middlemen and commission men, food trusts, stock yard grafters and cotton factors; and that we will organize into the A. S. of E. to throw every one of these parasites off of our backs forever and make them earn their own living.

This declaration is proclaimed throughout all of the lands of the United States and Canada of America

---

WE want a local union in every neighborhood. Will you volunteer to organize it? Any body can do it. We will send all instructions and blanks and a full outfit of supplies to the Union as soon as organized. We will also pay you for doing it. All it will cost you is a Postal Card. Send a Postal Card today and tell us what you want to do.

WE want every county organized with 1,000 members. Who will volunteer to organize a county? There are many counties with more than 1000 members already. We suggest that you first send for outfit to organize one local Union. See how easy it is and get one of our propositions. Then you will want to organize more. Send a Postal Card today and tell us what you want to do.

IF you don't want the Board of Trade to make prices on this years crops send a Postal Card for an outfit and instructions at once. Remember, every little helps. Don't put it off until tomorrow. We are in great earnest about this matter. We want earnest helpers. You don't want the gamblers to price another bushel or pound of your stuff and you know it.

When you write give your county.

WRITE A POSTAL CARD

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, AUGUST 1, 1905

1905 Wheat Bulletin

NATIONAL UNION OF THE AMERICAN SOCIETY OF EQUITY

INDIANAPOLIS, IND., JULY 22, 1905

To the Wheat Growers of America:-

The American Society of Equity Estimates the Winter Wheat Crop of the United States for the season 1905 to be Three Hundred Eighty-Five Million (385,000,000) bushels and the Spring Wheat Crop from present indications to be Two Hundred Thirty Five Million (235,000,000) bushels. Or a total of

620 Million Bushels

The Spring Wheat Estimate is subject to revision if conditions materially change.
This Society also recommends a **Minimum Price** for the 1905 crop of wheat at Chicago of

$1.00 Per Bushel

M. W. TUBBS, Secretary **J. A. EVERITT, President**

Wheat Growers everywhere are asked to keep this price in mind, spread it among their neighbors, ask it, and hold for it if the price is ever below.

Remember, those wheat growers who took the advice of the A. S. of E. won twice already. Remember, there is such a large part of the wheat crop controlled now that every person who holds will get the price. The more who hold the sooner the price will settle at or above the minimum price.

As far as getting the minimum price for wheat is concerned, those who set their mind on $1.00 and don't sell out for less are as certain to get the price as if the society had One Million Members. The world needs all the wheat. It needs the part controlled as much as the part dumped. When there is no more to be had from the dumpers it is bound to pay your price.

1905 HAY BULLETIN

The 1905 hay crop was a very good one. Our reports on hay were not sufficient, to venture an estimate on the yield. We do however recommend a minimum price for No. 1 Timothy hay, on basis of Chicago Market of

$12.00 PER TON

M. WES TUBBS, Secretary **J. A. EVERITT, President**

Hay growers are urged to keep the price in mind. Many places the price may be higher on account of the local demand. Also many places (in the Western States) the price will be better when through organization farmers can secure equitable freight rates.

IF THIS PAPER comes into the hands of Publishers they are requested to re print the 1905 wheat bulletin and such other items in this issue as they can. Also this is a request that our readers secure the publication of the bulletin in their local papers. Each person should be interested in giving the bulletin the widest publicity possible.

Notes on the Wheat Bulletin

$1.00 a bushel will be an export basis, If the farmers of America firmly hold their wheat for $1.00 they will get it and the Markets of the world will rise to this price. This will benefit wheat growers in all countries and there is not a place on the earth where wheat should be grown for less than $1.00 per bu. on basis of the U. S.

The United States consumes over 500 Million bushels of wheat for seed and food. There will be about 100 Million bushels for export out of the 1905 crop if nothing occurs to change the yield.

The condition of the crop in other wheat producing countries does not indicate more than an average yield.

The population of this country is increasing rapidly. The same is true of most of the wheat consuming countries, yet the production of wheat is not increasing. Final estimates by the Dept. of Agriculture of the worlds wheat crop for 1904 puts it 68 Million bushels less than the preceeding year.

The average yield of wheat in the U. S. for the ten years 1895 to 1904 inclusive has been 580 Million bushels.

The average exports of Wheat (including flour) from the U. S. for the ten years 1894 to 1903 inclusive has been 181 Million bushels.

The average price of cash Wheat at Chicago for ten years 1895 to 1904 has been 78 cents per bushel.

More than half the farmers sending reports expressed themselves that a fair price for the 1905 crop of wheat would be more than $1.00 a bushel.

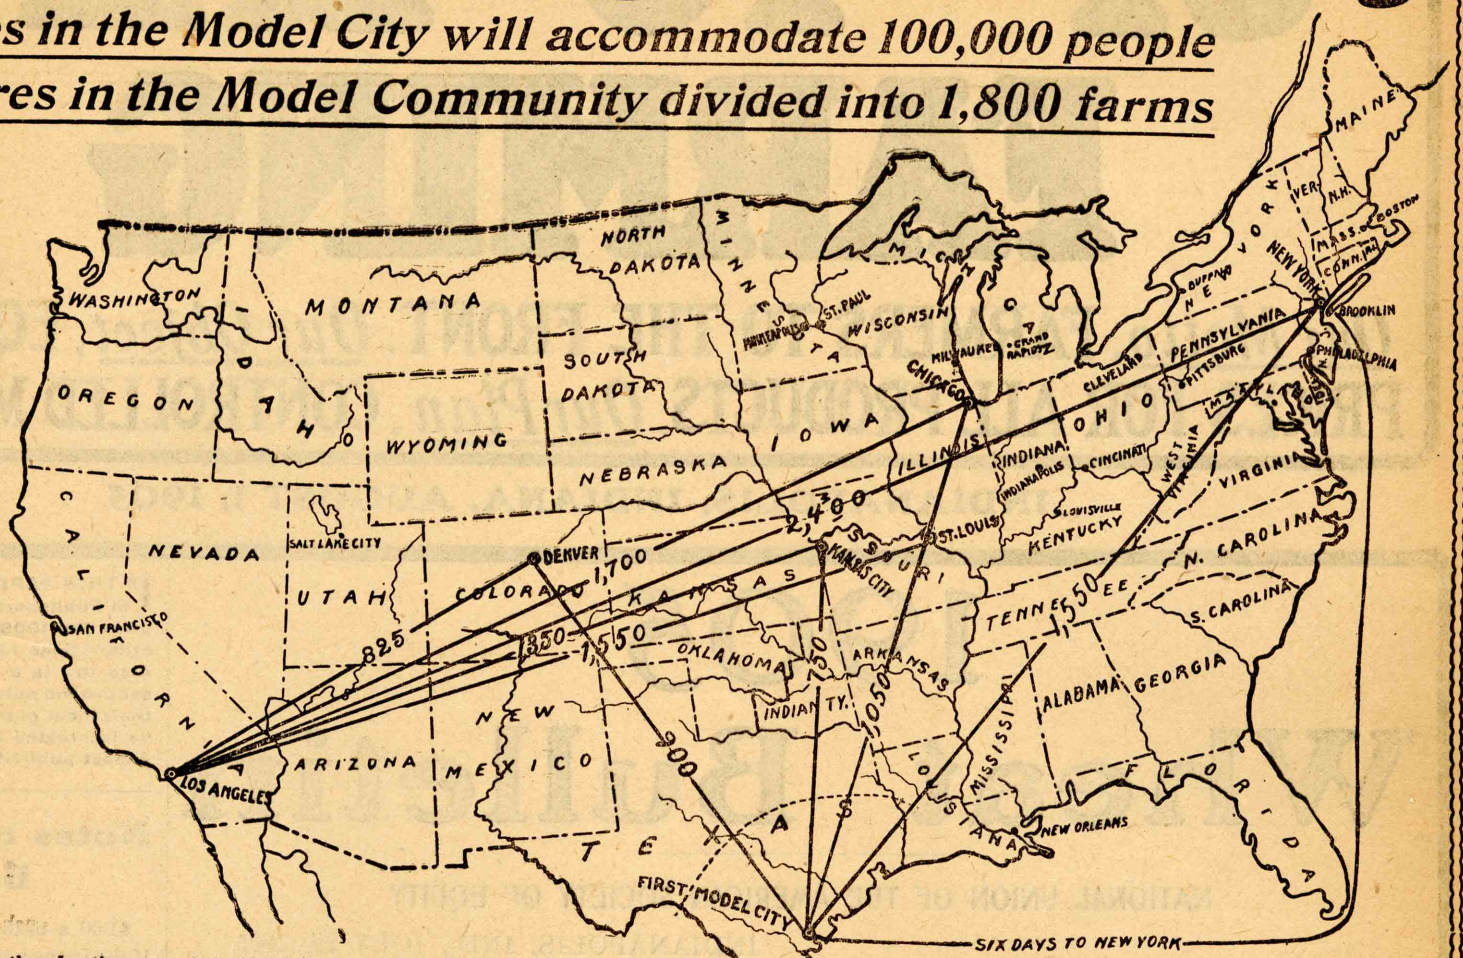
The Richest and Most Productive Land in the Country

Two or Three Crops Grown a Year



IF you have been following the advertisements of the Model City and Community as they have appeared in Up-to-Date Farming you have been told that this place is to be filled with MODEL PEOPLE, in MODEL HOUSES; doing MODEL BUSINESS and under MODEL GOVERNMENT.

Climate and Crops—Also that the CLIMATE is not surpassed anywhere in the country. That a GREATER VARIETY OF CROPS can be grown than elsewhere in the country. That its BAYS and LAKE and RIVERS bounding three sides of the tract abound in fish, oysters and wild fowls and add a charm and value to this place that will be hard to duplicate elsewhere. For HUNTING, FISHING, BATHING and BOATING this place will attract desirable, permanent and temporary residents from all over the country.

Other Features—We have told you about the MODEL CITY LAND AND IMPROVEMENT ASSOCIATION and what it will do; of the OPENINGS here for busines—mercantile, agriculture and professional; of the EDUCATIONAL SYSTEM and RELIGIOUS FREEDOM. How no pleasure, recreation or business will be denied that is not inherently evil of itself but where there will be the greatest incentive to effort, yet all activity will be restrained within healthful bounds. How profitable labor and healthful sports may be had and indulged to hearts content.

Wise Investments—We have tried to show you BEYOND THE SHADOW OF A DOUBT that any investment made now in the Model City lots or the Model Community lands will be the wisest you can make any where. That you don't buy a lottery ticket or gold brick but get a guarantee deed to THE RICHEST LAND IN THE COUNTRY; where a living and competency can be made, perhaps more easily, than any other place in this country and all the time the property increases in value. While savings banks pay 3%, government bonds about the same and industrials 6 to 10% MODEL CITY LANDS WILL RETURN FROM 100 TO 400 PER CENT IN CROPS and double in value by the time you take possession. And city lots acquired now at $100.00 may reasonably be expected to be worth $1,000 to $5,000 in a few years.

No. _____

Applications are numbered as received—No. 1 has first choice of all farms or lots, No. 2 Second Etc.

CUT OUT and send promptly. You may be of the 200 if you mail today

To Mr. J. B. Coghill, Mgr.
Dept. 4, Indianapolis, Ind.

I hereby subscribe for.... farms of 25 Acres each. And ....lots, all in Refugio Co., Tex. and in the tract of land known as **The Model City and Community.**

For such farm land and lots I agree to pay to **The Model City Land and Improvement Assc.** $20.00 per acre for the farm land, and $100.00 each for the lots. One third to be paid in cash as soon as two hundred (200) 25 Acre farms are subscribed for; another one third in cash when I take possession of the property and on delivery of the deed. I agree to take possession of the property or place some person in possession within six months from the time of notice of subscriptions for 200 farms is received. The balance one third is to be paid in one year from same date. Deferred payments to bear interest at 6 per cent. per annum. If it is not convenient to make the last payment at time specified it is agreed that the time will be extended another year. In the case of city lots the condition to take possession is waived.

DATE..... .. SIGNED.....

P. O.....CO..... . ..STATE.....

Do you see that map? Study it carefully. We want to tell you that in all the large cities you can now find new vegetables and fresh fruit nearly all winter. Where do they come from? There are two principle places—Southern California and Southern Texas. The whole of the United States must look to these places for the apitizing new vegetables and delicious fresh fruits when the balance of the country is in the rigors of winter or gardeners and farmers elsewhere are only preparing for crops. You know what high prices the early truck and fruit sell for, so we will not attempt to tell you, suffice it to say that the products from an acre in Southern Texas sells for several times as much as the product of an acre in the North. Now look at the map again. Which of these sections has the advantage? The FIRST MODEL CITY is 1,550 miles from New York, California is 2,400 miles. Model City is 1,050 miles from Chicago, California is 1,700 miles. Model City is 750 miles from Kansas City, California is 1,350.

Study the Map—Model City is almost as close to Denver as is Southern California. Does this count for anything in time and cost of transportation? It surely does. This portion of Texas absolutely offers the greatest possibilities agriculturally of any portion of the United States. Investments in land are bound to be extremely profitable. Fortunes can be made years hence, but there will never be another time like today.

First 200—We have told you how you can acquire these farms or lots for business or residence, also how the FIRST 200 SUBSCRIBERS HAVE THE PICK AND CHOICE OF ALL.

Send Application—If you have not read our former advertisements send for them. If you have read them and misplaced them, send for them now and read again. If you have not sent your application for what you want attend to it at once, or investigate at once and then apply. THIS IS AN OPPORTUNITY THAT DON'T COME TWICE IN A LIFETIME. The person who takes our advice will have made the choice of a lifetime and one which we predict he will never want to relinquish.

Your Choice of Business—But listen! If you don't want to farm—raise vegetables, fruit, grain, cotton, alfalfa or poultry—you can engage in business in the City, and property bought now will surely double in value over and over again. Or if you don't need to labor, you might travel over the whole country and not find another place to equal the FIRST MODEL CITY for health and enjoyment. It you love fishing, hunting, (wild fowls) bathing, boating or sailing; if you love flowers and semi-tropical trees and plants; if you love a city of beautiful streets, boulevards, parks and buildings; music and birds, come to the MODEL CITY for all these will be there.

Organize—Upon occupying the Model City one of the first things that will be done will be to organize the farmers, truckers and fruit growers in the coast country of Texas on the plan of the A. S. of E. to market their products with the CLEARING HOUSE at the MODEL CITY. This can be done to splendid advantage because when their crops are ready there is no competition elsewhere in the country. Then the uncertainty of prices will vanish and certainty will prevail. The supply will be judicially distributed to markets so as to prevent gluts, and with a better distribution larger markets will be obtained. Through organization and co-operation the producers will then be powerful to secure equitable rates from railroads and prompt service.

This is not the least important feature of this movement, and is one that will interest every citizen of Texas. The territory to be organized first is approximately represented below the dotted curved line. See the map.

First Allotment—REMEMBER, the first allotment will be made as soon as two hundred (200) farms of 25 acres each are sold. Then the people who have subscribed for farms and lots will be taken on the place and they can select the very cream out of 1,800 farms and nearly 30,000 lots, or they can select from a carefully prepared map.

People who are subscribing nearly all take both farms and lots, some take two or more of each. It shows that they are interested in both the country and city.

REMEMBER also, the City will be located on a fine bay and river; the tract is bounded by two bays, a lake and two rivers. One railroad goes through the tract, and other railroads will build through and to our city promptly after it is opened up.

Cheap Transportation—Arrangements are being made for cheap transportation to the Model City and Community. All particulars will be sent to subscribers in a short time. Subscribe today and get your neighbors to join. Remember this is a movement to secure the greatest possible happiness and prosperity to all who come with us to the First Model City and Community.

If you want to know more about the Model City Land and Improvement Association write to any bank in Indianapolis.

For Health, Wealth and Happiness come with us to the First Model City and Community. Address,

Model City Land and Improvement Association

Up-to-Date Farming

Representing the Union or Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII **INDIANAPOLIS, AUGUST 1, 1905** **Number 15**

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR
Foreign Subscriptions $1.00 a Year.

CLUBS. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 or five $1.00 for $4.00.

ALL PAYABLE IN ADVANCE

Acknowledgement. The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including county. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee tbat they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

ALLIED PRINTING TRADES UNION LABEL COUNCIL 18 INDIANAPOLIS

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain of organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the LABEL.

NATIONAL UNION LABEL AMERICAN FARMERS

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, 1905 crop per bushel	**$ 1.00**
Corn, No. 2 Chicago, 1905 crop April 1 to next crop	**.60**
Oats, No. 2 white, " per bushel	**.40**
Tobacco, (Price on the farm or at the market town)	
Virginia, dark, average per cwt.	**$ 9.00**
" bright, " "	**12.00**
Kentucky, dark, " "	**8.00**
" burley, " "	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit, per bu.	**2.00**
Cotton, New York, per pound	**.12**
Broom Corn, Chicago, per ton	**$75.00 to $85.00**
Hogs, " per cwt.	**6.00 to 6.50**
Cattle, " per cwt.	**6.00 to 7.50**

Booklet E 37

Wonderful to educate the people; 64 pages and cover. We have 25,000 to give away. All we ask you is 6 cents a dozen to pay postage. Order a lot and distribute them. This is one way for you to do your duty.

$1.00 a Bushel

Is never too high for wheat. Those who hold for it will get it. It matters not how low the price may be forced now. Remember 1903 and 1904. Remember cotton and recall the hundreds of cases where controlled marketing compelled the price.

Crops of 1905.

Does it take two to make a bargain?

Scarcely, when one side has nothing to say about the price.

The old system does not even divide the profits, it takes them all.

If it is incumbent on the government to report to the buyers how much the farm crops are to produce, why does it not report to the users how much of manufactured articles are being made?

If manufacturers are expected to say what their articles are to sell for, why may not farmers say what their products are to sell for? And if manufacturers are expected to so curtail their outputs as not to make too many of any one article, why may not farmers do the same?

It is a strange civilization that makes bone of one and flesh of another; that urges one class of laborers to make all they can in order that their articles may sell cheap, while it permits all other classes to produce as little as they choose, and to sell only at their own price.

Union labor should be a strong ally of union farmers. Farming unionized will produce more regular crops, and receive for them more remunerative prices. Farmers will then want to employ labor, at satisfactory wages. They will draw their supplies from the congested centers, and thus relieve the labor situation—restore the equilibrium that has been so greatly disturbed for many years.

We have courted contradiction. If there is any reason why farmers should not organize, we have all the time been anxious to know it, and have invited all classes to express themselves. Not an argument against it have we heard. Some have expressed doubt; some have employed ridicule because they had no other weapon; but none have dared to oppose it as a question of right.

Let's see. Somebody must be getting busy. The beef trust indicted in Chicago, the standard oil worried in Kansas and everywhere else, the Santa Fe shuffling uneasily on the rebates, the post office department scarcely settled down after a trowning, Jerome, Folk and Lawson all loose at once, and Secretary Wilson plugging "leaks" in the agricultural department. Yes, somebody is busy.

Up-to-Date Farming has no apology to offer for its opposition to whatever is contrary to the best interests of agriculture. The country could do without mining; it could do without manufacturing; it could even do without railroading, but it could not do without farming. We do not wish to do without any of these, and we do not ask that farming be given an advantage over any of them, but we do ask that it have the same privileges and advantages that the others enjoy.

Farmers may be slow to organize, but that is no proof that it is not necessary for them to organize. Deep waters are expected to move slowly, but they move with irresistible power. There is such a thing as being too conservative, and we sometimes conclude that farmers are open to this charge. All other classes are more radical; that is, they move more quickly and more positively. Farmers hesitate. They like to stay in the old paths, or, rather, they are unwilling to take risks in seeking not only to be convinced that it is better to do differently, they must be given courage to do it.

A study of exports and imports would be a good thing for farmers, and, indeed, for everybody else. It would be learned that our exports almost all go from the farms and ranges whiles the imports stop in the cities and centers of population and wealth. Agricultural products pay our foreign debts and settle our balances of trade. This looks like farmers pay for imported goods, but other classes get them. We make this remark not to create dissatisfaction, but to show the so-called wealthy classes the importance of agriculture in this country. There is not an interest but receives its most substantial support from the farms, and every interest should devote its best efforts to the building up of agriculture.

The A. S. of E. cannot perform miracles. It teaches the truth and contends for equity. The people interested must learn the truth and practice it.

County unions in the evolution of the A. S. of E. will become county clearing houses for agriculture. They will be connected with all members by telephones and with the headquarters clearing houses.

Members and readers are hereby reminded that clearing houses and telephones are among the things to be realized in due time. All such features require time to perfect arrangements to secure them. The A. S. of E. will not be a complete success without them.

This paper must have a larger circulation. If we had the printing facilities we would be printing 300,000 copies each issue instead of half the number. If each subscriber who is in arrears would pay up or pay part we could have the printing facilities before the end of this year. Pay up now.

Fruit and truck growers find their business uncertain and unprofitable because of lack of system in marketing. System will only come through organization. With organization and a headquarters for direction this business can be made as certain and profitable as any mercantile business.

Corn is in excellent demand. Exporters are taking it at the present excellent prices. The visible supply is less than half what it was a month ago. Receipts are falling off. Is not all this an encouraging prospect for those farmers who have their corn? Don't it look better from a farmer's view point to have a small visible in elevators and a large non-visible in cribs?

Department of Agriculture

There is a disposition to complain about the falling off of our agricultural exports. Such people must remember that our farmers must raise more than a home supply if the export volume is to be maintained. As all the combined effort of the Department of Agriculture, state farmers' institutions and farm papers have failed to teach farmers how to grow larger crops to supply the increased home demand and maintain the export trade, we recommend farmers to depend on good prices, which will allow better farming, and larger crops will result.

Twelve Cents

Before a pound of the 1904 cotton crop was ready for market, the American Society of Equity issued its bulletin fixing the minimum price of cotton at 12 cents per pound. Amid all the manipulations of the market since then, the disastrous government reports, the leakage and investigations, the dismissal of statisticians, and the wavering of the societies, the A. S. of E. never receded a single point, but stood for its price because we know it was equitable and right and that the condition of supply and demand justified it. Now the Press Bureau of the Southern Cotton Association has this to say:

"All that have held for 10 cents will soon receive their reward, and if they want 12 cents, all that is necessary is to hold for same."

If these people had stood by us all the way through, and ignored the department frauds and exchange manipulations as we did, not a pound of cotton need have sold for less than 12 cents at New York.

Well, people are learning, and we are glad of it. A little more confidence, a little more back bone, a little less scheming, a little more teaching that the planters are able to help themselves, and the clouds will roll away.

THE CROP REPORT SCANDAL

Warm Days at Washington

It is difficult for a semi-monthly publication to treat of current events in this electric age. We must needs write in advance of publication, and events treated may take on entirely different coloring by the time of publication. But at this time the crop report scandal in the national Department of Agriculture is something to amaze and startle the world. Every lover of popular government, that is, of government by the people, and especially every admirer of that form of popular government possessed by the United States, must regret to his heart's greatest depths, that such a thing could be. Still, the unprejudiced must concede that this and other great scandals that have for so long a time followed each other in such sickening succession, are not the fault of the government itself, nor of any of its peculiar forms; but they are distinctly traceable to certain "Systems," as Mr. Lawson would say, that have been permitted to grow up in a soil to which they flourish with alarming luxuriance.

One of the most fruitful propagators of these scandals is a practise of which all politcal parties that have been in power are guilty, that of rewarding private favors and political services with public office. It is unfortunate that there are so many appointive offices—it is unfortunate, indeed, that there are any. In a government where it is pretended that the people rule, they should rule. People scarcely realize that in voting to fill certain offices they are filling at the same time several hundreds or thousands; and that the "distinguished orators" who so patriotically (?) roam the country urging voters to "save the nation" by electing the "pure and spotless So-and-so, of all men best fitted for the place," are not so much interested in the "pure and spotless," as they are in themselves." It is often the case that the most successful party pullers and campaign managers are not the most conscientious of men, and yet, under the "system," these are the ones who surest get the most important positions at second hand, because those who succeed at the polls are in debt to them and dare not fail or refuse to pay the debts. When that class of men secure commanding positions, graft, boodle and corruption are as natural as that effect follows cause. Were the appointive positions lopped off, so that each candidate must come out in the open, there would be less room for intrigue, and less incentive to the hidden motive for the bitter party spirit that impels good men to vote without wholesome discrimination.

But we are wandering from the subject immediately at hand, though what we have said is pertinent to it, and should be earnestly considered by every friend of good government.

The crop report scandal, in addition to emphasizing the evils to which we have above referred, may be set down as another bitter fruit of the vicious speculative system of dealing in options or futures, and plainly proves what we have so often said that this work of the department is in the interest of speculation or consumption. In the first place, if there had been no graft attached to it there would have been no opportunity to sell official integrity and national honor for money, and if these unscrupulous gamblers had not been benefited by what they purchased, they would not have bought it.

We think we may pause long enough to suggest that there are two things to which the energies of the government, executive and legislative, should be directed in this behalf. One is the destruction of speculative dealing in futures, or option dealing; the other is to stop entirely the issuing of "speculative" crop reports.

We suppose that all of our readers know what this crop report scandal is. Aroused by the disastrous report of December 3, 1904, the cotton producing interests, of the country took up the subject, and began a quiet investigation. Facts sufficient were found to justify the lodging of charges before the Secretary of Agriculture, who at first treated the matter with very little consideration, but it was pressed too warmly to be ignored. Mr. E. S. Holmes, assistant statistician, was suspended "at his own request," and an investigation was begun. It was easily shown that the substance of the crop reports had been sold to speculators in advance of publication, and that figures had been doctored or falsified in the interests of such speculators, enabling them to make deals in advance of the reports—in other words, to gamble on a sure thing. So positive were the proofs that Secretary Wilson found it necessary to issue a report dismissing Mr. Holmes, and giving the names of several firms of speculators who, he alleged, had thus bought information that belonged only to the public. It developed that not only in cotton had these frauds been perpetrated, but in wheat and corn and other standard crops, and the end is not yet. What developments may occur by the time this paper is issued cannot be told at this writing, but that there is to be a shaking up, the following extracts from the daily press clearly show. Among other firms charged with having thus tampered with the Department, Mr. Wilson mentioned that of Theodore H. Price. Mr. Price denied the charge, and sent his attorney, Mr. Ivans, to see Secretary Wilson, and he is reported to have delivered to the Secretary, the following message:

"Mr. Secretary Wilson, my client has asked me to come here to say that you will be prosecuted for criminal libel to-morrow morning for the statements you made about him yesterday unless in the meantime you make a full retraction. You have stated that Mr. Price was one of those who obtained advance information of cotton-crop reports from Mr. Holmes. Looking through your statements I find that there is absolutely not a scintilla of direct proof warranting the assertion you have made. On the authority of Mr. Van Riper, who claims that he was told by Mr. Haas that Price was doing business with Holmes, and because of the mention of Mr. Price's name in a letter, you have gone on record as saying that Mr. Price was interested in this traffic with a Government official. On such evidence I would not kick a dog, and wish you to consider that you have done my client grave injustice, and make amends immediately."

That was on Monday after Mr. Wilson's report had been issued on Saturday, and that Monday was a warm day for the Secretary of Agriculture. Scarcely had Mr. Ivans retired, when Mr. Van Riper, one of the principal parties concerned, called to charge the Secretary with having broken faith with him, and to demand satisfaction. Then came Mr. Cheatham, secretary of the Southern Cotton Association, to reiterate the fact that Mr. Wilson had broken faith with Mr. Van Riper. He is reported to have charged the Secretary with "being more desirous of saving Mr. Hyde, the chief statistician of the Crop Report Bureau, than to serve the public. He asserted that Mr. Hyde was the man responsible for this long series of leaks, because he was the head of the bureau. But for Mr. Hyde's management of the bureau such things could not have happened. He declared his belief that when he reported to his association, a systematic effort would be made to force the Secretary to remove Mr. Hyde, even if an appeal had to be made to President Roosevelt at Oyster Bay and certain unpleasant revelations made to the President.

"You have been told, Mr. Secretary," said Mr. Cheatham, "that there is a man over there completely under the domination of a woman, you have been told all about the facts and you are familiar with the facts from personal investigation. Yet you are shielding men when you know they are not fit for the position."

In his report dismissing Mr. Holmes, Secretary Wilson said the United States attorney for the District of Columbia, had decided that Mr. Holmes was not subject to prosecution for the offense with which he had been charged and proven guilty. Next came Mr. Beach, the Dist. Atty., who declared he had not so decided, that the case had not been submitted to him in full and that Mr. Holmes could be, on the evidence, indicted for conspiracy.

The next day Mr. Wilson decided to stand by his report, and to make no retraction for Mr. Price or anyone else.

The latest at this writing is that President Roosevelt has taken the matter up, and ordered the Department of Justice to "go to the bottom of the scandal, make the facts fully known, and punish the culprits."

If this scandal, bad as it is, leads to the stoppage of the "speculative" crop reports, and arouses to effective action against gambling in the sweat and toil of the farmers of the country, the public will have cause to be thankful. They should also remember that this paper was the first to oppose the system and the American Society of Equity was the first institution to adopt a one crop report plan which is the true one for all interests.

Government Crop Reports

In former issues of this paper we have argued that the crop reports as issued from time to time by the government can serve no good purpose; that they cannot possibly benefit either the producers or consumers; that should they indicate an excessive crop it would be too late for them to result in a decrease of the crop, and should they indicate a light crop, even to famine figures, they come too late to result in an increase of the crop. The reports have never been known to improve the situation in either of these cases, nor can they, because, at the earliest, they come too late. And in no other way could they be of general benefit.

Hence, as we have said before, these reports serve but one purpose, and that is to keep fanned the flame of speculation to the extent of keeping unsettled the prices of the world's most necessary articles, its food and clothing, for the benefit of speculators who are of use to none.

The character and reliability of these reports are being more and more questioned, until they are actually bringing into disrepute the Department of Agriculture. We make a few quotations from a recent issue of the Northwestern Miller, the authoritative milling journal of the Northwest:

It would be interesting to learn the names of some of the government crop reporters in the State of Minnesota, for instance. A dozen of them in any county would be sufficient for a sample. The Northwestern Miller is willing to wager that out of the twelve, not three would be found who were in position to give an intelligent idea of the growing crop. It is no wonder that, with such material to work from, the wheat crop reports of the department are so often ludicrously wrong. In the matter of wheat acreage in the Northwestern States, the department has been far astray for many years and is apparently quite unable to get itself in touch with the facts. A few years ago, when flax made large inroads upon the wheat acreage, the department realized (a year or two after the event) that it was overestimating the wheat acreage, and to some extent rectified its mistake. Later, when the flax fever abated and the farmers went back to wheat, the department apparently ignored the change, and since then it has been going ahead on the same basis; in consequence of which its estimates of the spring wheat acreage have been woefully erroneous.

* * * * * * *

Truth is, the Government wheat crop estimate, being made up as it is largely from the guesses of people who are not in the best position to guess intelligently, does not cut very much figure in the markets. It is waited for rather languidly and with not half the interest that the newspaper market reporters, put to it to fill their allotted space, would have the public believe. Even this interest evaporates when the matter comes to the consideration of the legitimate user of wheat—the miller. The grain gamblers make as much of the reports as they can, but, within a few hours after publication, it is as a tale that is told and the market resumes its wonted course, either up or down, as the dominant element dictates.

* * * * * * *

The Government report is merely one of the market straws, like the humorous extracts from alleged market papers of the Cincinnati Price Current variety, which have as adequate a system of learning true crop conditions as the world has of keeping informed on the social life of Mars. If the Government report on wheat were taken seriously, there would not be so much room for the forecasts,

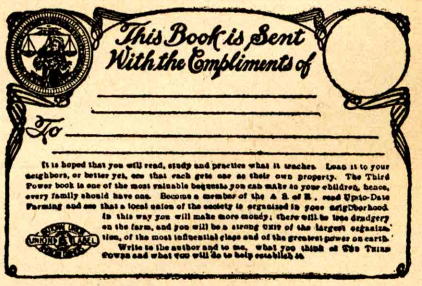
VICTORY! VICTORY!!

Reforms come through the people. No great reform is accomplished until the people are back of the movement. To secure their co-operation they must be educated. after education (and only after it) then organization is possible, after organization then comes co-operation.

Now we have in the farmers movement first the necessity for education. Millions are to be educated. To accomplish this there has been provided the very best mediums any movement ever had. We refer to this paper, Up-to-Date Farming and The Third Power book. No other great movement ever had such powerful mediums of education. Wherever they are read they "make new minds," as one of our readers said, and carry conviction that the farmers temporal salvation depends on him following their teachings.

A special educational offer is made in this paper of Up-to-Date Farming and The Third Power. It should appeal to every reader. Thousands should be persuaded to take of their own money and place these instruments of education into the hands of all their acquaintances. It will be like bread cast upon the waters and will return.

For all who will order Third Power books to distribute in this way we will write the name of the giver and receiver in the front of the book and dispatch with your compliments. See reduced fac simile below.



In this way the giver's name will be seen each time the book is taken up. Also, since the reading of this book will open up a new era on every farm, the giver will be held in grateful remembrance. Farmers should give them to other farmers, merchants to customers, professional men to clients, manufacturers to users of their goods; and all will be benefited. There is not a printed work in existence that can do as much good if widely distributed, as will The Third Power.

Second. After education, organization is easy, therefore let us have a million or more names on the educational offer. Then organization will sweep over the country. We have always found the lack of understanding to be the great hindrance to organization. Therefore, spread the knowledge, extend the education. No person can do this as easily or as well by word of mouth as it can be done through the means we have provided.

Third. Co-operate. Need we prove that farmers can and will co-operate for profitable prices and everything they are entitled to when organized? We need not. There are many examples where they have done everything called for in the first object of the A. S. of E. With more organization they will simply do it more easily and with more certainty.

The reasons are obvious; the way is made clear; the results are with the farmers themselves. Turn to "A million! A million!! Victory! Victory!!"

prognostications, guesses and dicta of the horde of professional crop estimators now employed by various option traders for the purpose of influencing public opinion and stimulating speculation in grain. The Government's crop estimate is generally regarded among actual wheat handlers as a comparatively harmless idiosnycrasy of the Washington authorities.

When we consider that these reports do affect market prices, as did the cotton report of December 3, 1904, which cost the planters millions of dollars, we may realize that they are too serious a matter to make a joke of, and for the credit of the United States government and the safety of producers, we may appeal to the Department to discontinue them, at least in their present speculation-tinted, hurtful way.

Allow us to make one more quotation from the Northwestern Miler. We do not know that we can endorse it. We trust things are not so bad as indicated, but we say this: Purge the whole concern; knock out the graft, boodle and corruption, even though it leave nothing of the Department, but an empty shell:

When the public thoroughly awakes, and it is now slowly becoming aroused, to the wasteful extravagance, the gross favoritism, the dangerous politics and the willful and malicious interference with legitimate industries which characterize the present administration of the Department of Agriculture, there will be a call for an investigation which will investigate. It will not be conducted by Tama Jim or by any of his numerous satellites. When the true story of the Connecticut tobacco fiasco, the beet sugar promotion, the goose wheat exploitation and innumerable other industrial ventures of the Department of Agriculture are brought to light there will be such a scurrying to safety of theorists, paid faddists and political farmers that the scenes attending the departure of rodents from the old town of Hamlin will find their counterpart in Washington. The President of the United States loves to clean house, and when he sets about it he does thorough work. Some of these days it may occur to him to turn his attention to the extravagant and mischievous administration of the Department of Agriculture. When this happens, there will be "something doing" among the fad farmers, the political scientists, the industrial promoters and the great army of cranks and theorists who now infest the uninumerable bureaux, folding-beds, sideboards and desks of this institution.

Agriculture's Crucial Period

The farmer pursues his calling at a disadvantage as compared with mining, manufacturing, merchandizing, the mechanical arts, or the professions, in so much as all of these exercise, unchallenged, the right to fix a price at which they will sell their services or the products of their labor, whereas the farmer must accept for his labor prices fixed, not by him, but by others.

This fact can no longer be dismissed by the unconsidered thought that this great disadvantage does not matter so much, because the farmer is simple in his habits, is content with little, and may obtain that little under almost any conditions. This is the way the world outside of agriculture has been inclined to view the situation.

But the farmer of today, in America at least, is a MAN, and possesses an appreciative and progressive spirit, and, like other men, chafes under restraint, and suffers amid humiliating conditions. His wife has a taste for the good and the beautiful, and longs for pleasant and refined surroundings and associations. His children catch glimpses of the outer world, and their unfolding minds, aspiring to better things, revolt at a groveling existence, and become restless because of their higher aspirations.

This is the American farmer and his family of today, and it is a libel to say they are satisfied with a menial lot. And if they were, what sort of comment is it on the so-called upper classes, the higher callings, to exercise the valuable rights above referred to and deny them to the greater number who may permit it and suffer in silence?

But the day of reckoning is here. Tame submission to injustice and wrong is ended. An awakened sense of right has aroused the sleeping multitudes, and the demand goes forth for privileges equal to those exercised and enjoyed by others.

How shall those privileges be attained? The mere demand will never bring them. The pricing of farm products is too valuable an asset to others to be lightly surrendered. If that privilege be restored to those to whom it rightly belongs, it must not only be asked for, it must be DEMANDED AND TAKEN.

What does it mean to farmers? Everything. Farming is the only calling that could exist without it. Take the right to price its labor or products from any other industry on earth, and it must go out of business in a single season.

Why, then, should farmers be denied a right without the exercise of which others could not exist? And how do others maintain that right?

By organization. By acting in concert with each other. By restraining, or annihilating competition. By controlling both output and marketing.

Can farmers do the same? There is not a doubt of it. It has been proven by the actual doing. At his own great risk, virtually at his own expense, and in spite of unheard of opposition, Mr. Everitt formulated a plan of universal application and general acceptance, and demonstrated its success by actually making and sustaining prices through controlled marketing.

But this very fact brings to agriculture as intimated in the heading of this article, a crucial period. This work is worth everything to the farmer. It can be made a complete success only by complete and compact organization. Better that the plan had never been given; that its practicability had never been demonstrated; that its success had never been achieved, than that it should not now be carried to completion and its universal success made permanent.

"For it is impossible for those who were once enlightened, * * * if they shall fall away, to renew them again."

So the scriptures say of those who see the evil way and for a time forsake it, only to return to it again. It is a true picture of life. Every effort for good, every higher step, every movement for better things, if not maintained and completed, leaves an obstruction in the way of future efforts to the same end. When the evil spirit was cast out of the man and he persisted in returning to his house (to his evil ways), the scripture declares, you know, that "the last state of that man was worse than the first." Every wrong that is brought to light and not crushed, is more firmly established and more powerful for evil than if it had never been known, because, being known, it is tolerated and permitted to exist.

"Vice is a monster of such frightful mien,
That to be hated needs only to be seen;
But seen too oft, familiar with her face,
We learn to pity, then embrace."

The evils of the speculative system of price-making are now seen; the injustice done the farmer in forcing upon him prices that neither supply nor demand regulate, but that are made by the mere chance of gambling, is fully realized, the power of the farmers to overcome, and secure, and sustain reasonable prices on all their products is understood and acknowledged by progressive and fair-minded people. Should the work end here the situation would be worse than before, for with the interest now manifested allayed, double, and more than double, effort would be required to arouse it again. "The last state of that man would be worse than the first."

That is why we declare this is a crucical period for agriculture. NOW the victory must be won or postponed for years, if not forever. Organization must secure EQUITY, or inequity must still prevail in business and continue to rest with crushing weight upon the farmer, who can neither price his products nor make good his losses by pricing those of anybody else. No great sacrifices are required, but reasonable effort must be made to perfect the organization and secure to the fullest extent the hearty cooperation of all interested, or a cowardly submission to known wrong and injustice will follow.

Shall silly quibbles, unreasoning suspicions, narrow selfishness, intervene between the farm and its greatest achievement? We cannot believe so. As the joyous sounds of this month of independence ring in our ears, we are compelled to believe that Equity's victorious banner is proudly and confidently waving over the fields.

Organizing Farm Labor

The question of farm labor is becoming each year more and more a serious problem, and word comes from the East that farm laborers are discussing the question of organization as a measure of self-protection if not of self-defense. They cannot be blamed if they take such action. Other earners have long since done so, and have succeeded both in increasing their pay and shortening their hours. It is a fact that farm laborers receive a smaller per diem and work longer hours than anybody else. The custom has come down the years of working on the farms from sun up to sun down, and the exigencies of the business seem to make it still necessary, but the employers work the same hours. They do not ask their hands to work more hours than they do themselves.

This is a two-sided problem. Employers of other classes of labor can so adjust the prices of the products of the labor as to make them meet the wages paid the laborers. The farmer cannot do that. What he and his hired men produce must go onto a market controlled by some one else at prices fixed by gambling pure and simple, and with which not even supply and demand have anything to do. Hence it is impossible for the farmer to figure on his income, and whenever he hires help at a fixed wage, large or small, he is doing so at an absolute risk, for it is impossible for him to know what that labor may or may not be worth to him. He knows full well that he dares not take too great a risk, therefore he keeps the wages as low as possible, and lengthens the hours to the utmost limit.

But this situation is no relief to the laborer. He sees his brother laborers in other lines receiving better pay than himself, and working definite hours and shorter ones, and he drifts away from the farm and into other lines of labor. The result is that other fields of labor are crowded, while on the farms it is difficult to get help at all.

Can this state of affairs be improved by the organization of farm laborers to demand higher wages and shorter hours as others have done? We think not, for the potent reason given above, that the farmers have no control over their own incomes. The laborers may organize and refuse to work for present pay and long hours, but they cannot compel the farmers to employ them, simply because they dare not on account of the uncertainty of their own business.

The result will be, then, that the employing farmers will be driven to reduce their operations to the capacity of themselves and families, and virtually close all avenues to employment on the farm. Hence, instead of relieving the congestion in the labor centers, such organization will increase it by pouring into it all the farm wage laborers.

But there is a remedy, and it is on the strict lines of reason, right and justice. Let the employers of farm labor and the farm laborers organize together, in the A. S. of E., for instance. Secure to the farmers the right to control their own markets and make the prices on their products as all other employers of labor do. Then the wages of their help will stand upon the same basis as the wages of help in other lines. As the laborers demand better pay, the employers can meet the demand by so adjusting their own incomes as to cover it. The result will be not only increased pay for farm laborers, but increased employment of labor on the farms. This will turn the tide of labor from the present congested centers toward the farms, and restore the equilibrium that has been so rudely disturbed by the gambling market system that has brought with it so many curses.

It is time reason began to blossom out in all these movements, and that men adjust their efforts on the lines of cause and effect.

Wheat Growers—Don't Be Deceived

Strenuous efforts are being made, as are made every year, to induce farmers to hurry their wheat upon the market at cut prices, not for the benefit of those who consume the flour, but for the benefit of those who store the wheat and hold it for the highest price to which they can push it.

The crop of 1905 is a somewhat better one than that of 1904, but it enters a market almost entirely bare, and fair prices must prevail unless farmers foolishly throw away their opportunity. Do not be frightened by speculative stories of foreign crops or supplies. We make some quotations from a published letter written by J. W. Rush, of London, England: "The chief feature, perhaps, in the general position just now, is the very large continental demand. At the present time we have about 2,895,000 quarters afloat for the United Kingdom against 4,245,000 last year. There is in fact every indication that the season will finish with extremely small stocks available in England, France, Germany, Spain and Italy, as well as in America; so that pending definite information with regard to the growing crop there is little chance of prices giving way, while it is obvious that any serious impairment of the crop outlook in any of the principal countries could hardly fail to exercise an immediate and decisive effect."

The Indian crop is two million quarters below that of last year, and none of the European or South American countries report an excess. Hence, there is no reason at all for a depression of prices.

In our own country there is no bumper crop, and late excessive rains have reduced the condition and impaired the quality, while the straightening out of the tangle in the cotton situation, and the rapid approach of the price to its proper level, will invigorate the domestic market by stiffening the demand.

So there is not a single element in all the wide world that points to a price below a dollar. Don't sell for less. Don't be stampeded. Remember the world needs all the wheat, not part of it. Remember the demand continues over 12 months, not a month or two.

Pooling Their Wheat

We learn from the Owensboro (Ky.) Inquirer that the A. S. of E. of that part of Kentucky proposes to pool their wheat by districts, and to not sell a grain below $1 per bushel. This plan we think entirely feasible, and may be worked not only in Kentucky, but elsewhere. The wheat crop of Kentucky is reported to be about an average, and of superior quality. We assure the growers that they can confidently hold for $1 per bushel. Every condition justifies that price. The Kentucky growers do not have to base their prices either on Chicago or St. Louis, as their Louisville, Evansville and local mills will consume every grain of it. Hence, instead of finding their selling price by deducting cost of transportation from the cash prices at Chicago or St. Louis, they may rather add these charges, for if the mills mentioned do not get Kentucky or other nearby wheat, they must pay charges from Chicago, St. Louis or other distant centers. Kentucky growers, therefore, may get more than these great centers pay, and yet let the millers have their wheat for less than the transported wheat would cost them. This is equity, and shows clearly the advantage of organization.

The same paper tells us of four million pounds of tobacco that is being placidly held for the minimum price. Good for Kentucky. God help other farmers to be as true to their interests.

In the near future we expect to give the A. S. of E. plan for holding any farm crops in the hands of the producer and yet realizing a liberal cash advancement on them. By this plan the farmers will not be asked to put up a dollar of capital nor required to move their crops to public warehouses. The plan we have in mind is simplicity itself and can be worked out through the county unions or clearing houses and with local capital.

THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Membership Fee

Is $1.00 for members at large. Charter members of local unions pay no membership fee, and each member is entitled to receive a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc. It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Co-operate.

Don't hesitate.

No cause is there to longer wait.

You'll win the battle sure as fate.

And quicker than you contemplate.

But there is work for all to do.

No less for me, no less for you.

Organize—County unions August 25th

Rally Day—County unions August 25th.

County Unions—Organize them August 25th.

C. W. Bitney, county secretary for Chippewa county, Wis., urges all the locals of the county to ratify the constitution previous to the next meeting of the county union which will be at Chippewa Falls, October 7.

W. H. McCoy, of Red River county, Texas, writes that they are having lively meetings in their locals now.

The mortgage system in Southern cotton farming is very harmful. A remedy must be applied locally. Whatever can be done to help farmers get out of it should be done.

Discuss the government crop reports in the local unions. Other papers are now beginning to demand the abolitio of the monthly reports, using the identical arguments Up-to-Date used a year ago. If farmers could be induced to look after their affairs as other people look after theirs, how easy would it be to stop all these abuses.

Farmers, what do you want? Don't wait for some one else to suggest questions for you to discuss. Discuss whatever you think should be discussed, either of local or general interest. You will thus benefit yourselves and attract interest to important questions.

A dead local union is of no more value than any other dead thing. If your union is dead, promptly revive it, and if it is alive make it livelier still. Let the neighborhood know that it exists by what it does. Stir things up.

Farmers have written us, and we have published their letters, giving the A. S. of E. credit for making for them in clear money hundreds and thousands of dollars. We take it that if those who wrote us actually made money on account of the society, as they say they did, others made money also. Hence, the society must have been and is a money maker for its members. Yet when it was provided in the constitution that the members should pay a few cents quarters dues to pay the society's actual expenses and to enable it to do still more, many kicked. This shows a smallness that is unlike progressive people and cannot be a trait of progressive farmers.

There can be no organized society without a constitution, and no society can accomplish anything without a regular fund to pay its expenses, and to enable it to do things. The A. S. of E. was started as an experiment to demonstrate the possibility of farmers so co-operating as to make the selling prices of their products. This has been proven beyond question, and every local union is urged to adopt the constitution and get in line on a solid basis. The funeral benefit feature, introduced as a means of strengthening the society, was never essential to its purposes, and has been suspended in deference to the expressed wish of many members. All the other features are necessary to our purposes, and should be accepted without a moment's hesitation. If the work of organization be not pushed vigorously now, valuable time is being lost at this most critical season.

The membership can and must be doubled between now and Christmas, and much of the work must be done by the local unions. To do their duty they must get busy. They must hold regular meetings. They must make their meetings interesting. They must make live talks on live subjects. They must set committees at work. They must get new members and organize new locals. They must fill up all the gaps. "I propose to move immediately on your works," said a great general to the enemy, and the enemy's flag went down. "I propose to move immediately on the enemy's works," should be the motto of every local union and member.

M. Wes. Tubbs, secretary of the A. S. of E., returned to his post of duty July 17th, after an absence of five months. Mr. Tubbs' wife was taken ill last winter and he took her to their former home in New York state, hoping that good care and old associations will assist her back to health. It was of no avail, however, and she died June 30th, mourned by all who ever knew her.

Occasionally we are asked if it is contrary to the constitution of the A. S. of E. to hold secret meetings. Replying, will answer, no. Any local union has a right to meet with closed doors, whenever the nature of the business makes it desirable.

Call for County Unions

AUGUST 25th has been selected as a rally day for organized county unions, and the organization of county unions in all counties where three or more local unions have been chartered, but where county unions have not been established.

The approaching annual meeting and other important matters make it imperative to hasten the completion of county organization and the National Union is depending upon the co-operation of the local unions in this work.

Correspondence has already been commenced with the secretaries of the local unions in such counties and we hope to announce in August 15th issue of the official paper names of counties, places and dates where county meetings are to be held. Secretaries will please reply promptly that the list may be complete.

It is also hoped to present the farmers' warehousing plan at such meetings and have the county unions organized as real farmers' clearing houses. They are coming. The plan of the A. S. of E. is working out. Education is sufficient. We will now organize and systematize for business.

Michigan Organizers

Until the appointment of a state organizer for Michigan organizers and members will report direct to headquarters.

Things Well Begun Are Half Done

Following the below businesslike notice in local papers, we are in receipt of one of the best reports of a county union yet organized. This plant can be used as a model by others, hence we give it quite in detail:

NOTICE.

Leelanau County meeting of farmers.
All local unions of the A. S. of E. in

STATIONERY

For Up-to-Date Farmers

Every farmer should use neatly printed stationery. It is business-like and gives a tone to your correspondence. Some business houses sort out the printed envelopes from their mail and open and attend to them first. Members of the A. S. of E. especially should use up-to-date letterheads and envelopes. We offer special stationery containing the seal in a beautiful design. Your name and address, and name of your farm or business also if desired, nicely printed. On the reverse side of the paper are printed appropppriate circulars, such as "Farming Exists by Divine Right," "Where Duty Lies", etc. You will spread the movement with these messages if you order some stationery. Price, PREPAID

100 Letter Heads	100 Envelopes $1.00
250 Letter Heads	250 Envelopes $1.80
500 Letter Heads	500 Envelopes $3.25
1000 Letter Heads	1000 Envelopes $5.25

Give your express office. Write very plainly AND ORDER NOW.

Chas. J. Godfrey Co., 4 Warren St., N. Y. City

Leelanau County (Mich.) are requested to send delegates and be represented by members at a county meeting to be held at Maple City, July 15th, called at 10 o'clock in the forenoon. The object is to perfect the county union and transact other important business. All farmers and members are cordially invited to attend.—Thos. W. Robinson, Dep. Pres., A. S. of E., Leland, Mich.

THE REPORT.

Promptly at 10 a. m. on the above date, as per report of Secretary Zeitz, the meeting was called to order by Thos. W. Robinson, D. P., and temporary chairman and temporary secretary were elected. Necessary working committees were at once appointed, including committees on credentials, on organization, on membership, etc., occupying the time until the noon hour, when the meeting adjourned to 1:30 p. m.

At 1:30 p. m. the afternoon session began and continued in the same active, businesslike manner. The committee on membership reporting eight local unions in the county with a total membership of 176, also 34 members at large.

County officers were elected as follows: Pres., John Belanger, Sec., Frank J. Zeitz; Treas., George Smith. This organization will be known as Leelanan County Union No. 45, and we preduct for it great success at home and in adjoining counties.

Conventions and Meetings

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind., October 24th, 25th and 26th. Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

STATE CONVENTION OF THE A. S. OF E. OF ARKANSAS, will be held at Hutsons Springs, four and one-half miles north of Clarksville, Johnson ccunty, Ark., beginning August 17, 1905. The convention will convene at 10 a. m. Matters of importance will be considered. It is expected that each local be represented by one delegate. Arrangments will be made to care for all delegates free. On Saturday, the 19th, a picnic dinner will be served on the ground and will be a grand labor day rally. Members of all labor organizations invited. All local unions of Johnson county are requested to help in caring for delegates. Others coming from a distance will please bring camping outfits and come prepared to stay three days. Correspond with T. J. Woodard, Clarksville, Ark.

FRANKLIN COUNTY (Va.) UNION will hold its next regular meeting at "Cross Roads," August 19th, at 10 a. m. James Sutherland, Secretary, Union Hall, Va.

CLINTON COUNTY, ILL., COUNTY UNION will hold its next meeting August 12th at Carlysle. Twenty local unions are represented with a total membership of 469 members. Efforts will be made to double the membership before the August meeting. Albert Wringe, Secretary, Carlysle P. O., Ill.

ST. CLAIR CO. ILL. State Organizer C. O. Drayton will speak at Mascoutah A. S. of E. picnic August 19, 1905. The address will be directed to the merchants as well as the farmers and it is hoped to arouse a great interest in this great movement. Mr. Drayton's address is Greenville, Ill. Other localities wanting his services should arrange dates as soon as possible. Chas. Bischoff, Secretary, Mascoutah, Ill.

DUNN COUNTY (Wis.) Union will hold its next regular meeting in Chippewa Falls, October 7. C. W. Bitney, Sec'y, Colfax, Wis.

STRONG'S PRAIRIE (WIS.) LOCAL UNION will give a grand rally and picnic at Strong's Prairie, August 5th. Program includes singing equity songs by the choir, assisted by the members and addresses by Rev. Harris, of Necedah, and Hon. N. C. Crowley, of Baraboo, state organizer. After the speaking, a ball game and other sports and amusements will close what is hoped will be an enjoyable and profitable day. E. V. Keys, Secretary, Strong's Prairie, Wis.

Virginia Meetings.

National Organizer H. B. Sherman will hold meetings in Virginia in August, as follows:

Rustburg, Wednesday, August 2d; South Boston, Friday, August 4th; Danville, Saturday, 5th; Martinsville; Tuesday th, and Rocky Mount, Wednesday, August 9th.

Territory meetings.

Sam J. Hampton, General Organizer, will organize local unions of the A. S. of E. at the following places and times. Farmers are urged to advertise the meetings and insure a large attendance: Sapulpa, Ind. Ter., August 2d; Okmulgee, Ind. Ter., August 5th; Henrietta, Ind. Ter., August 9th; Holdenville, Ind. Ter., August 12th; Shawnee, Okla., August 16th; Romulus, Okla., August 18th; McComb, Okla., August 19th; Etowah, Okla., August 19th; Norman, Okla., August 23d; Pauls Valley, Ind. Ter., Aug. 26th; Wynnewood, Ind. Ter., August 30th.

Farmers Will Hold for $1.00 Wheat and Believe They Will Get It.

[From the Inquirer, Owensboro, Ky., June 9.]

The county union of the American Society of Equity held a meeting at the courthouse today. Much work was done and the society was shown to be on a splendid basis.

The president, Jas. Dunn, congratulated the delegates on the large attendance present. He said he feared that the tobacco being chiefly off hand interest would wane. He now saw that this was not the case and that the interest heretofore shown was not only increasing but of permanent kind. He called attention to the fact that at the next meeting, which would be in July, the annual election of county officers would be held, and also three delegates appointed to the tobacco convention, which is to be held in Owensboro October 18, 19 and 20. President Dunn urged that much consideration be given to the selecting of both officers and delegates.

Mr. T. T. Barrett, of Henderson, was called for and spoke on the general principles of supply and demand and the limitations that the A. S. of E. placed on crops. He said in part:

"We have been raising tobacco for 100 years here. For twenty years the price of tobacco has dropped slowly and then went up. If we watch supply and demand and govern ourselves accordingly we can always get remunerative prices. There is a better reason for limiting the crop. It is that farms are better and more attractive where tobacco is not raised. Go into any region not given to tobacco raising and you will see that this is true. The average man produces about 3,000 pounds. The average price paid by a Henderson firm for twenty years was $4.85 a hundred. This gives the average salary of a tobacco raiser at less than $150. This is discouraging, but I believe by organization we can make it more hopeful. We are gathering statistics. We will improve our methods. Last year we had a crop of 60 per cent. of the average crop. This year the crop will be about the same as last year. Quite a few have given up the crop entirely. They have large and good farms and feel that they can improve them by discarding tobacco. Other large farmers claim that they must raise tobacco to keep hands on the farm for other work. I understand the crop has been slightly increased in Union county. In Webster county I believe the crop is about the same. About 90 per cent.of our tobacco is regie tobacco. Yours here is largely used in America, not exported to Europe. That is why you should organize somewhat differently. Later those who control the different kinds of tobacco can act in concert to every extent that is necessary."

President Dunn next called for reports on crops generally. This brought out the additional fact: 75 per cent. of the tobacco crop was set; the wheat is generally good and up to 75 per cent. or 80 per cent. of the usual Daviess county crop.

Geo. Taylor reported for the grain committee. He said the committee had ordered sacks for all who had notified them. He also reported that O'Bryan agrees to order sacks at cost and all were urged to order sacks through him. He also said other counties had reported as being anxious to act with the Daviess county wheat growers. He also said the chief trouble in storing wheat was to save it from sack-eating rats. He reported a plan for storing recommended by Price Baird. His directions were:

Stack sacks on top each other lengthwise, making the ricks six inches apart. Lay rails across the sacks to keep from creeling. In this way wheat will keep well and rats not eat the sacks to any great extent.

He also reported that no wheat was to be sold for less than $1 a bushel.

Business Exchange

This Department is intended to bring Buyers and Sellers together at Moderate Cost

Readers of Up-to-Date Farming and those acquainted with its objects will readily recognize the value of this department to both classes—the Buyer and Seller. There are thousands of Local Unions of the A. S. of E. with from 10 to 300 members each. Nearly every Union has surplus farm products to sell collectively, or their members separately. Often these Unions want to buy supplies for members. To bring buyers and sellers together there is no way surer or cheaper than through Up-to-Date Farming's Business Exchange Department. This department is principally for subscribers, but anyone may advertise his wants or goods.

RATES The cost for advertising under this head is 8c a word each insertion. 10% discount when two or more consecutive issues are used. Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. Cash should accompany order.

Agents Wanted

Agents Farmers wives everywhere earn money and handsome premiums. New idea. No canvassing. Write Carpenter Co., 147 Columbus Ave., Boston, Mass.

Men Wanted to sell the best line of scales made, Osgood Scale Co., Box 100, Binghamton, N. Y.

Women can dry fruit that would otherwise go to waste and make enough money to pay the greater part of their grocery bills. The U. S. Cook Stove Drier does it. No extra fire. Use it on the stove while you cook. Write for circulars. Price $5.00. Agents wanted. E. B. Fahrney, Box 445, Waynesboro, Pa.

Farm Lands

Canadian Lands are worth investigating. Send for our handsome magazine "Resources." U. S. Bureau of "Resources," 229 New York Life Bldg., Minneapolis, Minn.

Cash for your farm, ranch, home or business, no matter where located. If you wish a quick sale send us description and price. N. B. Johnson & Company, 543 Bank of Commerce Building, Kansas City, Mo.

Cash for your real estate or business no matter where located. If you desire a quick sale send us description and price. Northwestern Business Agency, C313 Bank of Commerce Building, Minneapolis, Minn.

For Sale Excellent stock and fruit farm. Address R. E. Cooper, Hedrick, Ga.

For Sale at a bargain a nice little home 5¼ acres conveniently located at the foot of the Peaks of Otter, 4 miles from R. R. Station on Rural Route. Good buildings, fine water, plenty of fruit of all kinds. A. S. Johnson, Bedford City, Va.

Oklahoma Farms, write for prices. H. F. Stephenson, Kingfisher, Oklahoma.

Reward $1,000, for equal of our Two Wheel Power Wind Mill, Self Oiled Pumper or Armsaver Husker. Ask for booklet forty-eight. Double Power Mill Company, Appleton, Wis.

Sell Your farm through W. M. Ostrander, 406 N. Am. Bldg., Phila. Pa. Largest real estate dealer in the world.

Send for our Illustrated Catalogue of Central Missouri Farms. Geo. W. Hamilton & Son, Fulton, Missouri.

Write J. D. S. Hanson, Hart, Mich., about fine farming and fruit growing lands.

160 acre level, improved farm for sale in the wheat belt of Kansas; $2,000 cash. Write J. N. Stinson, Hoxie, Kansas.

Household Supplies

Canning Business information for a 2c stamp. Warford, Newburgh, N. Y.

Cook Stoves and Ranges from our factory are made better and cost less than others. To prove it we send them on 360 days approval test and pay the freight. Can you afford to overlook this opportunity? Send for large complete catalog No. 290, mailed free on request. Kalamazoo Stove Co., Kalamazoo, Mich.

Guaranteed Double Flue Hot Blast Range only $21.75. Your money refunded if not satisfactory. We manufacture, and sell 1000 other articles at factory cost plus one small profit. Send for catalog. Hapgood Mfg. Co., 616 Front St., Alton, Ill.

Implements and Farm Supplies

Binder Twine for farmers, local unions and dealers. From factory to you at wholesale prices. Anti-trust twine. Orders accepted and filled now at 9½c per lb. Sold in bales of 50 lbs. each. Twine guaranteed. None better at any price. Samples free. Prairie Mfg. Co., Indianapolis, Ind.

Blizzard Feed and Ensilage Cutter will do your work better than any other. It will make more money for you. Latest improved and best on the market. Write for free catalog telling all about it. Joseph Dick, Agricultural Works, Box 80, Canton, Ohio.

Catalog describing the famous Eclipse Hay Presses sent free. Eclipse Hay Press Co., 547 W. 7th St., Kansas City, Mo.

Cider Machinery. Catalog free. Boomer & Boschert, 474 West Water St., Syracuse, N Y.

Free Trial of the Chatham Fanning Mill for 30 days. This is the only mill sold that way because it is the best. We have a book for you; send for it—free. Manson Campbell Co., Dept. 15C, Detroit, Mich.

Reward $1000, for equal of our Two Wheel Power Wind Mill, Self Oiled Pumper or Armsaver Husker. Ask for booklet forty-eight. Double Power Mill Company, Appleton, Wis.

Roofing For any building on the farm. Paroid and Neponset have years of satisfaction. Send for free sample and booklet on "Building Economy." F. W. Bird & Son, East Walpole, Mass. and Chicago.

Save Money, mend your own roof, tanks, etc., with Stop-A-Leke. Stick form. Always ready. Results permanent. By mail 25 cents. Breese Bros. Co., Cincinnati, Ohio.

Scales Official Scales at all Stock Shows. Highest award at all Expositions. Require no pit. Only Scale arranged to hang in heavy Steel Frame. Information free. Chicago Scale Co., Chicago.

Stump Pullers, tree pullers. Something new. Will pull an ordinary stump in 1½ minutes. All sizes. Send for free illustrated catalog. Milne Mfg. Co., 835 Ninth St., Monmouth, Ill.

Live Stock and Supplies

A Gift for you if you answer two questions: How much live stock do you own? What stock food have you used? Large picture, without advertising, of the Word's Champion Six-horse Team mailed free for your answers. Printed in many natural colors; suitable for framing. Wilbur Stock Food Co., 60 Second St., Milwaukee, Wis.

Fleming Bros'. Vest Pocket Veterinary Adviser, valuable to every farmer, mailed free. Write a postal to Fleming Bros., 207 U. S. Yards, Chicago.

Tamworth Swine Immense size, prolific breeders, grand sucklers and economical feeders. Quality of bacon unsurpassed. W. Warren Morton, Russellville, Ky.

Poultry and Supplies

Hamburgs, Leghorns, Minorcas, Reds, Rocks, Wyandottes. Eggs and stock bargains. Albertville Poultry Farm, Albertville, Ala.

Leghorns Rose Comb Brown, fine stock, best layers. Carefully selected Eggs, $1 per setting of 15; more than one setting in same order 75 cent each. Mrs. J. P. Stelle, Dahlgren, Ill.

Remedies

Barren Cows cured and abortion prevented. Pamphlet free. Moore Bros., Veterinary Surgeons, Albany, New York.

Horse Owners are sa e with Absorbine in the barn at all times. Our valuable book 6-B is free. W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.

Warts Removed. No pain, no burning, no cutting, no trouble. You have the remedy in your house. A common vegetable used raw. Nothing added. I will tell you how to use it for 25c. I have absolutely nothing to sell but this information. J. B. Fentony, Indianapolis, Ind.

Telephones

Free Book on Telephones for farmers. Write for book F118. Stromberg-Carlson Telephone Mfg. Co., Rochester, N. Y. or Chicago.

Telephones We make farmers lines a specialty. Instruction book free. Central Telephone Co., 2143 Lucas Ave., St. Louis, Mo.

Miscellaneous

Boats that can't sink! From $20.00 up. Handsome catalog free. W. H. Mullins Co., 164 Franklin St., Salem, O.

Gun catalog free. You will find valuable information in it. Union Fire Arms Co., Desk T, Toledo, O.

Mushrooms —Complete instructions for raising them profitably, 50c. Mrs. C. G. Doty, Middletown, Ohio.

Strawberry Plants wanted. State quantity you can furnish, varieties and price per 100. Address: John W. Martin, 433 N. Illinois St. Indianapolis, Ind.

Burlap Potato Bags

Made of heavy stock and extra quality material. Standard size. Made especially for shipping potatoes. $7.50 per 100, $73.75 per 1000. Write for prices on 5000 or more. J. A. Everitt, Seedsman, (Inc.) Indianapolis, U. S. A.

"Results Impossible"

"The returns from our advertisement in the "Business Exchange" columns far exceeded our expectations. While we have not yet completed the checking, we are positive that the net returns on this small investment will be from three to five hundred dollars. This to the average advertiser would appear impossible."—
COOPER CORDAGE CO.

The Business Exchange is mighty in effect and the cost is extremely low. Read explanation at top of these columns. Hundreds of readers of this paper can have a profitable business by advertising only in the Business Exchange and no other publication. Try a "flyer."

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did it Gladly Tells You How

Mr. A. S. Hitchcock, (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health. Our advice is to take advantage of this most generous offer while you can do so without cost.

Daviess County, Ky., Appoints Delegates

The Daviess County Union met July 7th in Owensboro, and elected new officers, and with great enthusiasm approved of the new Constitution. The wheat situation was discussed and every man there had "dollar wheat" so firmly fixed in their heads that it will mean dollar wheat in their granaries before it is sold. The tobacco affairs were also given consideration, and delegates to Owensboro were appointed. The new officers are: J. W. Dunn, President, Whitesville; L. N. Burnes, Vice-President, Utica; L. N. Robertson, Secretary and Treasurer, Utica. The next steps we want to take are county telephones and a county clearing house.—L. N. Robertson, Sec'y, Utica, N. Y.

Resolutions

We, the members of Salonia Union No. 616, of Taylor County, Kentucky, do petition the wheat growers of Taylor county and elsewhere to hold their wheat for one dollar per bushel. We ask all men to unite with us to secure an equitable price for all our products.

Signed:
W. G. FAWCETT, President.
J. E. DURHAM, Secretary.

Have you thought about growing mules for sale instead of horses. The demand for mules is on the increase and the price is always good.

BEGINNING OF THE PURE SEED AND PLANT COMPANY OF AMERICA

OBJECTS

The objects of the Pure Seed and Plant Co. of America are briefly stated as follows:

To grow and sell pure seeds, grain, plants and trees.

To eradicate weeds from the farms of America so that farmers' labor may be reduced, their crops increased in quantity, improved in quality and enhanced in value.

To improve the quality of all farm and garden crops by honest, careful, systematic, scientific selection and breeding of seeds, and to discourage the planting of mongrel and untrue seeds and those of weakened vitality.

To prevent adulteration of seeds, grain and food products, so the maximum markets for farm products may be secured and so that adulterated and poisoned foods need not be consumed.

To have laws passed to prevent the spread of weeds, and to see that they are enforced until a National curse—harmful weeds—is eradicated from the land.

HOW THE OBJECTS WILL BE ACCOMPLISHED

Twenty years ago seed growers and dealers depended principally on the **quality** of their seeds for sales. Crops for seed were then carefully isolated from kindred varieties to prevent mixing; the crops were watched during growth and plants departing from the true type were culled out. This was expensive but the cost was added to the price, the dealers paid it, and planters got the benefit.

In late years **cheapness** is the main consideration and the seed grower must reduce labor in order to secure cheapness to meet the demand. Consequently there has been deterioration in nearly all farm and garden crops. "One grower of seed beans and peas who prided himself on the quality of his stocks a few years ago confessed that he no longer "rogued" his crops, "can't afford it at the price I must sell," he said. This deterioration can be detected in many crops by the observing person. We might cite Water and Musk Melons. The melons are not as fine as they used to be. Many families have declared they will not buy any more because of the large percentage of poor ones they get. In this way the demand is reduced all of which is against the growers.

We cannot begin to point out the iniquities practiced in selling clover and grass seed. A large part of these seeds are now saved from fields containing bad weeds. Also there are firms in the country who gather up and import adulterants and mix with the good seed until it is difficult, and in some markets impossible, to get pure seed.

The farmers are not always able to judge and they are shamefully deceived. We claim that *farmers d n't want* to buy adulterated and deteriorated seeds *and will prefer* the pure and pedigree seeds if they could be had. We also claim that farmers will forego saving a few cents in the seed, for the dollars that pure, vigorous seeds will give them, when they are educated and when there is an institution where they can always be had.

The Pure Seed and Plant Co. of America will be equipped to grow or have grown all kinds of seeds with the view of purity and improvement. It will employ experts to supervise the growing and handling. It will give a certificate of qualities with each lot of seeds. In short, it will be an institution where farmers can buy seeds with their eyes shut and they will get what they expect.

Gardeners and Farmers will appreciate this. Landowners should put a clause in their leases that their tenants must buy the seeds from The P. S. & P. Co. of A. Merchants should buy all the seeds from this Company when they will control the seed trade of their community.

TRADE MARK

The trade mark of this company will be the name of the company in a circle. Inside of the circle will be the picture of a farmer blindfolded, underneath will be the words: "Your Confidence will not be Betrayed."

WHAT YOU MUST DO

Readers of Up-to-Date Farming have been taught that if farmers want anything they must depend on themselves. If they want pure seeds and better seeds they must have their own seed company. This company is for the farmers, and must be by the farmers. There is not a seed house in the country today with the equipment and facilities to supply such seeds as farmers need, and there will not be until the farmers are back of it themselves. Therefore farmers are asked to build this company and they will be expected to manage it. The incorporators are all good and true men; most of them have farms and several are large farmers. As soon as farmer stockholders are secured in other States than Indiana, those States will have representation on the board of directors. The stock of this company must be sold in every county in the country. A subscription for stock is desired from each reader of Up-to-Date Farming.

Some space will be devoted to this company in each issue of Up-to-Date Farming. Full particulars and its by-laws will be printed. We will say now however, that liability of stockholders ends with the stock they hold. If you have 10 shares of stock ($100) you can never be required to put up any more if the company should contract debts, and this condition can never be changed.

WHY YOU SHOULD JOIN

In the first place you want all the objects as printed above to be accomplished, there is no other way to accomplish them. Therefore you should help.

In the second place the stock will be profitable. When you consider the business this company is bound to do from the start, it must be very profitable. Just how profitable depends on the stockholders and directors themselves. The former to get customers in their locality—and the latter to decide on the prices. You see this is a co-operative movement. By you and your neighbors all buying seeds of this company its business will be very great and it will be comparatively easy to eradicate the weeds from neighborhood,

But you may say, "if my neighbor wont buy of our company his land will seed mine with weeds." Yes, but this company will be powerful to enforce laws against weeds, and the farmer or gardener who plants weed seeds will have a much harder fight, as no weeds will be allowed to seed. This will appeal to him to buy pure seeds.

This comp'y should begin business at once as crops are maturing. It is waiting on subscriptions for stock. Delay will not avail you of a better time or better things, but delay will make the problem harder. If the farmers won't do this thing now it will be only a short time when there will be no pure seed grown and the average of our field crops will fall even lower. (They are extremely low now). Everything points to this being a personal matter for each seed planter to consider and act upon. The greater the number of stock holders the greater will be the power of the company. It should be powerful in each State, because the legislature of each State will be expected to cooperate with this company by passing a sensible weed law and one that will be effective.

Fill out the accompanying blank and send in at once. You will add your influence by subscribing for one share. Let us have your subscription for one share at least. But if you have money to invest for a better profit than can be gotten from banks, bonds or any other industrial investment subscribe for a block of stock. Tell your neighbors about this company. It interests everybody Try it. Discuss it.

CUT OUT AND SEND PROMPTLY

NO.

Subscription of Capital Stock of The PURE SEED AND PLANT CO. OF AMERICA, 227 West Washington St., Indianapolis, Ind.

The undersigned hereby subscribes for ..... shares of the capital stock of **The Pure Seed and Plant Company of America,** (Capital $250,000.) Each of said shares of the par value of **ten (10) dollars** to be fully paid up and non-assessable, for which I agree to pay **ten ($10) dollars** per share. It is hereby agreed that no further sum shall be paid or demanded and no further assessments shall ever be made on account of this subscription. The stock for which this subscription is made to be issued to me or my order at once.

DATE..... NAME.....

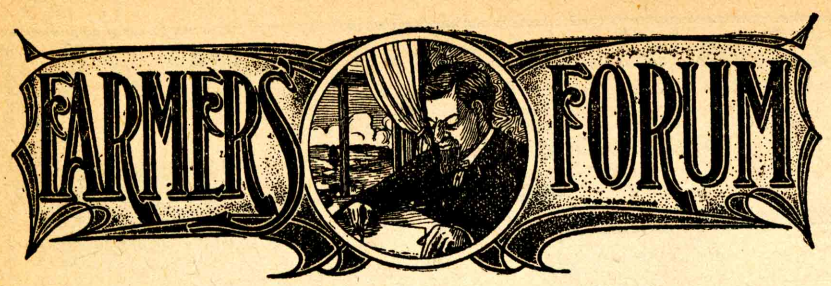
P. O..... CO..... STATE.....

TERMS. The terms on which stock is sold are as follows: The shares are $10.00 each. One third the amount of subscription must be paid at once. One third will be due in three months and the other one third in six months. If the entire amount is paid at once 3 per cent. may be deducted from the two thirds (deferred payments.) All subscriptions and correspondence should be addressed to **The Pure Seed & Plant Co. of America, Indianapolis, Ind.**

Note A. It was intended to incorporate under the laws of the District of Columbia but one condition, viz: "That the principal office must be maintained in the D. of C., made this impracticable.

Note B. This capital will be increased to $1,000,000 when the money is needed as the business grows. The policy of the company is to not have any capital idle which would reduce the dividends on the part actually employed.

Note C. The new Company will succeed to the business of J. A. Everitt, Seedsman, (Inc.) which was established 24 years ago.



Work Together

Editor Up-to-Date Farming:

I have read the Third Power book, and I like it very much. I am passing it around to my neighbors, and I hope in the early future what the book so clearly shows ought to be done will be in full operation. I well know times will then be better for us all.

I think it would be a good plan for the Interstate Tobacco Growers' Protective Association of Virginia and North Carolina, of which I am a member, to join in with the A. S. of E. I think we are doing a good work now, and if we could get all the farmers to come and join us we would move right along.—W. C. Hudson, Crystal Hill, Va.

False Economics

Editor Up-to-Date Farming:

In a recent issue of the Independent Farmer appeared the following:

Some years ago I lived near a coal mining district and we farmers and coal diggers formed a labor union to better our condition, but we soon saw that our interest was different. We wanted the top price for vegetables and cheap fuel; they wanted high coal and cheap vegetables.

So it is with us cotton and wheat growers. Our Equity brethren clamor for high-priced wheat and low cotton goods. We want high cotton and cheap flour. It is natural for each of us to seek the best price for our produce, but we need not try to unite. Let our Equity brethren stay in the wheat and tobacco district, while we Farmers' Union folks remain in Dixie's Land."

Respectfully, A. FRANK ROSS,
Durant, I. T.

Since Mr. Ross has been placed at the head of the Farmers' Economic and Co-operative Union of Indian Territory and Oklahoma, I think the article deserves at least a passing notice. Every economic proposition in it is false, and will not be accepted by any thinking person. The public would be glad to know where that combined union existed that discovered they were antagonistic to each other. Any sensible farmer knows that when all workers are employed at fair wages his produce finds a ready market at profitable prices; and the sensible laborer knows that prosperity for the farmer increases the demand for his goods and insures him employment. The best interests of these lies in precisely the same lines, prosperity for both.

So of the cotton planter and wheat grower. Equity puts the proper price for cotton at 12 cents, and of wheat at $1 to $1.20 per bushel. When each get these prices, both are prosperous and consume all the more of each other's products. The man who sees a conflict of interest between them is too narrow to recognize the open sea.

Just now the labor unions and equity unions are getting very close together in interest and sympathy, and the person who speaks such stuff as that quoted, tending to keep, not only them, but the different branches of farming apart, is an enemy to co-operation, and the best friend of crop gamblers. It is unfortunate that such men get to the head of farm organizations.—Sam J. Hampton, Durant, Ind. Ter.

Agree with Up-to-Date

Editor Up-to-Date Farming:

We agree with you as to crops. Why cut down acreage? Why fear big crops? In the past, bumper crops have ruined prices, but Mr. Everitt has shown very plainly that controlled marketing will settle the crop and price question, and upon this depends our success. It is right that no farmer should overcrop his ability, and that each should so vary his products as to live off his own labor as nearly as possible, but there is no reason why farmers should scare at big crops. Everybody wants them and tries to produce them, and they are urged to do so by all the educational and market influences. Let them come, then, but let the producers say what they are worth, and if there really be a surplus let the farmers hold it.

But all new roads are stumpy or rocky, and the rocks and stumps must be blown out before there can be smooth traveling. For instance, that old boulder, "Can't-be-done," is right in the way, and it must be broken up and thrown out. And that gnarling old stump, "It-won't-work," must be blown out by the roots. And so must many others. Let them go. The crop liar is there somewhere, too; heed him not. Crop reports are exaggerated to the injury of farmers. Reporters like to make a big show, and they enlarge their reports. Assessors do the same thing, not realizing how harmful it is. For instance, our own assessor asked how many eggs had been produced on our farm. Informed that we kept no account and did not know, he put down a far greater amount than had been produced, feeling he was making a good show for us and a better report for himself. It is so with many of our crops. Tear out the stumps and roll the rocks out of the way.—M. and S. E. Sowers, Henryetta, Ind. Ter.

Editor Up-to-Date Farming:

I lay no claim to being a "natural born farmer." To the contrary I have devoted the principal portion of my manhood days to the practice of law, but all the while my memory constantly reverted back to the happy hours of my boyhood days "down on the farm." So having accumulated sufficient means to insure me against crop failures placing myself and loved ones in the want columns, I moved to my farm ranch some two years ago.

My farm interest is as yet comparatively small, done very largely by proxy. I yet accept employment in some legal matters, the balance of the time being devoted very largely to my stock, and in reading.

Naturally enough I have found Up-to-Date Farming of splendid value, because (1) of the suggestions touching the care of stock and poultry; and (2) because of the sensible and feasible plans offered whereby farmers may protect themselves from the greed of conscienceless speculators. These subjects are of greater interest to me now than formerly, since I have products of the farm and ranch to market. This brings us to realize that the tendency of the age to specialize leads the American citizen to give particular attention to those subjects of direct interest to him, leaving the other fellow to take care of his own troubles. This tendency is injurious, since one calling or profession is dependent upon the others, and to know little and care less about fellows' ambitions and difficulties renders us incapable of social converse and less patriotic. It tends to clanishness, to individualism, hurtful to our public institutions and the welfare of oru common country.

The "associations" and "unions" being organized today promote and intensify the spirit of clanishnes as the membership is confined to a given trade, business or profession. We are told with all solemnity that this is the natural consequence of our progress toward a higher civilization, a doctrine we should scrutinize.

It should be remembered that the strongest bands that stood in the path of Christian religion, civilization and progress were racial and clanish. Every race had its own peculiar worship prior to the announcement of Peter on the day of Pentecost that "the promise is unto you, and to your children, and to all that are afar off, even as many as the Lord our God shall call," thereby proclaiming the brotherhood of men and the fatherhood of God.

Again it will be remembered that the day was when the son who failed to follow the occupation of his father was considered a prodigal, an unworthy child. That was the very idea of clanishness. These hurtful theories had not wholly vanished from the earth when the immortal Jefferson penned these lines:

"We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty and the pursuit of happiness." This new doctrine was so grand that assistance came from other lands to support the wavering cause of its promulgators, and the government founded upon the eternal truths of that document has been the beacon light to the world for more than a century.

So I conclude that condition which engenders and promotes a spirit of clanishness are not the result of upward strides, but are the reverse.

I see in your organization, or rather the organization that you are promoting, one that rises far above the ordinary "society," "union," etc., of today. It is broad enough in principal, equity, to be universal. The only reason that it especially commends itself to the tillers of the soil is because at the time it is launched all other classes are organized, and sad to say, not so much to advance the cause of equity, but often to secure especial benefits for a class, and that in utter disregard of the rights of their fellow men.

That this new doctrine may be proclaimed through the press, from the rostrum and the pulpits until the welkin rings with its rebounding echoes, calling a nation, a world from clanish ways to a higher plane of thought, the brooding place for patriotism and the cradle of religion is my hope.

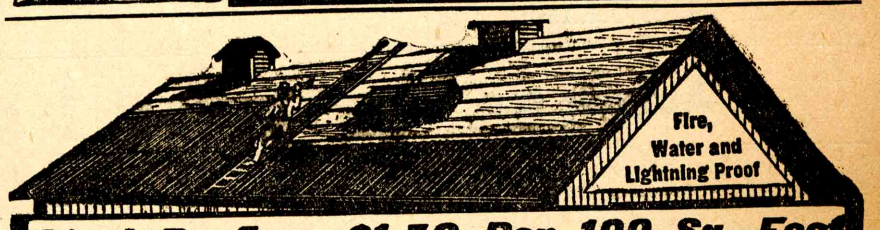
FERTO-INSECTONO

FERTIRLIZES—KILLS THE BUGS

FERTO-INSECTONO is an inexpensive fine powder preparation. It completely covers all plants on which it is sprinkled. It is very powerful and deadly for bugs but will not injure the plant in the slightest degree and is perfectly harmless to human beings. It is an absolute annihilator of all insects, bugs or beetles that prey on vegetation. Positively kills Potato Bugs, Squash Bugs, Pumpkin Bugs, Melon Bugs, Currant Worms, Cabbage Worms, etc., etc. You will not be bothered with pesky insects if you use Ferto-Insectono.

This chemical compound is very beneficial as a fertilizer. It extracts ammonia from the air as the wind passes over the plants. The ammonia combines with the powder and forms sulphate of ammonia. All that gets on the ground makes excellent fertilizer. Full directions with each shipment. **PRICE**—5 lb. package 20c; 10 lbs. 35c; 50 lbs. $1.25; 100 lbs. $2.00; per ton $35.00. Send for catalog. Hundreds of testimonials.

J. A. EVERITT, Seedsman, (Inc.) Indianapolis, Ind.



Steel Roofing, $1.50 Per 100 Sq. Feet

Painted red both sides; most durable and economical covering for roofing, siding or ceiling, for barns, sheds, houses, stores, churches, cribs, poultry houses, etc.; easier to lay and cheaper than any other material; no experience necessary to lay it—a hammer or hatchet the only tools you need. At this price **WE PAY THE FREIGHT** to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. At this price we furnish our No. 15 semi-hardened flat steel roofing, sheets 24 inches by 24 inches. At $1.60 this same material currogated as shown in illustration, or in "V" crimped, or standing seam. At 50 cents per square advance over above prices we will furnish this material in 6 and 8 feet long; $2.25 for brick siding or beaded ceiling or siding. Send us your order for immediate shipment. Time will prove its enduring qualities. It withstands the elements the best of all coverings. Ask for further particulars. **WRITE FOR FREE CATALOGUE NO. A. M. 204** on building material, wire, pipe, plumbing material, furniture, household goods, clothing, etc. We buy at SHERIFFS' AND RECEIVERS' SALES, 100,000,000 feet of lumber from the World's Fair.

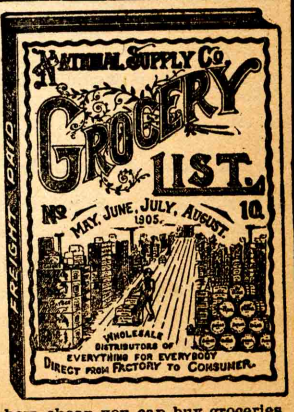
GROCERIES AT WHOLESALE PRICES

FREE This catalogue will save you money on your grocery supplies.

FREIGHT PAID

What do your groceries cost you a year? Will you buy them of us if we can prove that we will save you from 10 per cent to 20 per cent and *pay the freight*? That certainly is an amount worth saving; it is worth the trouble of asking for the proof. Get our large Grocery List and compare our prices with what you have been paying. Then put us to a greater test—send us a trial order and compare the goods and the prices. If we do not save you big money, send the goods back at our expense. The grocery bill is the biggest part of the family expenses. We will cut it almost in the middle and guarantee everything we sell. We can do this because we buy in immense quantities—carloads and trainloads—and we give you the benefit of our ability to buy cheap; in fact we can sell to you at just about the figure your local dealer would have to pay. We save you *his profit* and the *freight* besides.

To save still another 10 per cent, become a member of the **Co-operative Society of the National Supply Co.** We'll tell you how to get this extra 10 per cent discount, if you will write for full information. An easy way to make money.



If you want to save money get our catalogue and learn just how cheap you can buy groceries from us. Catalogue is ready and lists everything in the grocery line. We send it *free*.

Co-operative Society of the National Supply Co., Lansing, Mich. and Chicago, Ill.

The Summing Up

Mid-summer, around August 1st, is an interesting time for the farmer—a period of encouragement or discouragement. He has passed through another season of planting and cultivation, and he can now look upon the promise his crops are making. If that promise be flattering he is encouraged; if it be otherwise, he is discouraged.

He has had the usual times of hope and anxiety. At times there have been too much rains, at other times not enough. Insect pests have at times annoyed him, and weeds and foul growths have doubled his labors and multiplied his doubts. If he has succeeded in overcoming all these it is well; if he has not, it is ill.

His first annoyance, and perhaps his greatest, was with his seed. If he had good seed he must likely secured a good stand in the beginning; if he had not, he likely failed to get a stand, and that was the beginning of his troubles—a trouble that followed him all through the season, and made all his other operations more difficult. It is gratifying to know that there is a movement on foot which will make it possible to always have good seed—seed tested and guaranteed, and bringing with them such a warranty as will carry absolute good faith, and protect the purchaser from imposition. We refer to the organization of the Pure Seed and Plant Company of America.

Another source of great annoyance has been the weeds that have persisted in growing in spite of his very best endeavors. These have oftentimes been so persistent as to defy plow and cultivator, and the usual means of keeping them from the small grains and grasses. Here we may also see a hope in the Pure Seed Company. Its guarantee will not only cover the germinating qualities of the seed, but it will insure them to be free from foul seeds, and since our worst weed pests have come to us in purchased seeds, if assured that we shall get no more seeds that way, it only remains for us to rid our farms of these pests in ordrer to remain free from them. This throws another ray of light across the farmers' future.

But the work is not all done when the crop is made. Next comes the harvest, and then the marketing. About the latter operation clusters final success, the profits. How shall it be? As horetofore, heedlessly dumped upon unwilling buyers, or buyers willing only as they know they shall reap all the profits that result from a whole season's toil? Surely no. Farmers now know a better way. They know that they can make the price and control the marketing; that they can cooperate and retain for their own benefit and behoof, the profits that of right are theirs, and yet keep the wants of a hungry world well and cheaply supplied. Will they do it? We are persuaded that they will, and that as farmers view their crops and take note of the midsummer promises, they may have more to inspire them with hope than they ever had before.

Remedies for Weeds

One of our exchanges says: "The older the country grows, the longer it is farmed, the greater the number and variety of weeds."

According to this it is only a matter of time when weeds must take possession of the land to the exclusion of profitable agriculture.

This same paper, however, has remedies. For instance, it says: "There are only two methods that we know of to get rid of weeds. One is to keep more or less sheep. The other method which may be used in conjunction with sheep is good farming. By good farming we mean keeping the ground very rich, well cultivated, etc."

Let us suggest another remedy. Quit sowing seeds of weeds. This is surely striking at the root of the trouble.

Stockmen in the States are hopeful. Pastures have been unusually good this year. The element of price still throws uncertainty around them, but they are learning, though slowly, to control the marketing.

Talk of stock improvement and systematic marketing in your local union.

Always mention Up-to-Date Farming when you write to advertisers.

COLLINS PLOW CO., 1192 Hampshire St., Quincy, Ills.

We announce hereby that our first International Representative and permanent contributor to Up-to-Date Farming, Eugene Matrosow, D. C. L., of Washington, D. C., has established "A Short Course on the American Agricultural Economics," consisting of 20 lessons, to be taught by mail. As this is the first course of this kind ever established in this country, and we have no doubt of its usefulness as well as its instructiveness for the farmers, we heartily commend it to the members of the society and to the readers of Up-to-Date Farming. Those interested in the instruction on the organization, operation and possibilities of their industry must apply at once to Dr. Eugene Matrosow directly (1113 P street, N. W., Washington, D. C.).

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

Solve the Problem

The livestock problem is not in the breeding, nor in the pasturing, nor in the feeding, nor in the shipping, but in the marketing. Before the problem of marketing, all the other problems dwindle into insignificance. What matters all else, if a profitable price cannot be obtained? And what matters all else if a profitable price can be obtained? The price covers everything else. The object of raising stock is a profit, as is the object of doing everything else that is done for a living.

And there can be no assurance of price or profit unless the marketing can be controlled. So long as flood after flood of stock pours into the market centers without regard to the demand, how can there be a steady price? Who can think of a profit?

The packers warn us against such marketing, the commission men urge us to distribute our shipments; the market reports constantly tell us that "excessive arrivals broke the price," and our depleted pocketbooks admonish us that there are no profits in gutted markets.

On the other hand, a few modest experiments have taught us that even livestock shipments may be regulated, livestock marketing controlled, and profitable prices for livestock maintained.

But to secure this highly important result the price must be paid, and the price is organiaztion and co-operation. There must be a power at a central point to direct the shipments. This is not at all a difficult thing to do, nor is it necessarily expensive—not nearly as expensive as to keep buyers at the market centers to watch for bargains and take them, and this is something every important firm does. But so far as the stockraisers are concerned, it takes organiaztion to do it; and it looks like what the A. S. of E. has done ought to be sufficient to convince every stockraiser, and induce all of them to promptly enter an organization for that purpose.

An unfortunate condition of this business, however, is, that the small stockraisers, those who raise but few on the farms, wait for those who raise hundreds and thousands on the ranches, and the ranch stockraisers are not looking for either advice or instruction. They feel that what they are not already doing is scarcely worth their attention, and they are wasting all their energies on questions of transportation, which, at least is only one element in the problem, and one which, like all others, depends wholly upon price and marketing.

Let us hope that an awakening will come, that the practical common sense that rules in other business may find its way into this, and that we shall see stockmen taking such sensible action as shall save to them the millions of dollars that are now annually deprived them because of their unwise system of marketing.

---

60 CENT CORN—The market price.

$6.00 HOGS—The market price.

It requires corn to make pork.

See how the A. S. of E. minimum prices of corn and hogs are realized at the same time.

This breathes of equity and consistency does it not?

A great crop of hay and abundant pastures. Good prices for live stock and thus farmers are laying up for a comfortable future.

The packers have been indicted, but they have not been convicted. The price of meat is still just as high. We judge the consumers are paying the attorneys' bills for the packers.

An effective fly chaser will be appreciated by the milch cows and be found profitable to the dairymen. A good one is advertised in this paper.

An abundance of good water is essential to profitable dairying. If no springs or streams are available, then wells and pumps must be relied upon. It is false economy to deny cattle (and we will include all other domestic animals) of an abundance of liquid refreshments, even though it means some trouble and expense to provide it.

Are all your cows returning a profit? A dollar's worth of feed to a dollars worth of milk will not make the dairy man wealthy.

Kind words, gentle movements, regular hours, all count to the good in the dairy.

Time to think about building a Silo.

Night pasturing is all right, but day housing in a foul, sweltering stable is all wrong.

The right cows in charge of the wrong man is a combination that will not win.

It's not too late to sow rape seed for pasture.

"Receipts large, price off — cents" or "receipts smaller, prices advance—cents," are the usual head lines to the live stock market reports.

When marketing is done scientifically and systematically, and it can be sent to market to meet the demand and prices will be steady and equitable.

Sow a patch or field of rye this month for early green feed next spring.

The stockmen will not be neglected. The A. S. of E. contains the remedy for all their troubles. They will work out through the clearing houses.

This is the pushing time on the farm. Crops are pushing forward and the good farmer is in the push also. He should not however be so taken up with pushing the crops as to forget the day of final reckoning when he markets them.

Don't feed spoiled grain and hay to horses and cows.

Clean the horses well after a days work. To know how they enjoy it just consider the comfort of your own bath after the day's work is done. It takes a little time, but the team will make up for it the next day.

Don't neglect to oil the bearings of farm tools and wagons. Neglect shortens their life and wears out the horses.

Salt regularly or let stock have access to salt as needed. An abundance of water must also be supplied.

The cow that must fight flies consantly cannot be a very profitable machine to turn out milk.

Clean up the farm of weeds. This includes the fence corners and roadsides. Sow no more weedy seeds and raise no more weeds with the hay. Begin the campaign against weeds now BY NOT ALLOWING ONE TO GO TO SEED.

The up-to-date stockman and dairyman is doing well this year. He has good breeds, the improved machine, and utensils and employs the best methods in producing and particularly excels in marketing.

Br-r-r! Br-r-r! Farmer goes to telephone. "Hello! Hello! This is the manager of your county clearing house. Headquarters advises you to ship 90 per cent of your bunch of hogs at once. You should market 300 bushels of corn on August 7th. The market will take 40 bushels of your early potatoes, early apples are not wanted until further notice. Take them to —— station and our representative will send them to the right markets. The weather today will be fair. Be sure to report your surplus crops a few days before you want to market. Good-bye." This will be the way in the near future.

TIME IS THE TEST

of durable construction in a high-speed machine like the cream separator. No other machine a farmer uses has a harder test. Run twice every day, winter and summer, it must not only do thorough work, but to be permanently profitable, it must be durable.

U. S. Cream Separators

Which hold World's Record for Close Skimming, are built for long service. A solid, low frame encloses entirely all the operating parts, protecting them from dirt and danger of injury. The parts are few, simple and easy to get at, every one being subjected to most thorough inspection, both of material and workmanship. Ball bearings at high speed points, combined with automatic oiling, reduce wear as well as insure the easiest operation. Every machine is tested before shipment. Such careful and thorough construction is what enables the U. S. to better

STAND THE TEST

than any other separator. You don't have to buy a new one every year or two. And remember: the U. S. does the closest skimming all the time.

Read a few of the thousands of letters from people who have used the U. S. 5, 8, 10, 12 or more years. They know about the "test of time." Send for Catalog No. 550. It's free and it's interesting, and will point the way for you to save money as well as to make money in your dairy

UP-TO-DATE
Poultry and Bees
PRODUCTION AND MARKETING

You can't be so cleanly about the poultry house and yard, but the hardest thing to solve this time of year is the problem of lice. Don't be stingy with lime. Scatter it everywhere. Dust and whitewash freely—ground, walls and perches. Destroy the old nests with reckless prodigality.

We like the loose perches; it is so easy to remove them. If they are placed on ascending bars, a nail partly driven at the proper place will serve for them to rest upon and to keep them in place. But we like the perches to be level, all the same height; then they need nothing to hold them in place, and there is no higher perch for the fowls to crowd upon.

We have been this summer specially watching the water supply for the fowls, and we have become convinced that, as a rule, fowls are allowed to suffer too much for water. It is surprising how much they will drink. Keep the fountains or drinking troughs constantly replenished, and keep them clean.

During rainy times in warm weather bad odors are very apt to be observable about the poultry house and grounds. This is an unpleasant condition for the attendant, and it is very unhealthy for the fowls. Clean out, and use lime freely.

We know of nothing better to grow about the poultry grounds than potatoes. This is specially true if the fowls are confined in pens or runs, and it is the purpose to turn them out occasionally. The potato patch is a good place for them to scratch in with less damage than anywhere else, and they will keep the potatoes "bugged" while doing it. The cleanings from the houses, mixed as they are with lime, makes the very best of fertilizer for potatoes, and the ground should get more productive every year, while the rank growth affords both shade and protection to the fowls and chicks.

Health in the flock, whether large or small, is the matter for first consideration. Health cannot be expected amid unhealthy surroundings. Fowls are subject to disease as are other living things, and to be healthy they must have pure air, clean water, wholesome food of proper kinds, and quarters free from disease-breeding conditions. They must have exercise, dust baths, and other essentials of fowl nature. One reason why more thought is not given to this phase of poultry raising is that raising poultry is so very general, and nature, if let alone, as nearly supplies all healthy conditions on the farm. When "art" intervenes, however, and interferes with nature, intelligent management must supply what artificial restrictions deny.

There is not much to make the poultry raiser think of winter now, but such thoughts are timely even during the hot days of August. Winter conditions must be provided for, and winter feed laid in. It will not do to depend upon corn alone, even on the farm, for fowls are liable to get tired of it and reject it. Especially is this so if they are confined to winter quarters. To supply variety, sorghum and millet seeds are good; so is Kaffir corn, wheat, rye and barley. Oats also answers a good purpose for an occasional feed, but it is not so good as the other small grains and seeds named. Then there must be provision for the vegetable ration. The pumpkin is not to be despised for this purpose. Cut in half and put in the yard, it will be eaten to the very rind. Turnips are good, but to be available they should be crushed. Cabbage is good also, but it should be given the fowls in the whole head, or cut very fine. Fowls cannot eat the loose leaves, because they cannot pick them in pieces. The leaf, being loose, lifts up and the piece sought to be taken fails to tear out. This is one reason why people are so unsuccessful in feeding vegetables to poultry—the fowls do not bite out bits, but tear them out, which they cannot do in case of loose leaves or grass. Clover cut fine makes an ideal winter feed to supplement the grain ration.

History of Mail Order Business

If one were asked "What has been the greatest factor in the prosperity of the farmers and the great mass of people living outside of the large centers of population?" the answer would be "The Great Mail Order Houses," the largest of which are located in Chicago. These mail order establishments have put the selling of merchandise to the people on a money saving basis. The last move of Sears, Roebuck & Co., Chicago, one of the largest of these mail order houses, whereby they occupy twenty acres of space and put up a four million dollar institution, is directing the attention of people to this comparatively new development in the merchandise world.

Mr. W. R. Sears, the founder and president of this great firm was only a poor country lad twenty years ago. His first position was as railroad agent in a small town at a salary of $30.00 a month. Meeting with some success in the selling of watches by correspondence, he was encouraged to get out a catalogue of watches. This was the beginning of the mail order business of Sears, Roebuck & Co. With foresight that has always characterized him, Mr. Sears realized that Chicago was the ideal location for a general mail order business, and just ten years ago he established the present firm in the big city on the lake. within a very short time they occupied an eight story building covering half a block. Shortly after that, a new building was ptu up on the other half of the block, connected with the old building, giving them 600,000 feet of floor space. As this business grew they were compelled to take additional space in buildings and warehouses near their main house on the west side wherever space was to be had.

The new plant, now in course of construction, will be ready July 1st. It will occupy twenty acres of their own ground, situated in one of the best districts of Chicago, on a tract of land one-half mile long and one block wide. In the buildings now under construction there are over forty acres of floor space, and their plans contemplate over one hundred acres of floor space as may be required from time to time to meet their rapidly growing business. With miles of their own railroad tracks, their own railroad yards, engines, crews, etc., they will be able to make the promptest possible shipment all at the lowest handling cost.

The main building, nine stories building with high tower, is the largest single building in the world devoted to the handling of merchandise, being one-fourth of a mile long and one block wide. The railroad tracks will run directly into this building, with trackage sufficient to load thirty-two cars at a time. In this building every express company will be represented; every railroad, the two big telegraph companies and the government post-office department.

It is etimated that 7,000 will be employed in these buildings, and the buildings, equipment, etc., will be an investment of close to four million dollars.

How can one account for the rapid growth of the immense business of this firm? We think it is mainly because they have always looked out for the customer's interest. Their question has not been, "How much can we get for this article?" but rather "For how low a price can we sell it?" In many lines they save their customers one-half the usual retail price. Their business and policy is the most liberal known. They promptly refund the money and pay all expenses of the transaction if any goods do not please the purchaser. Every one of their thousands of employes is instructed to satisfy the customer. The customer comes first, last and all the time.

Under such a policy, having and holding the confidence of three million satisfied customers, with their trade increasing by leaps and bounds, with the constant effort to maintain the highest quality of merchandise and lower prices, and with the facilities in their new twenty-acre plant to take care of an almost unlimited business, we believe the institution of Sears, Roebuck & Co., will surely become one of the greatest distributors of merchandise the world has ever heard of.

UP-TO-DATE

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

After all, has the invention of the sewing machine been a blessing? Certainly, we imagine every woman on the farm will answer; and it no doubt has. It enables women to do a given amount of sewing in much less time. But they find so much more sewing to do now than they did in the olden years. Whenever somebody invents a labor-saving machine, somebody else promptly invents about three times as much work to do!

July and August are lazy months. No farm wife can be blamed if she plans to not have so much work to do during these months. Indeed, she is blamable if she didn't do so. I don't care what some men may say or think, the women deserve an hour or two of quiet rest every day during July and August.

Upholstered furniture requires an extra amount of care. Unless it is often lifted into the open air and well but carefully beaten, it will gather dust. And it is in constant danger of that cruel little pest, the moth. Carved furniture also is more trouble to keep clean than plain furniture is—it requires more care in dusting.

The lively beauty of spring has toned down into the quiet restfulness of summer, but the home on the farm should still be surrounded with flowers. The verbenas, the petunias, the cosmos, the chrysanthemums, and their hosts of relatives, should be out in force during July, August and September, and far into October, while in the fields the Spanish needles and the golden rods should make one think of gold and goodness.

Hints About Carpets

This is not house-cleaning time, but a dust-laden carpet is always ripe for cleaning, and we will give from an old paper that lies before us the following hints on the care and treatment of carpets, that will do very well to read now and preserve and practice later:

"It is not well to take hold of the carpet and shake the dust out violently; better hang it broadside to the wind and let it gently shake, saving not only strength but the carpet as well. Many wear carpets too long without cleaning. They are not very dirty and the dread of lifting them delays the cleaning in some cases; in others they imagine it wears them more than actual use.

"The cleaner the carpet, the lighter the wear and the healthier for those that must live upon it.

"If the carpet is soiled in spots it may be washed and rinsed without injury, provided it is all wool and of a reliable make. Cheap colors run, even when the cloth is strictly all wool.

"A carpet beater may be made from a flat piece of thin light wood. Have it of suitable length and planed until very smooth; then the threads are not caught. Any rips in the seams should be sewed before laying the carpet and the carpet should be reversed to equalize the wear.

"Carpet stretchers are quite an aid, yet some of them are too severe for the ordinary two-ply carpet, and should not be put in the hands of incompetent or uninterested help.

"The carpet that lies crooked usually is so because it was drawn too tightly while tacking the first side. When we place a tack firmly every few inches and stretch the carpet before driving the next we have it so taut at the side that the center where we must depend upon pulling the entire length at once cannot possibly be brought as tightly, and our carpet has a very bad appearance and there is nothing left but to take out the tacks and try again.

"Never stretch the sides first tacked more than enough to cause them to lie smoothly.

"Many housekeepers in the country adhere to the practice of putting straw under the carpets. This is especially recommended where the flooring is rough, as it protects better than paper by working into the low places.

"For bedrooms or the others less used straw is unnecessary, and the work of cleaning is very disagreeable where it is used. It flies about so and gets upon the yard unless one takes a light barrel into the house and fills it, packing it down well, then having this taken away and burned.

"This is also a good way to get rid of the old newspapers if they have been so used. I do not like the idea of shaking them and using again. Bundle each one up with what dust lies upon it and make a bonfire. True, the dust will not burn, but it gets pretty hot and is now rendered harmless.

"If moths infest the rooms it is well to leave the floors bare for some days, giving them daily a thorough scrubbing. With these unfinished floors boiling water or strong suds will do no harm, but are very cleansing agencies, and sure death to all moths and eggs reached.

"After the last scrubbing and when the floor is dry, go over the edge with a cloth dipped in turpentine.

"When carpet is laid and all is fresh and clean, dip a towel in warm water, lay it wherever moths may be suspected of lurking and iron the towel dry with hot irons. The steam will penetrate the carpet and kill any that may remain in it. Such heroic treatment is necessary only in extreme cases."

HIMALYA

(The Kola Compound)

The African KOLA PLANT is Nature's Positive Cure for HAY-FEVER and ASTHMA. Since its recent discovery this remarkable botanical product has come into universal use in the Hospitals of Europe and America as an unfailing specific, proving that

Hay-Fever —AND— ASTHMA can be CURED

Mr. W. H. Kelley, 317 48th St., Newport News, Va., writes Jan. 23d, was a helpless invalid and was cured of Hay-Fever and Asthma, by Himalya after 15 years' suffering. Mrs. J. E. Nordyke, of Hill City, Kan., writes Jan. 25th, had Hay-Fever and Asthma for ten years and could get no relief until cured by Himalya. Mr. D. L. Clossen, 126 Morris St., Philadelphia, writes Jan. 16th, Doctors did me no good but Himalya cured me. Mr. W. F. Campbell, Sanbornville, N. H., also writes Feb. 6th, that Himalya cured his son, Rev. Frederick F. Wyatt, the noted evangelist, of Abilene, Texas, writes April 15th, 1905, I never lose an opportunity to recommend Himalya as it cured me of Hay-Fever and Asthma and have never had any return of the disease.

Hundreds of others send similar testimony proving Himalya a truly wonderful remedy. As the Kola Plant is a specific constitutional cure for the disease. Hay-Fever sufferers should not fail to take advantage of this opportunity to secure a remedy which will positively cure them. To prove the power of this new botanical discovery, if you suffer from Hay-Fever or Asthma, we will send you one trial case by mail entirely free, It costs you absolutely nothing. Write today to the Kola Importing Co., No. 1164 Broadway, New York City.

RURAL MAIL BOXES

AT A GREAT REDUCTION

We have purchased several hundred Rural Route Mail Boxes at much less than their value. To sell them in the shortest possible time the regular price will be cut in two. This is an opportunity to get one or more boxes very cheap.

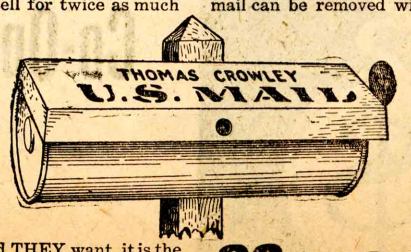
The Ideal R. F. D. Mail Box is the best medium-priced box on the market and is far superior to most of the $2 boxes. It is more convenient for the patron and the carrier than the old-fashioned square boxes, or any box that opens at the end. It is neater, more handsome and better than any of them, even though they sell for twice as much as the Ideal. The Ideal will give better satisfaction in every way.

The Ideal box has no "jim crack" attachments to get out of order, break or freeze shut. It's the kind of a box the farmer wants and the kind of a box the carrier wants, for he don't have to nearly break his neck to look inside, or get out of his rig to serve. If it's the kind THEY want, it is the box that YOU want. Any carrier or farmer will tell you that the Ideal box is like its name, IDEAL.

It is made of honest materials throughout. Lid is made of 20-gauge galvanized steel, (very heavy) and body of 24 gauge galvanized steel, thoroughly reinforced. Size of box 6¼ x 6¼ x 19 inches.

It has automatic signal painted bright red and poised above the box, making it easily seen by the carrier. Lid cannot blow open or freeze shut, nor can it be left open by mistake, as it is self-closing.

The body of the box being round, pennies or mail can be removed with gloves or mittens on. There are no cracks in it around the edges, as in the square boxes, for postal cards and change to lodge in. Both mail and change are always in plain sight of the carrier. The Ideal is rust proof. Screws for attaching to post sent with each box.



The Ideal Mail Box is made and sold at $1.50 every day. Because we want to move this lot at once the price is 80c each or $8.00 per doz.; $15.00 for twenty-four. We have only a limited number and the first orders get the preference. Order today.

80c each

COONER & FORTUNE CO., Indianapolis, Ind.

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

How to Make Holding Tobacco Profitable

More than 85 per cent of tobacco is usually placed on the markets between December 15th and April 1st. The remainder of the crop is marketed at a time when buyers are not anxious for the supply still for sale, being confident that they can secure it at a low price if they let it alone, and they accordingly do so. Holding until the regular buying season is over will not avail much until the quantity held is sufficient to run the buyers short on their contracts and expectations.

During the regular selling season there is no regularity or system in marketing the crop. Some days or even weeks, the supply offered is so great that a temporary glut is produced and prices go slumping toward the bottom. Then again, two or three weeks may pass without much tobacco being offered. Such spasmodic action in supplying the tobacco dealers works greatly to the farmers' disadvantage. While it is true that tobacco must be made ready for the market when the weather is favorable, it is both unnecessary and unwise to market heavily at any time.

Tobacco, if properly handled, should be higher in price in May, June and July than in the winter and spring months and should be higher still in early autumn or until the new crop comes into market. The reason it is not, is simply because, as above stated, the buyers get the tobacco before that time and are not compelled to purchase more until the new crop arrives.

There is one way—only one—meet these conditions. Deliver the tobacco slowly and only when good prices are paid. A strong and perfected organization will make it possible for you to do this.

Many farmers desire to have the crop off their hands as soon as possible. Such farmers can have their tobacco prized and stored and secured loans thereon if necessary. They can then sell at their own pleasure.

The important thing to do is to keep the supplies so short that buyers must pay a fair price to secure what tobacco they actually require to meet the demand, and then to provide means for taking care of a surplus, if any.

Hold back the crop and watch prices mount.

In Wisconsin and some other tobacco growing states, tobacco is frequently sold by contract before delivery, the buyers dictating terms, of course. When the growers are organized they will be able to become a party to mak the terms of the contract as well as to fulfill it.

Giving Options

In all fairness to both dealer and grower, options should stipulate the minimum price only for each class and grade. The contract should bind the dealer to take the tobacco offered at that price, and bind the seller to sell only to the dealer contracting, PROVIDED he will pay as high prices as any other dealer. This will leave the grower free to hold his crop for a higher price, and to sell to the highest bidder, always giving the refusal to the contracting dealer.

In making contracts of this kind, the minimum price recommended by the organization should be stipulated for each class and grade. Sorting, classing and grading should be done by experienced inspectors, satisafctory to both grower and dealer.

Will buyers "kick?" Undoubtedly, as they have everything their own way at present. But there is nothing unjust in giving the growers the same rights dealers enjoy, and it is time that the growers put the shoe that pinches in the scrap pile.

Any dealer who will object to such a contract simply makes an admission that he has an advantage that it is profitable to him; therefore ne is loth to give it up. But it does no more than to make the grower safe, and it permits the dealer to secure the crop, provided he will pay the highest market price for it. It should not and does not cripple competition in any way.

Late reports from the tobacco growers in the dark tobacco regions of Virginia and Kentucky state that the decrease in production this year will amount to at least 25 per cent. Heavy thunderstorms, hail, flooding rains and overflows have combined to cut the average condition down.

The Virginia meetings (when not stormed out) are being attended with much enthusiasm. While the farmers recognize that time is required to perfect their plans, their faith in the plan of the A. S. of E. is strong. Even the dealers admit that the 1905 crop will most probably bring higher prices than any crop of late years.

Our advertisements make as good reading oftentimes as the editorial columns.

How A. D. Blocher MADE $750.00 IN TWO MONTHS

WORKING FOR US

A. D. Blocher of Davison, Mich., is a farmer. He believes in turning his spare time into money. He read the advertisements of the **Co-operative Society of the National Supply Co.,** and was convinced that the Society was a good thing for himself and his friends. He believed in co-operation, and he saw that here was a Society which offered something tangible, safe and profitable, in that line. He wrote us and later joined the Society, became an active, enthusiastic worker, solicited his neighbors to join, distributed several hundred of our catalogues among them, and induced a great many of them to become members. His compensation for distributing the catalogues; the membership fees on the persons he induced to join the Society, and commissions on the goods purchased by them **paid him the handsome reward of $754.20**—all done in his spare time, and every member thanked him for getting them to join the Society. **What Mr. Blocher did you can do.** Hundreds of others—men and women—have done nearly as well and are doing it today. Write us and we will explain it all. We will show you just how and why you can do as well or better. This is the opportunity of a lifetime and will only cost you the effort of writing us a postal card to learn all about it; and it will mean very little work on your part to make big money. Besides we will show you how you will profit by your membership in this Society every year as long as you live. Mr. Blocher made $754.20 in two months, but that was not all the benefits he received—his membership made him a partner in a business that is saving him several hundred dollars every year. Write us a postal for full particulars. Do it now.

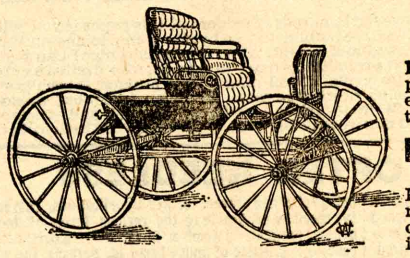
A. D. BLOCHER
Davison, Mich.

YOU CAN DO IT TOO

How You Can Save 10 to 20 Per Cent on Everything You Buy

To save 10 per cent to 20 per cent on the cost of your supplies, join the Co-operative Society of the National Supply Co. and buy everything you need to eat, wear or use on the farm or in the home, from the Society and you will save from $10 to $20 on every hundred dollars you spend for merchandise. The National Supply Co., of Lansing, Mich., and Chicago, Ill., is one of the largest mail order houses in the world—its prices published in plain figures in its large, **free** 1,000 page catalogue are as low and on many articles a great deal lower than any other mail order concern. Anybody can buy anything from them and save money by doing it. Members of the **Co-operative Society** get a special discount of 10 per cent from the list on everything they buy through the Society, which in the course of a year means a saving to members of many hundreds of dollars. The average farmer can save from $100 to $250 a year on his supplies—**all on an investment of but $10** for a fully paid up, non-assessable Life Membership in this Society. Can you invest $10.00 in any other way that will bring you even **one-tenth** the income that this will? Can you buy your supplies as cheaply any other way? Co-operation alone makes such a thing possible. You have everything to gain and nothing to lose by becoming a member. If you join the Co-operative Society of the National Supply Co., and your savings in discounts on purchases should not amount to $10 during the year and you wish to withdraw, we will **redeem** your Membership Certificate by paying you back the difference between the amount of the discounts you have received and the $10 membership fee, together with 6 per cent interest on the amount so paid back. Isn't this a fair offer, and doesn't it take away all risk from you? No other co-operative society ever made such a broad offer before. We invite you to join and we make it easy and absolutely safe for you to do so. Write today for particulars and full explanation of how this Society is able to make these extraordinary offers.

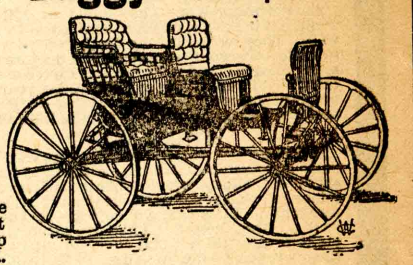
How We Can Sell this $47.50 Jump-Seat Buggy for $34.20



FREIGHT PAID

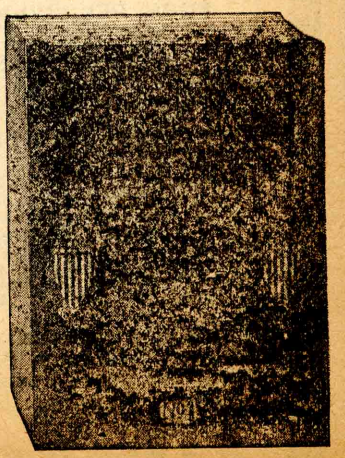
Furnished with Shafts, Carpets, Storm Apron, Wrench, etc. Our regular price for this $47.50 rig is $38.00.

Price to Members is $34.20



Here is a clear saving of $3.80 to purchasers who are members of the Co-operative Society. This is but one item of many, but it shows what a membership in this Society is worth to you in dollars saved.

This **National Jump-Seat Buggy** is actually worth $47.50 and you cannot duplicate it for less anywhere else. It is built for two or four passengers, made of good hickory, and is fully warranted in every particular—quickly changed from a single to a double seat without removing any parts. This is acknowledged to be the most convenient arrangement ever invented. It is very simple, making it possible to instantly change this rig from a two-seated buggy to a really desirable light market wagon—just what every farmer needs. **Wheels** are all hickory, Sarven or shell band, 1x1¼ inch steel tire. **Gear—Axle,** 1 inch, dust-proof, and cemented to hickory wood, rear king bolt, fifth wheel and double perch reach. Oil-tempered, elliptic springs, strong enough to carry four passengers. **Body**—white wood and hickory, strongly ironed throughout, and full length body loops 60 inches long and 28 inches wide. **Cushions**—green cloth, whipcord or imitation leather. **Painting**—body black with dark green gear, narrow stripe, high-grade finish. We are only able to make this remarkable offer by taking the entire output of the factory, and saving all middlemen's profits—co-operation in this Society cuts out all needless expenses and profits between the factory and the member. Send us an order for a National Jump-Seat Buggy at once—$38.00 is cheap for it. To make the bargain still better, send for an Application Blank, join the Society, and save $3.80 extra—this extra saving will pay more than one-third the membership fee. Hundreds of members have joined the Society without it costing them a cent—the savings on their purchases paying the full fee and often leaving them a nice profit besides. We solicit you to join the Society **now.**



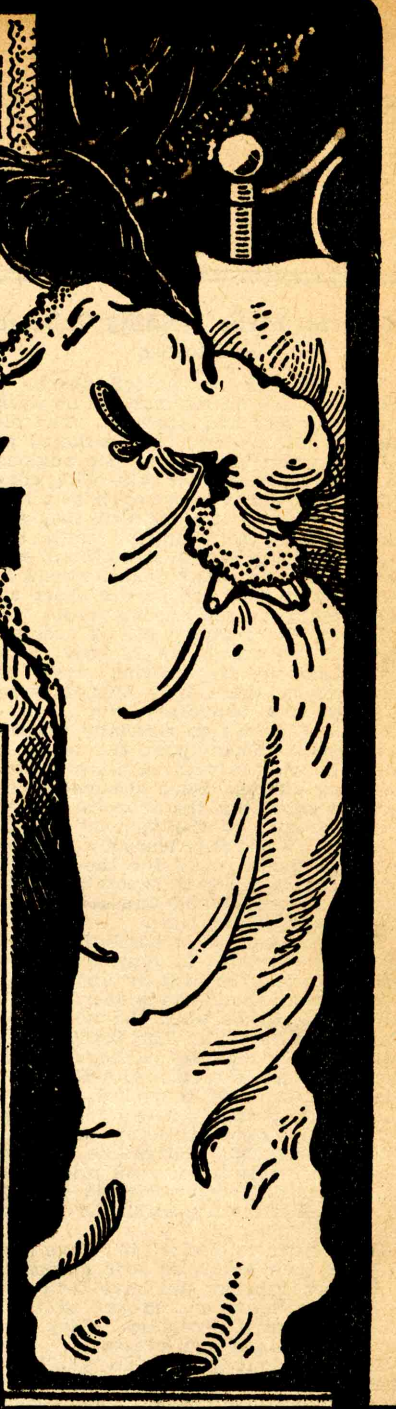
1,000 PAGE CATALOGUE FREE

We want every family in the United States to have one of our large, handsome 1,000-page catalogues. It is the greatest **Buyers' Guide** ever published. Is illustrated with thousands of beautiful cuts; every page is brimming full of genuine bargains not to be found anywhere else. We also want you to read the article in the catalogue on "Co-operation"—it's a treatise on the practical workings of genuine co-operation. It shows how this Society, composed of farmers all over the country, is fighting trusts and combines, and how its members are improving their conditions through the force of co-operation. The Society is willing to pay well to have the catalogue placed in the hands of men who will join the Society and help us to extend still further the influence of our co-operation. If you want to make good money in your spare time, or if you can devote your whole time to the work, write us for catalogue—**we'll send it free**—and we'll tell you how A. D. Blocher made $754.20 in two months, and how you can do the same or better. Write today for the information, and begin the work at once.

CO-OPERATIVE SOCIETY OF THE NATIONAL SUPPLY CO.

LANSING, MICHIGAN **CHICAGO, ILLINOIS**

A HEALING MINERAL SPRING AT YOUR DOOR



YOU CAN DRINK

three times a day from a spring more powerful than any known in Europe and America if you want to; you can drink glass after glass of healing, purifying, cleansing, curing, strengthening tonic waters; stronger, more powerful, more efficient than any the rich and great can get from the live, flowing springs and wells at Bath, Baden, Carlsbad, Saratoga, Mt. Clemons, French Lick, Hot Springs, White Sulphur Springs, or any of the well-known places where the rich get health and strength, and you need not step outside of your door to do it, need not call a doctor to prescribe it, need not put up a penny to get it.

IF YOU ARE SICK

and ailing, weak, debilitated, worn-out, feeble, if the organs of your body are not working rightly, in proper harmony, if your mind is not strong and clear because of bodily ill health, if your food does not feed you, if your sleep does not rest you, if your blood does not strengthen and sustain you, you can have the advantage of a mineral spring condensed and concentrated, every glass of which is equal to 53 glasses of the waters of the most powerful healing mineral spring of which man knows, every glassful of which will help set you right, make you hearty and whole, and you can have it brought, ready to your hand and lips, right to your chamber door.

VITÆ-ORE IS ALL THIS

and will do all this. It is an Ore, a mineral, from a mine of medicine-bearing rock, that has been ground up and pulverized into a fine powder. You have only to mix the Ore with water (nothing else) to make the water that is all this, that will do all this, that will do it as surely as the sun rises every morning in the eastern sky and sets in the western. It is from the earth's veins, and was put there for the good of your veins, to give to your body those elements which in ill health are lacking, to make rich, red blood, to make health, strength, life and energy—what God intended that every man and woman should have.

YOU CAN HAVE A PACKAGE

of this Ore for the asking. It will not cost you one penny if it does not help you. If it does help you, you will then owe us One Dollar. If it does not help you, you will owe us nothing. You have but to ask for it, to say that you have never before used it, that you want and need it, and a package will be sent to you, enough to make 120 glasses of this all-powerful, all-pervading, all-reaching, all-curing, all-healing water. You are to judge it; you are to decide whether or not it has helped you, whether or not you should pay for it. You alone are to be the judge. Read our special offer.

Thousands of Lives Saved

READ THESE LETTERS FROM NINE PEOPLE, EACH SAYING, "VITAE-ORE SAVED A LIFE." HUNDREDS SUCH ON FILE FROM EVERY STATE IN THE UNION

FROM TENNESSEE

COLDWATER, TENN.—I would have been in my grave if it had not been for Vitæ-Ore and I will not be without it. When I began taking it I could do no work at all. Now I work all the time. I cannot say too much for Vitæ-Ore. Patrick Bryan.

FROM KENTUCKY

PIERCE, KY.—I cannot say enough for Vitae-Ore. I believe it has saved my life. I do not have anything like Heart Failure now and I am stout as when young. I am fifty-two years old and owe all this to VITÆ-ORE. Ermine Hay.

FROM TEXAS

KENDELTON, TEXAS.—I have received untold benefit from one package of Vitae-Ore. It found me next door to death and snatched me from the grave, to tell the wonder of it. Mrs. Mary E. Dillard.

FROM ALABAMA

ADGER, ALA.—Mrs. Nat Parsons, who had been given up to die, having been abed for the last three months with female trouble, has had a wonderful experience with Vitae-Ore. In four days time after beginning its use she began to pick up, her appetite returned and everything that she ate agreed with her, and she is now up doing part of her housework. She is improving rapidly and blesses you and V.-O. and me, for saving her life. Nicholas Geis, Agt.

FROM WISCONSIN

ABBOTSFORD, WIS.—The people at Milwaukee could not believe it was I, to see me walk and be so well. They looked for my death every day. It is a miracle; everyone says so. The doctors said no man on earth could help me, but I have surprised them all. Twelve years an invalid, five years could not walk and could get no help. Vitae-Ore has saved my life. It is wonderful. May L. Kehlnhofer.

FROM OHIO

RAY, OHIO.—I suffered for six years with Tuberculosis or Systemic Catarrh. Although I had tried six different doctors and eight kinds of patent medicines I got no relief until the good spirit in some way sent me Vitae-Ore. Nobody expected me to get well or even better. I had five hemorrhages in eight days, could not eat, coughed all night and the doctors gave me up to die. In three days from the time I commenced using Vitae-Ore I began to improve. I have now taken all of one package and am much better than I have been for six years. My friends all say that Vitae-Ore saved my life. I cannot say enough good words for this grand medicine. Miss Caroline Clark.

FROM PENNSYLVANIA

BELLEVILLE, PA.—A living corpse is all that I can compare Wm. Benny of McVeytown to when I met him sitting in an armchair at his front door. He had eaten nothing for a week, and the doctors kept giving him drugs. I had him take V.-O., and last week when I met him, he said: "John, you have saved my life." John J. Rodkey, Agent.

FROM ILLINOIS

METROPOLIS, ILL.—I have suffered much from stomach trouble and have tried all kinds of medicine, but have found none as good as V.-O. It saved the life of my little girl after the doctors gave her up and said she would die. Mrs. Lizzie Benton.

FROM VIRGINIA

MAURERTOWN, VA.—I believe that Vitæ-Ore saved the life of my wife and therefore I do not like to be without it in my family. Hence this order for one dozen packages. D. S. Rhodes.

YOU ARE TO BE THE JUDGE

WE WILL SEND TO ALL Readers of this paper **a full-sized $1.00 package of VITÆ-ORE, by mail, postpaid,** sufficient for one month's treatment, to be paid for within thirty days' time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. If not, no money is wanted! **We take all the risk, you have nothing to lose.** If it does not benefit you, you pay us nothing. We ask no references, we want no security; just your promise to use it and pay if it helps you. Just say that you need it, that you want it and it will be sent to you, as it has been sent to hundreds of other readers of this paper. We want you to have it, and gladly send it, taking your word for the results obtained. There is nothing to pay, neither now nor later, if it does not help you. We give you thirty days' time to try the medicine, thirty days to see the results before you pay us one cent, and you do not pay the one cent unless you do see the results. **You are to be the judge!** We know Vitae-Ore and are willing to take the risk. We have done so in thousands of cases and are not sorry. Your case, no matter how hard or obstinate it may be, will be no exception.

WHAT VITÆ-ORE IS

Vitae-Ore is a natural, hard, adamantine, rock-like substance—mineral—ORE—mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime and is then of medicinal value. It contains free iron, free sulphur and free magnesium, three properties which are most essential for the retention of health in the human system, and one package (one ounce) of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water found on the globe, drank fresh at the springs. The mineral properties which give to the waters of the world's noted healing and mineral springs their curative virtue come from the rock or MINERAL ORE through which the water is filtered on its way to its outlet, only a very small proportion of the medicinal power in the ORE being thus assimilated with or absorbed by the liquid stream. The rock contains the much desired medicine, the water serves as the conveyance to carry but a small part of its properties to the outer world. Vitae-Ore is a discovery of this medicine-bearing rock, a geological discovery, to which nothing is added and from which nothing is taken. It is the marvel of the century for curing disease, as thousands testify, and as no one will deny after using. **VITÆ-ORE** has cured more chronic, obstinate, pronounced incurable cases than any other known medicine and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure. If yours is such a case, do not doubt, do not fear, do not hesitate, but **send for it today!**

Vitæ-Ore will do the same for you as it has done for hundreds of readers of this paper if you will give it a trial. Send for a $1.00 package at our risk. You have nothing to lose but the stamp to answer this advertisement. We want no one's money whom Vitæ-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention this paper, so that we may know that you are entitled to this liberal offer.

OPERATIONS OFTEN NEEDLESS

The modern tendency of physicians and surgeons is to rush patients off to the operating table as soon as it is suspicioned that the medicinal treatment being followed will not be productive of the results and ends desired. Frequently the entire diagnosis of a case is in error, causing a corresponding mistake in the manner and form of treatment. Instead of immediately submitting the patient to the knife with its grave attendant dangers, as is generally urged, if an attempt were made to get a proper diagnosis and follow a rational treatment as indicated by that diagnosis, many distressing, dangerous and often fruitless operations would be found unnecessary.

We do not for a moment, however, desire to say that all operations are undertaken without necessity. It is certainly an undeniable fact that surgery within the last few decades has made rapid strides and wonderful progress in the saving of human life and the removing of certain abnormal conditions. It is, nevertheless, equally indisputable that much trouble and suffering and frequent deaths have ensued from the too easy and quick recourse to the surgeon's blade.

An operation, especially one of a dangerous nature, should only be resorted to when and after all other known means and measures to effect a cure have failed to bring about the desired results and the operation is imperatively necessary to bring relief and prevent further complications. This injunction is especially applicable to the various forms of female disorders, particularly womb and ovarian irregularities, in which cases this practice of undue haste is, perhaps, the most pronounced.

Hundreds of women have written to the Theo. Noel Company that the doctors had advised operations, but the timely use of Vitae-Ore saved them from such. With their letters before us, we say to all that no woman should undergo an operation until Vitae-Ore has been given an opportunity to prove the knife unnecessary. The following letter from Mrs. Clara Watson of Muskegon, Mich., one of the many saved from the knife, tells its own story.

"After sending for Vitae-Ore I continued to grow worse until I was in such pain and my joints were so swollen I was perfectly helpless. I could not move hand or foot. The doctors said they could do nothing for me and I must have an operation for female troubles before I could get well. I was so bad that I had decided to have it done, when the Vitae-Ore came and I began its use. Now I am on my feet, can sit up all day without pain, can walk about without limping and am getting better, stronger and more active day by day. Vitae-Ore has done all this and saved me from the dreaded operation."

Natural means of relief are always to be preferred to the unnatural, and the knife is unnatural. V.-O. is nature's own remedy and is victorious in the most complicated conditions, where other treatments have encountered defeat, as has been proven times without number. Send for a package on trial.

WENT HOME TO DIE

Costly Operation Did No Good; Vitæ-Ore Cures.

HASTINGS, MINN.—I had been sick for nine years when I commenced to take Vitae-Ore. I had doctored with some of the best physicians in St. Paul and Minneapolis, and none of them were able to help me. They then decided that drug medication was useless and that the only thing that would do me any good was an operation. I submitted to the operation, though in a terribly weakened condition, only to discover afterwards that it was of no benefit to me whatever, and, in fact, only made matters worse.

I had stomach trouble, heart trouble, and liver trouble and could retain neither food nor water on my stomach most of the time. When I was first taken sick I weighed 197 pounds, but my sickness reduced my weight until I had reached 115. At this time I gave up all hope and went home to my mother, at Indianapolis, to die. While there an old friend recommended Vitae-Ore and insisted on my trying one more remedy. I had no more hope, but I finally consented and began to improve from the first dose and have continued to improve ever since. My weight is now 170 pounds, my strength has returned so that I can do my own housework. I have no more trouble with my stomach and can eat anything anyone else does. I have used six packages of Vitae-Ore, as against hundreds of dollars spent for treatment and other kinds of medicine that did not help me at all. Harriet A. Davenport.

A Certain and Never-Failing Cure for Rheumatism, Bright's Disease and Dropsy, Diabetes, LaGrippe, Blood Poisoning, Piles, Sores, Malarial Fevers, Nervous Prostration, Liver, Kidney and Bladder Troubles. Catarrh, Female Complaints, Stomach Disorders.

☞This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your personal investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

THEO. NOEL CO. Up-to-Date Dept., Vitæ-Ore Bldg. CHICAGO, ILL.

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, AUGUST 15, 1905

THE FARMER AT SEA

A LONE FARMER is in a boat, and guided by his old teachers has been using only one oar of "Production." The result is he has been going round and round and never making any progress that may be considered certain. Another oar, "Controlled Marketing," is within reach but idle.

Near by another boat is passing going in a straight line headed for "Prosperity." This boat is filled with farmers and they are all PULLING TOGETHER, using both oars, "Production" and "Controlled Marketing." The editor of Up-to-Date Farming is in the boat, and he calls to the solitary boatman: "Use both oars, brother, and come with us!"

WHY ARE THE PEOPLE GOING TO THE NEW MODEL CITY AND COMMUNITY IN SUCH LARGE NUMBERS

There are eight reasons:

1st—The excellent quality of the soil,
2nd—Locations and surroundings,
3d—Natural resources and advantages
4th—The salubrious health giving Climate,
5th—The certainty of profitable crops,
6th—Variety of crops.
7th—Excellent markets for all kinds for farm products,
8th—Good schools, churches and social conditions which will be more fully understood by reading our advertisements in the last four issues of Up-to-Date Farming.

CUT OUT and send promptly. You may be one of the 200 if you mail today

No.

Applications are numbered as received—No. 1 has first choice of all farms or lots, No. 2 Second Etc.

To Mr. J. B. Coghill, Mgr.
Dept. 6, Indianapolis, Ind.
I hereby subscribe for.... farms of 25 Acres each. And ....lots, all in Refugio Co., Tex. and in the tract of land known as **The Model City and Community.**

For such farm land and lots I agree to pay to **The Model City Land and Improvement Assc.** $20.00 per acre for the farm land, and $100.00 each for the lots. One third to be paid in cash as soon as two hundred (200) 25 Acre farms are subscribed for; another one third in cash when I take possession of the property and on delivery of the deed. I agree to take possession of the property or place some person in possession within six months from the time of notice of subscriptions for 200 farms is received. The balance one third is to be paid in one year from same date. Deferred payments to bear interest at 6 per cent. per annum. If it is not convenient to make the last payment at time specified it is agreed that the time will be extended another year. In the case of city lots the condition to take possession is waived.

DATE..... SIGNED.....

P. O.....CO.....STATE.....

MORE REASONS WHY YOU SHOULD GO TO THE NEW MODEL CITY AND COMMUNITY

THE FIRST MODEL CITY AND COMMUNITY is now an assured success, many applications are coming in every day and we will have the first two hundred farms sold some time before the property is opened for settlement. Great interest has been aroused among the farmers of the Northland, many are selling their present property holdings in the North and preparing to go to the New Model City and Community by October 1st so they can harvest a crop of vegetables for market in the early Spring and at the same time enjoya winter in the balmy climate of the Gulf Coast where snow and ice are unknown.

From present indications we will have five hundred families in the new city by January 1st 1906 with a rapid growth thereafter until the eighteen hundred farms and thousands of city lots are occupied.

READ WHAT DR. EDWARD CROSS says about the healthful climate of the Coast Country, he says: "I take pleasure in responding to the inquiries just received, as to my professional opinion and the results of my experience, of the LAND-LOCKED BAY COAST in and around your community. I do so with great pleasure and confidence, as I myself came an invalid to the Coast Country and was so greatly benefited that I hope others may in the future be led to profit from your ozone-laden breezes. I certainly regard that portion of the Coast Country as peculiarly adapted for a Winter Resort for many classes of diseases, and especially incipient phthisis or tuberculosis, nervous and chronic catarrhal troubles and rheumatism. There you have high, dry rolling prairies extending hundreds of miles back into the interior of the State and directly to the Bay Coast on which you are located, while at all other resorts of the "SOUTHERN COAST' great salt marshes surround and encompass for many miles.

You have what is so much needed for all cases of incipient phthisis; a climate more balmy than South Caroline and almost as dry; it is a well known fact that active, advancing tuberculosis is most benefited by a sedative, moist warm climate. Indeed, your COAST can boast not only sedative climate, but according, to report made by United States Coast Survey Officers in their survey, the air contains a larger percentage of ozone, bromine and iodine than any other in the United States.

My own selected cases have always done well here. Safely and with confidence can those who have been sufferers from the sequence of lagrippe seek the Texas Coast Country.

The effect of many ef these is magical. THE SOFT BALMY OZONE-LADEN AIR, with proper diet, certainly exerts a most soothing and beneficial influence, and most honestly can I recommend it as the IDEAL WINTER HEALTH RESORT OF THE SOUTH."

Besides the advice stated by Dr. Cross, the uniform temperature, prevailing southeast winds, the elevated location, freeness from swamp and marsh, southern location beyond the harm of north winds and recreation afforded by hunting and fishing make this section one greatly to be desired by the health and pleasure seeker. There is nothing in the natural conditions that will cause any of the fevers or malarial diseses.

TEMPERATURE—From indications taken, six times every twenty-four hours in three years by Capt. Stracken, the following averages have been arrived at: Winter months, thermometer 57, barometer 30.70; Spring months, thermometer 77, barometer 30.00; Summer months, thermometer 86, barometer 29.90; Fall months, thermometer 60, barometer 30.50. You will note from the register of the barometer that there is no humidity in the air throughout the year.

This section has no rainy season, but rains average well throughout the year with a possible excess during June, July and February. Water stays but a short time on the surface, no matter how hard the rain, but but percolates into the soil and is retained by the clay sub-soil beneath.

Pure water for all purposes can be secured by drilling 80 to 120 feet.

There is an abundance of small timber suitable for posts and fire wood.

The land is safe from floods and cyclones, and is a level, gently rolling prairie.

Model City and Community

WILL HAVE

50,000 PEOPLE IN FIVE YEARS

Our Section of the Coast Country is free from Yellow Fever and all Malarial Diseases because of the presence in the air of Ozone, Iodine and Bromide in large quantities.

READ WHAT OUR SUBSCRIBERS AND OTHERS SAY ABOUT THE "COAST COUNTRY" OF TEXAS.

Governor Herrick of Ohio says—"The "Coast Country" is an Eldorado of opportunity; an EDEN of resources that make for progress in many respects. It is the most wonderful country I have seen in my life. Words are inadequate to express my surprise at what I saw."

Mr. S. M. Tracy, Washington, D. C.—"Taken as a whole, the "Coast Country" is one of the most promising sections in the whole southwest, with its fertile soil, abundance of water, cheap labor and delightful climate. It is sure to become one of the World's Garden Spots."

Mr. A. R. Carhart, says—"The country is all right. soil is excellent and climate unsurpassed."

Mr. Chas. H. Lee—"The Model City Section is the finest place on earth and I intend to make my home there."

We could publish many more strong testimonials from people who have been there and have investigated for themselves but our limited space prevents doing so.

Seceretary Wilson, Department of Agriculture—"It is the finest land in the world."

R. N. Burt, California—"Climate is fine as can be found in the United States."

T. W. Carter, Missouri—"Climate perfect, land the richest I ever saw."

E. L. Gillam, Illinois—"It is an Eden-like locality."

WISE INVESTMENTS—Investment of any kind, to be good must be secure. The highest quality in any investment should be its soundness as a permanent quantity with an inherent ability to sustain its quality and interest earning power. From the banker's standpoint, the acceptable investment is that which represents real value and possesses that qualily which enables it to grow stronger as it grows older, with its foundations broadening and deepning as the pressure of time settles it in its permanent abode.

We have tried to show you BEYOND THE SHADOW OF A DOUBT that any investment made now in the Model City lots or the Model Community lands will be the wisest you can make any where. That you don't buy a lottery ticket or gold brick but get a warrantee deed to THE RICHEST LAND IN THE COUNTRY; where a living and competency can be made, perhaps more easily, than any other place in this country and all the time the property increases in value. While savings banks pay 3%, government bonds about the same and industrials 6 to 10% MODEL CITY LANDS WILL RETURN FROM 100 TO 400 PER CENT IN CROPS and double in value by the time you take possesssion. And city lots acquired now at $100.00 may reasonably be expected to be worth $1,000 to $5,000 in a few years.

First 200—You have been told how you can acquire these farms or lots for business or residence, also how the FIRST 200 SUBSCRIBERS HAVE THE PICK AND CHOICE OF ALL.

Send Application—If you have not read our former advertisements send for them. If you have read them and misplaced them, send for them now and read again. If you have not sent your application for what you want attend to it at once, or investigate at once and then apply. THIS IS AN OPPORTUNITY THAT DON'T COME TWICE IN A LIFETIME. The person who takes our advice will have made the choice of a lifetime and one which we predict he will never want to relinquish.

Your Choice of Business—But listen! If you don't want to farm—raise vegetables, fruit, grain, cotton, alfalfa or poultry—you can engage in business in the City, and property bought now will surely double in value over and over again. Or if you don't need to labor, you might travel over the whole country and not find another place to equal the FIRST MODEL CITY for health and enjoyment. It you love fishing, hunting, (wild fowls) bathing, boating or sailing; if you love flowers and semi-tropical trees and plants; if you love a city of beautiful streets, boulevards, parks and buildings; music and birds, come to the MODEL CITY for all these will be there.

If you want to know more about the Model City Land and Improvement Association write to any bank in Indianapolis.

For Health, Wealth and Happiness come with us to the First Model City and Community. Address,

Model City Land and Improvement Association

If a mark like this appears on the first page it is to notify you that your subscription or renewal has been received. The publisher thanks you and he hopes you will be delighted with Up-to-Date Farming and take it many years.

If a mark like this appears on the first page it is to notify you that your subscription expires with this number and the publisher earnestly requests you to renew at once.

If a mark like this appears on the first page it is a notice that your subscription is in arrears. The publisher hopes that you will send what is due at once. A statement will be sent on request.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns We guarantee that they will deal honestly with subscribers However, should any advertiser in Up-to-Date Farming fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in this paper only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write. ¶Our guarantee as above does not apply to advertisements under the head of Business Exchange. Many people who will advertise there are not rated in the regular commercial directories and it would be impractical to get reports on all. Every care will be exercised to keep rogues out and we want subscribers to tell us of unfair dealings, when future service will be denied such.

AMER. FEDERATION OF LABOR TRADES UNION LABEL COUNCIL INDIANAPOLIS 18

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, 1905 crop per bushel -	$ 1.00
Corn, No. 2 Chicago, 1904 crop April 1 to next crop -	.60
Tobacco, (Price on the farm or at the market town)	
Virginia, dark, average per cwt. -	$ 9.00
" bright, " " -	12.00
Kentucky, dark, " " -	8.00
" burley, " " -	12.00

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit, per bu.	2.00
Cotton, New York, per pound -	.12
Broom Corn, Chicago, per ton -	$75.00 to $85.00
Hogs, " per cwt. -	6.00 to 6.50
Cattle, " per cwt. -	6.00 to 7.50

Look at the first page and see if any of the marks, above, are on duty.

Booklet E 37

Wonderful to educate the people; 64 pages and cover. We have 25,000 to give away. All we ask you is 6 cents a dozen to pay postage. Order a lot and distribute them. This is one way for you to do your duty.

Wheat is safe for $1.

The cotton outlook is encouraging.

Don't go to sleep when keeping awake will give you fair prices for your crops.

The A. S. of E. national convention in October will be a record breaker and a price maker.

Boards of trade may resolve and statisticians may figure, but it is the farmer that gives the increase.

The Clearing Houses are coming. This will be one of the matters to dispose of at the annual meeting.

If you approve of the work this paper is doing, help to increase its circulation and thus you will multiply its usefulness.

Not less than ten million farmers, with the issues of life and death in their hands, are held in subjection by a band of speculators. Itsn't that a pitiful spectacle?

There is a larger crop of wheat than there was last year, but nobody is sticking up his nose at $1 per bushel. The A. S. of E. has said it, and even the farm papers have quit disputing it.

Some of the papers are telling us that in some of the older sections noxious weeds are becoming so troublesome that it is cheaper to take in or rent new land than to try to subdue the weeds in the old. And yet some farm papers ridicule the idea of furnishing farmers with guaranteed clean and pure seeds!

Canada is doing more than the United States in the line of weed extermination. We have some valuable bulletins on this subject from the Canadian Department of Agriculture. Our department is too busy gathering up seeds for congressmen to distribute, and in making crop reports that assist the speculators, to do much in the line of weed extermination.

A report from Oklahoma shows the actual inauguration of a series of local clearing houses for the purpose of handling grain. We wish them much success, and shall watch their efforts with very great interest.

Have you noticed how the price of hogs keeps good while the supply has been moderate—supply equal to demand.

We make the request that each of our readers will read the first columns of page 3 and the Local Union page. You may have read these before but we particularly want you to read them again. Some changes have been made that will interest you.

What availeth it the farmer if the weather adds millions of bushels to your crops and the speculators reduce the price so you get less for a big crop than for a short crop?

Millers admit that a steady market is best for their business. Then why do they not help to secure it?

The tobacco growers doubled the price of their products in about one year after organization began in earnest. Fruit growers, bean growers, potato growers, truckers and stock raisers can do as well. They must, however, take hold themselves and help themselves. The A. S. of E. supplies the plan, Up-to-Date Farming will supply the education. Correspond with headquarters.

The county and central clearing houses we have referred to are not designed to be places where the farmers' products are actually handled, but will be offices from where advice will eminate as to when and where to market and at what prices. Marketing, it is expected, will be done through the present established channels, but it will be done systematically —or scientifically, if you please—instead of in a haphazard way as at present.

Do some figuring. What has the A. S. of E., and controlled marketing been worth to the wheat growers during the last three years? Wheat was selling for less than 70 cents. Our bulletins put it to $1 and over and it staid there. What have these things been worth to the cotton growers? There never was such an effort to drive cotton prices to the very bottom. Our bulletins put it to 12 cents, and like the boy's fishing cork, it might be jerked under, but it would come up again, and now it is pointing up to the 12 cents. We will not believe that farmers are ungrateful.

The value of an active local union in a neighborhood cannot be over estimated. It is sure to be posted on markets and prices, and it is just as sure to get the best prices that are being paid. It is like a light house on the seashore, it shines for all, and all should appreciate it. And not only so. Every local union should work itself up to the point of seeing to it that locals are organized in every adjacent locality. It is the only way to get prices. Study it and act upon it.

In some places anti-weed clubs are being formed among farmers. All right. That is in the line of reform, and is a good hint to local unions. Discuss the weeds, and help to exterminate them.

Farmers' Business System

The country saturated with local unions; a clearing house in each county; about five central clearing houses or headquarters in the country; representatives on each large market; a farmers' warehousing plan without capital from the farmers; all connected by telephone and telegraph lines to get the supply and demand and to direct the marketing; all members reading Up-to-Date Farming. These things will comprise the SYSTEM for the distributing end of agriculture.

This system will not be any larger nor as expensive as the system employed to promote the producing end of agriculture which comprises the Department of Agriculture at Washington; experiment stations and colleges in each state; thousands of farmers' institutes; hundreds of farm papers and many societies.

We leave it with farmers themselves as to which is the more important, the producing end of farming or the distributing end, and which needs the more careful direction at this time.

The proposed business system can be established and will be established. Remember we say IT WILL BE. The plan of the A. S. of E. contained all the elements from the start. The educational campaign has been carried far enough. The people are ready for the next step. Plans are now being prepared to take them. The annual meeting we expect will be the culmination of the plans and after that time they will be live issues.

Think about these things and come to the Annual Meeting prepared to assist in completing the farmers' business system.

If you approve sign, cut out and mail the blank printed below. When sending blank write a brief letter, state whether you will attend the Annual Meeting, and send a subscription or membership if you can.

A Clearing House in Every County

To The American Society of Equity,
940 North Penna. St., Indianapolis, Ind.

Gentlemen: The movement to establish clearing houses in every county and central clearing houses or headquarters to direct the marketing of farm products meets with my approval. I want to see them accomplished.

Name .....

P. O. .....

County .....State .....

Third Annual Meeting

The time set for the Annual Meeting is Oct. 23d (Monday), and to continue as long as necessary. Many very important matters will come before this meeting—matters that we predict will have most extraordinary influences on future American agriculture. A partial list of subjects will be printed in September 1st issue. Each local union is entitled to one representative and each county union to one representative for the county at large and an additional representative for each two hundred members in the county and major fraction thereof.

What Is It Selling For

We have said much about the bad effects of the present pernicious system of price making and market reporting, but much remains to be said. In fact, the evils attending them will never all be told, and those who have the courage to tell them should never cease until every vestige of the miserable business shall be consigned to the rubbish pile where now hide in obscurity things that we think of amazed that they were ever tolerated.

Now lies before us a paper published in a city of about 30,000 people, and that has a large circulation. It is the dependence for market information of many interested farmers. It devotes the usual space to market reporting, and gives the speculative "future" prices of the various products but not one word as to what cash prices those products are actually selling for. It is the cash prices that producers are interested in, not the gambling prices offered for wind that may blow during some future month. What a happy day it will be when these miserable visionary arbitrary, speculative, gambling reports shall cease to be published, and the whole system consigned to an eternity of oblivion.

Absurdity's Limit

At a large meeting of farmers in Kentucky as reported in the public press, it was resolved not to sell wheat of the crop of 1905 for less than $1 per bushel; whereupon, says the paper:

J. C. Westerfield suggested that it was against the laws of Kentucky to fix a price and he feared a prosecution of the association members.

Up-to-Date Farming may not know all the laws that have been enacted by the Kentucky Legislature, and if that body is like the legislatures of other States, there is little telling what sort of laws they may have made. We could refer to many laws in a number of States that read like they had been adopted in insane asylums rather than by the State's wisdom gathered in the legislative halls, but we venture to assert that there is not in Kentucky or any other State, a law forbidding farmers to fix a price upon their products, or one under which they could be prosecuted should they refuse to sell until a price satisfactory to them be offered. Only during a state of war, and as a military necessity, may property be taken without the consent of the owner, or at a price fixed by the purchaser, the owner or any other person or power until the owner is willing to sell.

Don't be alarmed at the ubiquitous "conspiracy" scarecrow, which is now made to do such strenuous duty. An agreement not to sell below a certain price is not a "restraint of trade." The products are constantly on the market at the price. What more can the market ask?

Suppose certain farmers, few or many, should agree not to sell at all. What then? Millions of farmers raise valuable products every year that they absolutely refuse to sell at any price. They consume them and feed them to their stock. Would not the prosecution of such farmers be ——. Well, absurdity has just about reached the limit. And yet some farmers, though the bravest people on earth when serving others, tremble every time a "smart Aleck" coughs up something to retard their doing things for themselves.

Salaries and So On

Mr. Paul Morton, vice-president of the Santa Fe railroad during its rebate period, and then Secretary of the United States Navy, though he never "slipped a hawser or boxed a compass," has given up the cabinet portfolio to accept the presidency of the Equitable Life Assurance Society at a salary of $80,000 a year.

The salary of the president of the United States is $50,000 a year, which, of course, is the highest official salary paid in this country. If we had access, however, to the salary list of the corporations and trusts that the government and the States have created, we would find many higher salaries than that of the Nation's president. These corporations and trusts do business with the people; their profits are derived from that business, and of course come from the people's pockets. It goes without saying that the profits must be large or such salaries could not be paid. For years the great insurance companies have had millions upon millions of money to loan back to the people on real estate security. These millions have come as premiums from the people and have accumulated in spite of such princely salaries. No fact could be clearer, then, than that the people have had to pay too much for insurance—premiums have been too high.

So of other great corporations that do business with the people and pay like high salaries. Their profits are too high else they could not pay such salaries and dividends besides. They are taking from the people too much money for the service rendered, and to that extent are robbing them.

A wave of madness seems in truth to be engulfing the whole world. They are "science mad," it is said, in the Department of Agriculture, office mad in the political parties, boodle mad in legislative bodies, graft mad in the corporations and trusts, and money mad everywhere.

"Frenzied Finance" must have almost reached its height, and, like a pile driver slowly ascending, it will come down with a crash. Happy will he be who is not under it!

Will Big Crops Be Blessings?

The crops grown from the land are the greatest factors in the economics of this country. While there are other great interests they all depend so much on agriculture that they could not possibly stand or prosper without it. Therefore when the crops are abundant like this year we naturally expect all business to be good. This will only be true in proportion that the crops sell for good prices.

If we raise large crops of wheat, and oats, and corn, and potatoes and cotton, and live stock, and if these crops sell for profitable prices, then for a truth the country will prosper. But if we raise big crops and they sell for unprofitable prices to the farmers this country cannot enjoy continuous prosperity.

It will not be sufficient that the railroads have enormous tonnage of cheap farm produce to haul; the mills enormous crops of cheap grain to grind and cotton and wool to weave, or the consumers a superabundance of cheap food to eat and clothing to wear. These will not avail to keep the country prosperous if the farmers must turn over the results of their labor at less than a fair wage for the investment and toil they represent.

From nearly all sections of the country come reports of excellent crops or prospects, and until this time prices are very good. Such conditions act like magic on business. The stir of increasing activity is abroad in the land. The only thing that remains to be done is to maintain good prices for the farm crops.

We do not make this assertion without proof to support it. Go back, if you please, and scan the crop and price records as long as crop records have been kept and you will see that the periods of depression in this country were almost invariably preceded by abundant crops and low prices.

The A. S. of E. and Other Societies

The American Society of Equity is a fraternal worker with all other organizations whose object is the betterment of American agriculture, and the restoration to farmers of their just and undeniable right to put a reasonable value upon their labor by pricing the products of their farms, whose sale is their dependence for an income. This right they have been unjustly deprived of for many years, and whatever contributes to its restoration ought to have the support and gratitude of the farmers, as it certainly has our esteem and good will. This, our readers know, has ever been our attitude toward all such societies.

It pains us, therefore, when other societies display a narrowness unworthy of so great a cause, and, forgetting the common fight that is before us, waste their time in ill-advised attacks upon other people. Complaints that the F. E. and C. U. indulges in such attacks upon the A. S. of E. have often come to us, but our policy has been to ignore them as the ill-advised action of subordinates. We are prompted, however, to publish the following letter, not to stir up strife, but in the hope of showing these people that their action is understood, and that it does not meet public approval:

Editor Up-to-Date Farming:

I have carefully studied the Constitution of the A. S. of E. and I am delighted with it. I am enthusiastic on this subject, and am devoting my time to the society. But you cannot imagine how bad I feel to think of the way we have been treated by the Farmers' Educational and Co-operative Union. It is the worst enemy the A. S. of E. ever had. Their leaders here are determined to do us all the harm that lies in their power. Since our Mr. Sherman spoke at Thomas, they have made this county the main field of their warfare. They denounce Up-to-Date Farming and President Everitt, and do all they can to keep the people away from our meetings. Among our members they declare that Mr. Everitt indorses all they are doing. I personally know that all I have said is true, and the half not yet told. But the new Constitution refutes all their declarations, and makes it easy to meet them.—R. W. Wadsworth, Custer, Okla.

Of course we very much regret such things, and insist that our people refrain from returning like for like, but to always treat all societies courteously, and to meet them as brothers in a great common cause, provided they are sincerely working to secure equity.

But all the leaders of that society are not so narrow in their views, nor so discourteous in their action. Mr. Everitt has a very courteous letter from Mr. John T. Garner, their business agent, in which that gentleman uses the following words:

"I see no reason why we cannot co-operate together. I have noticed your great organization, and we have no trouble to organize a farmers' union where the Society of Equity has been taught."

We refrain from further comment except to say that the work to be done is too great and the time in which to do it is too short for different organizations to fight each other.

Market Slowly

In a market article in a paper in no way connected with a farm organization, we find the following significant words: "Millers will be looking for wheat during July and August just as sharply as they have for the past three years, and if wheat growers WILL MARKET THEIR WHEAT SLOWLY there is no legitimate reason why a price considerably better than eighty cents should prevail in this market (Minneapolis) during the crop year of 1905."

There is the whole secret of the farm crop market —MARKET SLOWLY. That is what Up-to-Date Farming has been teaching for some years, and it is what the A. S. of E. has been practicing so far as the extent of its organization has enabled it to do, and it has thus materially affected the price in the interest of the producers without in the least oppressing the consumers.

But how slowly should crops be marketed? What should be the gauge or standard, or can there be any? Certainly, the PRICE. Take the prevailing level of general values, consider the normal demand for consumption and then ascertain the current supply, and on these base a price in equity, or an equitable minimum price, and then market just as fast and no faster, than the product will be taken at the price. This is the standard of marketing. It is an unmistakable and infallible one, one that applies all the time to the whole country, and that reaches to every farm—the minimum price based on a certain market less the easily ascertained cost of transportation.

This is simple and comprehensive, easily understood and easily applied, but it takes organization to do it. That organization is being rapidly perfected and strengthened, and the entire outcome lies with the farmers themselves. No capital is required, no stock companies are necessary, but some expenses must be incurred and paid, and no one person, or dozen persons, should be asked to meet them. Hence certain farmers may, by crotchets and captiousness, delay the accomplishment, but they cannot defeat it, for it does not require the universal co-operation of all farmers, enough to control the surpluses or gluts will do it; but the largest possible number that are broad enough to so co-operate will make it easier, surer and quicker.

You may still think that this plan will not work if there is a real surplus produced any year. But it will. It is rarely known that there is a surplus at the beginning of a year, but if it is reasonably sure that there is then each producer of that crop should set aside 10 per cent, 25 per cent or some other per cent of his crop and put a slightly higher price on that portion. The other part, at the seller's price, will sell for more than the entire crop at the buyer's price. If the supposed surplus turns out to be a real surplus it must be held over. Take any series of two or three or more years and the short crops more than counterbalance the long crops, hence the average crop is not a surplus one. But if the supposed surplus was not real then the buyers will clamor for more supplies and offer a higher price, which will be the signal to sell the portion set aside. Think about the A. S. of E. Plan.

In the case of perishable crops it will be better to let the surplus spoil at home than to let it compel the whole crop to sell at a loss.

Will History Repeat Itself?

BELOW are the prices of wheat at Chicago on August 1st for three years. A study of them will be interesting and should be instructive to wheat growers. If the price of wheat advanced to the A. S. of E. minimum prices in the former years may it not be expected to do the same this season?

	Cash	Sep.	Dec.
Aug. 1, 1903, No. 2 wheat	.81	.81	.80½
Aug. 1, 1904, No. 2 wheat	.95	.92	.91
Aug. 1, 1905, No. 2 wheat	.87	.85	.86

In 1903 the A. S. of E. set the price at $1.00 per bushel which was reached and well maintained from February 2, 1904. On the 1904 crop the society set the price at $1.20, which was reached soon after harvest and the price remained around this figure until May, 1905. Any person can figure his loss by not holding for the minimum price while the loss on each total crop if all had been sold at the early prices would be a very great sum.

Present holders of wheat be wise. Enough now control their crops to compel the price sooner or later. You may as well be one of them.

Lumber Combine in Kansas

Mr. Jerome Carter, of Lawrence, Kansas, writes:

"All over Kansas and Oklahoma we have a powerful combination of lumber dealers, and they hold up the farmers and other users of lumber to beat everything. I paid $100 recently for a small bill of lumber. I went to four yards and found the price the same at all of them. I would like to see this question discussed."

There is nothing peculiar or mysterious in the situation mentioned by Mr. Carter. The lumber dealers are doing business to make money, and that is the object of all business. It may be that conditions in Kansas and Oklahoma give an opportunity to tax the buyers with exorbitant profits. If so, and the dealers take advantake of it, they do wrong. Reasonable profits are not wrong, and organization to secure them is not wrong. The wrong comes with extortion.

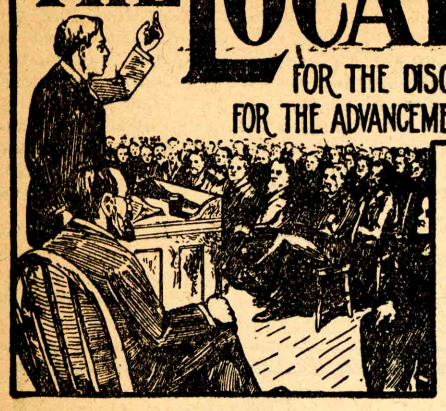
But under certain conditions reasonable profits, while not wrong, may be oppressive. Suppose the class securing the profits, as the lumber dealers, for instance, have a long line of customers that are not getting profits, then the reasonable profits collected by the dealers are oppressive to the customers who get no profits on what they produce.

That is just about the situation in Kansas and Oklahoma. If the farmers get profits at all, they are meager and uncertain, and are not such as business calculations can be based upon, hence any profits made by others oppress them.

What is the remedy? Organization on the part of the class without profits. The lumber dealers are organized; at least they understand each other so as to have the same prices, prices that evidently carry a profit and which they must have or they will not sell. Are they to be blamed? Not if they are content with profits that are just and reasonable. The no-profit class must do the same thing; must organize so that they can name prices on what they have to sell, prices that carry a profit and refuse to sell if they do not get it. They then make their profits meet the lumber dealers' profits, and re-establish the equilibrium that is disturbed by special or political organization. The lumber dealers and all others who claim profits, are as much interested in this as are the farmers, or the non-profit classes, because it equalizes trade, and makes their own profits secure. Profits all going one way must eventually destroy trade by impoverishing customers, whereas universal profits perpetuates trade by perpetuating the ability of all customers to buy. A little thought and common sense must make all classes advocates of this plan.

Do some think farmers cannot do that? Some have pretended to think they cannot. Then for the future there is but one inevitable result—the condition above hinted at, when the profit making classes will impoverish the non-profit taking class.

THE LOCAL UNION



FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where three or more local unions exist in a county

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Fee

Is $1.00 for members at large and $1.00 a year. Charter members of local unions pay no membership fee but a charter fee of $12.00 is charged, no difference how large is the union. Members of local unions pay 30 cents quarterly. Members at large are individual members, outside of local unions. Each member receives a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

Complete instructions will be sent free on request, how to organize local and county unions and all information about fees, dues, etc.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. The price is $1.00 per thousand, 500 for 50 cents. They are supplied on gummed paper and on tags.

Supplies, including books, blanks, etc., are furnished FREE to all new local unions and all old ones that ratify the new constitution.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Quarterly Dues

Have you paid your quarterly dues? If not, don't put it off longer. The A. S. of E. has been instrumental in farmers receiving hundreds of millions of dollars more for their crops, for this reason it should be supported. There is not a farmer who has not been benefited individually, therefore he should give his individual support. Have you thought that 3 or 4 bushels of potatoes, two or three of corn, one of wheat at the old price, will pay the dues for a year and keep your machine running? Or a good hen will lay enough eggs if given half a chance.

We want readers of Up-to-Date Farming to fill out a crop report blank for each crop he grows and send to headquarters of the A. S. of E. at proper time as explained in head of blank printed in this paper. Also we want you to cut the extra blanks out and save them and send to your brother farmers to make reports with the request that they join the A. S. of E. When sending reports please attend to renewals for your paper or membership and such other business as is seasonable.

Do you use A. S. of E. letterheads and envelopes? By your stationery your correspondents will know you. Every farmer should be proud to be known as a member of this great society that has done so much for agriculture.

The outlook is for another big crop of potatoes. They will go at ruinous prices unless potato growers will organize. The plan of the A. S. of E. is sufficient to secure profitable prices for big crops of potatoes if growers will only use it. If you don't know how, write to headquarters.

Have You an Idea?

The publisher of this paper will pay a fair price for acceptable designs for first page or other illustrations. If you cannot make the complete drawing, express the idea in words, with a rough sketch.

Commercially a man is worth only what his labor will produce, and whoever puts a value on that produce puts a value on the man ,so far as dollars and cents can measure a man. Ought not the man himself have something to say as to that estimate? Under the old system of price making in the city he is not consulted as to what he is worth, and he is very often sold cheaper than the clothes that hide him from the world. This isn't slavery, because all men are now free, and each individual may take up whatever line of work he pleases, but we can't forget that when it is done somebody else says what it is worth. Close run to draw the line between that and ——, well, think about it.

The Pot-Luck Farmer

The good old pot-luck farmer man
Still farms the good old way.
He grows the crops of wneat and corn
That are the country's stay.

He feeds our own and other lands,
As everybody knows;
In fact, our country's wealth is based
On what the farmer grows.

I must confess that I admire
Those hardy sons of toil;
They average high with other types—
Consider Standard Oil!

They don't combine on what you wear,
Or gamble on your bread,
Or organize a coffin trust
To catch you when you're dead.

They do not rob their fellow men,
Thus earning deep dislike.
I've often thought what would ensue
Should they go on a strike.

The Boards of Trade could gamble then
On different futures quite,
And railroad dividends, I think,
Would sink clear out of sight.

—*D. M. Hatch.*

CROP REPORT BLANK

Aug. 15, 1905 CLOVER and TIMOTHY

Do not send in this report until the crops are saved. If you thresh before Sept. 1st report as soon as threshed. If you do not thresh before Sept. 1st then estimate the yield

	CLOVER	TIMOTHY
Acres Harvested in 1904		
" Sown in 1904		
" Harvested in 1905		
" Lost by any cause		
Yield per acre in 1903		
" " 1904		
" " 1905		
(If not threshed by Sept. 1st estimate the yield)		
Quality of 1905 crop, Excellent, Good, Fair, Poor		
Amount on hand of former crops		
Average price received for 1904 crops		

What do you think would be a fair price for crops of 1905.....

Must you market immediately regardless of price.....

Can you hold until December if necessary to get the A. S. of E. price.....

*Are you a member of the American Society of Equity.....

Are you a subscriber to Up-to-Date Farming.....

*Non-Members who have this blank may use it, but be sure to fill blank above where question is asked.

Please have report in by Sept. 1st so the result may be printed in Sept. 15th number.

Reports may be sent through local union secretaries, or direct to The American Society of Equity, Indianapolis, Ind.

SQUIBS FROM THE NATIONAL ORGANIZER

HOW TO GET 2,000,000 MEMBERS.

This is the plan proposed by the President of Cumberland (Va.) Local Union No. 1: "Let each county union raise the money and pay for Up-to-Date Farming to go to each farmer in the county. If this was done the farmers would be educated and the A. S. of E. would have 2,000,000 members in 12 months."

FIVE UNIONS IN ONE WEEK.

Val Hyton, an enthusiastic member in Virginia, said: "I have an unshakable faith in the triumph of the A. S. of E." Mr. Hyton organzed five unions in one week. Speaking of his experience he said: "One day I lost two hounds and while I was waiting for a boy to bring them back, I galloped over the neighborhood, gathered the farmers together and organized a local union with twelve members. Just as I got through organizing, the boy came with the hounds." This shows what can be done by the person who turns things up instead of waiting for them to turn up. Do you see the point, brother organizer?

RAISED HIS PRICE.

Marion Campbell, of Glasgow, Va., hauled his tobacco to Lynchburg to sell it, but the buyers would not pay much for it. He told the buyers that the A. S. of E. had said to not sell for less than 9 cents per pound and he would obey orders. He packed his tobacco back into the hogsheads and let it lay a few weeks when the buyers paid him 9½ cents.

THE A. S. OF E. FOREVER.

Dr. Wash. Evans, of Concord Depot, Va., said: "Organizations may rise and fall; schemes may come and fade away; but the American Society of Equity will go on forever, because it is founded on the bed rock of business common sense." Dr. Evans is an aggressive A. S. of E. worker and one of the few men who recognize that "vanity will get up and fly a hundred miles, because it is light, before a solid truth will get into its boots."

THE FIELD

The Alberta (Canada) branch of the A. S. of E. under the able supervision of Organizer Will J. Keen is in a very promising condition.

In a recent report the following encouraging works were gleaned from Bro. Keen's report: "The farmers here are rapidly getting acquainted with our plan and we expect soon to have more good reports to send." He reported two new locals, Morinville No. 1389 and River Qui Barre No. 1390 with a membership of 61. Let the good work go on.

Twelve new members were recently added to Des Lacs L. U. at Des Lacs, N. Dak. From Secretary Hussey's report it is evident that Ward Co. will soon be solid for "Profitable Prices."

Woodward Co. (Okla.) County Union met on July 6th with 44 delegates from 15 local unions. There were 347 members represented. Two new local unions were reported. Committee on Clearinghouse reported its completion and that it would be ready for business July 10th.

Committee on Telephones had not completed their work and were instructed to report at next meeting, Oct. 5th. They are at work establishing a County Union Central Exchange and a system of reporting to all local unions.

Crop report will be found in another column.

The Secretary reports that "since adopting the new constitution by the majority of our local unions, there seems to be a general move to increase the membership within the county."

The following officers were elected for the ensuing year:

President, I. J. Teeters, Greenwood, Okla.
Vice President, W. W. White, Woodward, Okla.
Sectretary, Chas. O. Baker, Woodward, Okla.
Treasurer, Geo. D. Dickenson, Gage, Okla.

The following are subject to call to organize local unions in Woodward or adjoining counties:

E. R. Williams, Stockholm, Okla.
I. J. Teeters, Greenwood, Okla.
Irwin Hiatt, Fargo, Okla.
W. D. Robinson, Montreal, Okla.

CHAS. O. BAKER,
Co. U. Sec.

Day County (Okla.) Union will hold an adjourned meeting at Grand on Aug. 19th at 10 a. m. County union charter will be held open until after this meeting and it is desired that every local union in Day county be represented. Important business matters are to be transacted.

E. T. LUCAS, Sec.,
Little Robe, Okla.

Iowa Meeting. All Deputy Presidents and officers of Local Unions A. S. of E. in Iowa are requested to meet at the office of the President of the State fair on the Fair Grounds at 2 p. m. sharp, Wednesday, Aug. 30th. Important matters are to be considered and a good attendance is desired.

DON. M. LEACH,
Vice Pres. for Iowa, R. R. No. 3, Ackley, Iowa.

Cass County (Iowa) Union will hold its next county meeting at Cumberland, Iowa, Aug. 26. It is hoped that every local union will be represented as matters of importance will be considered.

The Third Power in California

"Enclosed find money order for $30.00 in payment for 200 Third Power books just received. I also give you my first report—the result of two hours' work. It is as follows: I called upon 16 people and sold 17 Third Power books. I succeeded far beyond my expectations. I am very much encouraged.

C. W. CULLEN,
Penryn, Cal.

Questions and Answers

Q. We have a great many Germans in the unions I have organized. I have told them that the official paper will be printed in German as soon as possible. They are anxious to get their paper in their own language. How soon do you think you can do this?

A. We will make a great effort to put in a publishing plant this year that will enable us to print Up-to-Date Farming weekly, get it out on time for all readers and also print a German edition. This largely depends on the support we will get from farmers themselves. We hope it will be such as to insure such a happy and valuable consummation by January 1, 1906.

Q. Who constitutes the American Society of Equity?

A. One hundred and fifty thousand farmers and friends of farmers in the United States and Canada, who have joined the society since its incorporation, December 24, 1903. A booklet, Constitution and By-Laws of the A. S. of E. will give full account of its incorporation, charter, officers, etc. Sent free on application.

Q. If I would order 50 or 100 Third Power books, do you think I could sell them?

J. E. H. ———, Butlerville, Pa.

A. There is not a community in the country where farming is carried on where 50 to 100 copies of the book cannot be sold at the popular price of 25 cents each. The freight on the shipment to your place would be about 1 cent per book, leaving a profit of 9 cents each, or $9 a hundred, even when sold at this low price. Read extract from a letter that came in the same mail: * * * "I received the books and they go like hot cakes. I sold five books on my way home from the express office."—H. L. Hanson, Spring Valley, Wis.

Q. Last season a neighbor of mine shipped 20 crates of very fine canteloupes to the Philadelphia market, and when the returns came in he got just 10 cents per crate, and he paid 10 cents for the empty crates. What can we do to prevent such loss?

B. Y. GOVE, Federalsburg, Md.

A. Organize. Know the demands of the market and send just enough supply to equal the demand and no more. Agree on your price before your stuff leaves the station.

Q. How will the A. S. of E. benefit the milk shippers? The producer gets half the retail price. He finds the cans and pays the freight; of course, he furnishes the cows and the feed they eat. The farmers' profit is ½ cent a quart, the retailers' 4 cents. When I was young I was taught nothing but work even if it did not realize more than 10 cents a day. Is this justice?

A. Organize. When the milk producers are organized they can control production, set their price and get it. They will never do it without organization. With organiaztion comes association and education. Farmers want to meet together often, and then ways will be found to give all their troubles wings and they will fly away.

Q. How can we convert our "Farmers' Union" club into a local union of the American Society of Equity?

MRS. M. V. BUXTON, Neosho, Mo.

A. Show them the advantages of the A. S. of E., which are many and evident. The main arguments are that the A. S. of E. does things, is na-

Patterson Ia July 28.05-
Inclosed find One
Dollar to help buy that
New Press - Jos Tiernan.

The above fac-simile order, hastily written with lead pencil, speaks volumes. Read it again. It forms a most appropriate introduction to the A. S. of E. Press Fund Campaign. It is in response to a brief editorial, touching upon the necessity for increased printing facilities for the official paper. appearing on page 3, July 15th issue. We desire to thus publicly express our thanks to Mr. Tiernan for the contribution and also to beg his indulgence for thus publicly appropriating his letter to the good of the cause.

We say to the good of the cause in all earnestness because it is a fact that, with "that New Press" which will be installed as soon as funds are available, we can send out double the papers we are now sending out, that is, 300,000 copies twice a month instead of 150,000, and at practically no advance in cost except for paper. The present equipment of Up-to-Date Farming is slow and expensive for so large a circulation. With a circulation of 300,000 the advertising rate would be advanced, which would enable us to publish a larger and better paper and we expect to embellish each copy with a handsome colored cover. Also, it would enable us to get every issue out on time and very soon to publish the official paper weekly. These things will be of direct benefit to every subscriber and particularly to every member of the American Society of Equity and every organizer.

That New Press and other equipment necessary to go with it will cost about Twenty-five Thousand Dollars, cash. But we must have it We must have the money first. We know the teaching of Controlled Marketing and a known Minimum Price have benefitted the readers of Up-to-Date Farming inestimably. We know these benefits are but a faint shadow of what will be realized as the work of education progresses. You know this, too.

Will you not now help to buy and equip "That New Press" so that your paper may the better carry on this educational campaign and demand more loudly "Profitable Prices for all Farm Products." Right is on our side, on the side of Equity, and Right must prevail. Our forefathers, in the most unequal warfare that the world had ever seen—with George Washington as leader and under Divine guidance, fought and won Independence from the oppression of the British Lords; SO WILL THE AMERICAN FARMERS, with J. A. EVERITT AS A LEADER, assisted by Up-to-Date Farming, the American Society of Equity and Divine Providence, win victory in an equally unequal warfare against the combined forces of the gamblers and speculators in farm products.

The above letter is but one indication. There are many others. The A. S. of E. Press Fund Campaign has fairly opened. We can close it in a short time if all will help just a little. Help in any way you will, but help.

The Press Fund has been started. Contributions of any amount will be accepted and personal mention will be made in proper column for all amounts of one dollar or over. This is a free will offering and it already (August 2) amounts to nearly Fifty Dollars. Names of contributors will appear in Sept. 1st issue.

Also all subscribers can help immensely and at the same time get big "value received" by renewing now for one, two or three years; also by getting your neighbors to send with you. If in arrears, as some are, pay up and a little in advance if possible. Do not neglect this. It is a fact that if all subscribers in arrears would pay up and in advance to Jan. 1, 1906, at once we could order the press and pay cash for it on delivery.

Members of the A. S. of E. can help in many ways; by securing new members, by organizing new local unions, by urging eligible people to join as "special" members, by holding socials or entertainments to raise money for the Press Fund, and perhaps in some instances where personal financial benefits have been large, through taking the advice of Up-to-Date Farming, by liberal personal contributions. Also, members may help by advancing one, two or three years' quarterly dues (that part of them coming to headquarters) for which they will at once receive credit on our records..

This appeal is made to you, be you member, subscriber or only a reader of Up-to-Date Farming. This is your paper and the A. S. of E. is your society. Financial gains by way of Profitable Prices for Farm Products will always be your gains. You give us "that New Press" now, "to Proclaim Profitable Prices" and we shall proclaim them throughout the land and unto all the farmers thereof.

Do not put this matter off. It will take at least four months to build the press after it is ordered. It is a big machine. They only make them after the order has been placed. When we have $10,000 the order will be placed. We hope to have a picture of "That New Press" in Sept. 1st issue so you can see just how it will look. In the meantime won't you write to us, we need your help and your encouragement. If not convenient to help at once, make a pledge of what you will do and when you will do it. Remember we (you, members of the A. S. of E., and the rest of our Up-to-Date People) must have "That New Press" to accomplish the work before us. Remember, also, that your action now is what will enable us to order the press at once, and that your delay now will positively make it impossible to order it.

Mark all orders, contributions or pledges intended "to help buy that new Press" as brother Tiernan put it; "Press Fund" in upper left hand corner of your letter and it will receive proper credit and attention.

Address,

M. WES. TUBBS, Secretary,
The American Society of Equity,
Indianapolis, Ind.

RURAL MAIL BOXES
AT A GREAT REDUCTION

Because we have purchased several hundred Rural Mail Boxes at much less than their value YOU have an opportun ty to profit thereby. Do not continue to use an old wooden make-shift or unsatisfactory box. They are unhandy and unsafe. Carrier and Patron agree that the Ideal Rural Mail Box IS IDEAL. Approved by the Post Master General. This very same box is being sold for more than twice the price we ask. WE DID NOT STEAL OURS; but circumstances enabled us to buy them very low. You get a box at half-price and we make a small profit.

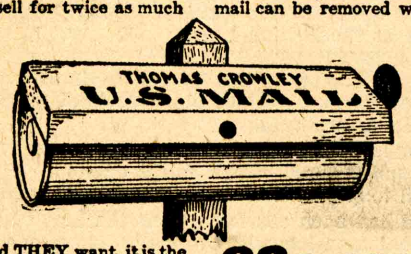
The Ideal R. F. D. Mail Box is the best medium-priced box on the market and is far superior to most of the $2 boxes. It is more convenient for the patron and the carrier than the old-fashioned square boxes, or any box that opens at the end. It is neater, more handsome and better than any of them, even though they sell for twice as much as the Ideal. The Ideal will give better satisfaction in every way.

The Ideal box has no "jim crack" attachments to get out of order, break or freeze shut. It's the kind of a box the farmer wants and the kind of a box the carrier wants, for he don't have to nearly break his neck to look inside, or get out of his rig to serve. If it's the kind THEY want, it is the box that YOU want. Any carrier or farmer will tell you that the Ideal box is like its name, IDEAL.

It is made of honest materials throughout. Lid is made of 20-gauge galvanized steel, (very heavy) and body of 24 gauge galvanized steel, thoroughly reinforced. Size of box 6¼ x 6¼ x 19 inches.

It has automatic signal painted bright red and poised above the box, making it easily seen by the carrier. Lid cannot blow open or freeze shut, nor can it be left open by mistake, as it is self-closing.

The body of the box being round, pennies or mail can be removed with gloves or mittens on. There are no cracks in it around the edges, as in the square boxes, for postal cards and change to lodge in. Both mail and change are always in plain sight of the carrier. The Ideal is rust proof. Screws for attaching to post sent with each box.



80c each

The Ideal Mail Box is made and sold at $1.50 and even more every day. Because we want to move this lot at once, the price is 80c each; $8.00 per doz.; $15.00 for twenty-four. We have only a limited number and the first orders get the preference. Order today.

THE TEMPLE PUMP CO., Mfrs., Meagher & 15th Sts., Chicago, THIS IS OUR FIFTY-FIRST YEAR.

tional, has the only practical plan. What good features the Farmers' Union has have been adopted from the A. S. of E.

Q. 1. How can we get organizers to organize the balance of our State? There are many, many counties in Wisconsin where the A. S. of E. is not started. 2. Some of our members don't receive their official paper while others whose names were sent on the same list get theirs.

A. 1. A list of speakers is printed in nearly every issue of Up-to-Date. Generally the organizers must be raised up in the State. Organizers and organized local unions should constantly be reaching out in new territory. A reading of the Third Power book will qualify anv person of good ability to become an organizer. 2. Great care is exercised in entering all names on the subscription list and in addressing and mailing the papers. There has been so many complaints that we have asked the Postoffice Department to investigate about non-receipt of papers.

Q. If a person becomes a member at the beginning of a quarter, say July 1st, will he be required to pay 30 cents membership fee and 30 cents quarterly dues, or does one payment of 30 cents pay all fees for the current quarter?

A. Refer to Article VII Fees and Dues which is as follows: "Persons subsequently joining a chartered local union, shall pay an admission fee of thirty (30) cents, ten cents of which may be retained in the treasury of the local union and twenty cents transmitted to the secretary of the national union. * * * Members at large may become members of a local union on application and acceptance, without the payment of any additional fee." This clearly shows that in cases as above the admission fee and quarterly dues are both payable.

Q. Do we understand aright that we are to send headquarters 20 cents each quarter, for each member, or only for those who are subscribers to the paper? Please explain.—S. B. Lott, Lewisport, Ky.

A. Send 20 cents for all full members and 10 cents for all special members. Special members are wives of members and their children not under fourteen years residing at home.

Q. I joined the A. S. of E. previous to May 10, paying $1.00 for membership and paper for one year. Our local has ratified the new Constitution. Will you please state clearly just how the dollar paid will be applied on quarterly dues?—W. S. C., Lovingston, Va.

A. A credit is allowed equal to the unexpired portion of the subscription to the official paper at 50 cents a year. If nine months the credit is 37½ cts. This should be deducted from the publication fund at the rate of 10 cents per quarter.

Crops and Conditions

Reported from Here, There, and Everywhere by our Members and Subscribers

NOTE—When writing headquarters about any matter, include a separate sheet of paper with a short and seasonable report of crops, market prices, and local conditions. Or, better still, write us a report on a postal card each two weeks. We will gladly publish all we have room for.—Editor Up-to-Date Farming.

PRATT COUNTY, KANSAS (July 28.)—Wheat has made an average of 11 bushels per acre in this county and is selling for 65 cents. (Sender's name not given.)

CAPE GIRARDEAU COUNTY, MO. (July 24.)—Heavy rains have washed hundreds of acres of wheat away. There will not be enough wheat threshed in this county to supply the local demand for six months. The average yield will be less than ten bushels per acre.—M. W. Gholson.

SANILAC COUNTY, MICH. (July 24.)—Have just begun to harvest fall wheat in this section. A good crop has been grown, and if the weather permits saving it, the farmers of this county will have plenty of wheat of good quality. Old wheat has been cleaned up for some time, and millers have been buying western wheat in order to keep running. Many farmers have been buying flour. I have 15 acres that will yield 30 bushels to the acre. Will hold it for $1.00.—James Minard.

WOODWARD COUNTY, OKLA. (July 24.)—Indication is toward a good crop of corn, kaffir corn, millet, broom corn and alfalfa. Vegetables and melons fine. Peaches and plums plentiful. Wheat will not average more than 7 or 8 bushels per acre throughout the county, but is of good quality. Oats and barley poor. Disposition to hold wheat prevails. Very little equity wheat going on the market. Since the adoption of the new constitution a general forward movement has been experienced.—C. O. Baker.

DALLAS COUNTY, IOWA.—Situated in the central part of the State. We are having too much rain. Corn is being drowned on the low grounds and little cultivation is being given. Oats are heading short. Rye and wheat acreage small. Haying commences with difficulties. Pastures luxuriant and stock doing well.—Walter Newby.

HENDERSON COUNTY, KENTUCKY.—In the dark tobacco and wheat belt. Very little wheat threshed on account of continued rains. Hay making seriously hindered; crop light and weedy. Corn getting grassy—too wet to cultivate.

Farmers will finish prizing and storing tobacco soon, and those who have prized will profit thereby. Many more declare their intentions to prize next year. Acreage is small. Practically all farmers will hold wheat for $1.00.—T. T. B.

WEBSTER COUNTY, KENTUCKY.—Tobacco acreage decreased in this county fully twenty-five per cent. Growing crop has been damaged and retarded by heavy, frequent rains. Our local is very strong and our members have made enough through their membership to pay their dues for five years, and more beside.—Spencer Oakley.

CAMPBELL COUNTY, VIRGINIA.—Heavy rains have damaged tobacco crops in this and adjoining counties considerably Hail storms have been reported from several localities. Tobacco crop of 1904 all sold. Prices average about 8 cents a pound.—C. H. T.

MONTGOMERY COUNTY, TENN.—This is the great dark tobacco center. Rains prevent cultivation and the tobacco fields are grassy. Hot, dry weather greatly needed. Prices as follows: Lugs, from $3.50 to $6.00. Leaf, from $8.25 to $13.00. Growers strongly organized here.—W. T. B.

KIOWA COUNTY, OKLAHOMA.—Wheat acreage in this county is small, being but about two acres to each quarter-section. Oats about five acres to the quarter-section. No threshing done yet. Estimated yields: Wheat, 20 bu.; oats, 45 bu.—L. Brown.

KNOX COUNTY, TENN. (July 17.)—The wheat crop here, and throughout eastern Tennessee is generally short. Will not averag much over 50 per cent. Rust is the cause. Hay crop fair, though slightly damaged by floods.—J. A. B.

MADISON COUNTY, ILL. (July 17.)—The wheat crop just harvested is of very good quality, but yield will only average 70 per cent of crops of 1903 and 1904.—H. B.

MARSHALL COUNTY, KY. (July 17.)—About an average acreage was sown in wheat, and the average yield will be about eight and a half bushels per acre. Much complaint is heard of wheat damaged and sprouting in the shock. Hay crop is small in acreage, yield estimated at three-fourths ton per acre.—Calvert City Local Union, Committee on Crops.

BOONE COUNTY, MO. (July 18.)—Farmers busy threshing wheat, which is damaged badly by rains. None of the old crop on hand. Some are selling the new crop at from 60 to 80 cents. Others are holding for $1.00. I am holding and can hold as long as necessary. Am a subscriber, and member of the A. S. of E. We have good prospects for corn, but oats and hay is light.—Jesse Yeager.

JASPER COUNTY, MO. (July 20.)—The wheat crop in this section is short. Hundreds of acres will not make five bushels to the acre. The 1904 crop was fair, while the crop of 1903 was not as good as the present crop. We have had nearly twenty days of rainy weather.—Geo. H. Downs.

HANCOCK COUNTY, KY. (July 23.)—But little wheat has been threshed in this locality, and wheat in the shock sprouted to a great extent. If wet weather continues, one-fourth of the crop will be rendered worthless. Farmers will all, without exception hold merchantable wheat for $1.00 per bushel. We have 2,000 A. S. of E. members in this county, and a splendid system of rural telephone lines, owned by the farmers. We are much interested in, and heartily in favor of the clearinghouse idea. We adopted the new constitution unanimously. Tell our brothers we are with them "till the cows come home."—D. B. Greathouse.

CUMBERLAND COUNTY, VA. (July 24.)—We have a fair crop of wheat in this county, but some damage has been sustained on account of wet weather. Good prospects for corn with about usual acreage. Tobacco is growing splendidly, and usual acreage planted. All vegetables doing well.—H. W. Ransome.

Call for County Unions Postponed

Reports from secretaries written to in counties where County Unions should be organized, show marked interest in this matter and indicate clearly that all counties having three or more Local Unions will soon have good active County Unions. We find, however, that our proposed date, "Aug. 25th," is not allowing time enough to work out the necessary details so we shall cancel same and leave the exact date largely optional with the locals of the county where the union is to be organized. Secretaries will please notify us of place and date as early as possible. We hope all may be organized before the annual meeting of the National Union beginning Oct. 23d. All notices should be received at this office 15 days before the date of the paper in which it is to appear.

Increase the Value of Your Crop 40%.

There are thousands of farmers in the United States, who in the last few years have doubled the profit they used to make on their corn crop, by harvesting the whole plant, stalks, leaves and all. Yet there are tens of thousands of other farmers who still snap or husk their corn in the field, letting the valuable stalks and blades go to waste.

We know that farmers, of all men, must base their operations upon the most strict business principles if they are to succeed; then why are so many of them following this practice of gathering only one-half of their corn crop?

Our Government Experiment stations tell us that the ears represent only 60 per cent of the feeding value of the crop, and that the other 40 per cent is in the plant. And they have demonstrated further that the plant loses this value if it is allowed to stand in the field at the mercy of the weather.

Let us suppose you have 75 acres of corn and are going to husk it in the field; do you realize that your neighbor who has only 50 acres of corn, and who will harvest the whole crop, stalks and all, will make just as much profit on his crop as you will on yours? You have paid taxes or rent on 25 more acres than he has, you have plowed, planted and cultivated 25 more acres, and yet your net profits will be about the same. Can you afford to do business on that basis?

Here is the way it figures out. Suppose you both get sixty bushels of corn to the acre; your seventy-five acres at 50 cents a bushel will bring you $2,250.-00. His fifty acres of corn at 50 cents a bushel will bring him $1,500.00, and his fifty acres of stover would bring him $800.00 more, $2,300.00 in all—$50.00 more from fifty acres than you get fro seventy-five acres.

These are not random figures; they are based on the statements and experience of some of the highest authorities in the country. For instance, an acre in corn will yield two tons of stover, and these authorities place the value of shredded stover at $8.00 a ton, producing $16.00 extra profit on each acre. You might just as well have this extra profit as not by cutting your corn at the right time, just when the ears begin to glaze.

You cannot expect to get this stover profit if you leave it in the field and turn the cattle on it. By the time the cattle get to it, it is practically valueless.

Neither can you realize good results cutting it by hand. In the first place, the plant must be cut promptly, just when it is ripe, and by the time the field could be cut by hand much of the feeding value would be gone. Besides this, farm labor is so high that this method would reduce the profit too much.

Use a corn binder. It cuts the stalks and binds them into well-shaped bundles, which are easily shocked or stacked for curing.

With this machine the field may be harvested rapidly, just in the nick of time, when the ear and plant are at their best.

The experience of the best dairymen and feeders of the country demonstrates that the corn binder is very nearly indispensible to the man who has a silo and regularly fills it with corn.

YOU HAVE THE CHOICE OF

Champion, Deering, McCormick, Milwaukee and Osborne Corn Binders

DEERING, McCORMICK AND PLANO HUSKERS & SHREDDERS

MADE BY THE

INTERNATIONAL HARVESTER COMPANY.

In each of these machines you will have all the advantages made possible by the unequalled manufacturing facilities of the **International Harvester Company.** The International Harvester Company owns its own timber lands and saw mills, its own iron and coal mines, its own coke plants and rolling mills from which it produces a large percentage of all raw material used, selecting in every instance only the best material and working it out in the best way in the above great manufacturing plants. These are advantages which no buyer can afford to overlook.

Remember. The International lines are represented by different dealers. See them for ca talogues.

PURE SEEDS AND PEDIGREE SEEDS

How to Solve the Weed Problem

No. 1.

UR forefathers had a great task to clear the land of primeval forests and other obstructions. We have also a great task to clear the land of obnoxious and damaging weeks and the longer we delay, the greater will be the task.

The one thing, more than all others, that plagues farmers, are weeds.

Weeds are the bane of the farmers and gardeners' life, they increase his labor 10 to 25 per cent, reduce his yield as much and discount his prices from a small per cent to 50 per cent or more.

Weeds draw largely on soil moisture, they sap the fertility of the soil, damage machinery, injure health of stock, effect injuriously the milk of cows and decrease the value of farms.

Weeds must be fought against continuously under the present conditions and by the individual farmers. Although laws have been passed against weeds, they are not enforced and each farmer is at the mercy of his carless neighbors and seedings from the roadsides. We believe each state has a law similiar to this:

"All land owners through or along whose lands public highways are laid out and extended shall between the first days of July and the twentieth day of August in each year cause all briars, thistles, burrs, docks and other noxious weeds growing along said highways and contiguous to their lands, to be cut down and destroyed for the length and distance the said highway shall extend along or through their lands."

Are the weeds allowed to grow along highways, but we see whole fields of them bursting out in white, blue, yellow or purple blossoms representing many varieties of weeds which flourish on many farms almost as freely as the desired crop.

Many of the best farms of the country are so completely inoculated with bad weeds that the owners will not plant the seeds grown thereon. But they sell such seeds and buy others. Any person can easily foresee the end if such a system continues, and it will not be long until it will be impossible to get any pure seeds.

Who can estimate the loss to farmers? First they pay an enormous sum for weed seeds which they do not want and would be much better off without. Then they labor hard to keep them in subjection and lose in the yield and price of the crop. The sum of the losses, we are certain, exceeds the loss from any one other cause on the farms. Therefore whatever plans can be followed to get rid of the weeds must appeal to every cultivator of the soil with immense force.

We might enlarge on this subject to the extent of this entire paper, and then half would not be told. But it is not necessary. Every farmer, from his own experience, knows that weeds exist and that our opening declaration is true. The case against weeds is made completely without any further argument. It is not, however, so much to make a case against the weeds as to find a remedy against them that this series of articles will be written.

The old idea that weeds came spontaneously must be discarded and the truth must be accepted that WEEDS ARE THE PRODUCTS OF SEEDS. Therefore if farmers will stop sowing weed seeds they have taken a long step toward curing the trouble. This should be supplement for a few years by a constant warfare against weeds. All the members of the family should resolve themselves into a committee, with determination to "exterminate on sight and without question." On considerable areas the mower should be used. The mown weeds may lie on the ground as a mulch or be used as bedding. But be careful to cut early enough as some varieties will ripen the green seed from the sap in the stalks.

Besides weed seeds, there is another great danger present. It is the deterioration of seeds. This has gone to an extent that no person knows and it is at present a serious menace to profitable farming and gardening.

Nearly all varieties of seeds have deteriorated because of lack of care in growing, selection and harvesting. We might refer to many cases, but will confine our reference to a few varieties. Let us ask you if it is not difficult to get good melons, musk or water? Do you grow as fine tomatoes as you used to? Have you not in mind some valuable varieties of cabbage and other vegetables that no longer give the old-time fine results? Then in grain, everybody knows what breeding and selection will do but farmers have not the time to do this and there is no institution in the country with the equipment necessary to breed seeds and grain as we have in mind and as farmers should have them. To illustrate, our clover and grass seeds are grown without the least attempt to improve them or to maintain the old standards. We have in mind a farmer who a few years ago selected a particularly fine stool of timothy and bred from that a few years and now he has fields of timothy that look like a new, distinct and superior variety. All farmers know what breeding has done for our live stock. Plants are even more susceptible to improvement through crossing, hybridizing, selecting and breeding. There is no more important subject for the farmers of America today than this one of seeds.

Farmers are, however, largely responsible for this condition and they must look to themselves for the remedy.

Under the present system of growing, buying and selling seeds the demand has been for cheapness. The farmer demands cheap seeds, the dealer must have cheap seeds, the seedsman must make his prices low to meet the demands of the dealer and as a consequence the grower must eliminate everything that adds to the expense. Twenty years ago and less the seed growers' principle claim for trade was QUALITY, now it is PRICE and the grower who selects, rogues and breeds carefully, thus adding to the cost, will find few people to buy his product. This is a deplorable state of affairs, but it applies to nearly all the seed crops grown, and, as we have said the farmers have unthinkingly brought it on themselves.

We have known seed buyers to visit all the stores selling seeds in a town or city and dicker for the lowest prices on seeds and they usually got the nastiest and poorest quality. This plan may be all right in buying nails, lumber, clothing and many articles of merchandise, but it is all wrong in buying living, vital seeds that will produce after their kind. No saving that is ever made in the price of the seed ever measures up to the loss resulting in the crop. The few cents that are saved in the seeds we dare say are represented by lost dollars in the crops.

True there are many farmers who make quality the first consideration, but they are unable to determine between the carefully grown and thoroughbred seeds and those carelessly grown and mongrel. Also as regards weeds they may buy pure seed but will fall victims to the carelessness of their neighbors who sow adulterated seeds and breed weeds. Also the most careful farmer may be, and has been, deceived by the seed dealer; whether intentionally or otherwise, matters not. The results are always the same if weed seeds are sown. These planters will be the first to appreciate the value of this movement to improve the seeds of the country and to eradicate weeds.

We now asume that no farmer or gardener wants to sow degenerate seeds or seeds foul with adulterants and weeds and that no landowner wants poor and foul seeds sown on his land. Therefore if there is a place in the county where true seeds can be obtained, where the constant endeavor is to breed the seeds up rather than to exhaust them and where purity will be an essential quality and vouched for by a certificate given with each purchase, we believe they would buy at this place.

As good and pure seeds are the first requisite to profitable agriculture, it is of the first importance that they be obtained, but how?

This paper has taught farmers that if they want anything for their benefit they must depend on themselves. So it is with the seeds they plant. If they are to improve their seeds and plant them free from adulerants and weed seeds they must quit depending on those who have not much interest but to sell the seeds. Also if they want laws made and enforced against weeds they must again depend on themselves.

Farmers are so numerous and their industry is so important that if they were in a condition to make their power felt no other industry or class could stand against their reasonable demands. As we have said before, "Farmers have the power within themselves to make their business and life what it should be. But they must learn how to use the power." They cannot be powerful if each stands alone and work independently. No power, except highly organized power is of value in these times. Therefore, it follows that FARMERS MUST ORGANIZE TO DO THE SEED BUSINESS OF THE country.

We know that thorough organization, an organization of their own, they can grow pure seeds, pedigree seeds and sell them to themselves. In this way they can solve their greatest problem and eradicate a national curse —harmful weeds.

This subject will be continued in future numbers of Up-to-Date Farming, until farmers, gardeners and others who plant seeds and grow crops are fully acquainted with the way the seed business has been done in the past and the remedy—the only practical remedy —is made perfectly clear. It will be gratifying news to all who are seeking for the greatest results from their investments and labor to know that the plan is already working out through the Pure Seed and Plant Company of America as announced in another part of this paper. This company has within it elements for unmeasurable good to agriculture in America and it should be the pleasure of every seed planter to give it his hearty support.

(To be Continued.)

The Department of Agriculture is badly shaken up. It is discreditable to the country that there is so much corruption in public life, but it is not discreditable to the administration that it is being uncovered.

Abolish crop reporting entirely except the final report of the year's work. Up-to-Date Farming demanded this more than a year ago, and the public press ridiculed the idea. Now many of the leading papers advocate it.

Every field crop, great and small, should be represented at the annual meeting of the A. S. of E. in October. Farmers can make their prices, but they must manifest some degree of life to do it. Without price-making we feel that they are at a disadvantage which all the fertiliaztion, the colleges, experiment stations, institutes, and everything else, cannot overcome.

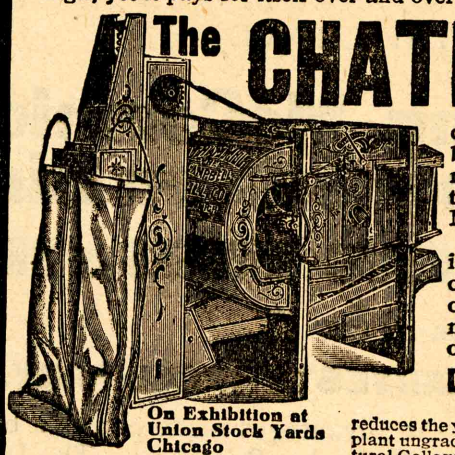
Whatever discouragements may come up, whatever slowness of organization, do not shirk controlled marketing. That is the only hope we can see for the future of agriculture.

Whatever we may say of field crops, the farmer may plow and he may plant. He may cultivate and he may gather in. But he cannot enjoy the profits of his labor while others price his products.

MAKES FARMING 100% PROFITABLE

WHY waste 25% of your time fighting weeds? That 25% comes off all your year's farming profit at the end of the season. If you sow unclean seed you get just about 25% weed harvest. All of the leading Agricultural Colleges are preaching "Clean Seed," and all of the leading up-to-date farmers are practicing what these colleges preach. It is because clean, graded grain and seed means better crops, better prices for products and a higher standard of farming. The first cost of a Chatham Fanning Mill is not high, yet it pays for itself over and over again every year.

The CHATHAM FANNING MILL



On Exhibition at Union Stock Yards Chicago

combines the usefulness of many machines in one. The man who buys one gets more for his money than he can get in any other machine for farm use. Space in an advertisement does not permit us to give the different things that you can do with a Chatham Fanning Mill. It cleans easily and perfectly all kinds of grain and seed.

No other machine on the market will come anywhere near touching the work of the Chatham. For instance, we guarantee that it will clean oats out of wheat, barley out of wheat, buckhorn plantain out of clover, and all wild and weed seeds out of all kinds of grain. Each machine is regularly equipped with 17 screens and riddles, which with our instructions enables you to use them in a great many combinations.

DON'T TAKE A 33⅓ PER CENT LOSS ON YOUR CORN CROP

It is an actual fact, shown up by statistics, that planting uneven or ungraded corn reduces the yield per acre 33⅓ per cent. Yet, it is surprising to know that many farmers continue to plant ungraded seed. We have a new **Corn Grader** that was tested by the Iowa State Agricultural College in a most rigid manner, and under this test graded corn 98 per cent perfect. This Corn Grader attachment can be fitted to all of our new machines, or is sold as a separate machine complete in itself. Don't fool away 33⅓ per cent on your corn crop. It is high-priced carelessness. Our new **Oats-from-Wheat Riddle** is composed of 4500 different parts, and makes an absolutely perfect separation, solving the long-vexed question of growing succotash. You can now sow oats with wheat with a dead certainty of being able to make a perfect separation with one of these riddles on the Chatham Fanning Mill. We guarantee every Chatham for five years, and they are such good machines and do such splendid work that we have no hesitancy in selling them on time if time is desired.

A FREE INFORMATION BUREAU—We have a special department in charge of experts for furnishing reliable and practical information on the handling of grain and seed. This bureau is for the benefit of our customers. You can consult it freely without a penny's cost. Any question asked will be promptly and thoroughly answered by our experts.

We issue a valuable book, "How to Make Dollars Out of Wind," which gives full information regarding the Chatham Fanning Mill and its uses. Get a free copy.

SPECIAL SHIPPING FACILITIES—We have 24 warehouses located in 24 of the leading shipping point cities throughout the grain and corn states, where we carry constantly a complete stock of mills, and can give immediate shipment.

THE MANSON CAMPBELL CO. Ltd. Mfrs. CHATHAM FANNING MILLS, INCUBATORS and BROODERS **154 Wesson Ave., DETROIT, MICH.**

This paper knows the Manson Campbell Co. to be a reliable concern, and that they will do exactly as they represent.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

The livestock markets are still under the control of the manipulators, and will remain so until the large stock men take a different view of the situation.

Yet it is a fact that livestock marketing could be controlled more easily than that of any other farm product. There are but few great market centers, not exceeding half a dozen. It would be a small matter to keep a representative at each of these, and, if necessary, a "quarantine station," so to call it, a special yard where erratic shipments could be taken care of and held off the market when there was not a profitable demand for it. As this "quarantined," or clearing house stock would be held at the shipper's expense, such shipments would grow constantly less, until they would cease altogether. Then the "shippers' yards," which need not be large, could be utilized for holding a reserve supply. The only thing that could intervene between such a plan and success, would be railroad discrimination, and the courts have only established the fact that such discrimination may be prohibited by law—is prohibited by law.

The excellency of pastures that has prevailed during almost the entire season over most of the country, would seem to be a sure guarantee of a high grade of stock on the market during the coming autumn and winter, because the stock will enter the feed lots in much better condition than usual.

Prices for good horses are still quite satisfactory to the horse raisers, and we expect to see an increased interest in the production of this valuable animal. And we believe it is safe to assume that the quality will constantly improve—certainly so if the price remains around present figures.

Wet seasons are not favorable to sheep, and the excessive rains that have fallen over such large areas of the country, may tend to check the advance sheep husbandry was making. If so, we feel confident the set back will be only temporary, for the price of wool last spring under the most "bearish" conditions and the prevailing prices for good mutton, are stimulating factors that will not be easily overcome.

A recent report shows that 87 per cent. of the Illinois stock raisers use pure blood males. The prominent breeds rank as follows: Shorthorns, 56 per cent; Hereford and Aberdeen-Angus, each 19 per cent; Red Polled, 4 per cent; Polled Durham and Galloway, each 1 per cent.

The A. S. of E. wheat bulletin announcing a minimum price of $1 per bushel for the crop of 1905, is meeting very general favor, and but little opposition from real buyers, so it is safe to assume that $1 will be the basis for the ruling price of the country. The price of $12 per ton for hay is not quite so definite, because conditions of that crop were not so well settled at the time the price was made; and even since then heavy rains in many localities have done great damage to hay. But these two prices indicate what the general level of values is to be, and is, therefore, of great interest to stockmen. The price of meat stocks and dairy products should not range below these levels, and will not, if the stock-raisers and dairymen exercise the same judgment as to marketing and price-making that they do in regard to other business propositions.

Now since you have decided to get rid of the weeds, keep a flock of sheep. They are valuable to trim the bushes and to keep weeds from seeding—they will help you.

Speaking of sheep, since the cotton growers will not raise cheap cotton any more, the price of wool will be permanently higher. Thus sheep will be profitable.

An era in farming has begun, when there can be created a large demand for fine stock. You may have some horses, cattle, sheep, hogs or poultry that other farmers will pay extra prices for if they knew it. The way to get your goods before purchasers is through the "Business Exchange" of this paper. If you want to buy, make your wants known here also. The cost is only 8 cents a word. Note this copy: "SHEEP—We have choice home bred Shopshire sheep and lambs. W. B. Clark & Son, Gillmore, Ind." Cost $1.36 each insertion to go in 150,000 farmers' homes.

Kid Meat and Lamb

The Agricultural Department now reports that no small amount of the "lamb chops" that come from the great packing houses to be retailed by local butchers, is kid meat and not lamb at all; and that some at least of the mutton is goat meat. Mr. George F. Thompson, who made the investigation and is author of the bulletin, does not seem to think the consumers of the kid meat have lost anything, as he regards it in all respects as good as what they supposed they were eating, though he admits the flesh of mature goats is inferior to mutton. Still he believes there is a field for profitable expansion in increased goat raising, and he is speaking of the common goat, too. The goat is notoriously hardy, and can live on almost anything, or nothing. They are very prolific, and he thinks kids may be raised more cheaply than lambs. The skins of kids sell at from 25 to 30 cents per pound. Goats are also considered valuable on rough and foul land—land often making good goat pasture that is not fit or anything else. But they are more difficult to fence against than sheep, and they are destructive in orchards.

The Angora is more prolific, if possible, than the common goat, the kids make just as good "lamb," and the wool of the old goats, or mohair, is very valuable.

24 YEARS WEAR NO REPAIRS — SEPARATOR FACTS — 43 YEARS WEAR 75¢ REPAIRS

Just facts—that's all you want. Facts can't hurt you nor Tubular Cream Separators. Facts prove Tubulars outwear all other makes five to ten times over.

On August 2d, 1904, we started a No. 9 hand driven Dairy Tubular, rated capacity 900 lbs. per hour, on the hardest test a separator was ever put to—an endurance test to last until the wearing parts give way. This Tubular has now run 50 hours a week for 43 weeks—and is still running. Every week of this test is equal to a year's service in a ten cow dairy. No other separator made could stand such a test.

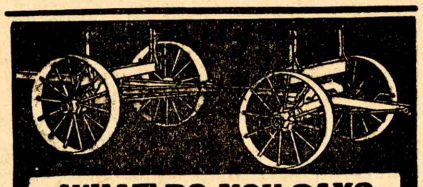
24 Years' Work—No Repairs		43 Years' Work—75c Repairs	
Hours run	1,200	Hours run	2,150
Pounds separated	1,080,000	Pounds separated	1,935,000
Turns of crank	3,155,760	Turns of crank	5,652,070
Turns of bowl	1,152,000,000	Turns of bowl	1,864,000,000
Oil used	8 quarts	Oil used	5½ quarts
Time oiling	About 4 min.	Time oiling	About 7 min.
Time adjusting	None	Time adjusting	10 min.
Repairs	None	Repairs	75 cents

After 24 weeks, the balls in the frictionless bearing supporting the bowl showed wear. This was natural, for each had rolled over 32,000 miles. Renewing balls cost only 75 cents and ten minutes adjusting, yet made this Tubular as good as new. All Tubulars are equally durable. Catalogue P-136 tells about them. Write for it today.

THE SHARPLES SEPARATOR CO.

Toronto, Canada West Chester, Pa. Chicago, Illinois

Have you three local unions in your county? You ought to have. Secure three local unions as soon as you can and then establish a county clearing house. You can do it. Wodward county, Okla., has done this and has raised the local price of wheat from 70 cents to 84 cents in three weeks, while the prices in Chicago did not vary three cents. It succeeds every time. Get organized and show that you can attend to your own business. It pays.



WHAT DO YOU SAY?

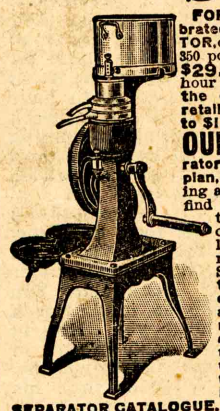
Several hundred thousand farmers say that the best investment they ever made was when they bought an

Electric Handy Wagon

Low wheels, wide tires; easy work, light draft. We'll sell you a set of the best steel wheels made for your old wagon. Spoke united with hub, guaranteed not to break nor work loose. Send for our catalogue and save money.

ELECTRIC WHEEL CO., Box 170, Quincy, Ill.

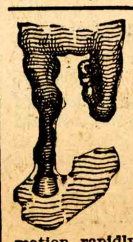
$25.00 Cream Separator



FOR $25.00 we sell the celebrated DUNDEE CREAM SEPARATOR, capacity, 200 pounds per hour; 350 pounds capacity per hour for $29.00; 500 pounds capacity per hour for $34.00. Guaranteed the equal of Separators that retail everywhere at from $75.00 to $125.00.

OUR OFFER. We will ship you a Separator on our 30 days' free trial plan, with the binding understanding and agreement if you do not find by comparison, test and use that it will skim closer, skim colder milk, skim easier, run lighter and skim one-half more milk than any other Cream Separator made, you can return the Separator to us at our expense and we will immediately return any money you may have paid for freight charges or otherwise. Cut this ad out at once and mail to us, and you will receive by return mail, free, postpaid, our LATEST SPECIAL CREAM SEPARATOR CATALOGUE. You will get our big offer and our free trial proposition and you will receive the most astonishingly liberal Cream Separator offer ever heard of. Address,

SEARS, ROEBUCK & CO., CHICAGO.



A BAD HITTER.

His Bunches and Bruises can be removed quickly without stopping work with

ABSORBINE

This remedy cures Lameness, kills Pain, removes any Soft Bunch without blistering or removing the hair, and pleasant to use. $2.00 per bottle, delivered, or at dealer's. ABSORBINE, JR., for mankind, $1.00 Bottle. Allays Inflammation rapidly. Cures strains. Book 11-B Free.

W. F. YOUNG, P. D. F., 102 Monmouth St., Springfield, Mass

Bog Spavin

Lameness resembles bone spavin, but the bunch is in front of the true hock joint, a little to the inner side, and is soft and yielding, hardening sometimes as the case grows old.

Fleming's Spavin Cure (Liquid)

is a special remedy for the soft and semi-solid bunches that make horses lame—Bog-Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It isn't a liniment to bathe the part, nor is it a simple blister. It is a remedy unlike any other—doesn't imitate and can't be imitated. Easy to use, only a little required, cures the lameness, takes the bunch, leaves no scar. Money back if it ever fails. Write for Free Horse Book before ordering. It tells all about this remedy, and tells what to do for blemishes of the hard and bony kind.

FLEMING BROS., Chemists,

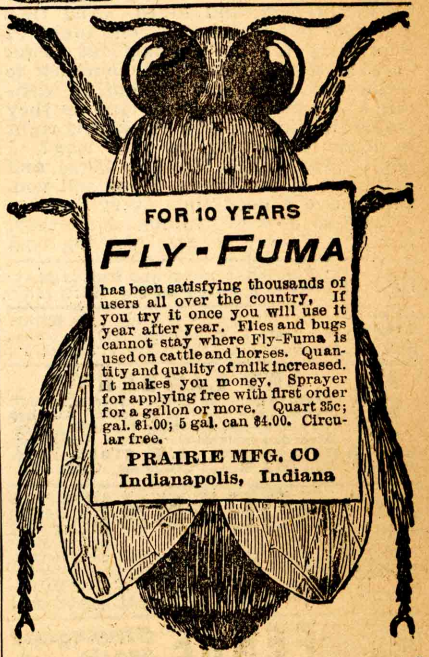
The Newton Remedy Co., Toledo, Ohio.



FOR 10 YEARS

FLY-FUMA

has been satisfying thousands of users all over the country. If you try it once you will use it year after year. Flies and bugs cannot stay where Fly-Fuma is used on cattle and horses. Quantity and quality of milk increased. It makes you money. Sprayer for applying free with first order for a gallon or more. Quart 35c; gal. $1.00; 5 gal. can $4.00. Circular free.

PRAIRIE MFG. CO

Indianapolis, Indiana

"Please send me two gallons of Fly-Fuma put up in quart cans. Your goods are giving the greatest of satisfaction."

Osgood, Ind. G. W. Brown.

I have tried the sample of Fly-Fuma received from you and it seems to work like a charm. Send me one gallon of Fly-Fuma and Electric Sprayer. Jas. Pummell, Mission City, B. C.

Increase Your Profits

What's the use of trying to skim cream with a lot of pans or crocks, no end of hard, tedious work and then lose half to fully as much cream as saved? Or perhaps you use one of those tin-can affairs that borrow the name of "Separators" but forget to take along their results. Don't. There's a better way—easier, quicker, far more profitable, absolutely sure and perfectly safe. It's the "U. S." way.

DELHIE, MINN., June 6, 1905.

"I purchased a No. 6 U. S. Separator Feb. 1, 1905, and sold cream the first month to the amount of $52.52, the product of 8 cows. The month previous to getting the Separator the 8 cows produced me about $25. This herd of cows is about the average herd, three of them being heifers. I can heartily recommend the U. S. to all who want a first-class Separator.—H. A. DRYER."

110 per cent. increase! Pretty profitable investment, wasn't it? Yet only one of many thousands that prove the "U. S." way the most profitable. Isn't it worth investigating? That costs nothing. Send for illustrated Catalog No. 550-A, which will tell you all about it and show you how and why the Improved

U. S. Cream Separators

MAKE THE LARGEST PROFITS

VERMONT FARM MACHINE CO., BELLOWS FALLS, VT.

412 Prompt Deliveries from 18 Distributing Warehouses throughout United States and Canada

LETTER FROM DAVID DOBETTER

Number 55

Near Williamsport, Ind., July 15.
My Dear Mr. Everitt:

If there is anywhere in the world that young folks are welcome it is here at Four-Leaf-Clover Farm. I guess you do not need to be told that after I have told you about our taking in Chipper and Little Sweetheart, in addition to our own boys and girls. I was reading in the paper the other day about a woman (think of it, a woman) that said she and her husband set out in life with the idea that they would be happier if they never had any children, and they never had had any! Well, I don't want to visit their home! It would be a pretty lonesome place for me, I can tell you that, right now.

After our own children came home from school we let Chipper and Sweetheart go down to the city for a week or two. They had an invitation from some of our friends, and just for the sake of giving them a taste of what the city is like we rigged them up and let them go. They have been gone now about ten days, and I tell you they left a big hole around this farm! We miss them everywhere. About the house, down at the barn, and when night comes and we gather out on the deep porch to talk things over and sing some of the old songs.

But we got a couple of letters to-day that did us good. Say, the man or woman that says they are happier without young folks around has something wrong in his makeup. I wouldn't want to trust my life to them, now, I tell you! But I am going to give you and your folks a peep at those letters. I believe it will make you have more faith in boys and girls and help the men and women that read your paper see what a real old-fashioned farm can do even in these days to make good men and women. I will give the one from Chipper first; that is, a copy of it. I wouldn't part with the letter itself for more than you would be willing to pay. I copied the letter down while Hannah read it last night. I had tears in my eyes more than once while I was doing it, and I noticed that wife kept brushing something away with her handkerchief. Oh, well, it's no disgrace to say that we cried! Here is the way Chipper writes:

"Dear Uncle David:—We are here all right and having just the best time we can. It was good and kind of you to let us come on this visit. There is a great deal to think about and to see in the city. The buildings are so high you wonder if the folks got scarce of ground and thought they could build cheaper up that way. We see some funny things on the street, too, especially in the evening when we go down town. Last night we saw sixteen of those flying machines. That's what they seem to me, rushing along like mad, blowing their horns once in a while to scare folks out of the way; and my, how the people do scud to get off the track when they see those things coming! I'm afraid of them. They don't look as if they cared who they run over and killed. And then we went out to the park one night. I was sorry for the animals out there; they looked so sorry and homesick to think that they must be shut up without a chance to move around as they would like to. Do you think it is right to keep 'em caged up that way? I don't. Not much like the horse and cows out at our house, I can tell you. They have a good time every day.

"And so does everything, don't they, Uncle? We try to give 'em the best time we can. And I believe it pays. I don't think I like it here so very well. I get to thinking about you and Aunt Hannah, and somehow I wish I was out there. I would put my arms right 'round your necks and hug and kiss you till you said, with your eyes all shiny, 'Bless me, Chipper! You're a regular bear in the hugging business!' And I will be when I get home. See if I don't. And say, I'm getting anxious to get back there and see the horses and the cows and things. When it comes night and we go up to bed there is such a noise out on the street that I can't get to sleep. The lights stream right in from the streets, and you can't pull the curtains down tight enough to keep the sprinkles of electricity out. I have tried it. I can't sleep till I'm all tired out. I keep thinking about the things out home, where everything is all so still and bright and comfortable. I can't just think how good Aunt Hannah's bed is, and the things she will have for breakfast. I don't see how folks can like it here better than they do out on the farm. I don't. Say don't you believe you had better come after us just as soon as you can? I do. Your little boy, CHIPPER."

"Dear child!" Hannah says. "I'm afraid he is going to be sick! Do go down and get him as soon as you can!" And I am going to-morrow.

And, then, here is Sweetheart's letter:

"Dear Ones All at Home:—It seems like the awfulest time since we came away from Four-Leaf-Clover Farm! I believe I am ten years older than I was! I want to see you very, very much. When do you think you will be down after us? Soon, I hope. They try to do all they can to make us have a good time, but the farm is the best place. There you can take off your good clothes and your shoes and dip your feet in the cool water of the brook and see your face in it, too. You don't have to sit up straight all the time, right on the edge of the chair for fear that you will muss up the cushions and things! And you ain't afraid to yell a little once in a while. The folks here all seem to think they've got to talk so low all the time. I wonder why? Do they think somebody's going to hear them and tell what they have said? And, then, someway I have not felt like saying 'Now I lay me down to sleep' once since I have been here. And I don't believe Chipper has, either. Nobody says anything like that here. It is all about the store or the matinee or the party or what somebody says or does. I like it out where we live the best! There you can put your arms around Bessie's neck and feel the soft skin under her head move when she chews her cud standing down in the yard after the milking is done. And I think it is more fun to talk with the rest of you about things that really are! I am not homesick. Don't you think that. But when I see you coming after Chipper and me—Well, somebody will get some hugs then! So good-night. Your own little

"SWEETHEART."

Dear Chipper! Dear Sweetheart! God bless them both and keep their hearts true always as they are now! If we only can do that one thing for the young folks God has given us, it

I don't see as I am going to have time to say much about the farm work this time. But everything is running along nicely. John and Ben have their shoulders right down at the wheel, will be enough to have lived for. lifting like heroes. It takes quite a load off my shoulders, too. Somehow I am beginning to feel relieved when they get their strong hands under things. Getting old? Not much! You can't work that joke on me! Not a gray hair in my head yet. Not in Hannah's either. We don't believe in growing old, and we never will be, either. A man is no older than his heart is. Counting that way I am only twenty-one.

Well, keep a stiff upper lip, and good-bye for this time.

Yours sincerely,
DAVID DOBETTER.

Letters intended for J. A. Everitt as publisher of this paper or president of the American Society of Equity should be addressed in care of Up-to-Date Farming or the A. S. of E., as the case may be. When addressed simply J. A. Everitt, Indianapolis, there is delay in reaching the proper department.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

Only a Few Hints

It is customary to set hens now for fall chicks. Is it done because it is a custom, or because it has been found to pay? It is a matter of considerable doubt with us whether it is a profitable thing to do. Fall chicks are much more troublesome than early ones. The cool nights and dewy mornings are more disastrous to them than are the sudden rains of April and May, and winter generally overtakes them before they are sufficiently mature to stand it. The fall roosters do not meet the good market the springs have, and the fall pullets do not lay until spring, consequently they must be fed all winter without making any return.

For several years past the price of eggs has maintained a remunerative level all through the summer, and at this writing, the middle of July, they are commanding 12½ cents per dozen in country markets. It is very doubtful if eggs at this price can be profitably set in August, when the heavy mortality of the chicks and the trouble they are and the fact that it takes so long before they begin to make returns, are considered. We believe, in view of these matters, it is better to sell the eggs than to set them. The habit of setting hens in August was contracted when entirely different conditions prevailed, and eggs could scarcely be sold at all, and it is still followed from force of habit.

On the farms the fowls usually roost in trees through the summer months, and there was no thought of cleaning out poultry houses. In many cases now there are houses for them to roost in all the time, but in the push of summer work, cleaning out the houses is neglected. This is wrong. The poultry houses need cleaning more frequently in summer than in winter. They should be carefully cleaned at least once a week, and lime scattered all about where the droppings fall, and dusted upon the perches and the walls.

Hens are prone to become broody this time of the year. As the season advances they lay fewer eggs each time for a clutch, and then begin to set. Of course they must be "broken up" if egg production is desired. The most effective method, and of least trouble, is to coop them for two or three days.

Our white Plymouth Rocks, growing up under precisely the same conditions as our Rose Comb Brown Leghorns, seem to be as hardy as the Leghorns and to develop just about as rapidly, making, of course, much larger growth. This is our first year with White Rocks, and we are so far well pleased with them.

We believe it is entirely safe for farm poultry raisers to increase their facilities for raising poultry. The country has never yet been able to supply the demand for eggs, and they have commanded a fair price all through the year, while poultry has also been in good demand at profitable prices. These conditions are very likely to continue, and it will be money in the household pocket-book to prepare to meet them.

We again urge, as the most important thing in poultry management, to take good care of early pullets, and keep them for winter layers. The early hatched pullets and the young hens, hens not older than of the 1904 hatch, are to be looked to as the main source of eggs for the winter, and if they are treated right, they will not be disappointing. Hens older than we have mentioned, unless possessing some special merit, should be fattened and sold before time for winter feeding. Keep the flock young and vigorous. Hens will lay just as well in winter without being mated with males, and keeping surplus roosters through the winter is not good economy.

Up-to-Date Farming trusts that all its poultry raising readers have kept exact accounts of their poultry business, so that at the close of the year they may be able to report just what they have made off the poultry. The feed coming mostly from the corn crib without measurement, will generally have to be estimated, but other expen can be accurately accounted for as can the proceeds of all sales. Keep accounts so as to know just what you are doing.

If all departments of farming were kept as well in hand as are the poultry interests, farmers would have a larger bank account, and they would have a better knowledge of what pays and what does not.

Those who burn wood in their stoves should empty the ashes in the poultry yard. The fowls will scratch and wallow in the ashes, and that is good for them, and they will swallow many a bit of charcoal, which is good for them also.

Fowls, especially chicks, must have plenty of grit, or they are sure to be troubled with indigestion, which is likely to be indicated by bowel troubles. Charcoal is good for them in such cases.

The well-sustained price of eggs is a great stimulus to poultry raising. The sustained price is a clear case of storage and controlled marketing, feeding the market as the product is required for consumption, and a lesson for all producers.

CURE YOUR OWN KIDNEY

And Bladder Diseases at Home at a Small Cost—One Who Did it Gladly Tells You How

Mr. A. S. Hitchcock, (clothing dealer), East Hampton, Conn., wishes us to tell our readers who are suffering from any kidney or bladder disease that if they will send their address to him he will, without any charge whatsoever, direct them to the perfect home cure he so successfully used.

Knowing, as he so well does, the failure of almost every other treatment in stubborn cases, he feels that he ought to place in the hands of every suffering man and woman this simple, inexpensive and withal positive means of restoring themselves to health. Our advice is to take advantage of this most generous offer while you can do so without cost.

THE WHITE RIVER DIVISION.

This Important Addition to the Iron Mountain Route Is Rapidly Nearing Completion.

The White River Railway, the through line between Carthage, Mo., and Newport, Ark., connecting the Missouri Pacific System on the west with the Iron Mountain Route on the southeast, is rapidly approaching completion, and report of representatives of the general passenger department, who recently made a complete trip over the line, indicates that through trains will be running inside of sixty days.

"While several thousand tourists have already made the trip from each end of the completed line, and we have hauled during the month of June over forty fishing parties from Carthage, who desired to make the five-day float from Galena to Branson, returning on train in fifty minutes, for the complete daylight run over the new line," said Mr. H. C. Townsend, General Passenger Agent, "there will be a tourist travel unprecedented over any line in this part of the country. The fishing proposition is becoming so well known that a number of club houses on the James River, between Galena and Branson, are now completed and are taxed to their capacity.

"The romantic features of the new line are naturally the ones to attract the most general attention, but the agricultural and mineral possibilities of this new region are remarkable.

"The road itself is a marvel of engineering, and the 85-pound rails, with rock ballast, promises the highest degree of speed and safety."

UP-TO-DATE
Home on the Farm
HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Better farms, better homes, better schools, better churches—better people.

A life that does not bring happiness is a failure.

The morose, gloomy person, male or female, is a blot on somebody's sun.

Lips that are always dripping with a sad, tragic or wicked story, play above a heart that has a bad place in it somewhere.

Tom and Sally think the summer is passing very nicely. Tom takes great pleasure in Sally's flowers, and Sally is never so happy as when looking over Tom's meadows and cornfields. Sally claims the poultry, but Tom takes as much delight in the little chicks as Sally does.

The tactless husband or wife is to be pitied. But not so much as the other members of the family. The person with tact says and does, apparently by intuition, the right thing at the right time; the one without tact does exactly the reverse. Yes, the "other one" is most to be pitied.

There can be no shadows where the sunshine is. Long faces, constant sighing, chronic groans, and looking for evil, shut out lots of sunshine and make many shadows.

Constant gab and giggle do not appeal to good common sense, but they are more enjoyable than the chilly atmosphere that emanates from the frozen zone of cultivated misery. What we are trying to say is, "dog on it, be cheerful."

Be ambitious, but don't be restless. We can scracely advise people to be contented and satisfied, for that kind of people never improve. Their shell is as big as it will ever get. Yet it won't do to wallow around and get covered with dirt just because you are not on the sunny slope of some distant hill. Do your best where you are, and work your way towards the hill.

Don't be afraid of an open window or door in the sleeping room. Do not sleep lightly covered in a draft of changeable night air, but during these sultry summer nights cool, fresh air is needed for both health and comfort.

Bad dispositions are made worse by gorging on rich meats. Cooling fruits and vegetables, strengthened by good bread, butter, and molasses or honey, are conducive to health and physical, mental and moral development.

Hygiene is reversing itself in some respects. It is now held that, in warm weather a warm bath is more permanently refreshing than a cold one; and the reason given is that the cold bath drives the blood too rapidly back to the heart, thus increasing the circulation and the heat, while the warm bath brings the blood more rapidly to the surface, and cools and refreshes the body.

This time of year pure water is an important household question—one of the most important. The following is a very simple test of water, and it is said to be a good one: Fill a clean pint bottle nearly full of the water to be tested, and dissolve in it half a teaspoonful of granulated sugar. Cork tightly, and keep in a warm place two days. If the water becomes cloudy or milky within 48 hours it is unfit for domestic use.

Have you noticed that your most beautiful flowers bloom in the sunshine? That seems to be God's plan. How about the children? God has made some bright sunshine for them. Don't keep them away from it.

Fools sometimes rush in and win, while wise men sit on the bank and don't believe it can be done that way.

Happiness and dyspepsia are seldom found in the same person at the same time. Does happiness prevent dyspepsia, or does dyspepsia drive away happiness? If happiness get there first, dyspepsia will stay away.

If you don't want to get old, quit thinking about it. The oldest man I ever saw was under forty, but he could think or talk of nothing but his age.

What do you talk most about, your griefs or your joys your misfortunes or your blessings, your loses or your gains If I knew these I could very nearly tell what kind of a person you are, how you are getting on in the world, and about how long you are likely to live.

Farmers are thought to be not very sociable, and they are not so sociable as they ought to be, perhaps; but what would you think of people living a year or more with nothing between them but a partition wall, and not so much as learning each other's names! We have actaully known cases of that kind in the city.

Up-to-Date Farming is a favorite advertising medium, because its advertisers do what they say they will. We guarantee that.

God's umbrellas are now spread to make refreshing shades for man and beast. What a temptation to loiter!

Guaranteed advertisers are better than those that are not. They're safer. Ours are guaranteed.

Tomato catsup is so common a table relish that we need not mention it, but grape catsup is not so common, but it is better, we think, than the well-known tomato article: One quart ripe grapes picked from the stem, cover well with vinegar and let stand a few hours; then cook until thoroughly soft and pass through a seive to take out seeds and skins; add a small cup and a half of sugar, a little salt, a tablespoonful of cayenne pepper and same of cloves. Scald again five or six minutes, and put up same as tomato catsup.

TO WOMEN WHO DREAD MOTHERHOOD!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at childbirth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also, how to cure sterility. Do not delay but write today.

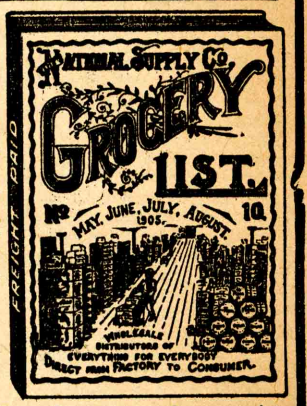
GROCERIES AT WHOLESALE PRICES
—FREIGHT PAID—

FREE This catalogue will save you money on your grocery supplies.

What do your groceries cost you a year? Will you buy them of us if we can prove that we will save you from 10 per cent to 20 per cent and *pay the freight?* That certainly is an amount worth saving; it is worth the trouble of asking for the proof. Get our large Grocery List and compare our prices with what you have been paying. Then put us to a greater test—send us a trial order and compare the goods and the prices. If we do not save you big money, send the goods back at our expense. The grocery bill is the biggest part of the family expenses. We will cut it almost in the middle and guarantee everything we sell. We can do this because we buy in immense quantities—carloads and trainloads—and we give you the benefit of our ability to buy cheap; in fact we can sell to you at just about the figure your local dealer would have to pay. We save you *his profit* and the *freight* besides.



To save still another 10 per cent, become a member of the **Co-operative Society of the National Supply Co.** We'll tell you how to get this extra 10 per cent discount, if you will write for full information. An easy way to make money.

If you want to save money get our catalogue and learn just how cheap you can buy groceries from us. Catalogue is ready and lists everything in the grocery line. We send it *free.*

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

PREPARE FOR THE CONVENTION

Urgent Appeal to the Tobacco Growers of the United States

Indianapolis, Ind., Aug. 10, 1905.

Thorough preparation is essential to the success of any movement, great or small. "Things done by halves are never done right.

The coming convention of tobacco growers was provided for at the first annual meeting of the American Tobacco Growers' Association, a branch of the American Society of Equity, held in Lynchburg, Virginia, November 11-12, 1904. It is called for the purpose of accomplishing the following important objects:

First, to make a report of the amount of tobacco owned by farmers, by securing accurate statements from organized sections, and making a careful estimate of the amount grown by the unorganized farmers.

Second, to provide for honest classifying, grading and storing tobacco, and arrange for sales to be made at farmers' prices.

Third, to arrange to secure cash advances on tobacco stored by farmers in warerooms and on the farm, thereby enabling all farmers to hold for the prices agreed upon.

Fourth, to determine upon equitable prices for each class and grade, and to publish to the tobacco growers the minimum prices for which the tobacco should be sold.

Fifth, to secure the co-operation of all tobacco growers, local merchants, bankers, business and professional men in securing a sure prosperity for the thrifty, deserving tobacco grower, for thereby will the prosperity of all be assured.

These things can be accomplished, and should be, judged by every righteous law of commercial liberty and individual progress. But to accomplish them, duties of importance devolve upon every local organization in tobacco growing sections.

FIRST, DELEGATES SHOULD BE SENT TO OWENSBORO FROM EACH COUNTY, AND SHOULD BE CHOSEN WITHOUT DELAY.

Second, committees should be appointed at once in each county to secure the statement of yield, grade, quality, etc., which statement should be furnished the Owensboro delegates.

Third Committees should be re-appointed in each county to report on local facilities for classifying, grading, prizing, storing and financing the present tobacco crop.

Fourth, at all local, county and district meetings the minimum prices should be fully discussed, and the delegates to Owensboro instructed as to the wishes of the farmers. This convention is to be a representative convention, in which the will of the planter, the one for whom and by whom the organization exists, shall speak. "Farmers to the Front," is our motto.

These duties, thoroughly and conscientiously disposed of, will make the Owensboro convention the greatest meeting in the interests of the tobacco growers, in history, and the results will save to the hard-working farmer many a hard earned dollar that otherwise would increase the already fabulous wealth of the tobacco trusts.

We appeal to you, to each member and officer of the American Society of Equity, to every man who should feel it a part of his duty to assist in securing to the farmers the just reward for their toil to BEGIN RIGHT NOW and make this convention what it should be—the guarantee of profitable prices to the men who produce one of the staple farm crops. We are depending on you to do your part.

Signed: E. L. Davenport, Cisney, Ky., President; American Tobacco Growers' Association, branch of the A. S. of E. C. Hayes Taylor, Indianapolis, Ind., Sec'y.

Distinguished Visitors

We have assurance that the gentlemen whose names appear below will attend the Owensboro convention, and lend assistance in making it the Declaration of Independence for American tobacco growers. All are men of prominence and experience in tobacco growing and are earnest advocates of organization.

Hon. S. C. Adams, Red Oak, Va., President of The Interstate Tobacco Growers' Association of Virginia and North Carolina. Hon. John S. Cunningham, N. C., C. G. Lane, Business Manager of the "Southern Tobacconist," Richmond, Va., and many others whose names will appear later.

From headquarters will be President Everitt of the A. S. of E. National Organizer Sherman and Secretary Taylor.

Delegates to Owensboro

Campbell County, Va.
R. J. Marshall, Brookneal.
Andrew B. Martin, Concord Depot.

Daviess County, Ky.
L. N. Robertson, Utica.
S. F. Burns, Mosleyville.
Geo. M. Taylor, Maceo.

Henderson County, Ky.
Thos. T. Barrett, Henderson.
J. E. Sights, Henderson.
W. C. Green, Spottsville.

Bedford County, Va.
Otho Hull, Lowry.

Todd County, Ky.
J. M. Rice, Kirkmansville.
F. B. McCown, Kirkmansville.

Cumberland County, Va.
James M. Vaughan, Cumberland.

Hopkins County, Ky.
F. F. Brown, Hopkinsville.
Bradley Wilson, Hopkinsville.

We want a largely increased list for next number.

Urgent and Important

The appointment of delegates to Owensboro October 18, 19 and 20.

Arranging to send these same delegates or others to Indianapolis as delegates to the annual meeting of the American Society of Equity October 23, 24, 25.

Seeing that the best business farmers of your county are chosen, and furnished with the information that will be needed at these great meetings.

Preparing to make a complete crop report of your county for both meetings and then making it in due season.

Notifying headquarters at the earliest possible moment of the appointment of delegates. This IS VERY IMPORTANT, and not less urgent.

Expenses to the unions in tobacco sections will be materially reduced by arranging to have the delegates to Owensboro also made delegates to Indianapolis. Act on this suggestion at once.

Attend to the above duties.

DARK TOBACCO CONTROLLED

A Brief Statement Concerning the Dark Tobacco Planters' Protective Association of Tennessee

(Special to Up-to-Date Farming.) This Association, under the able leadership of Hon. Chas. H. Fort, Charles E. Barker, Felix G. Ewing and others, comprising more than 80 per cent of the dark tobacco planters of the Clarksville district, white and colored, has become a power to be respected and reckoned with by the buying interests. It is an incorporated body, and its constitution provides that each county comprised in the Clarksville district shall have a board of directors, consisting of one member from each magisterial district in the county, who shall be elected annually by the members residing in the district from which the director is chosen. Each member reports the amount and quality of his crop to his representative—the director who in turn reports to the county board. Samples are taken of each man's crop, and full and complete information is furnished to the Executive Committee. Its officers are chosen by the directors of the several counties, each chairman of a county board being ex officio a member of the Executive Committee.

The Executive Committee, constituting also the general board of directors, make all contracts, employ all necessary agents, including an Inspector-General, assistant inspectors, salesman, classifiers, supervisors of prizing, warehousemen, all of whom must give good and sufficient bond to insure competency and integrity. The tobacco is graded by the association graders, prized by their prizers, stored by their warehousemen, and sold by their salesman, each lot guaranteed to come up to the samples taken.

Members sign agreements that their tobacco shall be sold only by the association, and those who violate their agreement are promptly taken care of by law, and the buyers are enjoined from receiving the tobacco. The result is that the farmers have cornered the dark tobacco grown in this section.

Banks, merchants, newspapers, officials and professional men, in fact, everybody supports the association heartily, and lends every assistance to the farmers in their demand for what is justly due them. Members are determined and enthusiastic, knowing that in time they must win the greatest commercial victory known in history. Buyers must have tobacco, and the only way for them to get it is to pay for it. They may visit the warerooms and inspect the tobacco, or they may purchase by sample, but not a pound can they buy unless they pay the association's prices.

Prices have advanced nearly double since the association was first formed, tobacco that once sold for from $3 to $5 is now selling from $5 to $10. But the end is not yet. The planters deserve ALL the profits that are due them and the motto "no compromise," is the law of the association.

1905 Production Curtailed

Dr. T. W. Evans, Campbell county, Virginia, sends us a carefully prepared report of the condition of the 1905 tobacco crop, as compared with that of 1904. This report was prepared from the statements of members who attended the Lynchburg Rally on July 13th.

Campbell county, 25 per cent shortage; Appamattox county, 30 per cent shortage; Bedford county, 30 per cent shortage; Franklin county, 30 per cent shortage; Prince Edward county, 30 per cent shortage.

This is about in keeping with the revision of statistics made by the Department of Agriculture. There will be undoubted shortage in the dark tobacco district, and every farmer should know it.

N B—TAKE NOTICE—N B

In writing to Headquarters, be sure in every letter to give your name, postoffice, COUNTY and State. Acquire the habit of doing this for business sake. Without it the entire object of the correspondence is often defeated. Another thing of special importance in writing here is to give the name and number of your local union in every letter. Without that we often lose more time looking up matters inquired about than it might otherwise take to read and answer the letter. GIVE NAME, POST-OFFICE, COUNTY AND STATE, AND NAME AND NUMBER OF LOCAL UNION IN EVERY LETTER.

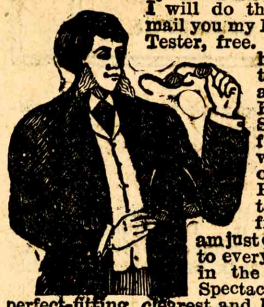
Annual Meeting

Annual Meeting of The American Society of Equity beginning October 23d. Make arrangements to come. Note the date the meeting will begin, Monday, Oct. 23, 1905, and continue as long as necessary.

DO THIS NOW

SPECTACLE WEARERS.

Just send me your name and address and I will do this: First I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test) I will mail you a Perfect Fitting Five Dollar Family Set of Spectacles for only $1, which will include a pair of my Handsome Rolled Gold Spectacles, absolutely free of charge. I am just doing this to prove to every spectacle wearer in the world that my Spectacles are the most perfect-fitting, clearest and best in the world today, and I will return your dollar as cheerfully as you send it, if you yourself don't find them to be the finest, clearest and best you have ever bought at any price, anywhere. Address:—



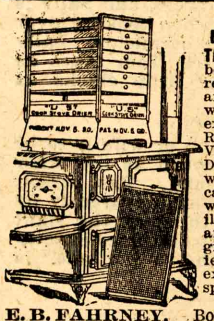
I WANT AGENTS ALSO.

And any man or woman (also storekeepers), without any previous experience whatever can fit the weakest eyes with my Improved Metal Eye Tester, which is so simple that anyone can test with it with absolute correctness. If you are not earning at least $25.00 weekly don't delay another minute as my agents are making from $25.00 to $100.00 every week, selling my famous Spectacles, either in their homes, traveling, or in stores. My Agent's Outfit includes my Latest Improved Metal Eye Tester, a Handsome Traveling Spectacle Case and everything else necessary to start you right, also the necessary documents showing that Agents need no license anywhere.

Write me at once as this is the best time to begin. Address:—

DR. HAUX SPECTACLE CO., Haux Bldg., St. Louis, Mo.

NOTE.—The above is the largest Mail Spectacle House in the United States, and perfectly reliable.



A LITTLE Gold Mine FOR WOMEN

The U. S. Cook Stove Drier is the best on the market. Always ready for use. Easily set on and off the stove. It works while you cook. Takes no extra fire. DRIES ALL BERRIES, CHERRIES, FRUITS, VEGETABLES, CORN, ETC. Don't let your fruits etc., waste. With this Drier you can at odd times Evaporate waisting fruits, etc, for family use, and enough to sell and exchange for all or the greatest part of your groceries, and in fact, household expenses. Write for cir. and special terms to agents. PRICE $5.00

For Military Bounty Land Warrants issued to soldiers of any war. Write me at once. Address FRANK H. REGER, Barth Block, Denver, Colo.

Tobacco Notes

The government crop reports first stated a 20 per cent increase in tobacco acreage, and caused a short panic among farmers who were holding, many of them selling at reduced prices and losing thousands of dollars in the aggregate. Then an "error" was discovered by the Department, and a 20 per cent decrease was declared. A mighty poor guesser ought to be able to come within 40 per cent of the total production. These careless "guessers" cost the poor farmers more money than they can earn back in many long months. There is a double lesson to be learned by this. Do not credit the department's crop reports, and never sell produce during a stampede.

The merchants of Clarksville, Tenn., recently held a meeting and sixty-eight mercantile firms signed resolutions declaring in favor of the efforts of the organized tobacco growers to hold their crops for profitable prices and offering all reasonable assistance. Surely the rights of the farmer will be recognized by all honest men, and will overcome all opposition.

The consumer who pays $1.00 a pound for tobacco also pays $1.00 a pound for a cheap adulterant, which makes the tobacco bring the manufacturer considerably more than $1.00 a pound.

The Dark Tobacco Growers' Protective Association has brought suit against the large tobacco companies for $250,000 damages, for boycotting the tobacco of the Association. When all the tobacco growers are oragnized, what will such a boycott amount to? A boycott of agricultural products will be about as effectual as moonlight on ice in January, when the A. S. of E. is at the wheel, steering the great ship "Agriculture."

Both Richmond and Lynchburg, Virginia, report that all old tobacco has passed from the farmers' hands in that section, and dealers are making ready for the new crop. Will they get it below its value? It all depends on the farmers.

The same tobacco that many of our growers sell at from 3 to 8 cents per pound is finally purchased by illy paid peasants in foreign countries at prices ranging from $1.00 to $2.50 per pound; or, by the better paid American laborer at prices ranging from 40 cents to $1.20 per pound. Twist these facts anyway you will, there is no reason why the growers should not receive fair prices, and many good and sufficient reasons why he should.

The organized farmers of Tennessee control more than 80 per cent of the tobacco grown there. Their crops are prized by the association's prizer at 65 cents per cwt., which includes pay for casks and insurance. It is stored in association ware rooms, with drayage and storage charges fixed at $3.25 for each hogshead. It is sampled by an association inspector, and sold by an association salesman, who refuses all offers not equal to the prices set by the association. Cash advances are made on stored tobacco by local bankers and business men. Read the article "Dark Tobacco Controlled," and carry the news to your neighbors.

It is said that the profits secured by the Tobacco Trust in 1904 exceeded the amount paid the farmers for the entire crop. And yet the buyers contend they are paying all tobacco is worth! Bosh!

Reliable Heart Cure

Alice A. Wetmore, Box 67, Norwich, Conn., says if any sufferer from Heart Disease will write her, she will, without charge, direct them to the perfect cure she used.

I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write today. Capt. W. A. Collings, Box 1012, Watertown, N. Y.

Mention Up-to-Date Farming when writing advertisers

The Interstate Tobacco Growers' Association of Virginia and North Carolina are buying factories and arranging to manufacture their own tobacco. We consider this as unnecessary and therefore unwise. There is much risk and responsibility attached to the management of a tobacco factory, and the product will be thrown into direct competition with the product of the trust factories. The trusts have shown their perfect understanding of the ways and means to crush or crowd out independent factories, and they will not be more merciful to a "farmers' factory." If the farmer will compel the trust to pay a fair price for leaf tobacco, he has done well enough, and well enough is better left alone. If the organized farmers cannot compel a fair price for the leaf, they will surely fail to make a success of manufacturing. We desire to see the farmer attend strictly to his own business, and to make the business pay.

Acreage Reduced

Scoffers said the acreage of tobacco would not be reduced in 1905. There is sufficient evidence to prove that it has been reduced, however. The latest reports from the Department of Agriculture indicates that the percentage of decrease is at least 15 per cent and as the claim is made that there is a large increase in the Burley tobacco districts, we have no reason to doubt that the acreage of dark tobacco is no less than 20 per cent under that of 1904.

This reduction was not advised by us because we did not believe it necessary, and we have had no reason to change our position. That it will assist in establishing better prices, we know. That if this reduction is kept up in 1906 and again in 1907, there will be a great shortage of tobacco is undoubted. The shortage will make prices high—in fact, the farmer, if organized, can command their own price. But we question the necessity of such a course. We believe that when farmers become thoroughly organized, they can sell the production of a normal acreage at fair prices by refusing to sell any for less. And abnormally high prices will naturally lead to an abnormally large crop, creating a temporary surplus that might be difficult to take care of. The farmer has demonstrated his power, and now it is up to him to demonstrate his business ability and sagacity.

The larger the circulation of Up-to-Date Farming, the greater will be the power of farmers to control marketing and make prices.

Conventions and Meetings

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind., beginning October 23d, 1905. Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

DUNN COUNTY (Wis.) Union will hold its next regular meeting in Chippewa Falls, October 7. C. W. Bitney, Sec'y, Colfax, Wis.

WASHTENAW COUNTY, MICH.—Bean Growers Association, Branch of the A. S. of E., will hold its next regular meeting at Ann Arbor, Aug. 21. Let there be a full representation at the meeting and it is requested that bean growers everywhere write the Secretary of this Association stating just what is being done in their locality. Address K. H. Wheeler, Sec., Dexter, Mich.

LIVIA, KENTUCKY Local Union No. 460 will give a picnic and basket dinner at Livia, Saturday, September 2nd. Hon. A. O. Stanley, D. T. Hamill and other noted speakers will be present. Good music, excellent refreshments, and an abundance of it. All adjoining locals, and all non-members areinvited to bring full baskets and join in a grand farmers' rally and give everybody a good time.—R. W. Mahan, Sec'y; Geo. Harris, L. S. Ford, L. T. Boyle, T. S. Coke, R. W. Mahan, Committee on Arrangements.

Dubois County (Ind.) Union will hold its next regular meeting Saturday, August 26th, at Huntingburg. Let every Local Union in Dubois county be well represented. Important matters will be considered.—John G. Koch, Co. Sec., Huntingburg, Ind.

INVEST
your savings in the Pure Seed and Plant Co. of America
Indianapolis, Indiana
J. A. EVERITT, President

BECAUSE it will pay about 25 per cent dividends on stock.

BECAUSE it furnishes an institution where you can get pure seed and thoroughbred seeds.

BECAUSE when you quit sowing weed seeds your labor will be less at once.

BECAUSE when you don't grow weeds your crops will be larger and your prices better.

BECAUSE every stockholder can buy his seeds cheaper than non-stockholders.

The Sum of These Benefits

Think about this matter. Try to sum up the benefits that will result to every farmer or gardener, even if not a stockholder, but particularly try to sum up the benefits to stockholders.

Remember, you must take hold and help if you want the benefits. You must put in some of your money and get others to do the same. You must study the plan and objects. You will learn them from our advertisements and in this paper. Read "Pure Seeds and Pedigree Seeds" in this paper.

Savings banks pay 3 per cent, government bonds about the same. No other investment will equal this.

The Capital Stock is $250,000

When this is sold and in use it will be increased. Receiving, cleaning, and distributing houses will be built and operated in all leading cities or central localities, so planters everywhere can be supplied. This will be one of the largest and best institutions in the country.

TERMS:

The terms on which stock is sold are as follows: The shares are $10.00 each. One-third the amount of subscription must be paid at once. One-third will be due in three months and the other one-third in six months. If the entire amount is paid at once 3 per cent. may be deducted from the two-thirds (deferred payments.) All subscriptions and correspondence should be addressed to The Pure Seed and Plant Co. of America, Indianapolis, Ind.

CUT OUT AND SEND BELOW COUPON

NO.

Subscription to Capital Stock of The PURE SEED AND PLANT CO. OF AMERICA, 227 W. Washington St. Indianapolis, Ind.

The undersigned hereby subscribes for ..... shares of the capital stock of The Pure Seed and Plant Company of America, (Capital $250,000.) Each of said shares of the par value of ten (10) dollars to be fully paid up and non-assessable, for which I agree to pay ten ($10) dollars per share. It is hereby agreed that no further sum shall be paid or demanded and no further assessments shall ever be made on account of this subscription. The stock for which this subscription is made to be issued to me or my order at once in stock certificates together with a copy of the By-Laws of said Company and a prospectus fully setting forth the objects and plan of the Company.

P. O..... CO..... STATE.....

EYE AND EAR BOOK FREE

Tells of a Method by Which People, From Every State in the Union as well as Canada, were Cured of Chronic Eye and Ear Troubles at Their Own Homes by Mild Medicines.

Most of these cases had been pronounced incurable by other doctors, but they wrote for this book, followed its advice, and today are cured.

Blindness and Deafness Prevented and Cured

This book is written by Dr. F. G. Curts, the famous Eye and Ear Specialist. Tells how all diseases and defects of the Eye, such as Failing Eyesight, Cataract, Granulated Lids, Scums, Sore Eyes, etc., may be successfully treated by the patient in their own home. No necessity of seeing a doctor and no interference with daily duties. Tells how deaf people, except those born deaf, may be restored to perfect hearing. Tells how to quickly relieve and cure distressing Head Noises, Ringing and Buzzing in the Ears, Discharging Ears and Catarrh (which causes most cases of deafness).

This book tells all about the Mild Medicine Method used by Dr. Curts, which has restored sight and hearing to scores of supposedly incurable patients in every State. There is scarcely a neighborhood in America in which he has not one or more cured patients. The Mild Medicine Method makes it unnecessary to submit to an operation for any eye or ear trouble.

CROSS-EYES STRAIGHTENED IN ONE MINUTE

$500 will be paid by Dr. Curts for any case of Crossed or Turned Eyes that he fails to straighten in one minute without pain or chloroform. His method never fails, and when he straightens eyes they remain straight. No need of persons afflicted with this humiliating deformity to go through life in this condition.

NAMES OF SOME PATIENTS CURED

Of Eye or Ear Troubles by the Mild Medicine Method Described in this Book.

CURED OF DEAFNESS—Frank Ferris, Mt. Washington, Mo., Mrs. S. J. Highfill, Peabody, Kas.; Ex-Sergt. S. S. Stewart, 422 Yuma St., Manhattan, Kas.; H. Rosenkoetter, R. F. D. 34, Florisant Sta., Mo.; Henry R. Warren, 36 Fenn St., Pittsfield, Mass.; Mrs. Sallie Brown, Micro, N. C.; J. D. Mashburn, Orus, Ga.; Rev. P. C. Newell, Oil Center, Ky.; Chas. Frank, 350 Ash St., Argentine, Kas.; Emma Hochhalter, Evansville, Ind.

CURED OF CROSS-EYES—Harry McCauley, 1603 Ritner St., Philadelphia, Pa.; Edward Woodlock, Roswell, N. Mex.; J. G. Blaine, Pratt, Kas.; R. J. Connery, Quincy, Ill.; Jas. Hollisy, Liberty, Mo.

CURED OF OPTIC NERVE TROUBLE—Mrs. J. E. Scobey, 704 W. 11th St., Kansas City, Mo.; Maude Pittman, Ottawa, Kas.; Mrs. R. B. Gibbs, Morrill, Kas.; Chas. C. Edwards, Wellsboro Pa.

CURED OF CATARACT—Mrs. John L. Harlan, 117 Colborne St., Battle Creek, Mich.; D. J. Ballenbaugh, North Canyonville, Ore.; Mrs. F. M. Martin, 118 Cherry St., Benton Harbor, Mich.; A. W. Rupel, 124 E. 4th St., Chillicothe, O.; Mrs. M. E. Mitchell 407 Independence Ave., Kansas City, Mo.; J. A. Moorman, Haymond, Ind.; M. M. Pullen, Evergreen, Ala.; Mrs. A. M. Rollins, Bebee, Ind. Ter.; Mrs. Cora Nevins, Cayuga. Ind.

CURED OF CHRONIC GRANULATED LIDS—Dr. S. G. Wright, Connellsville, Mo.; Jas. Sampson, Grass Valley, Cal.; Emma Tangner, Dock, Minn.; J. J. Ray, Hathaway, Tenn.; Josie Vetter, Rulo, Neb.

Dr. Curts makes the following statement to the readers of this paper: "My entire professional life has been devoted to the treatment of diseases of the Eye and Ear. I have probably treated more cases and been more successful than any other living doctor. The larger portion of my patients I have never seen. By the aid of the Mild Medicine Method, I am able to treat my patients as successfully as though they were to come to my office. I believe that any person having any Eye or Ear trouble should read my book, which I will gladly send free to any afflicted one. It will bring to them tidings of great joy. It will show how easy it is to regain perfect sight and perfect hearing. No matter how serious your affliction—no matter what other treatments you have tried—no matter what other doctors may have told you—write for my book; it will cost you nothing, and will tell you how you can be cured at your own home." In writing please mention this paper. Address,

DR. F. G. CURTS,

532 Gumbel Building, KANSAS CITY, MO.

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, SEPTEMBER 1, 1905

1905 Oats Bulletin

NATIONAL UNION OF THE AMERICAN SOCIETY OF EQUITY

INDIANAPOLIS, IND., AUG. 22, 1905

To the Oats Growers of America:-

The American Society of Equity from numerous reports received from members and non-members representing every producing section of the United States, and from other sources of information, does estimate the Oats Crop of 1905 in the United States to be

876 Million Bushels

This Society recommends a **Minimum Price** on the basis of Chicago Market of

35 Cents Per Bushel

M. W. TUBBS, Secretary **J. A. EVERITT, President**

1905 Barley Bulletin

NATIONAL UNION OF THE AMERICAN SOCIETY OF EQUITY

INDIANAPOLIS, IND., AUG. 22, 1905

To the Barley Growers of America:-

This Society, from numerous reports from members and non-members representing the sections that produce Barley and from other sources of information, does estimate the Barley Crop of 1905 in the United States to be

127 1/2 Million Bushels

This Society also recommends a **Minimum Price** on the basis of Chicago Market for Good Malting Barley of

45 Cents Per Bushel

M. W. TUBBS, Secretary **J. A. EVERITT, President**

IF THIS PAPER comes into the hands of Publishers they are requested to reprint the 1905 bulletins and such other items in this issue as they can. Alsot his is a request that our readers secure the publication of the bulletins in their local papers. Each person should be interested in giving them the widest publicity possible.

Notes on the Oats and Barley Bulletins

"Good Malting Barley" as referred to in the bulletin means about the same as No. 3 grade.

The size of a crop is not the most important thing. An exact estimate of the size is not essential. The important things to know, is that every crop, no matter how large, has been consumed. Also that there will be as much consumed at a fair price, as at an unfairly low price. The most important thing to know is **the price** and that controlled marketing will get it.

If, as has been stated, we have grown the largest crops this year ever produced in the country, shall they be less profitable to the farmers than small crops?

Years ago in selling seed wheat, the writer used the phrase, "The Top bushels are profit, strive for the top bushels" and I thought this was true. Later my eyes were opened and I realized that often the top bushels were not profit but a clear loss. Controlled marketing will change this.

There is just about an average worlds crop grown each year. God intends you to prosper, or why did He bless you with the good crops. This year is your opportunity. Will you improve them or throw them away?

Germany proposes to reduce her tariff on barley, while increasing it on other grain from this country. This will benefit the growers of barley.

Rust is doing damage in North Western Oats.

America has had enough good crop years to make a bad year probable. A good time to hold firm for price and carry a surplus if any.

We will be pleased to print Canadian crop reports if some of our readers will supply them from reliable sources.

FOR THE CO-OPERATING FARMERS OF AMERICA

GET YOUR SHARE OF $600,000,000

We want to get every corn growing farmer in the country to thinking about the money value of corn stover.

We want every farmer to know that the ears of corn he harvests—that is, the grain—represents only 60 per cent of the value of his entire crop, and that unless he makes proper use of the whole plant, stalks, leaves and all, he is losing 40 per cent of his corn profit. This has been proved by chemical analysis and actual feeding trials at many of our Government Experiment Stations.

What we mean by 'Get your share of $600,000,000,' is this: The average yearly crop of corn in this country, as shown by the Bureau of Statistics is worth $900,000,000 and there remains in this plant $600,000,000 or 40 per cent of a total of $1,500,000,000. If you don't harvest the stalks you don't get your share of the $600,000,000.

Now don't think of these figures in a hazy way, as if they were based on theory or as if they were too large to mean anything to you.

They mean actual dollars to you personally. They mean about $16.00 for every acre you have planted in corn. High authorities place the value of shredded stover at $8.00 a ton, and at the lowest estimate each acre ought to yield two tons.

These values, you understand, apply only to the crop that is taken care of properly. The stalks and leaves that are left standing in the field after the corn has reached maturity decrease rapidly in feeding value until they are soon completely bleached out, dried up, and represent practically nothing but indigestible woody fibre.

Why not apply the same close figuring to your corn crop as you do to all other crops?

If you do this, you will see that it is only a question of cutting your corn stalks at a certain time in order to add from $10.00 to $20.00 profit to every acre you harvest.

The whole secret of the double profit method is not to husk your corn in the field, but to cut the whole crop just at the time when the ears are beginning to glaze. Then the ear is complete, and the stalk is at its highest point of feeding value.

If you use a good corn binder you will get over the field rapidly, before any of the nutritious palatable elements of the plant have time to die out.

After the plant is cut, there is no deterioration of its feeding value, providing the stalks are properly cared for.

The binder puts the fodder in shape to be easily shocked and quickly and profitably husked and shredded.

In actual practice dairymen and feeders find that the corn binder is well-nigh indispensable to the man who wishes to get all the profit out of his corn crop. This is true no matter whether the corn is to be shredded into stover or put into the silo.

While you are not going to buy a corn binder because we ask you to, if you will figure out the value of corn stover in actual dollars and cents you will appreciate the wisdom of saving it. If you then want a corn binder or husker and shredder, our agent will be pleased to talk to you.

YOU HAVE THE CHOICE OF

McCormick, Milwaukee, Osborne, Deering and Champion Corn Binders

McCormick, Deering and Plano Shredders

MADE BY THE

INTERNATIONAL HARVESTER COMPANY

In each of these machines you have all the advantages made possible by the unequaled manufacturing facilities of the **International Harvester Company.**

The International Harvester Company owns its own timber lands and saw mills, its own iron and coal mines, its own coke plants and rolling mills, from which it produces a large percentage of all raw materials used, selecting in every instance only the best material and working it out in the best way in the above great manufacturing plants. These are advantages which no buyer can afford to overlook.

Up-to-Date Farming

Representing the Union, or Co-Operating, Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII | INDIANAPOLIS, SEPTEMBER 1, 1905 | Number 17

UP-TO-DATE FARMING
PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50 CENTS A YEAR
Foreign Subscriptions $1.00 a Year

CLUBS. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 (40c each) or five $1.00 for $4.00 (80c each).

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including **county.** Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

If a mark like this appears on the first page it is to notify you that your subscription or renewal has been received. The publisher thanks you and he hopes you will be delighted with Up-to-Date Farming and take it many years.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns. We guarantee that they will deal honestly with subscribers. However, should any advertiser in Up-to-Date Farming fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in this paper only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain or organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the **LABEL.**

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, 1905 crop per bushel	**$ 1.00**
Corn, No. 2 Chicago, 1904 crop April 1 to next crop	**.60**
Oats, No. 2 white, Chicago, 1905 crop per bushel	**.35**
Barley, good malting, Chicago, 1905 crop	**.45**
Hay, No. 1 Timothy, Chicago, per ton	**$12.00**
Tobacco, (Price on the farm or at the market town)	
Virginia, dark, average per cwt.	**$ 9.00**
" bright, " "	**12.00**
Kentucky, dark, " "	**8.00**
" burley, " "	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit, per bu.	**2.00**
Cotton, New York, per pound	**.12**
Broom Corn, Chicago, per ton	**$75.00 to $85.00**
Hogs, " per cwt.	**6.00 to 6.50**
Cattle, " per cwt.	**6.00 to 7.50**

Booklet E 37

Wonderful to educate the people; 64 pages and cover. We have 25,000 to give away. All we ask you is 6 cents a dozen to pay postage. Order a lot and distribute them. This is one way for you to do your duty.

At the Annual Meeting the farmers' business system is expected to be considered. Then for definite results.

The A. S. of E. contains every element for a successful system to take care of the distributing end of farming. It has been unfolded gradually. The last features will be added at the Annual Meeting.

Give Up-to-Date 1,000,000 circulation and all the boards of trade in the country cannot bear the prices below the minimum set by the farmers.

Remember the Annual Meeting. Begins October 23rd.

Delegations and individuals will come from nearly every state in the union to the Annual Meeting.

An exchange says:

Neither can the gamblers keep the price down if the size of the crop warrants a high price.

Therefore, by this reasoning it follows that in order to get a high price (or we will say a good price) the crop must be small. Also it then follows that when the natural conditions are favorable and the husbandmen cannot do otherwise than accept a large crop the price can be kept down by the gamblers.

What we contend for is a good, fair price for every crop no matter how large it is and it can be obtained.

Don't be alarmed at the big crops, remember the world raises just about an average crop each year. You will know this if you will examine statistics. While it may look to you as though the world is overflowing with crops, you can only see a short distance. Beyond your horizon somewhere are short crops and some places are failures and famines.

The board of trade can fix the price when the supply exceeds the demand, but when the supply just equals or is less than the demand, the party who has the supply fixes the price. Remember this.

The adulterations of foods is more tremendous than any person has ever been able to figure or calculate. The effect on the market of good farm, garden and orchard products, if known, would be appalling. Therefore, do all you can to discourage and prevent adulterations until a national law is made and enforced.

Read in another column the report by Mr. Sherman of his meeting at Clemson College, S. C.

Farmers should make themselves heard and felt in the choice of subjects for their institutes. Demand that conrtolled marketing and price making be given a prominent part of every program. If half of each institute was devoted to these subjects it would not be too much. Any intelligent farmer who has read Up-to-Date and The Third Power, can speak on these subjects and entertain the audience better than the fine theorists on the old thread-bare subjects.

Farmers should not be discouraged if prices are forced down at the beginning of crop years. This is not an indication of a defect in the plan of the American Society of Equity, but the natural result of insufficient organization. Encouragement should be taken from the fact that such a large part of each crop is now controlled that the world must have those portions and must pay the price for which they are held.

The Modern Miller, a paper that makes a specialty of crop reporting, makes the statement, that the farmers are quite generally holding the good, sound wheat and marketing the poor qualities. This shows wisdom and it must have a beneficial effect on values soon.

Remember, you cannot get rid of a large crop or a surplus by dumping it for another set of people to hold until the demand seeks it.

When farmers dump their crops before the demand comes, a set of middle-men get hold of them. These people have not enough money of their own to hold them, but they have warehouses and elevators. They put your grain, meat, cotton, vegetabes, fruit, etc., into these storage houses and then they borrow money and hold them until the demand comes. Do you see how it works?

At the Annual Meeting a farmers' warehousing plan wil be considered and we are confident it will be adopted. By this plan farmers can warehouse any of their staple crops on the farm with the ordinary facilities and secure cash advances. Also, the plan contemplates a low rate of interest to farmers, no matter where they live.

The 1904 crop of wheat sold for $1.20, because our crop was short and the 25 cents per bushel tariff helped our farmers to maintain prices. This year our crop is larger and we have a surplus. Yet the world's crop is smaller than last year. As we have a surplus our tariff cannot be active and we must put our price down so we can get our wheat in other countries, where there are shortages. With a good crop in the United States, and a world's shortage, this is a year of great opportunities for wheat growers. Will they embrace them? Read carefully, "Our Foreign Markets" in this number.

Has it occurred to all the readers of Up-to-Date Farming that there is probably not another man in America who sees the needs of the farmers as clearly as does Mr. Everitt; or who is able to state them as clearly and show the remedies?

If you approve of the work Up-to-Date Farming is doing extend its circulation, Preferably send new subscribers, but if you cannot do that then send names for sample copies.

Do not forget to do your part toward the **A. S. of E. Press Fund.**

Remember the date of the Annual Meeting of The American Society of Equity, October 23d. Reduced rates on all railroads and special rates for accommodations while in the city.

This is a busy time with farmers, but it won't take long to do your part toward "That New Press," and then we can have it working when you will have the time to read the most helpful farm paper published.

Do not wait for your neighbor. If the principles of the A. S. of E. are correct, it will pay you to help promote them. Read "Press Fund Appeal" Aug. 15th issue. Then act, if you have not already done so.

Wolves in Sheeps Clothing

The farm papers of Michigan have found a sweet morsel. State organizer Mr. Winans, resigned because his other business made it impossible to give time that the increased growth of the A. S. of E. demanded. The farm papers now say the society is dead in that state and are exulting over the supposed demise. Strange to what length some papers will go to accomplish their selfish ends and they do not stop to reckon the cost to their friends.

The Society of Equity dead in Michigan? Well, we guess not. Ask any person who was ever a member. This society will never die. But suppose it should, its principles will live forever. Any Michigan farmer who was ever converted to the doctrine of controlled marketing is a convert yet and just as anxious for the complete triumph of the society now as he ever was.

Farmers, mark every paper that dare put a rock or straw in the way of the development of this movement. That paper is not your friend and deserves your condemnation.

That the American Society of Equity is not a complete success in Michigan is because the farm papers of that state have not given it, the best institution for farmers the state ever knew—their support. If the bean growers and potato growers of Michigan are not getting equitable prices for their crops it is not the fault of the plan of the A. S. of E. or its official paper, but lack of co-operation of the farmers' institutions in that state. Put the responsibility where it belongs. Farmers, whatever of equity you fail to get in prices, charge to those who hinder and don't help your work, not to those who have accomplished more than could reasonably be expected. All human endurance and human endeavors and human accomplishments have their limits, but had this movement the support it deservise it would be triumphant over the land.

OUR FOREIGN MARKETS

The National Reciprocity Conference

Did It Accomplish Anything for Farmers

The following report, with comments on the same, has been prepared by J. A. Everritt, who was in attendance at the conference at Chicago, Aug. 16th and 17th:

This conference was called by several agricultural and manufacturing associations.

The object was to safeguard the markets for our manufactures and agricultural products, and chiefly the latter, in foreign markets.

The particular thing that impelled this conference at this time is the proposed new tariff by Germany against American products and which is particularly heavy on agricultural products. There can be no question about the great loss to American producers of agricultural products if the tariff schedule as now proposed becomes operative. Therefore, it was of vital importance that this conference should handle the subject intelligently. But did they from the farmer's standpoint?

The result of the conference was as follows:

1st. A committee of twelve was appointed to draft a set of resolutions setting forth the desires of the conference.

These resolutions were debated for about half a day but finally were adopted practically in the form that they were offered and are as follows:

1. The immediate enactment by Congress of a maximum and minimum tariff act, which shall be put into effect by the President.
2. The creation of a permanent commission which shall assist the President from time to time in determining what reciprocal concessions shall be made.

The commission to consist of fifteen members to be named by the chairman of the convention. Such commission to have power to increase its membership when necessary.

* * *

And so a conference on one of the most stupendous problems that confronts the agricultural industry of America has been held and its acts are now history.

The conference was made up of representatives of more than two hundred agricultural, commercial and industrial associations of the United tSates. More than half of them were agricultural.

I venture the assertion that not a single agricultural member of the convention had any clear idea how the plan as proposed will help the farmers of America. They did not try to think it out for themselves, but blindly trusted the leaders who themselves have no idea of how the benefits are to come.

I made several attempts to get a hearing early in the conference so some vital thoughts could be injected and which might be guides to the agricultural representatives, but was informed that it would be impossible to interrupt the program which provided for speeches by governors, ex-governors and others who have given the farmers problems, but little thought.

If reforms in the tariff on manufactures result from this meeting some good will result to farmers indirectly. But if any farmer, stockman or fruit grower puts his faith in the movement started here to defeat the proposed German tariff or to get lower tariffs in any country on agricultural products from this country, he is doomed to disappointment.

* * *

Let us see where the American farmer stands and what his chances are in a compromise with German, and what is true with Germany will apply equally with any other country that imports food products, wool, cotton, etc.

The United States is a surplus producing country. Germany is, on the contrary, unable to produce enough for her own consumption, yet her agricultural interests are very great. Naturally, Germany must look after her farmers and as these farmers, through organization and concert of action on national questions, have become powerful, they are able to make their demands heard and their power felt. Consequently, they started out years ago for protection on their industry which is secured through taxes on imports of agricultural products.

If the German farmers decide that they want $1.50 a bushel for wheat they grow (and they never grow a surplus), and if the United States farmers are willing (or are compelled) to grow wheat for 75 cents a bushel at Chicago, and the freight to Germany's ports is 20 cents a bushel. Then the German farmers will demand a tax of 55 cents a bushel against the United States wheat to guarantee him his price. (75c plus 55c equal $1.50.)

The United States objects to the proposed German tariff. They pretend to say it is not fair. They call it discrimination and denounce it as a prohibitive tax. But is it fair? If it is prohibitive who is to blame.? Who should set the price on German farm products? The German farmers or the American farmers? Why, surely, the former. This is all it amounts to and all the kicking by the American farmer will be for naught. Any number of conventions may be held and resolutions passed galore, yet Germany, the nation that has the interests of her people at heart, will never relinquish her right to protect her citizens from the American peril of low prices.

I don't believe Germany wants to wage a commercial fight against America. I am sure she wants to deal fairly. There are many mutual interests between the nations and the bonds of friendship and co-operation should be strong because of the millions of Germans in the United States who love the fatherland. Therefore, wisdom on our part will secure equity and fair trade agreements with that country.

It will be a terrible comentary on our shrewdness and business sagacity if we cannot devise a plan that will allow our surplus products to enter Germany with more freedom than ever in the past. German citizens are not going to quit eating nor will they discontinue wearing clothes, nor manufacturing goods that they ship to all parts of the world. Therefore, all that we need to do is to display the right spirit in trade with that country, and more than that, refrain from attempting to send goods in that will make paupers of her own people who must produce goods of the same kind.

Here we have the whole thing in a nutshell. As long as the price of the United States farm products are too low, or as long as the prices lack stability, it will be impossible to prevail on any continental European country to grant what we would consider favorable import terms. As long as we attempt to throw the surplus of our grain, and cotton, and wool, and fruit on foreign markets at unfairly low prices, so long must those countries protect their own farmers by tariff walls. A refusal to do so would simply be suicidal to the same industry in those countries. Do you understand it?

But what is the remedy?

Our old readers are asked to recall the remarkable article in July 15th, 1904, number, of Up-to-Date Farming, "Our Foreign Markets Lost by Low Prices." As early as that date we proved by figures from the most reliable sources that this statement is true, and showed by illustrations that liberal prices stimulated export demand. We may be taken to task here by the fact that very little export of resulted from the 1904 crop of wheat, which ruled at the highest price for many years, so will simply remind my possible critics that there was no surplus of this crop to export and the price was held higher on this account. If it is true that our foreign markets have been lost by low prices of our farm products, then does it not follow that higher prices or fair prices wil open them up to us?

This every one must concede, vix: that Germany is determined to protect her own farmers; also, that her farmers want good prices for their products, and as they do not produce a surplus, it is easy to get the price by a tax regulation. Also in all fairness we must assume that Germany does not desire to impose undue hardshrips on the consumers of farm products. Now if this reasoning is sound, does it not appeal to people of good sense and sound judgment that if the surplus producing countries would quit underselling German farmers, that their products would be taken in free of duty?

To illustrate so clearly that there cannot be a chance for a misunderstanding, we will assume that the German farmer must have $1.30 a bushel for wheat that he grows to make it a satisfactory business. Now, we will assume that the price in the United States was maintained steadily at $1.00 a bushel at Chicago, that the freight was 20 cents a bushel and commissions and handling 10 cents a bushel, making a total of $1.30. ($1.00 plus 20c plus 10c equals $1.30.

With this representation and assurance, that the price would be maintained, the United States farmers could treat with Germany for free entry of her wheat and win. A refusal on the part of Germany to enter it free would impose hardships on the part of consumers, which I am inclined to think they would not stand for.

You may say that Germany would not take our wheat but would buy from Russia and Argentine. Very true, as long as their surplus holds out. But the world's crops average just about the same one year with another. There is just about enough raised all over the world to equal the demand, and if our wheat is not taken the first of the year at the set price it will be needed before the year is around, also, I belive if the farmers of this country were to set a fair, equitable price on the wheat crop and stick to it, and prevent the price from going above by supplying the demand at the agreed price, that the markets of the other surplus producing countries will come to the same level. Wheat growers have been the poorest paid class of farmers in the world until within two years (since the plan of controlled marketing has been taught) and they will all gladly embrace any thing that will give greater stability and profit to their business.

Does not this idea appeal to wheat growers? The same illustration will apply to every crop that has an exportable surplus and that is needed in foreign countries. It is the only plan that will afford our wheat growers, cotton growers, meat producers, etc., relief. It means organization as we have advocated, and controlled marketing. This can be accomplished as has been abundantly demonstrated. Refuse to organize, refuse to control marketing, refuse to make a fair minimum price, and you will find the markets of foreign countries closing tightly against you and you will be impotent to prevent it.

With stability of price of farm products you will have a business foundation from which to work, in negotiating with foreign countries. Under the old order of things when prices may vary 100 per cent. in a year and fluctuate 10 to 20 cents a month, you are absolutely at sea without a rudder to guide in any negotiations. If the manufacturers' business was as unstable or uncertain in values they would be equally unable to make reciprocity treaties, but fortunately for them, they are organized and their values are very uniform.

As a definite proposition, since the citizens of Germany, France, Italy, and other protecting European countries are willing, in fact, determined to pay a good price for food and clothing, the exporting countries might as well have the difference that now goes into the treasuries of those countries.

Think about these things. Think how foolishly you are casting aside the great profits represented by the taxes against your products and then go around crying, "discrimination." Live up to your privileges and you will be the kings of the land. Quit following blind leaders. Wake up, think for yourselves and select leaders who will lead you in the broad way of light, opportunities and prosperity.

The way is now blazed. Well you enter in? If you will, Up-to-Date Farming will light you on every mile of the road and bring you to the haven where you will find markets for all you can produce at profitable prices.

(To be continued.)

Note. I invite comments, and criticisms if any can be offered, on the above program. Also if the farmers of the United States want to prevail on the German government to not increase the tax against our farm products they must hold conventions independent of the manufacturers. The conditions are so different in agriculture and manufactures, that the remedy for one will not apply to the other.

I will not charge any ulterior motives on the part of manufacturers' associations in joining with the agriculturists, or in seeking to have the latter join with the former, but I cannot see how any good can come to our farmers, and by such co-operation they may again be obliged to carry the burdens for another period.

As I have said before, farmers are numerous enough to keep free from any entangeling alliances and adopt the only plan to work out their own salvation.

Will any farmers' associations join with the American Society of Equity to call a convention of farmers to consider our foreign markets from a rational view point? Is there a desire on the part of individual farmers for such a convention? After one general convention it is my idea that conventions should be held in every state so that every farmer may have an opportunity to attend.

A Better Understanding

The following is from a Texas paper:

Texas potato growers are feeling the effects of low prices, but they should not feel totally discouraged. Corn has sold for less than 25 cents per bushel in Texas, and cotton has often sold below cost of production. As the potato growers come to a better understanding of how to reach the market, the conditions of their business will improve.

If 25-cent corn, potatoes at 20 cents and cotton at less than cost of production are not sufficient cause for discouragement, then we like to know what is. It comes with very poor grace to tell farmers to be encouraged when such conditions prevail, or to remind then of such conditions as likely to prevail. But "as the potato growers come to a better understanding of how to reach the market, the conditions will improve." How are they to come to a better understanding? Why does not this paper tell them what to do? If there is a way the farmers want to know it.

If in favor. cut out, fill out and send the below coupou

A Clearing House in Every County

To The American Society of Equity,
940 North Penna. St., Indianapolis, Ind.

Gentlemen: The movement to establish clearing houses in every county and central clearing houses or headquarters to direct the marketing of farm products meets with my approval. I want to see them accomplished.

County .....State .....

The Crop Reports

The Department of Agriculture is still making crop reports, and, under pressure, it is remaking some of them. The tobacco report for June showed a large increase in the acreage over that of the preceding year in the Burley district of Kentucky, Ohio, Indiana and West Virginia, and in the dark district of Kentucky and Tennessee. Against this the organized planters protested, and presented such proofs as to compel the Department to reconsider its figures. About July 20 a special report was issued, with a confession of "errors" in the former report, and making the acreage much smaller than the previous report had made it.

It will be observed that the territory covered is the States where the tobacco growers are best organized, and where a fierce fight is raging between them and the tobacco trust. Present prices, of course, in the speculative market, the market of the trust, is regulated by the prospect of the crop of 1905. It is easy to see that a Department report of an increased acreage would indicate an increased 1905 crop, and the strongest possible factor in the reduction of price, and therefore directly and powerfully in the interest of the tobacco trust. If the report were true, and there actually was an increased acreage, the Department would be no more to blame for its being in the interest of the trust than would the camera be to blame for showing a wart on the nose of a picture when the wart was actually on the nose of the subject.

But if it turns out that the report was not true, that it was actually FALSE IN THE INTEREST OF THE TRUST, and the Department itself, now confesses that it was by issuing another and a different report, the growers have a right to infer that the "errors" may not have been accidental ones.

But let us do the Department justice; or, rather, let us be fair with the Department. The tobacco trust is a powerful combination. It can correspond with people just as easily as can the Department of Agriculture, and it is not at all beyond the possibilities for it to get the addresses of the tobacco reporters, and then it is easy for the trust, under some other name to urge the reporters to be careful to make their report of acreage large. Many pretexts could be given why they should do that, and even "inducements" might be held out to them. In such a case as that, by no means an impossible one, the Department would not be to blame, but the crop reporting system would, and preliminary, or problematical reports should be entirely abandoned as unworthy of the government and harmful to the farmers. Of course the exaggerated June report caused a fall in the price of tobacco that would not have occurred but for those "errors," and every pound of tobacco that sold at the reduction, took just that much from the farmers and gave it to the trust.

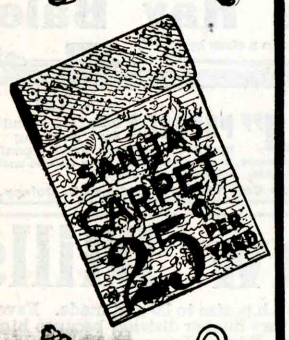
1905

Montgomery Ward & Co.'s
Big Catalog FREE



THIS NEW CATALOGUE, No. 74, for the season 1905-6, just from the press, is the largest in size and the most complete in contents of any general merchandise catalogue ever issued, and is filled from cover to cover with the lowest prices at which highest quality goods were ever sold. There never before was gathered into any one book so marvelous a collection of desirable goods of every kind at such money-saving prices.

Three million families—about ten million people—are going to save a lot of good money by having on hand and ordering their goods from this massive catalogue.

We know by past experience that those who make free use of it will save from $50.00 upwards during a year's time. We invite you to be one of them.

Our No. 74 Catalogue and Buyer's Guide is a Necessity

to the farmer, the planter, the miner, the lumberman, the hotel keeper, the railroad man, the teacher, the mechanic—in fact to **every** resident of the country, the large town, the village and hamlet.

Despite the great value of this mammoth catalogue to you and the large cost to us, to prepare, print, and distribute it, we shall **GIVE ONE COPY FREE** to every grown person who asks for it, provided he does not reside in a city of fifty thousand or more, or in Cook County, Illinois.

Everything you eat, wear and use is found in our No. 74 Catalogue in the highest grades, latest styles, best qualities, standard makes and absolutely honest values, at the very lowest prices.

You take no chances in buying from us. We refund your money, if, for any reason whatever, you are not satisfied.

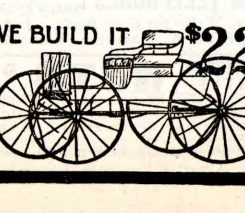
The prices in our No. 74 Catalogue are uniform and the same to all alike—the rich and the poor. We do not **raise** our prices when we deal with the wealthy, nor can those in moderate or poor circumstances do better for themselves anywhere than to buy at our established, printed prices—the **fairest** prices in the world, because they are **low** quotations, on **high quality goods.**

REMEMBER—No such offer as this was ever before made you. We offer you the Genuine, Up-to-Date Montgomery Ward & Co. large Catalogue without a penny's expense to you. This is no partial list, no incomplete book, but the largest, newest, complete Catalogue—just off the press.

A Word About Ourselves—Our establishment comprises seven large buildings, covering more than fifty acres of floor space. We are the **original, largest** and **most favorably known** Catalogue House in the world. We have a successful record of a **third of a century** to which we refer with pride. Our customers are our **friends,** and they are found the world over. We have honestly acquired our reputation for selling goods of **quality** at **fairest** prices, such as no other concern has been able to meet.

We absolutely refuse to sell **snide** goods or **trash** at any price.

Montgomery Ward & Co.'s New No. 74 Catalogue comprises 1200 large pages, full of accurate illustrations and truthful descriptions, without exaggeration or misrepresentation. It describes over 126,000 articles, such as everyone uses every day—just such goods as **you** use, but of highest quality and lower price than you can obtain them in your home stores or anywhere else but of us. We have heretofore asked everyone to send us fifteen cents to partly pay postage, as a guarantee of good faith, but we will NOW **give** you a copy absolutely without charge of any kind—delivered at our expense—providing you show you desire to possess it, by just **writing** and **asking** for a copy. That's all we require. Do you want it? Do you want to **save** part of your **necessary** expenses? Do you want to get some things that you cannot secure near home? This large, complete, up-to-date, No 74 Catalogue makes it possible and easy for you to own, use and enjoy many things of which you have frequent need, but which the usual prices asked by others have compelled you to do without. **Get this Catalogue** and consult it **freely** and **often.** Those who **use** it most **save** the most.



Cut here, fill in carefully, and send to Montgomery Ward & Co., Chicago

Send me **FREE** and prepaid one copy of your New No. 74 Catalogue for 1905-6.

THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

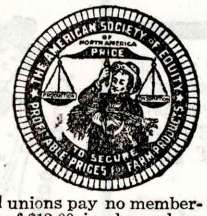
The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where three or more local unions exist in a county

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem



of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Fee

Is $1.00 for members at large and $1.00 a year. Charter members of local unions pay no membership fee but a charter fee of $12.00 is charged, no difference how large is the union. Members of local unions pay 30 cents quarterly. Members at large are individual members, outside of local unions. Each member receives a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

Complete instructions will be sent free on request, how to organize local and county unions and all information about fees, dues, etc.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. The price is $1.00 per thousand, 500 for 50 cents. They are supplied on gummed paper and on tags.

Supplies, including books, blanks, etc., are furnished FREE to all new local unions and all old ones that ratify the new constitution.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

THE ANNUAL MEETING

Local and County Unions, Officers and Elections

Office of the National Union of the American Society of Equity, Indianapolis, Ind. Sept. 1, 1905.

To the officers and members of all Local and County Unions, of the American Society of Equity and members at large, Greeting:—

The date of the Annual Meeting of the National Union of this Society has been fixed to begin October 23, 1905, and the meeting will continue as long as necessary to transact all business properly coming before it.

Reduced railroad rates will be granted from all parts of the country and special and ample accommodations will be made for members, delegates and others while in the city.

This will be the first great representative meeting of this society. It will also mark an important epoch in the history of the American Society of Equity and of American Agriculture Invitation is extended to all farmers, to be present and see and learn about and assist in this movement to better the farming business.

A full representation of members and delegates from all local and county unions of this society and of members at large is not only desired, but absolutely necessary to the success of this meeting and the wisdom of its deliberations. This meeting should positively insure the permanecy of the organization, pave the way for much more rapid development and the ultimate success of the great principle of controlled marketing, which can only be accomplished through organized effort and which alone can compel profitable prices. Indifference upon your part at this time will seriously interrupt the desired progress of this movement, while enthusiasm will give it such an impetus as will surprise the world.

From three to five thousand members and delegates should be in attendance. Remember, it is the first great national convention of farmers ever assembled in this or any other country, designedly for the purpose of considering profitable prices and better markets for farm products. The price of and markets for every farm crop will be considered in this convention. The importance of the interests at stake should make it the greatest gathering of farmers ever assembled in America.

When we realize that the aggregate value of our leading crops for one year represents a sum four times as great as all the products of all the mines of all kinds including gas and oil; three times the gross earnings of all the railways for one year; six times the capital stock of all the national banks in the United States, and twice the value of our exports and imports combined, we may get some idea of the importance of the work before us. Again when we consider that a general drop in price of only one cent per pound, hundredweight or bushel actually reduces the farmers income by hundreds of millions of dollars and that under the present lack of system speculators can cause such drops almost at will, we can begin to realize the importance of this meeting.

It will cost too much for me to attend or for our local union to send a delegate! Do we anticipate such an excuse? God pity us all if the American farmers, the backbone and foundation of this country's free institutions, wealth and prosperity have decided that they will never pay a cent to secure profitable prices for their products or make some sacrifices, if necessary, to free themselves from a few score of parasites who in the past have had it absolutely in their power to set the price on farm products and at will to pocket hundreds of millions of dollars.

Profitable prices have been maintained by controlled marketing, even under very limited organiaztion. They can always be so maintained by complete organization and a proper business system.

System is a creature of organization. Organization must be alive, alert and active. A great army is but an organization acting as a unit under the direction of a commander. The success of the army depends upon the wisdom of the commander and the absolutely unselfish obedience and support by every private, aid and officer. The commander may make mistakes and loss may result from following his command, but such losses are likely to be vastly less than would result from the confusion caused by every individual in the army following his own inclinations. The commander has the whole field plotted before him. He sees everything in its entirety. He is an expert in warfare and knows what must be done and how to accomplish it. This gives him a wonderful advantage over the private or officer who knows little of the field and can see only a small section of the opposing forces.

So with the American Society of Equity, privates and officers scattered in every state may accomplish much. in fact, it is they who must and will win the battle for Profitable Prices. But it is necessary now to hold a council of war so that those in command may know exactly the conditions everywhere and arrange in council the campaign for future activity, so that great and lasting advances may be made and so that both officers and privates will understand and promptly execute all commands.

This comparison illustrates most clearly the necessity for a large attendance from the field. It is necessary for you, officers and commanders, to know exactly the condition of the entire field and it is necessary for you to know, understand and have confidence in the plan of campaign. If mistakes have been made they must be corrected and avoided in the future, plans must be made and approved by all for the advance movements. In many places the society is strong enough to put into operation more of the business plans of the society, which later will fit in everywhere as cogs in the great machinery of the farmer's business system.

* * *

Officers and members of local and county unions, active or inactive, read the next paragraph carefully. Members at large, read it, ponder well its truth.

Upon you now depends the immediate success of this movement. Yours is a tremendous responsibility. At this writing there are chartered fifteen hundred (1500) local unions. Some of these were organized but never remitted the charter fee and consequently have never been chartered by the National Union, and we may have no record of them. Others were properly organized and chartered—held enthusiastic meetings for a time, perhaps, but drifted into disinterestedness, but many are active and are nobly carrying forward the work of extension. Besides these there are many thousand members at large.

While all converts to the doctrine of controlled marketing are converts still and whether active or inactive, are desirous of seeing the time when framers can positively make their own prices for their own products. The time has now arrived when we must know the living and bury the dead.

The report of the Annual Meeting of the National Union, A. S. of E., will be published in pamphlet form. The name and number, also name and address of secretary of each local and county union of the American Society of Equity in the United States and Canada, with the total membership in each, on Oct. 15th, 1905, should be and we expect will be published as a part of this report as a complete directory of the society. A copy of the report will be mailed to each local union secretary, to all officers of county unions, to delegates who attend the Annual Meeting and may be procured by members at large and others desiring them at 10 cents each copy. Every local union and every county union must report on or before Oct. 10th, so that all may be in by Oct. 15th.

To insure such reports all members of local unions of this society are expected to assemble and hold a meeting during the first week in Oct. For those local unions that are inactive, the National Union recommends the following as an official notice. It is addressed to every member naturally belonging to said union:

"There will be a special meeting of ——— Local Union, of the A. S. of E., on Oct. 5th (?) at the same place the organization was first effected, at 7:30 p. m., sharp."

All officers and members are expected to act upon this without further notice. At these meetings new officers shall be elected, also a delegate to the

Annual Meeting of the National Union should be selected. These delegates should be instructed as to the wishes of the local union and if utterly impossible for said delegate to attend the Annual Meeting, they shall reduce their instructions to writing, cause them to be signed by the President and Secretary, have the local union seal imprinted thereon (if the union has one) and mail them to the Secretary of the National Union, who will see that they are considered at the Annual Meeting. Some of the subjects to be considered at the Annual Meeting appear in this issue of the official paper.

Also, at this meeting you should take up the new constitution for ratification if you have not already done so. At this Annual Meeting the new constitution will be passed upon, amended if necessary, approved and adopted by the delegates in attendance, so that after the Annual Meeting there will be but one plan of work and no local union will be recognized by the society that refuses to be governed by the laws of the society as approved by the majority of the delegates in attendance.

TO SUMMARIEZE.

In this message we urge the importance of the Annual Meeting and the necessity for a full representation. The necessity of holding local and county meetings preceding it and the great importance of electing your best men or women as officers. If no good, well trained officials are available, select young people, who willl rapidly develop. We especially desire to emphasize the importance of having a secretary interested in the cause—willing to give the society and his office the attention it requires and having the ability to transact the business of the society accurately and promptly. The secretary is the business agent of the society and should be retained in office term after term, if possible. Study the needs of your section and the partial program printed in another column and instruct your delegates so they may come to the National Convention prepared to present your views intelligently.

Don't fail to send the report of your union to headquarters on or before Oct. 10th, to insure its arrival Oct. 15th, 1905.

Do all these things. Come to the Annual Meeting and help to make it as great as the industry it represents and one that will attract the world's attention by its numerical attendance and the results accomplished.

The National Union of the A. S. of E.
J. A. EVERITT, Pres.
M. WES. TUBBS, Sec'y.

SOUTH CAROLINA FARMERS' INSTITUTE

Some Hints for Institutes and Farmers Elsewhere

Early in the summer Mr. Everitt accepted an invitation to deliver an address at Clemson College (Clemson College P. O.), S. C. Subject: "How to Solve All Farmers' Problems."

When the time approached it became evident that business matters would prevent him from keeping the appointment and National Organizer H. B. Sherman, was sent.

The success of the meeting may be judged from Mr. Sherman's report from which we make extracts as follows

"Dear Mr. Everitt:—I now write about my work in South Carolina, of the State Institute meeting and of Clemson College, where I spoke to, and taught the people on the 8th and 9th.

"When I arrived at the college I was conducted to President Mell's office. He explained the situation to me and how we came to be down on the program for this meeting. He said. 'There has been more or less complaint by the rank and file of farmers, that the institutes were overrun with a crowded program of college professors, high grade essayists and fine spun theorists; that the real needs of the farmers were overlooked. Therefore, I, as the head of the State Institute, determined that this institute should be what he farmers wanted, providing I could find out what they want. I consulted leading farmers from all sections of the state and invited them to tell me what they wanted and who they wanted put on the program and I will get what you want if money can secure it.'

"There was a strong demand for an address by Mr. Everitt along the line of his work. There was a slight objection because Mr. Everitt was a northern man, but I told the faculty that the farmers should have what they wanted. No matter where it comes from."

Church Workers and Church Singers

Several pages of new ideas and new material in the coming numbers of *The Ladies' Home Journal.*

Entertainments by Young People's Societies. Programs planned especially for amateur local talent where resources are limited.

New Church Suppers and Church Fairs. Pages of ideas on menus and management, all of the out-of-the-ordinary kind; both large and small suppers and fairs.

The Church Choir will be given several beautiful devotional songs.

"Come Unto Me," by Jessie Hilton Farrell Wilson; an invitingly restful solo, beautiful for church singing.

"Crossing the Bar," Mr. George B. Nevin's setting for Tennyson's great poem for effective quartette singing.

Two beautiful devotional songs by Kate Douglas Wiggin.

In the December issue: a Christmas Cantata, a Christmas Prayer and hints for Sunday-School entertainments. A splendid description of "The Successors of Moody and Sankey," with their famous "Glory Song" given with full music.

See the present and future numbers of

Continuing the President said:

"I have arranged that the P. M. meetings shall be experience meetings and they can put up any man they want to, in fact do as they please with that session and now, Mr. Sherman, they have requested that you occupy as much of the afternoon session following your night address as they want. The farmers are displaying much interest in your line of work. This meeting will be largely for you and if they are not satisfied they will have nobody to blame but themselves."

I have given the talk in his exact words as near as I can repeat it. I commended his action and expressed to him my belief that he had set a valuable precedent that should make future institutes in South Carolina and other states more popular and helpful to the real interested people—the farmers.

As to the results: This was conceded to have been the most popular institute ever held in the state. At the meeting I at once, by a few well chosen introductory remarks, put myself in rapport with the 1,000 people present and then I gave them as good an A. S. of E. speech as I ever delivered in my life. As the preachers say, "The Lord gave me great liberty" and for one and three-fourths hour I made that hall ring of controlled marketing, price making, and equity in all the business dealings of life as was never head in this state before. When I wanted to close they shouted "Go on! go on!

"A whole multitude of people shook my hand after the speech, many said: "That is what we have been waiting to hear;" You tell us the truth about our business;" "You point the only way to our salvation;" "You have shown us how to solve our problems," etc.

"I send you a long list of names of members and for the Third Power. Many of these people never heard of the American Society of Equity and the doctrine of controlled marketing, until today, but were converted.

"I want to report to you the most cordial reception tendered me by President Mell, the faculty and the Board of Control, of Clemson College. They thanked me and you and our society for what we did for them and admitted that this experience would greatly benefit their work throughout the state. They also rewarded me liberally in a financial way.

In conclusion I want to say Clemson College in all respects is an advanced institution for teaching and any South Carolinian is entirely justified in holding his head erect as he points to his own institute—Clemson College.

"I have urgent invitations to go to many parts of the state to address meetings, some of which I will accept while in the South."

H. B. SHERMAN,
National Organizer.

Equity Speakers

MENTION THIS PAPER

When you write to advertisers. They want to know in what paper their announcement was seen.

Let Us Get Close Together

THE ANNUAL MEETING OF THE AMERICAN SOCIETY OF EQUITY, to begin at Indianapolis on October 23 next, will be the first opportunity farmers have ever had to get close together and discuss the vital features of their business from a correct standpoint.

When the editor of this paper announced nearly three years ago that through CONTROLLED MARKETING all of the farmer's problems could be solved, few if any believed him. The intervening period has, however, been productive of so many proofs, that scarcely any intelligent person who has noted the changes that have come over American agriculture will deny that CONTROLLED MARKETING is the chief thing for farmers to accomplish, and the only factor that stands between them and definite results or complete success.

The three years past have been given to education. This the writer recognized at the start was all important. Sufficient education has been accomplished to now put it to use.

At this ANNUAL MEETING can be considered great problems which, if mentioned three years ago, would only have provoked derision. Now conditions are such that they are possible of accomplishment. They are so large that before the campaign of education they would have appeared visionary. Now some of them are largely accomplished already, and all may be undertaken with reasonable assurance of complete success.

A partial list of subjects that will be considered at the annual meeting is given below. We urge farmers from every State and every community to GET CLOSE TOGETHER at this time to consider these momentous matters. Even though it may be decided that the time has not arrived for some of them, agitation and more education will bring the time nearer. The partial list follows:

Complete Organization of Farmers.

Clearing Houses.

Extension of Telephones and Consolidation of Farmers' Lines.

Farmers Warehousing Plan.

Low Rate of Interest on Farmers' Loans.

Our Foreign Markets—How to Enlarge Them.

How to Secure Profitable Prices for Perishable Products.

The Railroad Problems—A Simple Plan to Solve Them.

Crop Reporting—A Recommendation to the Government of One Report a Year.

A Law Against Gambling in Farm Products.

The American Society of Equity in Foreign Countries.

How to Prevent Adulteration of Foods and Marketing of Adulterated Food.

Minimum Prices on All Leading Crops.

Election of officers.

Suggestions are asked from our readers of matters to be discussed at this meeting. Also it is desirable that each person who intends to attend the meeting will notify the Secretary, M. W. Tubbs, so that arrangements may be made for his or her accommodation. Ladies are invited. Non-members of the A. S. of E. are also invited, as it is intended to make this a meeting representative of American (including Canada) agriculture rather than of one society.

A YEAR'S INFLUENCE

What Wheat Prices Had to Contend With During the Past Year

The Influence that Makes the Speculators' and Gamblers' Business Possible and Profitable

The following quotations are the head lines over the wheat market reports, taken from a leading daily paper. We selected only one a week and the array comprises one year—52 weeks. The prices are for CASH wheat at Chicago:

Aug. 22, 1904—Opening prices were firm but bears soon gained control.

Aug. 29—Had a weak start, but little offered at the price.

Sept. 6—Weakness due largely to heavy word's shipments. Cash $1.10.

Sept. 12—One, two, three, four cents wheat went up. Cash $1.13.

Sept. 19—Plenty for sale when buying began. Cash $1.15½.

Sept. 26—Speculative wheat broke badly, large receipts the cause. Cash $1.18.

Oct. 3—Vacilation marked the course of wheat. Cash $1.15.

Oct. 10—Weak wheat market rallied at close. Cash $1.16.

Oct. 17—Wheat freely sold. World's shipments large. Cash $1.18.

Oct. 24—Wheat prices held up by smaller movement. Cash $1.22.

Nov. 1—Foreigners offering higher for wheat—war scare helped the price. Cash $1.18.

Nov. 7—Dry weather gives a strong tone to wheat. Cash $1.15.

Nov. 14—Wheat sold by longs. Prices were lower. Cash $1.18.

Nov. 21—High at start but liberal offerings carried the market down. Cash $1.15.

Nov. 28—Small holders sold their wheat freely. Cash $1.14.

Dec. 5—Wheat up two cents on livelier demand. Cash $1.17.

Dec. 12. Wheat weak on heavy receipts and cables. Cash $1.15.

Dec. 19—Wheat prices make headway up under urgent demand due to small recepits. Cash $1.16¼.

Dec. 27—Over two cents advance on (speculative) wheat on strong cash position and urgent demand. Cash $1.17½.

Jan. 3, 1905—Wheat started year with higher price. Cash $1.17½.

Jan. 9—Shorts sent wheat prices steadily up. Cash $1.20.

Jan. 16. Wheat prices were high at start. Other markets weak. Cash $1.20.

Jan. 23—Heavier receipts northwest, a bearish feature. Cash $1.18.

Jan. 30—Slump at opening, but recovered on small receipts. Cash $1.20.

Feb. 6—July wheat option was in good demand in spite of bearish weather and statistics. Cash $1.20.

Feb. 13 and 14—Bulls have the wheat. Shorts, do worring. Scare and shorts sent wheat market higher—cables, receipts and weather against them. Cash $1.20¾.

Feb. 22—There was presistent selling of May wheat. Cash $1.22.

Feb. 27—Sensational break in May wheat. Prominent longs let go, and selling becomes strenuous. Cash $1.19.

March 6—A bearish sentiment in the wheat market. Cash $1.18.

March 13—May wheat delivery extremely nervous. Cash $1.14½.

March 20—Liquidation of the May wheat deliver. July and September sold off in sympathy. Cash $1.16½.

March 27—Wheat market lower on the crop weather. Cash $1.17.

April 4—Grain market weak on general rains. Cash $1.03.

April 11—Damage reports from Indiana helped wheat. Cash $1.03.

April 18—Moderate world's shipments and firm cables. Cash $1.02.

April 25—After quick advance wheat sold heavily—closed at low point of the day. Cash $1.05.

May 1—There was a reaction in the wheat market; May options advanced more than two cents. Cash 92c. Visible 28,529,000.

May 8—War news affected wheat market, offsetting the influence of ideal weather. Cash 95½c.

May 15—Weather was factor in the wheat market. Cash $1.01.

May 22—Rampantly bullish in wheat market. Cash $1.06.

May 29—Wheat prices lower on Japanese victory. Cash $1.07½.

June 5—Wheat prices lower on excellent weather and exceptionally heavy shipments from Russia. Total winter and spring estimated at 670,000,000 bu. Cash $1.02½.

June 12—Covering by shorts turned wheat market. Opened weak on showing of government reports. Cash 96c.

June 19—Bearish sentiment in the wheat market on the excellent weather for harvesting. Cash $1.04¼.

June 26—Cash wheat weak on southwest conditions. Cash $1.03½.

July 3—Wheat crop is a high second if not first. Sufficient for local demand in nearly every state and a surplus for shipment. Cash $1.04.

July 10—Sharp decline in the price of cash wheat. Cash 82c.

July 17—Wheat market weak on account of weather and large shipments from southwest. Cash 87½c.

July 24—Met much damage from black rust after all, so wheat tumbles from high pedestal. Cash 90½c.

July 31—Wheat prices showed a substantial gain—mostly from bullish news from the northwest. Cash 87¼c.

Aug. 7—Wheat was weak on excellent weather—offerings free—demand light.

Aug. 14—Wheat market nervous and closed lower. Main factor was situation in the northwest. Cash 82c.

And so ends a most interesting chapter. This subject is well worthy of study and serious deliberation. Consider the conditions that affected the prices, how often they were entirely false or exaggerated. How the business of the country has been kept on a nervous strain because of the lack of stability of prices. This includes farmers as well as merchants, manufacturers, millers and middlemen. How the consumers would hestitate to buy hoping for lower prices and the reduction in consumption that resulted.

Contrast these reflections with the conditions that would exist if only one crop report was made each year; one price was set on the crop and it prevailed until the next crop came. Then business would flow on in an even course the volume of trade would always fill the channel and never overflow or go dangerously near to dry. Then the maximum markets would be secured for farm products and all consumers could calculate definitely on cost of living. Then, also, our foreign trade would increase and flourish as it never did before.

Why Is It So?

THE expense of keeping National Organizer Sherman in the field during the month of July was in excess of the total receipts. Commenting upon this condition Mr. Sherman writes as follows from West Appomattox, Va., August 1st:

"Mr. Everitt is, and justly has a right to be, disappointed over the results. I know that every farmer ought to unite at once and contribute to the success of the A. S. of E. That they act so slowlv is astonishing to me. I lay awake of nights trying to think out some plan to get them to act—without the cost of securing their membership being three or five times what it brings."

Congressman Flood in commenting upon Mr. Sherman's address at West Appomattox said, "For clearness in statement, logical connection, strength of argument, strength of reasoning—backed by strict business plans and convincing conclusions, that address has never excelled in Appomattox county." Yet, we are informed that only five farmers not already members of the A. S. of E. were in attendance and that every one of them joined the society.

Why is it so? Why are farmers so indifferent to their own welfare? The American Society of Equity is not an experiment. It has fulfilled every promise and this with a fraction of the membership it considered necessary. To be sure benefits have been delayed because of the "dumpers." But everything possible is being done to reduce the number of dumpers so the A. S. of E. price—an equitable, profitable price—may be had at the beginning of the sales season for any crop.

Mr. Sherman has been kept constantly in the field for the past year and a half. He is well qualified to answer the question. He KNOWS POSITIVELY that the only cause is lack of education. Where Up-to-Date Farming has been quite generally read he is greeted by large and enthusiastic crowds—EVEN DURING THE BUSY SEASON. This is not all. In such cases there are always a large number of members secured. The reverse is true in localities where the teachings controlled marketing are unknown. It is impossible to get out large crowds and there is always an inclination—and justly so. on the part of those present to want to know more before joining. He says "You must precede me with a vigorous educational campaign with Up-to-Date Farming and other A. S. of E. literature."

From the same letter Mr. Sherman reports the feeling of the people as follows: "The people are almost worshipers of Mr. Everitt, and say they would give a great deal to once see him and shake his hand. One man asked me, 'Will President Everitt be at the Owensboro convention?' I told him that I thought he would be there. He said, 'If I was certain of that, I would go at my own expense for the pleasure of seeing our president.'" Mr. Everitt would be accorded a great ovation all through this country. Why can't this kind of enthusiasm be converted into CASH, by memberships, paying dues and arrearages promptly, all along the line? If this enthusiasm could be converted into practical help just now instead of HERO worship we could remove the mountains that have always confronted our work."

This was written before the A. S. of E. Press Fund Appeal on page7, Aug. 15 issue, Up-to-Date Farming, but Mr. Sherman realizes the great need for better printing facilities to enable us to carry on the work of education more extensively and that something must be done "to remove the mountains that now confront our work."

We are compelled to leave this matter with you, dear readers, who are and of right should be interested in the success of this movement.

Regular meetings of all county unions are to be held in October. Possibly the date for some of them has already been set for late in the month. If so, let us suggest that the DATE be changed so that all county meetings may be held prior to Oct. 10th, so that all reports may be received at headquarters and tabulated before the annual meeting beginning October 23d. Also to give delegates to the annual meeting some time for preparation.

Secretaries of county unions should notify National Secretary M. Wes. Tubbs at once as to date and place for holding the October county meeting so that due notice may be given in the official paper, Sept. 15th issue.

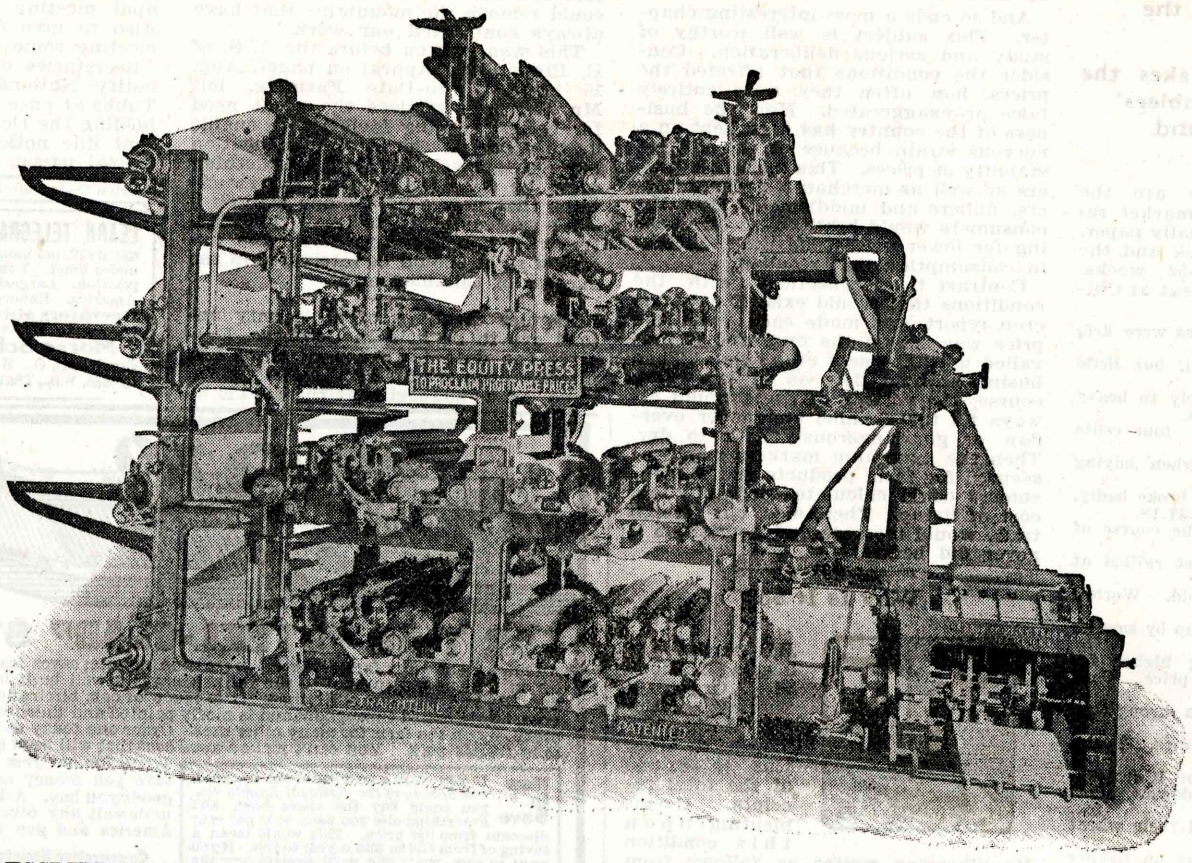
"THAT NEW PRESS"

To Proclaim



Profitable Prices

DESCRIPTION—Full description of "that New Press" and what it will do will appear in Sept. 15th issue.

What They Say

I noted by wrapper on "Up-to-Date" that my paper comes "Comp.," so I will enclose $1.00 to boost the NEW PRESS FUND.—H. A. Barrows, Prop. Jumpierun Dairy Farm, Monticello, Fla.

I am pleased at what you say about enlarging the paper soon. I have a vision of a splendid "Up-to-Date" with cover, illustrations, fine paper and press work; with a perfect bouquet of good things for its readers every week. Will not that be great! And I shall be only too happy to add my best efforts to this end. I will sharpen by best quill and dip it in the best ink I can find, ready for the time that is on the way. —E. L. Vincent, Binghamton, N. Y.

I note Secretary Tubbs' call for a New and Powerful Press. GOOD. This sounds like educating the farmers which must be done, chiefly THROUGH THAT PRESS." (Other presses don't seem to catch on.) I hasten to approve of this action and send herewith $1.00.

Why, $25,000 is less than 20c for each present member and "THE PRESS" will benefit the A. S. of E. and farmers generally for all time. * * * All hail to "that new press." Better anticipate 500,000 copies at least. Yours for a forward move all along the line.—A. R. Carhart, Bartow, Fla.

(That press can print 500,000 copies easily every week or 1,000,000 copies as quickly as we can now print 150,000—M. W. T.)

Enclosed find $1.50 for renewal of this paper—Eli Cramer, Hametown, Pa.

Your paper is the best paper for farmers in the U. S. The plan of the A. S. of E. is now being endorsed by nearly all farmers' organizations. After reading the "Press Fund" Appeal last night in my paper, I hasten to send $1.00 to help buy "that new press." You are doing a great work and should have all the help necessary to consummate your plans.—Welton Winn, Santa Anna, Tex.

Have been taking Up-to-Date Farming and like it very much. I enclose $1.00 to apply on subscription. I am in perfect harmony with the prniciples of controlled marketing, etc., and propose to give my support to the PAPERS which are contending for the people's rights.—John T. Reynolds, Brashear, Mo.

Enclosed find $1.00 to apply on my subscription to Up-to-Date Farming. With best wishes to editor, paper and society—Ezra Headings, DeGraff, Ohio.

Enclosed find $1.00 for two years' subscription. "All hail, that new press."—August Dick, Michigan City, Ind.

Enclosed you will find M. O. for one dollar for Up-to-Date Farming for two years.—Gottfried Palm, Carlyle, Ill., R. R. No. 4.

Enclosed please find $2.00 to help buy "THE NEW PRESS." Kindly credit $1.00 to Mr. Frank Sielke and $1.00 to myself. I only hope you will succeed and get the press and I think every member of the A. S. of E. will do their share when they understand how much real benefit it will be to them personally—Henry Scheetz, Jennings, Kas.

Enclosed please find $1.00 for the Press Fund.—A Subscriber, Friend, Neb.

Have You Done Your Part?

Naturally many of our readers may expect to see a long list of contributors and, perhaps, a total of three or four thousand dollars listed in this issue. First, let us ask what have YOU done towards it? Remember that YOU must share the responsibility of success or failure Have YOU done your part? If YOU have (including every reader of this paper and every member of the A. S. of E.) we will have ordered "that press" up there, long before you get this paper

This note is written when we are not through printing the August 15th issue, and but little more than half of the issue has been mailed, so YOU SEE WE CAN NOT KNOW at this time what you will do nor print much of a list

WE HOPE YOU HAVE DONE YOUR PART. If YOU HAVE NOT, PLEASE DO IT NOW. It is, in many instances, only asking for what we have earned—for what YOU owe us and in EVERY instance it will prove a most profitable investment to you by way of better service a more interesting paper and better prices.

ROLL OF HONOR

Contributors to A. S. of E. Press Fund—Free Will Offering

Officers and employes of A. S. of E. at headquarters and staff of Up-to-Date Farming	$150.00
Joe Tiernan, Iowa	1.00
A. R. Carhart, Florida	1.00
E. L. Vincent, New York	5.00
H. A. Barrows, Florida	1.00
A. R. Tubbs, New York	1.00
H. B. Sherman, Indiana	5.00
..... Michigan	2.00
Welton, Winn, Texas	1.00
Frank Sielke, Kansas	1.00
Henry Scheetz, Kansas	1.00
A Subscriber, Nebraska	1.00
Miscellaneous (including total amount of all contributions less than $1.00 to date)	44.65
Total	$314.65

President's Picture

We have in course of preparation a beautifully vignetted tinted half tone reproduction of President Everitt, size 11x14 inches and suitable for framing. As soon as completed we propose to send one of these fine pictures, pre-paid, to every Free Will Contributor of twenty-five cents or more to the A. S. of E. Press Fund. This will serve as our acknowledgment of the receipt of your remittance besides being something you will prize very highly. Remember, also, that your name will be listed in the "Roll of Honor" if your contribution is one dollar or over.

We want to ask: Is the cause of equity and profitable prices worthy of YOUR support? Can you afford to delay when the necessity is so great and the benefits so certain? DARE YOU REFUSE when you stop to think that THIS PAPER is the ONLY PAPER in the United States DEMANDING PROFITABLE PRICES and trying to maintain them for YOUR PRODUCTS.

PRESS FUND

M. WES. TUBBS, Sec.
Indianapolis, Ind

_____

Yours to help bring "Farmers to the Front"

NAME_____ P. O._____

Co._____ R. R._____ STATE_____

Ways to Help

1. Write us an encouraging letter.
2. Make a contribution to the Press Fund Free Will offering.
3. Renew your subscription for ONE, TWO or THREE years. If in arrears, PAY UP and as FAR IN ADVANCE AS POSSIBLE.
4. If a member of a Local Union send in your quarterly dues for ONE, TWO or THREE years. That is, send the part (80 cents a year) coming to headquarters and proper credit will be given you on our records.
5. Get your neighbors to join with you and you send in their orders with your own.
6. Local unions may help by organizing other locals; by holding socials, dances or entertainments for the benefit of the A. S. of E. Press Fund; by ordering badges (see announcement elsewhere) for their officers, members and delegates. The profit on these will go into the Press Fund.

Yes, we are asking a good deal. We fully realize the fact, but WE MUST HAVE A GOOD DEAL. We must have that new press. Hence the necessity of our asking largely. Hence the necessity of your responding liberally. A little dime—as small a contribution as that from every reader would enable us to buy the press and do all that has been promised. You realize that every one of the 150,000 copies we publish now is READ by more than one person, so that TEN CENTS from every READER would give us a sufficent amount. The trouble is some won't do a "blamed" thing but drag their feet, and, of course, that makes it all the harder for those who "saw the wood."

What are YOU going to do about it? If YOU intend to do YOUR PART, DO IT NOW before you let this paper pass out of your hands. Remember every dime, dollar or larger amount or pledge of what you will pay later, and when, should reach us before October 1, as we want to order the press on or before that date, but if we don't get enough by October 1st we will keep on until it comes. We told you it would take four months to build the press after it was ordered, so the longer the order is delayed the longer you must wait for the ideal farm paper. As soon as TEN THOUSAND DOLLARS is received or pledged we will place the order. BE PROMPT ONCE and do your duty.

Conventions and Meetings

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind., beginning October 23d, 1905. Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

DUNN COUNTY (Wis.) Union will hold its next regular meeting in Chippewa Falls, October 7. C. W. Bitney, Sec'y, Colfax, Wis.

DANE COUNTY (Wis.) Union will hold its next meeting in Cambridge, Saturday, September 30, for the purpose of preparing a complete and concise crop report of the county, especially tobacco; and for the further purpose of selecting and instructing a delegation to be sent to Owensboro to attend the second annual convention of the National Tobacco Growers' Association Branch of A. S. of E. Secretaries of local unions will call meetings at least one week previous to September 30, prepare local reports for the County Union, and choose delegates thereto. Prof. D. G. Ristad will deliver an address, and everybody is cordially invited to attend.—S. D. Kump, Secretary, Cambridge, Wis.

POPE COUNTY (Ark.) Union. The next meeting will be held October 4th, at Gillespie Hall (two miles south of Russellville, Ark.). As this is the meeting for the election of delegates to the annual meeting of the National Union and also to consider and make recommendations regarding the Farmers' Business System, it is especially desired that every Local Union will send a full representation and that as many members as possible will also attend.—C. C. Minyard, Co. Union Sec'y, Russellville, Ark.

WARWICK COUNTY (Ind.) Union will hold a regular meeting in Boonville on Sept. 9th, 1905. An effort is being made to have a good out-of-town A. S. of E. speaker in attendance to address the meeting. Matters pertaining to the annual meeting will be discussed and possibly delegates will be elected at this meeting. A full representation is desired.—C. M. Monweiler, Sec'y, Boonville, Ind.

Some Words to the Farmers

A grain dealer in Southern Illinois writes as follows to The Indianapolis News:

"I notice in The News various reports from different localities regarding yield of grain, and also note its probable effect on prices. One farmer reports 963 bushels oats from sixteen acres, another that his wheat yielded forty-one and one-eighth bushels an acre. Then another has thirty acres of corn that will yield seventy-one bushels, and one old, long-whiskered son of toil proclaims that the corn in Indiana will average fifty-eight bushel an acre this year.

"The farmers go to town and ask the price of grain—they find oats off half a cent. The next day the same, and so on for several days. Then they 'cuss' the grain dealers, and say they have combined to rob hard-working, honest farmers. They do not stop long enough to grasp the idea that their reports penetrate all grain marts of the new and old world, and that buyers will expect a flood of grain, expect to be covered up with it, the bins on the farms will not half hold it. So they bid low and down go prices with every batch of such news.

"I have had dealings with some of these old fellows who sell their grain and say they were robbed and are going to start a farmers' elevator. Here is what happens: When they sow their oats they have sixty-one acres. When they cut them they do it with a binder and three horses in three days and tell about cutting over twenty acres a day. When threshing comes the yield is sixteen hundred and seventy-three bushels; but the acreage has dwindled to seven, which makes the yield over forty-five bushels an acre.

"Some farmers do this just to surpass their neighbors with big figures. Others do it in order to establish credit. Land agents help along all such exaggerations."

This paper must have a larger circulation. If we had the printing facilities we would be printing 300,000 copies each issue in stead of half that number. Read "What They Say" elsewhere in this issue.

A National Help in the Servant Problem

WHERE every housewife, no matter where she lives, in the United States or Canada, can come and be told how and where to get a good servant, and where the servant will be helped to get a good place—the nearest approach ever reached to a reliable, national intelligence office. A new department, absolutely practical, which begins in the September issue of

THE LADIES' HOME JOURNAL

One Dollar a year until October 1 next, then $1.25.

An Easy Way to Make Money

I have made $560.00 in 80 days selling Dish-washers. I did my housework at the same time. I don't canvass. People come or send for the Dish-washers. I handle the Mound City Dish-washer. It is the best on the market. It is lovely to sell. It washes and dries the dishes perfectly in two minutes. Every lady who sees it wants one. I will devote all my future time to the business and expect to clear $4,000.00 this year. Any intelligent person can do as well as I have done. Write for particulars to the Mound City Dish-washer Co., 3685 K, Laclade Ave., St, Louis, Mo.

RAND MFG. CO. DEPT. 660 CHICAGO

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

Hogs have prevailed at higher prices than since after the short corn crop of 1901.

Cattle are advancing also.

These advances are more remarkable because of the large feed grain crops of last year and the flattering prospects of this year. Certainly something is getting into the stock markets that was not there before. May it be controlled and more systematic marketing?

Stock men have their grievances against the railroads. They always will have until they organize and adopt a fair plan for handling their produce and then through combined effort put it in operation. A plan will be proposed at the annual meeting.

If no trees in the pasture to make shade, build sheds.

A wind mill in every pasture and flowing water all the time will help much.

Kill the lice. There are good remedies sold in all towns nowadays.

If any hogs are in condition to put off, better let them go now. Prices may not be so good later.

The corn crop is earlier than last year. There is little danger from frost.

Hogs should not wallow in a stagnant pool. Fresh water should continually be flowing in.

Cheap corn has gone. This is the corn growers' ultimatum. It is now up to the meat producer. Will he continue to produce cheap meal from high-priced corn, or will he be driven to apply the remedy as have the corn growers?

Graineries were empty for the wheat crop which insures controlled marketing and good prices as soon as the dumpers have dumped. Cribs are empty (induced by good prices) for the corn crop and this guarantees that the 1905 crop of corn will not sell cheaply. Now will the cattle men stiffen up their backbone and stand out for a price equitable with other values?

Up-to-date machinery in the dairy reduces the labor, increases the product, improves the quality and augments the income. Therefore have a properly equipped dairy. Our advertising columns will help you.

You can educate the cow to kick. A kicking cow is apt to make life miserable for the milker and is a fruitful source of disturbance with the hired man on the farm.

An hour in the pasture in the evening after the flies are gone, will be enjoyed by the cows and be reflected in the pail in the morning.

Whether it will pay to have a separator is no longer debatable. This point has been proven affirmatively. The order is to get it.

Silos need not be experiments. They are in such general use now that any interested person can; 1st, learn how to construct them. 2d, learn how to fill them. 3d, learn how to use them. The result will be more feed from a given area, more palateable food, greater returns, and more profit to the dairyman who has them. The silos were once in the experimental stage. Now they are with us on merit.

Determine that all your products shall draw a fair exchange in money to your pocketbook.

High prices for land cannot be maintained unless good prices for products can be maintained.

We have been asked what the price for the 1905 crop of corn shall be. What do you say to 50 cents a bushel at Chicago, no difference how large the crop?

As railroad stocks go up, prices of farm produce go down. Did we not tell you that the railroads make as much money hauling a cheap bushel as a dear one, and the more bushels there are the lower will be the price as long as the dumpers have control.

Cold storage is a wonderful aid in the economics of our country. As it is so largely applied to farmers' produce, why should they not control it? As they have the goods to store, they can make the storage companies come to reasonable terms through concert of action.

The sheep is a dual purpose animal sure enough. Both the fleece and carcass are much sought after now.

The news agencies are cabeling reports of a meat famine in Germany, yet our feeders don't know anything about famine except as it affects profits. Why don't the American feeders get together for the purpose of giving Germany more meat and themselves more money. It can be done.

Read our comments in this paper on the reciprocity conference held at Chicago. These comments and advice will be continued. When farmers quit looking to congress for what they need, but determine to get it themselves, they will not put themselves in the power of their supposed friends to be betrayed.

One of our readers recommends farmers' stock yards. These, according to his idea, should be in the country, but near the large cities. The stock to be first shipped to these yards, where they will be kept nearly as cheaply as at home. From these yards the supply could be let out as the demand comes at the producers' prices. This is the right idea. It is exactly the plan of the A. S. of E. We have advocated it in the past. Let us try to put it in operation after the annual meeting.

An Increase in Profits

Here is the way it figured out for this man:

$52.52 received the month he used the U. S.
25.00 received the month he **didn't.**
27.52 **gained in one month.** At this rate
330.24 is the total for the first year, and
100.00 deducted for his machine, leaves him
$230.24 **net gain,** with his machine **paid for.**

Read the signed statement below:

DELHIE, MINN., June 6, 1905.

"I purchased a No. 6 U. S. Separator Feb. 1, 1905, and sold cream the first month to the amount of $52.52, the product of 8 cows. The month previous to getting the Separator the 8 cows produced me about $25. This herd of cows is about the average herd, three of them being heifers. I can heartily recommend the U. S. to all who want a first-class Separator.
"H. A. DRYER."

Pretty profitable investment, wasn't it? Isn't it worth investigating? That costs you nothing. Send for illustrated Catalog No. 550-B, which will tell you *all* about it and *show* you how and why the Improved

U. S. Cream Separators

MAKE THE LARGEST PROFITS

VERMONT FARM MACHINE CO., Bellows Falls, Vt.
413 18 Distributing Warehouses throughout the United States and Canada

MOST PROFITABLE OF ALL FARM MACHINES

This is what the **De Laval Cream Separator** has proved to be—proved to be a necessity to anyone owning three or more cows. Twenty years of experience on the part of hundreds of thousands of **De Laval** users bear witness to this fact. Likewise has the **De Laval** proved to be the **most profitable of all cream separators.** The superiority of **De Laval** construction is responsible for this fact. In the first place, of equivalent capacities the **De Laval is actually cheapest**—then the use of the "Alpha" or "Disc" and patented "Split-Wing" skimming device, enables the **De Laval** to gain and save twice as much as the best of immitating separators, while the simple, mechanically correct, low speed gearing of the **De Laval** makes it **capable of lasting four times as long as other separators.** And again its operation is accomplished with the greatest possible ease and economy, all of which in addition to a hundred other features of superiority make the **De Laval separator** the **best that money can produce.** As for the first cost, if you have the ready cash there is a fair discount for it, but if not, any reputable buyer may buy a **De Laval** on such liberal terms that it means securing the **best of separators actually free of cost,** for it will earn its cost and more while you are paying for it. Write for new catalogue and full particulars.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

Don't forget the dust bath.

Always keep a sharp look out for lice and especially the spider louse or red mites. These EAT CHICKENS at night and may be seen in red clusters in cracks and crevices around the roosts during the day. Crude oil or common lamp oil will fix 'em. May have to use it more than once.

We say it often, yet find some of our up-to-date people who have not given their hens a bit of crushed oyster shells this summer. You will get more eggs if you do. Grit and charcoal should always be before them, too.

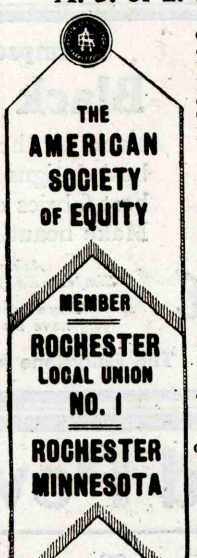
Speaking of thoroughbred eggs, calls to mind the flock that laid them. Careful breeders know the effect of inbreeding and the value of changing blood frequently. Fall is the time to buy cocks and cockrells or to exchange birds with other reputable breeders. They then get accustomed to their new masters and new surroundings and will produce hardier and healthier chicks than if bought in the spring and have to "get acquainted" during the breeding season. The "Business Exchange" department is just the thing to work out these sales and exchanges.

How about that new hen house that last winter was sworn to be a reality before another winter? Some have it almost finished. Went right at it at odd times and it is nearly done and hasn't taken hardly any time from other work. Some are still waiting. Be careful or you will lose out on those thirty or forty cent eggs next winter. Go right at it now. Lots of time yet before cold weather. If you don't feel able to buy shingles for the roof get tarred paper and let the hends pay for it, and enough to buy shingles, in high priced eggs laid in approval of their new, warm and comfortable uarters. Any of our advertisers of roofing materials will be glad to send you samples free. They will deal fairly with you too or WE WILL DEAL WITH THEM.

Now is the time chickens begin to go on the market quite plentifully. Just watch the price go down. We mean the price you will get for them. The price the consumer has to pay won't go down so fast nor so far. In conversation with the owner of a cold-storage plant a few days ago he told the writer that they put in thousands of dozen of dressed chickens in the fall and kept them as long as they could. The only trouble he said the demand was usually so great at holiday time that they had to let them go so could not keep them till spring or the following summer and get the highest prices. I caught on. Do you? The local dealers take our chickens, as a matter of accommodation (?) at "hog" prices. They dress them and put them into cold storage (no cost for feed and but little for storage) and hold them for the holiday trade. Then out they come by the thousands, literally fill the market and the poor farmer who had been FEEDING his chicks in hopes to get a better price 'long about Christmas, finds a worse market than in September or October and wonders were so many fowls are raised. Never mind, keep up good courage, do your duty now to help along the plan of the A. S. of E. and controlled marketing and it won't be long before farmers will have warehouses with stold storage facilities. Then we'll keep chickens WITHOUT FEEDING till the market suits us. We'll keep eggs, also and butter, fruit and vegetables and like enough, unless the buyers play fair, we'll hold our own cheese. It's a mighty big tribute to pay the gentlemen who style themselves "business men"—4 cents or more a pound on cheese—but we pay it just the same. Our cheese don't average us 12 cents a pound, but the average cost to the consumer is 16 cents. Let's boom the farmers' warehousing and cold storage end of our business system.

A word more, being a farmer myself, I didn't know how long "picked," they call them "dressed," but I don't; poultry could be kept in cold storage, so I asked and was informed like this—"about five months—they (meaning the dealers) won't let us keep them any longer. We could keep them five years or indefinitely. Why, the temperature of the room we keep them in is kept down to within two or three degrees of zero—winter and summer, steady cold. Everything is frozen as hard as a rock all the time." Eggs are kept just above freezing point.

A. S. of E. Ribbon Badge



FOR PICNICS, SPECIAL MEETINGS, CONVENTIONS, ETC. EVERY MEMBER, OFFICER AND DELEGATE SHOULD WEAR THIS BEAUTIFUL BADGE, SIZE 2x6 IN. It is printed in "gold" on medium dark red, No. 12 silk ribbon and is as neat as "wax." As you will notice it is to be "pinned on" with our regular A. S. of E. button.

The upper lobe displays in bold type, "The American Society of Equity." The lower is not printed only when ordered by a Local Union.

LOCAL UNIONS' SET of badges contains one for each officer, that is, with word PRESIDENT, VICE PRESIDENT, SCRETARY, TREASURER OR DOORKEEPER in place of "member" as shown—FIVE badges with word DELEGATE and as many as required for regular and special members with the word "MEMBER" as shown. In making order extras should be provided for NEW members as it will cost 50c extra, after the first order, to set up, make ready and print just a few.

HELP "THAT NEW PRESS FUND." Every member should have one of these badges. Every Local Union should have a full SET.

The price is low—only 10 CENTS EACH, but there will be some profit and ALL the profit goes into the "Press Fund."

Address The American Society of Equity, Indianapolis, Ind., Badge Dept.

A TELEPHONE IN YOUR HOME SAVES TIME AND MONEY

THIS 80 PAGE RURAL TELEPHONE BOOK FREE

A telephone in the home is an investment—not an expense. It will pay for itself over and over again. In reality it costs you nothing to install a telephone in your own home. Aside from the time and money a telephone will save you — think of the convenience—think of the comfort there must be to know that at any moment you can be in instant communication with any of your neighbors, or that you can call your physician at any hour day or night. Perhaps the time saved will save the life of one that is dear to you. Think of the advantage there is in sending orders or messages to any of your nearby cities. Can you not see what it will mean to you to be in close touch with all market quotations? All those and many more advantages are fully explained in our 80-page Rural Telephone Book which is free for the asking. Write before the supply runs out. This valuable book tells how to organize, secure subscribers, build lines, and install instruments. Advises what to use and where to buy. Shows cost per mile. Contains franchises, by-laws, rules, code of signals, contracts, cuts of telephones, switchboards, tools, supplies and wiring diagrams. Teaches how to remedy telephone troubles. Largest and most complete book on rural telephones and lines ever published. Valuable and instructive. Worth writing for. Write while your mind is on it.

UP-TO-DATE

Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

When you see a farm home where the back yards to both house and barn are neat, orderly and well kept, you will usually find a farmer who is making a success of farming, and the farm home a happy one.

Have you put your cellar in good shape for winter? Now is the time to look after this matter. See that it is attended to, so your writer's provisions will be safe and sound. We have seen some farmers carry out basket after basketful of spoiled provisions—spoiled because of neglect in storing. Provisions are worth money in late winter and early spring, so it pays to do things right.

Don't fail to put up plenty of fruit, and use it freely during the winter. I have long noticed that in families where a liberal supply of canned and dried fruits were put away in summer there were few doctor bills in winter.

This is the month for the county fair. Let the children go, and go with them. It will do you all good.

Many a farmer's daughter looks enviously at the stylish clothing and mincing walk of the "society lady" in town. But she little knows what a world of happiness many other farmer's girls have given up to become "society ladies." The farm home is a much better place to cultivate a kindly feeling to fellow creatures, and to enjoy the gifts of God than is the streets of a city, and many a "society lady" will tell you so. Make the farm home bright, cheery, and fill it with contentment.

Every girl appreciates a good mirror, and it is right that she should. Personal appearance counts for much with girls, and a good mirror is not a sign of vanity—not at all. And, by the way, an excellent way to polish a mirror is to rub the glass with a ball of soft paper moistened with alcohol, and then with a duster, on which a little whiting has been sprinkled, finally polishing with clean paper. This treatment will make the glass beautifully bright, and enable you to "see yourself as others see you."

Reliable Heart Cure

Alice A. Wetmore, Box 67, Norwich, Conn., says if any sufferer from Heart Disease will write her, she will, without charge, direct them to the perfect cure she used.

Have You Ordered Your Third Power Book?

Read Carefully Every Word

THE THIRD POWER book is truly a book of revalation to farmers and all people interested in Agriculture.

¶ It shows them their true condition and teaches them how to secure certainty of results, and better, if not ideal, conditions on everp American farm.

¶ Everybody wants good conditions and certainty to prevail on the farmers, so farmers may be contented and prosperous, when every business in the country will prosper.

¶ Farmers, you are seeking for the truth, yet you believe what is told you by designing or uninformed people who don't want present conditions to change. You want light to show you the way in the future but you look back to your past failures', you want wisdom and leaders te direct you but you are prone to believe false doctrines and follow false leaders; you yearn for relief from the uncertainty and drudgery of farming but you look to others for relief that must come through yourself; you want a solid foundation to stand upon, but you refuse to put your feet down on the solid rock of your own dependence.

¶ You hesitate to organize and systemize your business because it will cost a trifle, yet you know every other class has organized and you should know that for every dime that it would cost to build your own machine of co-operation, you are contributing dollars, and making Multi-Millionairs all over the land.

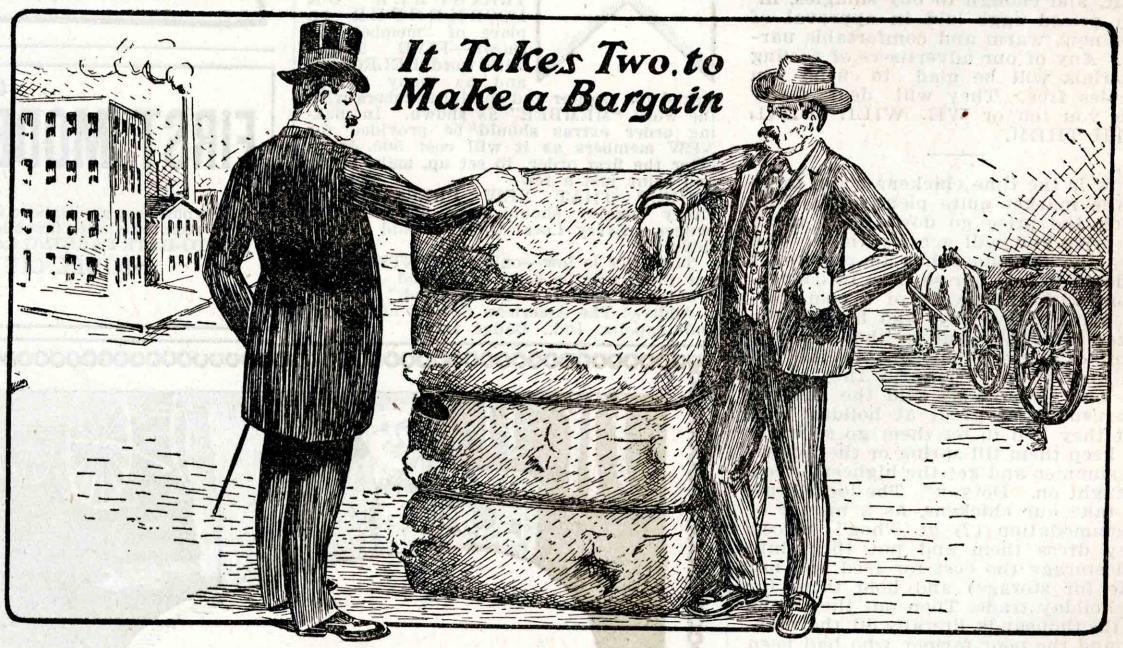
¶ Your doubts, your suspicions, and I will say, often times your ignorance, have prevented you from protecting yourself, and left you an easy prey to other classes who produce nothing but who grow immensely wealthy off of the sweat of your brow.

¶ THE THIRD POWER book teaches the truth; it creates new, minds in in farmers; it is the guiding lamp for farmers; it will lead them to success; it teaches the true doctrine; it teaches how to organize and co-operate; it solves all farmers problems; it is bringing farmers to the front; it explains THE THIRD POWER—the farmer's power—the greatest power in the world.

¶ This is the most valuable book ever written for farmers and should be read by every person in every country regardless of business or condition.

Read this book and you will see possibilities in farming, and in life on the farms, that never entered into your imagination before, let alone be so close to realization.

J. A. Everitt



Specimen illustration from The Third Power Book

25 cts.—The Third Power Book contains 320 pages, is bound in handsome cloth. It is a $1.00 book at any book store and 10c extra for Postage. But you can get a copy now for

25 CENTS Postpaid

$6.00 FREE—We mean just what we say. To each person who sends **25 cents** and the Coupon below for a Third Power book we will also send a bond worth $6.00 in cash—see below. This offer and the extremely low price of **25 cents** we maketo educate the people.

HAY-FEVER AND ASTHMA CAN BE CURED

The Kola Plant

The African KOLA PLANT is Nature's Positive Cure for HAY FEVER and ASTHMA. Since its recent discovery this remarkable botanical product has come into universal use in the Hospitals of Europe and America as an unfailing specific.

Mr. W. H. KELLEY, 317 48th St., Newport News, Va., writes Jan. 23d, was a helpless invalid and was cured of Hay-Fever and Asthma, by Himalya after 15 years' suffering. Mrs. J. E. NORDYKE, of Hill City, Kan., writes Jan. 25th, had Hay-Fever and Asthma for ten years and could get no relief until cured by Himalya. Mr. D. L. CLOSSEN, 126 Morris St., Philadelphia, writes Jan. 16th, Doctors did me no good but Himalya cured me. Mr W. F. CAMPBELL, Sanbornville, N. H., also writes Feb. 6th, that Himalya cured his son, REV. FREDERICK F. WYATT, the noted Evangelist of Abilene, Texas, writes April 15th, 1905, I never lose an opportunity to recommend Himalya as it cured me of Hay-Fever and Asthma and have never had any return of the disease.

Hundreds of others send similar testimony proving Himalya a truly wonderful remedy. As the Kola Plant is a specific constitutional cure for the disease, Hay-Fever sufferers should not fail to take advantage of this opportunity to secure a remedy which will positively cure them. To prove the power of this new botanical discovery, if you suffer from Hay-Fever or Asthma, we will send you one trial case by mail entirely free. **It costs you absolutely nothing.** Write today to the Kola Importing Co., No. 1164 Broadway, New York.

BROOKS' SURE CURE FOR RUPTURE

Brooks' Appliance. New discovery. Wonderful. No obnoxious springs or pads. Automatic Air Cushions. **Binds and draws the broken parts together as you would a broken limb.** No salves. No lymphol. No lies. Durable, cheap. Pat. Sept. 10, '01.

SENT ON TRIAL.

CATALOGUE FREE

BROOKS APPLIANCE CO., Box 199 MARSHALL, MICH.

RUPTURE

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated upon. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write today. **Capt. W. A. Collings, Box 1012, Watertown, N. Y.**

Warts Removed. No pain, no burning, no cutting, no trouble. You have the remedy in your house. A common vegetable used raw. Nothing added. I will tell you how to use it for 25c. I have absolutely nothing to sell but this information. J. B. Fentony, Indianapolis, Ind.

A Zobo Band

Composed of boys will afford them more harmless amusement than anything else, no matter what the cost. The Zobo is an inexpensive musical instrument. It can be played by anyone without a minutes practice or instruction. Costly instruments can be used only by experts after years of practice. Old and young find entertainment and enjoyment with a Zobo. It furnishes good dance music; can be used in street parades or any place where music is desired.

BOYS Get up a Zobo Band. Tax each member a dime and you can buy your instruments. Nothing better than a Zobo. Made of strong material and not liable to injury. 6 inches long. Full printed instructions with each Zobe. Get a dozen and sell them to your friends. **Price** 10c each. $1.00 per dozen postpaid. 100 not prepaid $5.00.

S. E. FERRY, 842—844 Capitol Ave., N. Indianapolis, Indiana

9 TOOLS IN 1

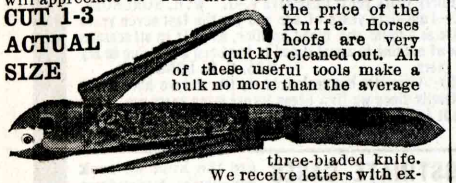
One of the most useful tools of recent invention is the

C. & F. WONDER KNIFE

—9 tools in 1. It successfully combines in one article nine perfect tools, all of which are used every day by the average man and boy. In reality it puts nearly all the tools of a work bench in your pocket. It is so handy that no one will be without after using once.

The knife-blade is of the finest steel and made to stand bad usage. The other tools are: Wire Cutter, that will cut barbed wire; Wire Pliers useful always; Swedging Awl; Leather Punch and Gimlet, for Harness mending and other jobs; Screw Driver, that is always handy; Alligator Wrench and Hoof Hook. The latter is something new and every horse-owner will appreciate it. This alone is worth more than the price of the Knife. Horses hoofs are very quickly cleaned out. All of these useful tools make a bulk no more than the average three-bladed knife.

CUT 1-3 ACTUAL SIZE



We receive letters with expressions like these: "Greatest little article I ever saw," "Never saw its equal," "All my friends want one," "Don't see how I ever got along without it." You will agree when you see the knife.

"C. & F. Wonder Knife received. It is certainly a wonder. I want to buy them by the dozen."—
J. Barnhart, Wilmington, O.

The regular price is $1.50 each. But we want to introduce them and make an offer of only $1.25 each. With each order we send wholesale price list. Agents will find the C. & F. Wonder Knife a wonderfully fast seller. No free samples. Send $1.25 for a sample and get the attractive agents price.

C. & F. Wonder Knives—9 tools in 1—are made to sell on their merits. Made to gain friends and keep them. One sold sells many others.

COONER & FORTUNE CO., Dep. A, Indianapolis, Ind

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

Another Step Forward Will Bring Success

The tobacco growers are becoming business men. They are learning the business end of the disposition of tobacco. They are perfecting and building a gigantic business organization for disposing of their tobacco for profitable prices only. It is nearly complete, and the assurance of good prices is now within their grasp.

The tobacco grower has learned that he has been robbed of the profits justly belonging to him. He knows that the buyers can afford to give good prices and the manufacturers still make good profits. He knows that the prices paid by the consumers are sufficient to allow a fair price to the producer. This knowledge has made him think and act, until more than half of the tobacco growers belong to organizations that propose to control the marketing and compel a fair price.

Fully eighty per cent. of the growers of dark tobacco are organized and ready to act as a unit. The balance will act with them when they fully comprehend the situation.

The action to be taken by the Owensboro convention will be the final step to bring success. The Dark Tobacco Growers' Protective Association of Kentucky and Tennessee, the Dark Tobacco Growers' Association of Virginia, the Interstate Tobacco Growers' Association of Virginia and North Carolina, the National Tobacco Growers' Branch of the A. S. of E., having thousands of members in all tobacco growing states, and the Wisconsin tobacco growers' are all to have their delegates at this convention; their leading business men will be there, and the co-operation of all for the common welfare is practically assurred. There can be but one result —complete victory for the growers.

Upon each officer and member of the society, and upon each reader of this paper rests a share of responsibility and a duty, which if carried out as it can be and should be, will make the work easier and success the more certain. Turn to the Tobacco Department of the August 1th issue and read it again carefully. Then prepare for immediate action.

A county meeting should be held in each county during the first week in October, or earlier. In preparing for this meeting local union officers, or earnest members should visit personally the homes of each member and non-member. Urge an attendance at the county meeting, or in case where a county meeting is impossible, call a local meeting. Take with you a bundle of Up-to-Date Farming of September 15th, containing the Tobacco Report Blank, and urge the farmers to fill them and send them in. Where county meetings will be held, these reports should be taken to the meeting and given to the secretary, who will compile them, and forward a copy to headquarters. give a copy to the delegates to Owensboro, and keep a copy for reference.

It is impossible for any tobacco growers to do too much for the success of the movement, though there is some danger in not doing enough. Therefore, see to it, friends, that a complete report of the tobacco crop of your country is made and sent to headquarters. Do not depend on others, for they are depending on you. We must depend on you. We cannot do the work ourselves. Make your own report as soon as you get the blank. See your neighbors and get them to do the same. Call the local and county meetings and tell what they are for. Send your best men to Owensboro to help make plans for holding and marketing your future crops. Will you do it? We believe you will.

TENNESSEE TOBACCO GROWERS ACTIVE

Will be Well Represented by Capable Men at Owensboro Convention

The Tennessee planters have accomplished more in the way of controlled marketing and advancing prices on tobacco than have the planters of other states, and are very hopeful and enthusiastic. They will be at Owensboro in full force to tell what they have done and how they did it, and to prepare to do still more. Hon. D. T. Hamill, one of the A. S. of E. leaders in the Clarksville section, writes us as follows

"We will have a good delegation from this section. Col. Young, H. M. Dunlop, Hon. C. P. Warfield, and others, will be there. We are in dead earnest, and have got "strings" on the tobacco situation here. Men who have had years of experience in the tobacco trade, and who have handled millions of dollars worth of tobacco are with us, heart and soul. We want to do great things at Owensboro, and as everything is moving along just right, we are in the very best shape to do it."

Letter from Hon C H Fort

The President of the Dark Tobacco Growers' Protective Association of Tennessee, and a leader in the work, writes:

"I fully appreciate your kind invitation to be with you in Owensboro, Ky., October 18, 19 and 20, and will take pleasure in attending. Our association will, at the proper time, take steps to send delegates to the convention. We are glad to co-operate with you in this good cause and put to flight the trusts which are the common enemy of all tobacco growers. Wishing you God speed in your labors, I am, yours truly,

CHAS. H. FORT.

Congressman Stanley of Kentucky to Make an Address

Hon. A. O. Stanley, who is an earnest and willing worker in the cause of the co-operative tobacco growers, will deliver an address the last day of the convention. He writes encouragingly, as follows:

"I will certainly attend this convention on October 20th. I am most heartily and enthusiastically in favor of this movement, and am convinced if the planters act in unison, their efforts will be crowned with signal success."

A. O. STANLEY.

Additional Delegates to Owensboro

Henderson County, Ky., J. T. Wilson, Wilson Station; Muhlenberg County, Ky., Rev. L. J. Stirsman, J. B. Kittinger, J. H. Burney, Rev. J. C. Gary, E. L. Davenport; Christian County, Ky., R. C. Hopson, Hawkins.

It is not absolutely necessary to report the delegates, but we would like to have them. Report them if convenient, but come to the convention, report or no report.

Virginia Dark Tobacco Association Adopts A. S. of E. Plan

The annual meeting of the Dark Tobacco Growers' Association of Virginia, was held at Charlotte, C. H., August 1 and 2, and after arranging for another state meeting to be held in the same city November 8, 1905, they passed the following recommendations

"We recommend that this organization appoint a committee of three for each magisterial district in every county growing dark tobacco, whose duty it shall be to canvass their respective districts thoroughly, visiting every tobacco grower, and urging them to join the society without delay. Also to arrange for county meetings to be held not later than October 14, and to report at these meetings the work that has been done.

"We recommend that at each of these county meetings a general report be prepared for the state meeting to be held in Charlotte, C. H., November 8, 1905.

"We further recommend that all tobacco shall be prized, and sold by sample, according to the detailed plans to be arranged at the annual convention of the National Tobacco Growers' Association, branch of the A. S. of E., to be held in Owensboro, Ky., beginning October 10.

"We request the publication of these recommendations in Up-to-Date Farming, the official paper of the American Society of Equity."

Signed: LEE W. MORTON, Sec'y.

The above is along the right line, and has a business ring. We would like to add the suggestion that the county meetings above referred to be held as early in October as possible, and that a copy of the reports be sent to the headquarters of the A. S. of E.; also, further, if delegates to Owensboro have not been previously appointed, these meetings will be the time and place to appoint them. We hope this association will use the Tobacco Report Blanks to be printed in the next issue and send us complete reports from each county. As the committeemen visit the farms, they can secure the crop report of each farmer, which will include the approximate number of pounds of each class and grade of his tobacco, and what he considers a fair price for it. Do this, gentlemen, for such information will assist the organiaztion greatly. Bear in mind that the convention is to prepare a scale of prices, and that no tobacco should be sold at a lower price. These prices must be made fair to both grower and buyer, so that no unnecessary delay in disposing of the crop will occur. Hence it is important that we know where the tobacco is, its class, grade and uality.

ABOUT THE SOUTH

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about

Southern Farm Lands, Mississippi Valley Cotton Lands, Truck Farming, Fruit Growing, Stock Raising, Dairying, Grasses and Forage, Soils, Market Facilities and Southern Immigration

along the lines of the Illinois Central and Yazoo & Mississippi Valley railroads, in the States of Kentucky, Tennesee, Mississippi and Louisiana; including the famous

YAZOO VALLEY

of Mississippi.

Send for a free copy to J. F. MERRY, General Immigration Agent, I. C. R. R., Manchester, Iowa.

Information concerning rates and train service to the South via the Illinois Central can be had of agents of connecting lines, or by addressing

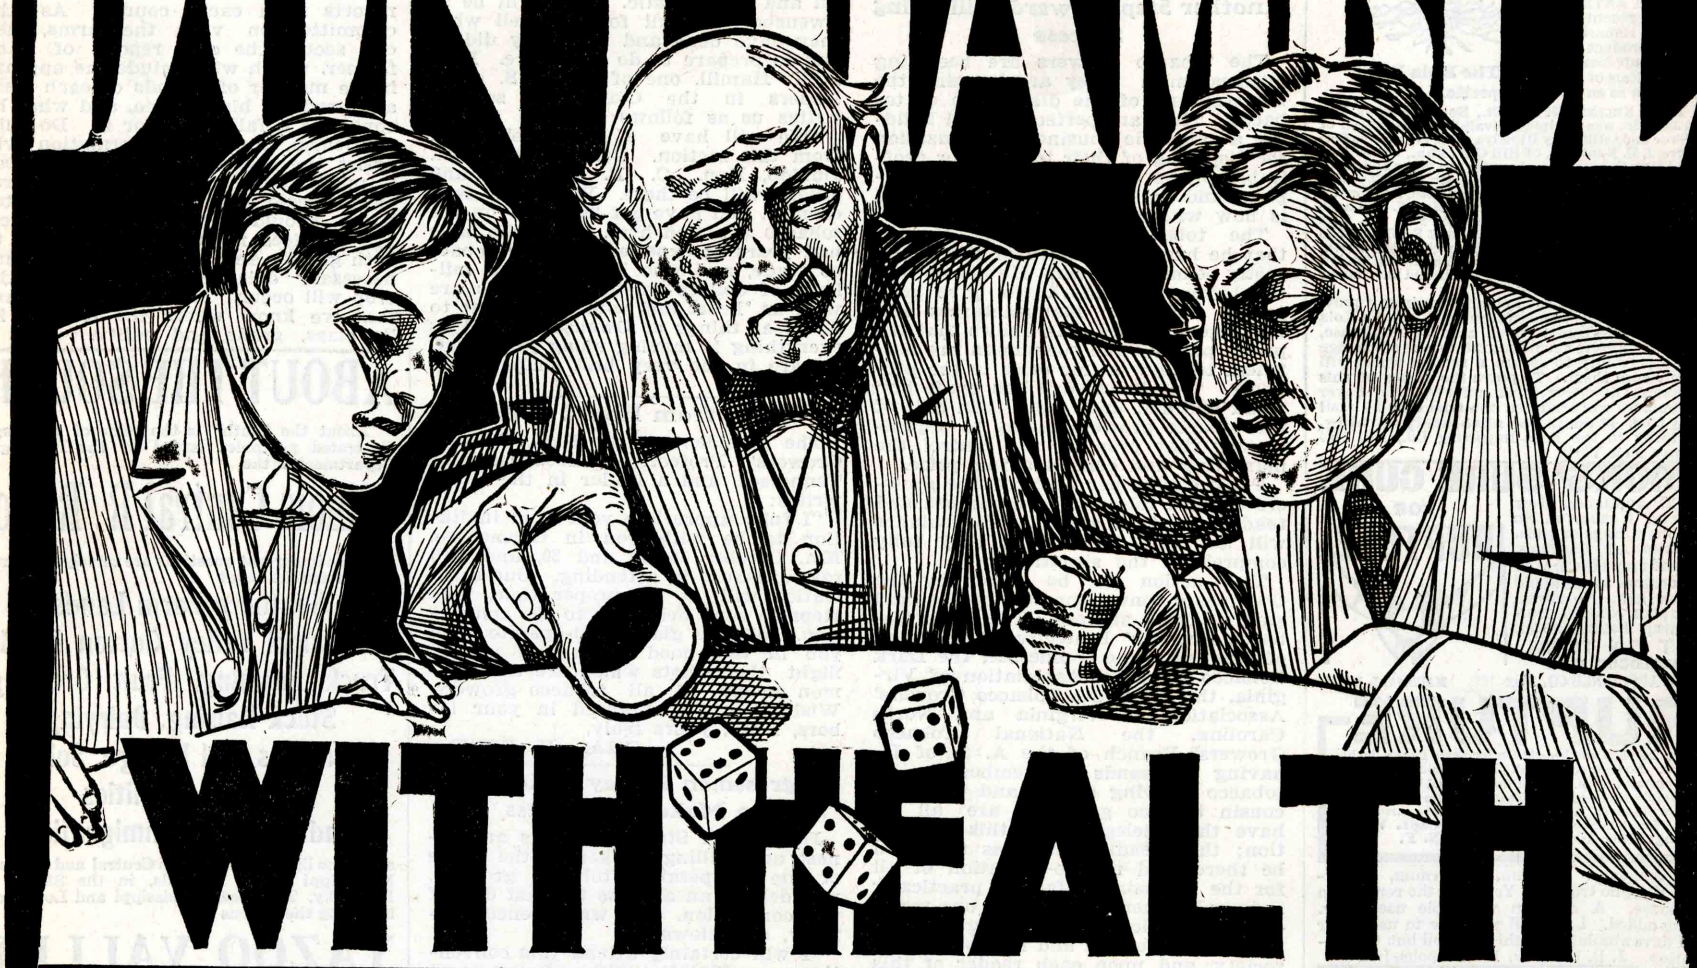
You Want to Make Money Rapidly

All our millionaires made money rapidly. They invested their money in stocks which grew in value while they were paying handsome dividends. If a farm increases in value while it is paying a big profit, the owner makes money, but shares in growing companies often increase one to one hundred times their original worth in a single year. We have a full line of Bank and Railroad, Mining, Manufacturing and other Stocks and Bonds to offer. Send for particulars.

We also sell real estate—no difference where located. List your farm and other property with us.

FOUNDERS TRUSTEE CO. (Inc.)
403 to 406 State Life Bldg., Indianapolis, Ind.

DON'T GAMBLE WITH HEALTH



IF YOU ARE SICK Acknowledge it to yourself! Admit that you are ailing, that you need treatment, that nature needs help to put you natural, and send for that which will set you right. Do it immediately! Don't delay! Don't put it off! Don't juggle with the days and weeks and months, trusting to luck to bring about the change, the health you crave. Don't gamble with your health, your vitality, your life! Don't hope your disease will vanish some night as if by magic; don't expect to awake some fine morning and find yourself sound and well.

Don't trust to vile, laboratory-drug-shop compounds of alcohol and sarsaparilla or neat, fancy boxes of senna and straw to perform the miracle needed to set you right. Don't expect to be cured unless you use the medicine that holds the cure in its grasp, the medicine that is not a drug, not a compound, not a laboratory pet or theory—the medicine from THE EARTH'S VEINS—the medicine for YOUR VEINS.

The man with the dice throws and throws and throws again, always hoping, always expectant, trusting to chance, to luck or whatever it is that guides the falling cubes, to make them form THE WINNING COMBINATION he seeks. Have you, distressed, distracted disheartened, tried and tried again, medicine after medicine, gambling always with health, throwing money after money, trusting to chance or luck to make you at last hit upon the right medicine, THE WINNING COMBINATION, to unlock the doors of health for you?

Don't take any more chances! Don't risk any more money! Don't put up another cent! Iron, Sulphur and Magnesium, combined by nature in the bowels of the earth, nature's own laboratory, are the WINNING COMBINATION upon which you absolutely take no chance, run absolutely no risk, neither with your health, your money nor your time. Vitæ-Ore cannot be used by any person without actual benefit, cannot be taken into any human organism without good result. Its action is as sure, as certain, as all of nature's laws, as positive as that night follows day, as the summer the spring, or that plant life must spring from a fertile seed. Vitæ-Ore plants the seed of health in the system, gives the leaven needed for the loaf, and nature does the rest. It is the right aid at the right time, nature's own aid for nature's work.

Send for a package on thirty days' trial. It will not cost you a cent if it does not benefit you. You are to be the judge. One package will last thirty days' time—one package will prove all this to you. It will be sent you immediately on your request, without quibble or question, if you will promise to use it and pay if benefited. Use means benefit and benefit means our pay. Read our special offer.

YOU ARE TO BE THE JUDGE

WE WILL SEND TO ALL Readers of this paper **a full-sized $1.00 package of VITÆ-ORE, by mail, postpaid,** sufficient for one month's treatment, to be paid for within thirty days' time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. If not, no money is wanted! **We take all the risk, you have nothing to lose.** If it does not benefit you, you pay us nothing. We ask no references, we want no security; just your promise to use it and pay if it helps you. Just say that you need it, that you want it and it will be sent to you, as it has been sent to hundreds of other readers of this paper. We want you to have it, and gladly send it, taking your word for the results obtained. There is nothing to pay, neither now nor later, if it does not help you. We give you thirty days' time to try the medicine, thirty days to see the results before you pay us one cent, and you do not pay the one cent unless you do see the results. **You are to be the judge!** We know Vitae-Ore and are willing to take the risk. We have done so in thousands of cases and are not sorry. Your case, no matter how hard or obstinate it may be, will be no exception.

Vitae-Ore in its original condition is a natural, hard, adamantine, rock-like substance—mineral—ORE—mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime and is then of medicinal value. It contains free iron, free sulphur and free magnesium, three properties which are most essential for the retention of health in the human system, and one package (one ounce) of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water found on the globe, drank fresh at the springs. The mineral properties which give to the waters of the world's noted healing and mineral springs their curative virtue come from the rock or MINERAL ORE through which the water is filtered on its way to its outlet, only a very small proportion of the medicinal power in the ORE being thus assimilated with or absorbed by the liquid stream. The rock contains the much desired medicine, the water serves as the conveyance to carry but a small part of its properties to the outer world. Vitae-Ore is a discovery of this medicine-bearing rock, a geological discovery, to which nothing is added and from which nothing is taken. It is the marvel of the century for curing disease, as thousands testify, and as no one will deny after using.

Vitæ-Ore will do the same for you as it has done for hundreds of readers of this paper if you will give it a trial. Send for a $1.00 package at our risk. You have nothing to lose but the stamp to answer this advertisement. We want no one's money whom Vitæ-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention this paper, so that we may know that you are entitled to this liberal offer.

A Certain and Never-Failing Cure for

Rheumatism, Lumbago
Bright's Disease and Dropsy, Diabetes
LaGrippe, Blood Poisoning, Piles, Sores, Ulcers
Malarial Fevers
Nervous Prostration
Liver, Kidney and Bladder Troubles
Catarrh of Any Part
Female Complaints
Stomach & Bowel Disorders, General Debility

Women Are you afflicted with any of the innumerable diseases which are so common and prevalent among your sex? We cannot mention them in this space, but let us assure you that **Vitæ-Ore** is the true "Balm of Gilead" to every sufferer. The many diseased conditions which unfit women for the full enjoyment of life and its duties may be at once alleviated and permanently eradicated by the proper use of this wonderful remedy. Send for a package on thirty days' trial!

Men Is debility taking the place of the vim and fire of youth? In these conditions it proves to be a powerful tonic, a reviver, a vitalizer, a restorer, a force-builder. It is not a temporary stimulant, but builds up from the bottom by putting each organ, tissue, muscle and ligament in a healthy, normal, natural condition. Send for it today!

Old People For the aged there is nothing better than **Vitae-Ore.** The loss of appetite and general break-down of the digestive organs is delayed, the blood purified and enriched, the vital organs are strengthened, and a peaceful old age may be enjoyed by the use of this great natural remedy.

NOT NEW, BUT TRUE

The claims we make for Vitae-Ore **are not new,** but they are **all true.** They are the same identical claims we made **over a quarter century ago,** when this remarkable healing and curing Ore was first offered the public, the same claims **we proved then,** the same claims **we prove today,** the same claims that were **true** then, the same claims that are true **today.** Vitae-Ore did its **work** then; it will do its work now; do it **surely, speedily,** perfectly and permanently. It is not new, not untried, but **true, tried and proven,** as no other **living remedy** has been proven.

Thousands have used it for ten, fifteen or twenty years, wanting no other remedy, **needing no other remedy,** no doctor, no drug store. Thousands keep it always in the house, as you keep salt, flour and sugar. They used it, **were cured,** grew to know it, to value it, and keep it near at hand, for use should it be needed.

If you are sick, **we want you to know it,** to use it, to get cured by it, to value it, to keep it in the house as these thousands do. No matter what your ailment, **no matter what your age,** your circumstances or where you are located, no matter what your sex, creed or politics may be, you need not risk a cent to try it, to test it, to prove all this for yourself, to prove it all true, as thousands have done. Read the testimony and send for it today. You don't gamble, you take no chances, you run no risk.

STERLING, ILL.—I have used Vitae-Ore in my family for eight years, during which time it has saved me many doctors' bills. It cured me of Rheumatism eight years ago and the cure is permanent, as I have never had any further trouble. My daughter cured herself of Diphtheria, using nothing but Vitae-Ore. I shall always be a friend to this remedy and keep it in the house at all times. MRS. R. C. THOMPSON, 403 8th Ave.

CALLAO, MO.—I have through my health done much to show people here what a great remedy Vitae-Ore is. They know that I have used no other remedy for ten years and now have better health and have had ever since using Vitae-Ore than for twenty years before. I find it the best treatment for all diseases and need none other in the house. MRS. J. I. LEFFLER.

SYLVAN, WIS.—Vitae-Ore has been in my house for years. I used to have many ailments like other people, but since I began using Vitae-Ore I am as healthy as a child. Although I am now 54 years of age, I have not a stiff joint or an ailment of any kind. MRS. M. E. TWADDLE.

HERMANSVILLE, MICH.—I had been pronounced incurable of Bright's Disease by three eminent physicians, when I commenced using Vitae-Ore. I weighed about 100 pounds, but in three months I weighed 145 pounds and was well and hearty. Have not suffered with my kidneys since, and it is twelve years since I first used V.-O. I am now fifty-six years old, and believe I am good for thirty years yet if I can have V.-O. W. H. NORCROSS.

BARTOW, FLA.—I am sixty years of age and for the last seven years I have taken Vitae-Ore as a tonic and blood purifier, using it in all seasons of the year. I know of nothing to equal it and it has been a blessing in my household for many years. MRS. C. R. LONGMIRE.

BRITTAIN, OHIO—Vitae-Ore has prolonged my life and we have never had a doctor in our family since we first began its use many years ago. I can never cease praising it and pray that its discoverer may be blessed in his undertakings. MRS. HENRY FUNK.

CHRONIC, OBSTINATE CASES are the kind we seek especially. **Vitæ-Ore** has cured more chronic, obstinate, pronounced incurable cases than any other known medicine and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure. If yours is such a case, do not doubt, do not fear, do not hesitate, but **send for it today!** It matters not what you think, what the doctors think or what they would make you think. It matters not what efforts you have already made, what failures you have already been through. A trial will tell its own plain story, a story that means comfort, health and happiness for you.

THEO. NOEL CO. UP-TO-DATE DEPT. Vitæ-Ore Bldg. **CHICAGO, ILL.**

UP-TO-DATE FARMING

Our Motto, FARMERS TO THE FRONT. *Our Object*, EQUITABLE PRICES FOR ALL PRODUCTS. *Our Plan*, CONTROLLED MARKETING

INDIANAPOLIS, INDIANA, SEPTEMBER 15, 1905

IN view of the Annual Meeting of the America. Society of Equity that is approaching it is proper to have in mind that this Society is broad enough in its plans to serve all sections and to comprise all crops. The American Society of Equity is not for the North alone, nor for the South, or East, or West. Under its banner all farmers, no matter where located or what they produce, can unite and co-operate to support each other in their demands for equity in all their dealings with other classes.

Also, thinking people will see that the interests of all sections of our country are mutual, and the needs of all are for steady, profitable prices on whatever they produce for market. When the North is prosperous it will consume more cotton, fruit and truck grown in the South. If the South gets good prices for cotton, etc., it will buy more grain and meat from the North. If the East gets good prices for dairy and its other products it can better afford to pay good prices to the West for feed and food. Good prices for the finished product—a profit above the raw material and cost of production—is vastly more important than buying the raw material at an unfairly low price.

No North, no South, no East, no West; no State bounds; but one country, one society, one head to the agricultural business of America, should be the rally call to attend the Anuual Meeting of The American Society of Equity.

NOW IS THE TIME TO ACT

This will be the first time in the history of American Agriculture that farmers have had to get together and discuss ways and means for solving all their problems FROM A CORRECT STANDPOINT.

Don't you see that the minds that are directing your Society are clear on all matters affecting your business? For evidence, consider the couple thousand delegates at the Chicago Reciprocity Conference, yet not one of them had any clear idea how our foreign markets were to be maintained or enlarged. But read the A. S. of E. plan in Sept. 1st and 15th issues of this paper, and more to folliw. Don't you begin to get light on this momentous problem?

You must quit following blin d or dishonest leaders. You must think for yourselves. But above all, you must meet in conventions and learn, and help to teach your brother farmers, these great truths which may now be to you as an open book.

You must come to the great Annual Meeting. The first one where your problems will have the light of truth and commonsense thrown on them. Farmers' Congresses, Reciprocity Conventions and other great gatherings have done very little good because they looked away and beyond the base of your troubles. At this meeting, however, we will strike at their roots and then they will soon be conquered.

After this meeting we would like to see a great meeting held in each state so farmers everywhere, and of every class, can learn the one way—the true way—to organize. co-operate and solve all their problems.

Let nothing but severe sickness keep you from the ANNUAL MEETING. It will do you much good and the good will be such as will pay large dividends each year for all future time.

Will you come?

Dare you refuse to come?

Converts in good standing, backsliders or non-members—all are invited in the United States and Canada.

Let us make this meeting an outpouring that will be fairly representative of the great and important indus-

(Continued on Page 10.)

FOR THE CO-OPERATING FARMERS OF AMERICA

THAT NEW PRESS
TO PROCLAIM PROFITABLE PRICES

DESCRITPION—That New Press. "The Equity Press." To Proclaim Profitable Prices, will be similar to the one illustrated herewith, which was built by The Goss Printing Press Co., of Chicago, Ill.

"The New Press" will weigh about 80,000 pounds, 40 tons, and in size, will approximate 22 feet in length, 7 feet in width and 12 feet in height. It will contain about 10,000 separate parts each constructed by expert mechanics.

In operation it will print from large rolls of paper each weighing about 1000 pounds and at a speed of 24,000 complete papers, ready for mailing, every hour. The cover may be printed on heavier paper and in different colored inks if desired without any loss of speed. The following miscellaneous fact will interest our readers:

The paper for this September 15th issue if spread out over a level tract of land would cover thirty acres. Its weight is 8 tons or 16,000 pounds. Over three hundred pounds of ink are required for each issue. It costs nearly two hundred dollars for postage to mail one edition, four hundred dollars each month. The rolls of paper if unwound and laid end to end would extend a distance of over ten miles. A fifty horsepower electric motor will be required to run the press. The four rolls of paper shown on the left will produce about 24,000 complete papers, and they will be delivered at the right of the press as shown at the rate of over six a second, 400 per minute, 24,000 per hour, 500,000 per day (full time) or our MILLION edition in 48 hours.

Such are the possibilities of "That New Press" that we must have to proclaim Profitable Prices and to bring Farmers to the Front.

Martha Spencer

Joseph Mauler
Pleasanton. Neb.

Dear Sir:
Enclosed find $2 in Paper Money for the New Press.
Joseph Mauler,
Pleasanton, Neb.

An die deutschen Leser.

Es offenbart sich ein großes Verlangen für die Zeitschrift „Landbau für unsere Zeit" (Up-to-Date Farming) in der deutschen Sprache.

Mit unsern jetzigen beschränkten Einrichtungen war es bis jetzt unmöglich diesem Verlangen nachzukommen, aber mit der neuen Presse können wir nun eine deutsche Ausgabe drucken und zugleich eine deutsche Uebersetzung des großen Werkes des Präsidenten Everitt, „die dritte Kraft" (The Third Power) liefern, so daß unsere deutschen Mitglieder und Viele die noch nicht Mitglieder sind diese Arbeiten studiren können in ihrer eigenen Sprache, besonders die Lektionen über "controllirenden Handel" und „Profitablen Preisen."

Bitte stehen Sie uns bei dieses gute Werk zu befördern wie Bruder Mauler es that.

Wenn unsere deutschen Freunde ihren Theil jetzt thun, wird es nicht lange sein bis sie die einzige Zeitung in ihrer Sprache lesen können, die hier im Lande das Recht des Landmannes (Farmer) mahnt seinen eigenen Werth den Farm-Produkten zu geben.

Dieses ist der Weg wie man eine deutsche Ausgabe der Zeitschrift schaffen kann und auf diese Weise bringen wir die deutschen Farmer an die Front.

Jedermann sollte mithelfen.

Der amerikanische Verein der Gerechtigkeit.

What We Say

We ought to be printing 300,000 copies weekly of Up-to-Date Farming instead of 150,000 copies semi-monthly. But, as you know, we are unable to get out our present edition as it should be done with our present facilities. Also, we ought to be printing 20,000 copies in the German language.

We are planning for improvements that will allow us to do all these things, and more. It is our intention to make Up-to-Date Farming, in every respect, the VERY BEST FARM PAPER PUBLISHED. It should be printed in larger type, on better paper, and it shou'd contain many illustrations and have handsomely illustrated cover, printed in colors. To open these covers should be like opening the covers of a picnic dinner basket.

First will come the EDITORIAL DEPARTMENT, giving each week a general review of crops, prices and the various problems that confront the farmer, as seen from headquarters and as reflected from our daily reports; advice about marketing; extension of markets in foreign countries, etc.; exposure of frauds, illegal practices, manipulations by political and commercial tricksters to filch from the farmers their hard-earned wealth; teaching and explaining the work of the society and true co-operation of the farmers to secure the greatest progress and prosperity possible.

Next will come the LOCAL UNION DEPARTMENT, telling you what local unions are doing, of the successes they have made in business, of the plans they have found beneficial to their community and of innumerable other Local Union items of benefit and interest to every member.

Not less valuable and interesting will be the BUSINESS DEPARTMENT, giving you the business transactions of the society, the statements of the Board of Directors, the reports of the Secretary, committee reports, price bulletins, market reports, etc., etc. Just what you need to be fully informed and up-to-date, just what will prevent any one from taking any unfair advantage over you.

Besides these society and business departments for teaching controlled marketing and directing how to carry out the plans of the A. S. of E., will be up-to-date departments on farm work, dairy and live stock, poultry, gardening, fruit, home on the farm, etc., until the time arrives when distinct papers can be printed for these industries.

THE FARMER'S FORUM will be for our readers to express their own ideas and opinions on any subject that interests them. It will be a free-for-all discussion of any topic that pertains to the welfare of the farmers. Questions may be asked and answered. Personal experiences will be welcomed. This feature is one that is always interesting to the readers of any publication, and here it will be invaluable as we are developing almost a new branch of agriculture— the new doctrine of controlled marketing to compel stability of prices for farm products.

CROPS, CONDITIONS and PRICES will bring a weekly summary from all parts of the United States and Canada, where you can easily review them and know the conditions confronting your brother farmers in other sections of the country.

Now wouldn't you like to have such a paper come to your reading table weekly? We are sure that you would. It will pay you. But before it will be possible we must have THAT NEW PRESS. With it and the increased facilities it would give us we could make immediate improvements that would insure the ideal farm paper, and better still, all the good purposes that the A. S. of E. stands for, would soon be accomplished.

We have suggested to you "Ways to Help" get THAT NEW PRESS, and they are ways that you can easily make available. This is YOUR SOCIETY and YOUR PAPER, and YOU can make it all that you desire. A few cents from each will do it. Advance dues should be cheerfully paid by members and advance subscriptions by subscribers. Will you do it? We believe you will.

What They Say

I will enclose one dollar in this letter as extension on my dues. Up-to-Date Farming is the best farm paper that I ever read and the A. S. of E. is exactly what the farmers need to successfully control marketing and compel profitable prices. Everybody help along that new press. It will hurry up all the good things promised.—Albert Fetting, R. R. No. 2, Applegate, Mich.

Enclosed please find $1.00 which credit on my dues as member of A. S. of E. "That New Press" must come.—V. L. Browning, R. R. No. 3, Columbus, Kas.

Herein find $2.00 renewal of subscription, one new subscriber and advance on dues to hurry up "that new press" and get Up-to-Date Farming—the only real farmer's paper—weekly, soon.—Joseph C. Kochert, Lafayette, Ind.

I herewith enclose dollar bill to renew my subscription to "Up-to-Date," also $1.00 for press fund. If farmers ever get what they are entitled to they must "go after it." The A. S. of E. furnishes the plan and "that new press" and 500,000 issues weekly of Up-to-Date Farming will surely bring profitable prices.—John Myrtle, Arkansas City, Kas.

Enclosed find one dollar bill for renewing subscription to Up-to-Date Farming for two years. We must have that new press and 500,000 copies each issue.—J. M. Faber, Kirby, Ohio.

Enclosed find $2.00, one dollar to be applied to renew my subscription and one dollar to the "Press Fund." Farmers, hurry to the front. Up-to-Date shall sound the call. That New Press is needed now. Loose your purse srings, one and all.—Philip Will, R. R. No. 5, Somerset, Pa.

Enclosed find P. O. money order for one dollar for two years' subscription to the one farm paper "with a mission."—W. H. Ganong, R. R. No. 3, Elk Mound, Wis.

Enclosed find check for one dollar to be applied on my subscription. I like your paper very much. Uncle David Dobetter's letters are worth more than the subscription price, while your stand for the farmers and Profitable Prices should insure for you all the help needed.—H. D. Hutson, Mangolia, Miss.

Inclosed find $1.20 "TO HELP BUY THAT NEW PRESS." This is a "self assessed" special dues of 10 cents per member for my family (ten children, wife and myself). We will try and repeat it next quarter if necessary.

If every lover of Equity will "follow suit" you will soon have all the presses you can use.—The——— FAMILY,, Michigan.

[NOTE—Is there a reader of this paper or a member of the A. S. of E. that will withhold their assistance so as to make a second "self assessed special dues" necessary? Especially when renewal of subscription, payment of arrearages or a few quarter's dues paid in advance will do all that is required.—M. W. T.]

Similar letters with remittances of one dollar for renewal of subscription for two years have been received from each of the following:

Mrs. A. C. Bowes, Blanchard, Pa.
Dr. J. S. Dickinson, Trenton, Ky.
Noah Weiser, Delaware, Ohio.
Gottfried Palm, R. R. No. 4, Carlyle, Ill.
Perry Davie, R. R. No. 2, Barryton, Mich.
Oliver H. Perry, Centerville, Mass.
Fred Bachman, Belknap, Ia.
C. E. Hazen, R. R. No. 1, Eau Claire, Wis.
Mervin W. King, Berlin Center, Ohio.
Lizzie Nuek, Paonia, Col.
Julius Folger, S. Frankfort, Mich., R. R. No. 1.

President's Picture

We have in course of preparation a beautifully vignetted tinted half tone reproduction of President Everitt, size 11x14 inches and suitable for farming. As soon as completed we propose to send one of these fine pictures, prepaid, to every Free Will Contributor of twenty-five cents or more to the A. S. of E. Press Fund. This will serve as our acknowledgment of the receipt of your remittance besides being something you will prize very highly. Remember, also, that your name will be listed in the "Roll of Honor" if your contribution is one dollar or over.

Up-to-Date Farming

Representing the Union, or Co-Operating, Farmers of America

PUBLISHED SEMI-MONTHLY
At 940 North Pennsylvania St.

Entered at the Indianapolis Post-Office as Second-Class Matter

Volume VIII — INDIANAPOLIS, SEPTEMBER 15, 1905 — Number 18

UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher

JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50 CENTS A YEAR

Foreign Subscriptions $1.00 a Year

CLUBS. Five subscriptions, on any offer we make may be taken at the cost of four. This applies to five of one offer or it may embrace several offers. To illustrate, five 50 cent offers for $2.00 (40c each) or five $1.00 for $4.00 (80c each).

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

☞ Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly, including **county.** Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

If a mark like this appears on the first page it is to notify you that your subscription or renewal has been received. The publisher thanks you and he hopes you will be delighted with Up-to-Date Farming and take it many years.

Advertising Rates will be quoted on application.

Only Reliable Advertisers are admitted to our columns. We guarantee that they will deal honestly with subscribers. However, should any advertiser in Up-to-Date Farming fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in this paper only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

The Farmer's Union Label must be made the strongest link in the chain of organized farming, as it has long been the strongest link in the chain or organized labor. By the use of the Label an article is recognized as a product of organized labor, and those who use such articles know they are patronizing and sustaining organized effort for improved conditions. Look for the LABEL.

The solution of the Farmers Labor Problems that will come through Profitable Prices means a demand for millions of union laborers

Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, *below which* farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. *If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price.* This is the key to controlled marketing. The world must have your products at *your* price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, 1905 crop per bushel -	**$ 1.00**
Corn, No. 2 Chicago, 1904 crop April 1 to next crop -	**.60**
Oats, No. 2 white, Chicago, 1905 crop per bushel -	**.35**
Barley, good malting, Chicago, 1905 crop -	**.45**
Hay, No. 1 Timothy, Chicago, per ton -	**$12.00**
Tobacco, (Price on the farm or at the market town)	
Virginia, dark, average per cwt. -	**$ 9.00**
" bright, " " -	**12.00**
Kentucky, dark, " " -	**8.00**
" burley, " " -	**12.00**

North Carolina, Tennessee and other States where tobacco is grown can line up on these prices as a basis, being governed by varieties, quality and location.

Beans, No. 1, Hand-picked, Detroit, per bu.	**2.00**
Cotton, New York, per pound -	**.12**
Broom Corn, Chicago, per ton -	**$75.00 to $85.00**
Hogs, " per cwt. -	**6.00 to 6.50**
Cattle, " per cwt. -	**6.00 to 7.50**

Booklet E 37

Wonderful to educate the people; 64 pages and cover. We have 25,000 to give away. All we ask you is 6 cents a dozen to pay postage. Order a lot and distribute them. This is one way for you to do your duty.

Farmers to the front.

That's where they belong.

If farmers will only organize the problems will take care of themselves.

Will the farmers accept less for the large crops grown this year than for the smaller ones grown last year? We will see.

The corporations and capitalists are the government of the country. We want a change. We want the farmers to rule a while.

The Annual Meeting. October 23d it begins. This can be made the most important event in American agriculture. It is all up to the farmers themselves.

The Government whacked the cotton growers again September 5th, and knocked off one-half cent a pound on the price of their cotton. Beautiful (?) system. Glorious opportunity for speculators. Bewildering system for farmers.

Farmers are in better shape financially now than they ever were before. What we strive for is to maintain this condition and improve it. In the past they went around in a circle, too often bringing up at the place they started, like the lone farmer in the boat in our first page illustration of August 15th, who used only the oar of production. Be careful that you don't drift around to the starting point. Low prices will surely land you there.

Things We Want to Keep Before the People

The new press to proclaim profitable prices.

Clearing houses to direct the marketing of farm products.

One crop report a year.

Farmers' stock yards or farms for receiving and distributing live stock.

The extension of telephone lines and consolidation of independent systems.

The farmers' warehousing plan.

Cheap money for farmers with crop security.

Farmers' insurance at equitable rates.

Solution of the railroad problems in the interest of agriculture.

If a call was sent out to capitalists, manufacturers and politicians to gather together and consider ways and means to combine to exploit the farmers' business for profitable prices (to the capitalists, manufacturers, etc.), there would be a tremendous response. Those classes of people are not slow to see possibilities and are prompt to act. Now the call is for farmers to help themselves and reap the profits themselves. Will they take enough interest to insure success? The annual meeting should have an attendance of thousands of farmers.

Eggs and Prices

From a leading city paper we clip the following:

The four big cold storage warehouses of Minneapolis contain over 14,000,000 eggs which are being kept for winter use. Dealers state that before the end of June 12,000,000 more eggs will be put up for the same purpose.

Were it not for the fact that this large quantity of eggs were taken off the market during April, May and June, eggs would become so plentiful that the price would probably drop to 1 or 2 cents a dozen. The eggs are packed away in cases, 30 dozen to the case, and undergo a careful examination before being stored.

We do not give this quotation as in any sense an extraordinary bit of news. What is done in Minneapolis is done in all the great cities, and it is a benefit to all who produce eggs for market, as it results in marketing eggs more slowly—holds them off the market during the season of over-production, the harvest season, thus preventing ruinous gluts and fairly maintaining prices—precisely our doctrine of controlled marketing.

But the thought occurs to us, why could not the poultry people themselves provide for this storage, and make a more perfect equilibrium of price, and themselves getting the full benefit? They can. All on earth it takes is organized co-operation and the application of even the most rudimentary business principles.

Learn to Think

The general government appropriates almost $6,000,000 for the Department of Agriculture. How much of this is wisely expended? $290,000 of it is for the distribution of "rare and valuable seeds." The greatest humbug of the age. $139,000 is for collecting agricultural statistics. (We assume crop reporting is included in this item.) This is to enable the gamblers to skin the farmers. Ten thousand dollars for foreign markets. Yet the foreign markets are constantly closing against you because the department don't understand the first principles of reciprocity as it effects agricultural interests.

These things and others in the department are performed under the guise of doing something for farmers and the dupes believed it. But you won't believe it any more if you do some independent thinking for yourselves.

Farmers' Institutes

We again call the attention of our many thousand readers to the necessity of having a hand in making the program for their farmers' institutes. Unless you do, it will contain no reference to controlled marketing as a means to secure profitable prices. Have a place provided for "Profitable Prices for Farm Crops." Or "How to Solve Farmers' Problems." If a speaker cannot be secured to address the institute then let the time be occupied by remarks and a general discussion of these subjects. Our word for it, this will be the most entertaining and profitable part of the whole program.

If any people want to be posted upon these subjects send to us for printed matter and send 25 cents for a copy of The Third Power book. Now don't neglect so important a matter. The common people have the choice of part of the subjects. Assert your right and don't make a mistake in the choice. These subjects should be discussed at EVERY farmers' institute.

Packers Active, Farmers Passive

A Chicago report is as follows:

"The Independent Packing Co. began operation in its partially completed plant at 41st and Halsted streets. This, with the Western Packing and Provision Co. at Morgan and 38th streets, will form the nucleus of a formidable system, which is ultimately to include a third plant in Chicago and others throughout the United States."

One of the parties interested when interviewed said:

"These are simply local companies formed by butchers and small packers so that they can do business cheaper. I want it distinctly understood that we are not trying to oppose the big packers. It is absurd to think so. We are not strong enough to do it if we wanted to. Each of these companies is independent of the others."

And still stockmen remain passive. The packers, great and small, recognize the grand opportunity for business and profits between the great unorganized class that produces and an equally large unorganized class that consumes and are not slow to avail themselves of it. How long! oh, how long! will it be before the producers awaken to their opportunity and through co-operation exert their power? How simple and easy it would be for the cattle, hog and sheep raisers to have their own yards, outside of the large cities, but close to them. To these yards or farms they could ship their stock and from there distribute it only so fast as the demand seeks it. Such stock yards would belong to the producers. The ground would be cheap, the feed would cost only the market price and all the expenses would be light. Here stock could be kept nearly as cheaply as at home, besides the opportunity for animals to recuperate after a long railroad journey and before being sold would be of immense value to the shippers.

By this plan reports could be sent out to shippers if a surplus was accumulating, or if a shortage was imminent an appeal could be made for shipments. A simple plan like this would quickly put prices on an equitable basis and the control of supply that would result would be sure to keep them there. With steadily maintained prices all business would be benefited. The meat trust would soon come to time and our foreign markets could be enlarged and retained because of the solid foundation of uniform price to work from.

Will stock men take the hint? Can they find any objection to this plan? If they can, then cannot somebody devise a better one?

OUR FOREIGN MARKETS

The National Reciprocity Conference

Did It Accomplish Anything for Farmers

By J. A. EVERITT

(Continued from September 1st)

The September 1st number may be obtained at one copy, 5c.; per dozen copies, 25c, postpaid.

The National Reciprocity Conference held at Chicago, August 16th and 17th was for the purpose of safeguarding the export of the United States in foreign countries and enlarging our foreign markets.

The particular cause for this conference at that time is the proposed new German tariff which, if passed, will probably go into effect in March, 1906.

The resolutions adopted at the conference are as follows:

1. The immediate enactment by Congress of a maximum and minimum tariff act, which shall be put into effect by the President.

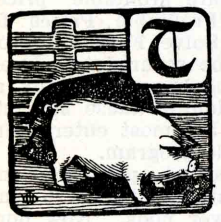
2. The creation of a permanent commission which shall assist the President from time to time to determining what reciprocal concessions shall be made.

The commission to consist of fifteen members to be named by the chairman of the convention. Such commission to have power to increase its membership when necessary.

The conference was composed of representatives of more than two hundred associations in the U. S., the majority of them being agricultural.

The first installment of this article on a subject of such tremendous importance was directed toward showing that under the present system, or lack of systems of pricing American farm products, no relief can be expected from foreign countries through the reduction of tariffs. But we did attempt to show that as long as the American farmers will sell their crops at unfairly low prices they (the crops) will be shut out of foreign markets, or can only come in over a tariff wall high enough to protect the home farmers, taking our lowest price as a basis.

It is urgently recommended that each person who has not read the first article, send for the paper containing it at once. Farmers must understand these matters and must quit following blind or dishonest leaders if they ever want to put their business on a basis, where their surplus crops will be sought by all countries that do not produce enough for their own needs.)



To get at the gist of the German tariff as it relates to American agriculture, we will say that all fresh meat and live cattle are now excluded. The following table shows the present tariff on some of our leading produce, in force since 1879, and also the proposed new tariff to go into effect in 1906 if adopted:

Article.	Present Tariff. Maximum.	Minimum.	New Tariff (Proposed.) Maximum.	minimum.
Wheat, bu.....	$ .33	$ .23	$ .49	$ .36
Rye, bu.....	.32	.22	.47	.34
Oats, bu.....	.13	.09	.24	.17
Corn, bu.....	.12	.09½	.30	.18
Salt Meats, cwt..	2.16	1.84	4.86	3.80
Hogs, per head...	1.42	1.19	4.28	2.14

The minimum duties it will be possible to get only by treaty, and the United States is not in the list of "Most favored nations" for such minimum. Therefore, while considerable exports of our products have been made to Germany each year in the past it may be expected that they will be less in the future, UNLESS OUR PRICES ARE KEPT LOW ENOUGH TO ENTER OVER THE TARIFF WALL AND OUR SURPLUS CAN SELL THERE AT PRICES THE GERMAN FARMERS APPROVE.

This point needs further elaboration so there can be no misinterpretation. In our former article we said: "Germany is determined to protect her own farmers." She is not a surplus producing country of food products; therefore, if she agrees on a price that will be fair to her farmers all she needs to do is to put a tax on imports to raise the price of the imported goods to the desired plane and "presto change," the price for the home farmers goes to that level also.

Now let us see in the case of our pork. The present German tariff became operative in 1879. The next year, 1880, the average export prices for pork (cured meat) was $5.05 per cwt., on basis of Chicago markets; 1881, $7.39, 1882, $14.01, (almost double the year before)

1883, $16.90; 1884, $13.53; 1885, $10.53; 1886, $ 9.09; 1887, 7.49; 1888, 8.13; 1889, 7.91; 1890, 9.97; 1891, 11.99; 1892, 11.39; 1893, 14.51; 1894, 9.50; 1895, 10.76; 1896, 10.80; 1897, 10.30; 1898, 7.67; 1899, 6.77; 1900, 7.71; 1901, 10.68; 1902, 10.56; 1903, 10.15; 1904, 8.48.

Here we have a case where a nation has a vast number of citizens who are engaged in a needful occupation for a living and profit. They do not and cannot produce enough for their own use. Outside of this country is another country that can produce not only enough of this same article for their own needs, but immensely more, and they seek markets for the surplus in the other country. Now it transpired that the farmers in the former country cannot produce the article (in this illustration, pork,) as cheaply as the farmers in the latter can, consequently the guardians of the former nation try to equalize matters and protect their own farmers by a tax against the latter.

Examine the range of prices and try to decide whether it is possible for the German government to frame an equitable tariff law for the protection of its own producers and for this country in view of the frequent and violent fluctuations. Starting at $5.05 per cwt., the price soon went to three times this price; then down again, only to rise and fall each few years. The only remarkable thing is that Germany has left the duty without change so long.

Where the desire is to protect the home producer the basis for duty must be the minimum price in the export country. If then, the price in this country advances materially, the price becomes prohibitive or curtails consumption in the importing country. It cannot be otherwise unless the tariff was readjusted to correspond with the fluctuations in the exporting country.

From a report by Frank A. Mason, U. S. Counsel-General at Berlin, Germany, we take the following:

Even the agrarians (farmers), in whose interest the whole schedule of rates on agricultural and food products was enacted, are still unsatisfied and regret that the minimum rates to which the grain duties might be reduced by treaty were not made higher.

Here we have the whole purpose in a nut shell. The German farmers are like all others, they want high prices, or at least fair prices, for their products. They are organized, are strong as a political body and get what they should have and perhaps more. But be that as it is, it is not in the power of the U. S. farmers or of this government to effect legislation in Germany that will make paupers of her farmers by opening up her markets to our produce at unfairly low prices. Therefore, can anything be more evident than this proposition: IF THE U. S. FARMERS WANT THE GERMAN TARIFF REDUCED THEY MUST MAINTAIN FAIR AND UNIFORM PRICES. We will proclaim more: THE LOWER THE PRICE OF OUR MEAT, GRAIN, ETC., THE HIGHER WILL BE THE EUROPEAN DUTIES, AND THE HIGHER THE PRICES OF OUR FARM PRODUCTS AT HOME THE LOWER WILL BE THE DUTIES. And if our prices can be adjusted on a basis that will be fair to the European farmers and maintained there the tariffs will disappear and they will be freely admitted into every country where our surplus is needed and with whom we maintain friendly relations.

In support of these assertions we will quote from a pamphlet sent out by the committee on arrangements for the Chicago conference, as follows:

The German attack on American meats which began twenty-five years ago, was not a wanton, malicious effort TO INJURE THIS COUNTRY. It grew out of the fact that we were not buying as much from Germany as Germany was buying from us.

The first sentence states a truth, and is in line with my former statement that "I don't believe that Germany wants to wage a commercial war against the U. S.. * * * Therefore, wisdom on our part will secure equity and fair trade agreements with that country."

Also we can rely on the German tariff being reduced just in proportion that our prices are advanced toward an equitable basis and maintained there. For proof of this we again quote from a report by our Counsel-General, Mr. Mason, as follows:

And throughout the whole of industrial Germany there is an apprehension lest the increased duties on cereals and other food products which will come in with the new tariff will either render living so costly and difficult, that the efficiency of labor will be impaired or compel the payment of enhanced wages that will in effect increase the cost of manufacturers to a point which will weaken Germany's powers of competition in foreign markets.

We see that there is a safety valve that our farmers can depend upon. If the prices of our farm products are put up Germany dare not follow with an arbitrary high tariff without injuring her consuming classes more than the benefits to the producers. Germany dare not, for her own preservation, legislate prices for food that will put them beyond the reach of the wage earners. If the prices were put up in this country the duties must come down in those countries. OR THE PRICES THERE WILL RISE to an extent to injure the consumers, except the imports of our products were prohibited. But would Germany dare do this? She would not.

In this article I have atempted to show that it is absolutely necessary for American farmers to make and maintain fair and equitable prices for their products if they want to maintain or enlarge their foreign markets.

That, instead of Germany (and it is true of all other importing countries) collecting a tax against our surplus farm products, it is just as practical for the farmers to collect this themselves when setting the price on their goods.

I will now close by making a few estimates of the financial gain to farmers if they will organize and maintain an up-to-date or scientific system for pricing and marketing their crops on a basis that will insure their surplus being freely taken by European countries.

The average price for pork in the U. S. in 1904 at Chicago was .0504c. per lb. Germany has been collecting about 2c. per lb. to bring the price to her idea of equity. The amount marketed in 1904 was about 7,000,000,000 lbs. If the price of this would have been maintained on a free export basis it would have put $140,000,000 extra into the pockets of our stock men.

This year we will estimate our wheat crop at six hundred and twenty million bushels. This represents an exportable surplus of about one hundred and twenty million bushels and this surplus is likely to set the value on all the crop unless the farmers do like the manufacturers, have one price for home and another for export. But millers and shippers tell us that 80 cents is an export basis. This contemplates a tariff of 33 cents to go into German markets so the German farmers can afford to produce wheat. Now suppose we collect this tax at this end and give it to our farmers, it would raise the price of wheat to $1.13 and enrich our farmers by $204,000,000.

The same illustrations might be made with other crops. If this doctrine is correct it opens up a vista of extra wealth for the United States farmers of billions of dollars and practically free markets in every country where they do not produce enough for their own requirements.

I am not attempting to propose a definite plan of action to accomplish these results, but I am convinced that I am outlining the only plan that will accomplish what our farmers are so anxious to obtain, viz.: to retain foreign markets and to enlarge them.

(To be Continued.)

NOTE—Comments are invited on the program I have partially outlined. I believe farmers can only get what they are entitled to through organization and co-operation on the plan of the A. S. of E.

This subject should be thoroughly considered at the Annual Meeting of the A. S. of E. beginning Oct. 23d. A plan to co-operate with Germany should be decided upon and conventions to secure a complete understanding should be held in every state, following the Annual Meeting and preceding the meeting of the German law-making body.

If the United States farmer cannot enter the foreign markets by this plan, then they must quit raising surplusses. It will never do to continue the old system of a small surplus putting the price on all the home requirements, resulting in the larger crops selling for less money than moderate crops as shown in our article in this issue, "Some Notes on the Markets."

Some Notes on the Markets to Make Farmers and Editors Think

August 30, 1905, Sept. wheat sold for 78c. A year ago it sold for $1.06, a difference of 28 cents per bushel. This is the Chicago market.

The 1904 crop was, we will say, five hundred fifty million bushels and was worth on basis of $1.06, $583,000,000. The 1905 crop, we will say, is six hundred and fifty million bushels, (averaging the various estimates) and is worth at the price one year later $507,000,000.

Now tell us, pray, which crop will bring the most prosperity to the growers?

It was always so. When you win in the bushels you lose in the price, and it will always be so until farmers are sufficiently organized. Except we will again say that those who will hold for their price will get it after the dumpers are done marketing.

Cash corn was worth 55 cents a bushel on Chicago market August 31, 1905, but December ('05) (future) corn is being sold at 43 cents. This is a difference of 12 cents a bushel.

The yield of corn in 1904 (government report) was 2,467,000,000 bushels, which at the present selling price was worth $1,356,750,000. For the 1905 crop to bring as much money at the December price (for new corn) the crop must be 3,155,000,000 bushels. Of course no such a crop will be raised, besides if it was possible to raise such a crop the speculative price of 43c. would simple be cut in two.

Farmers, in the past, have been blindly floundering about. When crops were very large and prices low then they had horse sense enough to reduce their acreage or Providence sent a bad season to cut down the yield. But this did not save them from loss on the big crops. When organized they can control their acreage as well as marketing. This has been demonstrated in the cotton and tobacco crops, where by effort the acreage of each was reduced this year. Also, when sufficiently organized, they can carry any surplus that may exist over to the short years.

On the plan of the A. S. of E. there is no reason why a price may not be made on any grain or staple crop that will stand for years—the long years helping out the short ones.

Deliveries of wheat are much below a year ago and this notwithstanding a larger crop and better weather. Does it signify anything? Don't it signify that farmers are not satisfied with prevailing prices?

Heavy receipts are expected in the spring wheat districts soon. This probability is one factor that keep the price of wheat down. Will the spring wheat growers be dumpers or controllers? We will soon see.

Cotton prices have ranged between 11c and 12c for some time in New York. Did you take the A. S. of E.'s advice?

From member E. L. Taylor, of Grossdale, Ill., we

received a clipping from the Chicago Daily news, with request to publish. It is as follows:

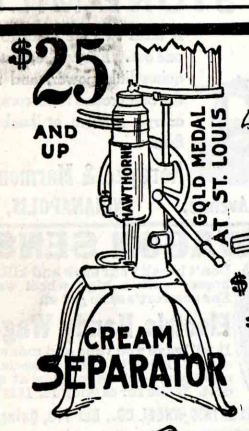
"The producers of the winter crop have allowed themselves to be cruelly deceived as to the situation and have sold wheat at prices that were entirely unnecessary," says E. W. Wagner. "It looks, however, as if they had seen their error, for primary receipts in that section are now well below last year, when the price was some 30c a bu. higher. They had no reserves this year and no competitor in the world, but broke prices down on themselves. The plan is now to fright the spring wheat producer in the same manner. They are told by men who have ridden through their states in palace cars that they have so much wheat they must get rid of two-thirds of it the first sixty days or they will not be able to sell above 65c. We are trying to ascertain the real value of wheat; we shall have no difficulty in arriving at it, when we know producers see through this deception. The price-making is with them; they can control the market as long as they will hold their surplus. It will be time to throw it away when they know they have a surplus. The cotton planters had a surplus and were going to burn it to restore prices, but they took thought and held the surplus and put in less acreage the next year. Every one knows what that did. It will be the same for the grain producer. I believe men raising wheat would prefer to have more money and less work rather than more work (and wheat) and less money. That's the size of it. There's more need of science in the field of labor than there is for it in finance.

Mr. Taylor, commenting on above, says: "Even the people who are manipulating the farmers' produce, point out the only way to his salvation. Every person who can read should keep posted."

The domestic consumption of corn has increased marvously in a few years past. Also the exports have increased. American corn is selling in London at about 68 cents a bushel—the highest price it ever commanded. Notwithstanding the large crops grown since 1901, it has all gone into consumption and we approach the new crop year with much smaller supplies than usual. All these things will strengthen the faith of growers in good prices for the 1905 crop.

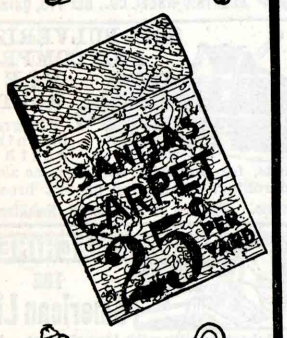
Even though the country has produced a greater aggregate grain crop than was ever raised before, this is no reason why low prices should prevail. We must remember that our population is larger, that the individual consuming powers are greater and the world's crops do not exceed, if equal, last year's. All the crops we have grown will be needed, hence will bring good prices if marketed wisely. Also it is a good policy to carry over a portion of large crops against the short crops that are bound to come. This country has not carried over any material surplus for a few years and should short crops have resulted this year, who can say where prices would have gone to?

Prepare to get your price or carry the surplus over this year. Remember you don't help prices by dumping your crops. Somebody will hold them. You should control them until the demand comes.



1872 1905

Montgomery Ward & Co.'s
Big Catalog FREE



THIS NEW CATALOGUE, No. 74, for the season 1905–6, just from the press, is the largest in size and the most complete in contents of any general merchandise catalogue ever issued, and is filled from cover to cover with the lowest prices at which highest quality goods were ever sold. There never before was gathered into any one book so marvelous a collection of desirable goods of every kind at such money-saving prices.

Three million families—about ten million people—are going to save a lot of good money by having on hand and ordering their goods from this massive catalogue.

We know by past experience that those who make free use of it will save from $50.00 upwards during a year's time. We invite you to be one of them.

Our No. 74 Catalogue and Buyer's Guide is a Necessity

to the farmer, the planter, the miner, the lumberman, the hotel keeper, the railroad man, the teacher, the mechanic—in fact to **every** resident of the country, the large town, the village and hamlet.

Despite the great value of this mammoth catalogue to you and the large cost to us, to prepare, print, and distribute it, we shall **GIVE ONE COPY FREE** to every grown person who asks for it, provided he does not reside in a city of fifty thousand or more, or in Cook County, Illinois.

Everything you eat, wear and use is found in our No. 74 Catalogue in the highest grades, latest styles, best qualities, standard makes and absolutely honest values, at the very lowest prices.

You take no chances in buying from us. We refund your money, if, for any reason whatever, you are not satisfied.

The prices in our No. 74 Catalogue are uniform and the same to all alike—the rich and the poor. We do not **raise** our prices when we deal with the wealthy, nor can those in moderate or poor circumstances do better for themselves anywhere than to buy at our established, printed prices—the **fairest** prices in the world, because they are **low** quotations, on **high quality goods.**

REMEMBER—No such offer as this was ever before made you. We offer you the Genuine, Up-to-Date Montgomery Ward & Co. large Catalogue without a penny's expense to you. This is no partial list, no incomplete book, but the largest, newest, complete Catalogue—just off the press.

A Word About Ourselves—Our establishment comprises seven large buildings, covering more than fifty acres of floor space. We are the **original, largest** and **most favorably known** Catalogue House in the world. We have a successful record of a **third of a century** to which we refer with pride. Our customers are our **friends,** and they are found the world over. We have honestly acquired our reputation for selling goods of **quality** at **fairest** prices, such as no other concern has been able to meet.

We absolutely refuse to sell **snide** goods or **trash** at any price.

Montgomery Ward & Co.'s New No. 74 Catalogue comprises 1200 large pages, full of accurate illustrations and truthful descriptions, without exaggeration or misrepresentation. It describes over 126,000 articles, such as everyone uses every day—just such goods as **you** use, but of highest quality and lower price than you can obtain them in your home stores or anywhere else but of us. We have heretofore asked everyone to send us fifteen cents to partly pay postage, as a guarantee of good faith, but we will NOW **give** you a copy absolutely without charge of any kind—delivered at our expense—providing you show you desire to possess it, by just **writing** and **asking** for a copy. That's all we require. Do you want it? Do you want to **save** part of your **necessary** expenses? Do you want to get some things that you cannot secure near home? This large, complete, up-to-date, No 74 Catalogue makes it possible and easy for you to own, use and enjoy many things of which you have frequent need, but which the usual prices asked by others have compelled you to do without. **Get this Catalogue** and consult it **freely** and **often.** Those who **use** it most **save** the most.

Cut here, fill in carefully, and send to Montgomery Ward & Co., Chicago

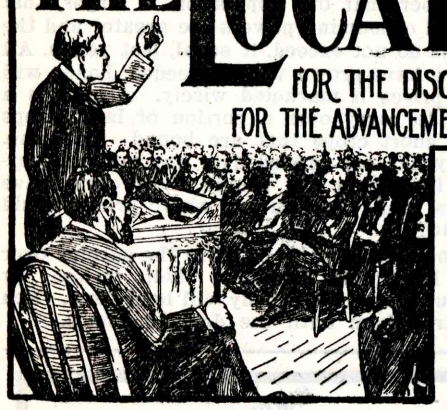
THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING



OCT. 1st. QUARTERLY DUES

This is just a reminder that the next quarterly dues come Oct. 1st. From these quarterly dues the steam to keep up our society and your official paper running must come. You will now appreciate the importance of the quarterly dues being paid—promptly.

THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

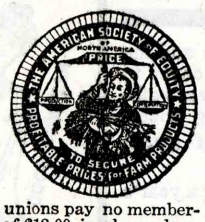
The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shapened the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where three or more local unions exist in a county

County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

The Emblem



of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

The Fee

Is $1.00 for members at large and $1.00 a year. Charter members of local unions pay no membership fee but a charter fee of $12.00 is charged, no difference how large is the union. Members of local unions pay 30 cents quarterly. Members at large are individual members, outside of local unions. Each member receives a certificate, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, paid for by the National Union.

Complete instructions will be sent free on request, how to organize local and county unions and all information about fees, dues, etc.

The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. The price is $1.00 per thousand, 500 for 50 cents. They are supplied on gummed paper and on tags.

Supplies, including books, blanks, etc., are furnished FREE to all new local unions and all old ones that ratify the new constitution.

How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceeding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood.
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting.
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

THE ANNUAL MEETING

Local and County Unions, Officers and Elections

Office of the National Union of the American Society of Equity, Indianapolis, Ind. Sept. 1, 1905.

To the officers and members of all Local and County Unions, of the American Society of Equity and members at large, Greeting:—

The date of the Annual Meeting of the National Union of this Society has been fixed to begin October 23, 1905, and the meeting will continue as long as necessary to transact all business properly coming before it.

Reduced railroad rates will be granted from all parts of the country and special and ample accommodations will be made for members, delegates and others while in the city.

The report of the Annual Meeting of the National Union, A. S. of E., will be published in pamphlet form. The name and number, also name and address of secretary of each local and county union of the American Society of Equity in the United States and Canada, with the total membership in each, on Oct. 15th, 1905, should be and we expect will be published as a part of this report as a complete directory of the society. A copy of the report will be mailed to each local union secretary, to all officers of county unions, to delegates who attend the Annual Meeting and may be procured by members at large and others desiring them at 10 cents each copy. Every local union and every county union must report on or before Oct. 10th, so that all may be in by Oct. 15th.

To insure such reports all members of local unions of this society are expected to assemble and hold a meeting during the first week in Oct. For those local unions that are inactive, the National Union recommends the following as an official notice. It is addressed to every member naturally belonging to said union:

"There will be a special meeting of _____ Local Union, of the A. S. of E., on Oct. 5th (?) at the same place the organization was first effected, at 7:30 p. m., sharp."

All officers and members are expected to act upon this without further notice. At these meetings new officers shall be elected, also a delegate to the Annual Meeting of the National Union should be selected. These delegates should be instructed as to the wishes of the local union and if utterly impossible for said delegate to attend the Annual Meeting, they shall reduce their instructions to writing, cause them to be signed by the President and Secretary, have the local union seal imprinted thereon (if the union has one) and mail them to the Secretary of the National Union, who will see that they are considered at the Annual Meeting. Some of the subjects to be considered at the Annual Meeting appear in this issue of the official paper.

Don't fail to send the report of your union to headquarters on or before Oct. 10th, to insure its arrival Oct. 15th, 1905.

Do all these things. Come to the Annual Meeting and help to make it as great as the industry it represents and one that will attract the world's attention by its numerical attendance and the results accomplished.

The National Union of the A. S. of E.
J. A. EVERITT, Pres.
M. WES. TUBBS, Sec'y.

Railroad and Living Rates

Arrangements are nearly completed with all the different Passenger Associations including all roads over which delegates and members and their families, will travel for one and one-third fare for round trip. That is, full first-class fare going and one-third fare returning on the certificate plan. Local ticket agents will give full information on request. Try to see them at least two weeks in advance of date of starting so no mistakes will occur.

The cost for board and room while in atendance at the Annual Meeting need not be over $1.00 a day. Full particulars will be given later.

Organizers' Contest

One of the features of the Annual Meeting will be speaking contests by organizers.

It is expected that a large number of organizers will be in attendance. Those who will. may enter for a speech and substantial prizes will be given for first, second and third best addresses.

The speech must be limited to one hour and must be such as would be delivered before an audience of farmers preparatory to organigation of a local Union. After tee address a moderate space of time will be allowed to each contestant to explain his plan of organizing.

There will be hundreds, perhaps thousands, of farmers in attendance. hence these addresses should be productive of much good. Prizes will be awarded by a committee selected from the audience and stationed in various parts of the room.

This feature should be an inducement for a large attendance of organizers who can learn from others their best plans of organizing.

A national organizer will be elected for the ensuing year at this meeting. These speeches may secure for one of the contestants the coveted position.

All contestants should report in advance so the program may be prepared to take care of this feature.

A Suggestion

In September 1st issue is a list of speakers who will accept calls to address meetings in the interest of the A. S. of E. The list is repeated in this issue. Many of these will attend the annual meeting. They will pass through your town or, at least, near you. Why not write some of them and arrange to have them stop off and address your people. Then get out—advertise the meeting and have a rousing rally for Equity. By this plan it might be possible for these speakers to have several good meetings enroute. Stop over tickets could be bought from starting point so as to insure reduced rates for home trip. Look over the list again—see who will pass nearest you to reach Indianapolis and then write them at once as there is none too much time to work out this plan for the best results. Speakers, be on the lookout for these letters.

PROPOSED AMENDMENT

To the By-Laws of the A. S. of E

I move that the following be substituted for Article VII of the Constitution and By-Laws of the A. S. of E., and acted on at the Annual Meeting:

The membership fee in the A. S. of E. shall be 50 cents for all new members, which must be paid into the National Union for the organization fund. Each member of a local Union shall pay into the treasury thereof a quarterly dues of thirty cents, on the first day of January, April, July and October, of each year, of which dues ten (10) cents shall be retained in the Local Union treasury; the balance shall be sent to the Secretary of the National Union at Indianapolis, Ind., one-half for the publication fund and the other half for the general treasury fund.

C. O. DRAYTON,
Greenville, Ill.

Conventions and Meetings

ANNUAL MEETING OF THE A. S. OF E. and convention of all farm interests, Indianapolis, Ind., beginning October 23d, 1905. Each local union is entitled to one representative, and each county union to one representative for the county at large, and an additional representative for each two hundred members in the county.

NATIONAL TOBACCO GROWERS' ASSOCIATION BRANCH OF THE A. S. OF E. Annual convention at Owensboro, Ky., October 18, 19 and 20, 1905. Representation: One delegate for each local union, but a maximum of three for a county. Address C. Hayes Taylor, Secretary, Indianapolis, Ind.

DUNN COUNTY (Wis.) Union will hold its next regular meeting in Chippewa Falls, October 7. C. W. Bitney, Sec'y, Colfax, Wis.

DANE COUNTY (Wis.) Union will hold its next meeting in Cambridge, Saturday, September 30, for the purpose of preparing a complete and con-

cise crop report of the county, especially tobacco; and for the further purpose of selecting and instructing a delegation to be sent to Owensboro to attend the second annual convention of the National Tobacco Growers' Association Branch of A. S. of E. Secretaries of local unions will call meetings at least one week previous to September 30, prepare local reports for the County Union, and choose delegates thereto. Prof. D. G. Ristad will deliver an address, and everybody is cordially invited to attend.—S. D. Kump, Secretary, Cambridge, Wis.

POPE COUNTY (Ark.) Union. The next meeting will be held October 4th, at Gillespie Hall (two miles south of Russellville, Ark.). As this is the meeting for the election of delegates to the annual meeting of the National Union and also to consider and make recommendations regarding the Farmers' Business System, it is especially desired that every Local Union will send a full representation and that as many members as possible will also attend.—C. C. Minyard, Co. Union Sec'y, Russellville, Ark.

CHIPPEWA COUNTY, (Mich.) Union was organized Aug. 15th. Six Local Unions were represented. The following officers were elected: President, Wm. Reich, Sault Ste. Marie; Vice-president, John Andress; Secretary, Will Hill; Treasurer, Geo. Roe.

Among other business transacted a price of $10.00 was recommended for No. 1 and $9.00 for No. 2 hay—to be in effect until Jan. 1, 1906, at which time an advance should be made.

The next meeting will be held at Donaldson, Mich., on Monday, Oct. 2d, at 2 o'clock p. m. sharp. Local Union Secretaries are requested to send in their crop reports to this meeting. Also, it is hoped that each Local Union will send at least three delegates as important business is to be transacted and delegates elected to the Annual Meeting at Indianapolis.

WASHTENAW COUNTY (Mich.) Bean Growers' Association and County Union of the A. S. of E. which was to have met at Ann Arbor, Aug. 21, postponed their meeting until Saturday, Sept. 30th. As important matters will be considered and delegates elected to attend the Annual Meeting of the A. S. of E. to be held at Indianapolis beginning Oct. 23, it is desired that a full representation be in attendance.

Remember the day and date—Saturday, Sept. 30th, at Ann Arbor, Mich. K. H. Wheeler, secretary County Union, Dexter, Mich.

CORNER STONE, (Okla.) Local Union.—Grand A. S. of E. Rally and Picnic under the auspices of Corner Stone Local Union at Brewster Weares' place near Muldrow, Ind. Ter., on Sept. 21. An interesting program will be carried out consisting of a grand parade and several good speeches. Among the speakers may be mentioned L. N. Nichols of Muldrow; S. Grant, of Mountain Grove Local Union; Y. T. Johnson, of Mulgrove N. U. No, 2; G. M. Moore, W. M. Weare and others. Everybody come and enjoy a good time. L. N. Nichols, D. P., Muldrow, Ind. Ter.

DUBOIS COUNTY, (Ind.) Union held its regular meeting at Huntingburg on Aug. 26th. There are eleven Local Unions with a membership of 217 and about twenty-five members at large in Dubois county. Many important matters were considered and delegates elected to attend the Annual Meeting of the A. S. of E. After an enthusiastic and helpful meeting adjournment was made to Saturday, Oct. 28th at Huntingburg at 10 a. m. John G. Koch, County Secretary, Huntingburg, Ind.

ST. CLAIR COUNTY (Ill.)—Every Local Union in St. Clair county, Ill., is requested to send five delegates to Lebanon, Ill., on Saturday, Oct. 7th, at 9:30 a. m., to form a County Union for St. Clair county. Each Union is also asked to collect ten cents from each member for the county treasury to pay expenses, and send one delegate to the National Convention at Indianapolis, Oct. 23rd. Bring all the farmers and business men who are not members, you can, to hear the plan and principles of the A. S. of E. explained. Tell them they will be welcome. C. O. Drayton, Greenville, Ill., State Organizer.

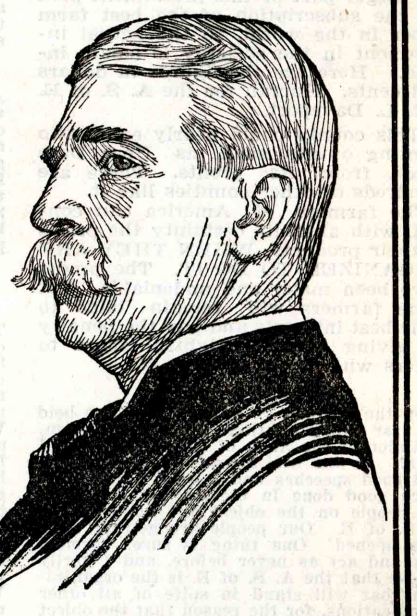
MADISON COUNTY, (Ill.) The County Union will meet in the court house in Edwardsville, Ill., Saturday, Sept. 30th, at 9:30 a. m. Every Union in the county ought to send as many delegates as possible, not less than five. Ten cents should be collected from each member to be paid into the county treasury. Bring as many farmers who are not members as possible to this county convention. Business men and farmers not members will be welcome. Come and hear the principles and plan of this society fully explained. C. O. Drayton, Greenville, Ill., State Organizer.

On Monday, October 2 Next

the price of THE LADIES' HOME JOURNAL will be raised to $1.25 per year. Until that date a subscription for one year (but for no longer period) will be accepted at the present price of One Dollar ($1.00).

The Curtis Publishing Company, Philadelphia, Pennsylvania

Mr. F. Hopkinson Smith in an Entirely New Departure



A series of powerful stories, in which Mr. Smith fearlessly puts his finger on some of the social dangers of the day that threaten our girls, women and young men, and calls a spade a spade. "I have written without mitts," says Mr. Smith.

The Ladies' Home Journal Enlarged—

improved very materially—new departments—new covers in four colors—it's a new JOURNAL this year. Send a dollar *now*—after October 1 we must ask more.

The Curtis Publishing Company, Philadelphia, Pennsylvania

DON'T BUY GASOLINE ENGINES UNTIL YOU INVESTIGATE "THE MASTER WORKMAN," a two-cylinder gasoline engine superior to all one cylinder engines; revolutionizing gas power. Costs Less to Buy and Less to Run. Quickly, easily started. No vibration. Can be mounted on any wagon at small cost—portable, stationary or traction. Mention this paper. SEND FOR CATALOGUE. THE TEMPLE PUMP CO., Mfrs., Meagher & 15th Sts., Chicago, THIS IS OUR FIFTY-FIRST YEAR.

A Zobo Band

Composed of boys will afford them more harmless amusement than anything else, no matter what the cost. The Zobo is an inexpensive musical instrument. It can be played by anyone without a minutes practice or instruction. Costly instruments can be used only by experts after years of practice. Old and young find entertainment and enjoyment with a Zobo. It furnishes good dance music; can be used in street parades or any place where music is desired.

BOYS Get up a Zobo Band. Tax each member a dime and you can buy your instruments. Nothing better than a Zobo. Made of strong material and not liable to injury. 6 inches long. Full printed instructions with each Zobo. Get a dozen and sell them to your friends. **Price** 10c each. $1.00 per dozen postpaid. 100 not prepaid $5.00.

S. E. FERRY 842–844 Capitol Ave. N. Indianapolis, Indiana

9 BOYS. I want to buy a good farm of 50 to 80 acres on easy terms. I have nine boys and 1 girl and am equipped to do good work on a good little farm. Who will help me and I will help him. **S. L. Slaughter, R. R. 3, Henderson, Ky.**

CASH for your real estate or business, no matter where located. If you desire a quick sale send us description and price. Northwestern Business Agency, C 313 Bank of Commerce Building, Minneapolis, Minn.

Reward $1000, for equal of our Two Wheel Power Wind Mill, Self Oiled Pumper or Arm-saver Husker. Ask for booklet forty-eight. Double Power Mill Company, Appleton, Wis.

The Farmers Win Again

From Gishton, Kentucky, comes the gratifying news that the farmers of one local union made $10,500 in a lump sum, clear money, by reason of being organized. They are in a coal mining section. and the unorganized farmers of the northern part of the county, having no facilities to consider going into the matters, except individually, were induced to sell coal rights to mining companies at $4.00 an acre. When approached by the companies' agent, they put them off until they could consider the proposition carefully as a body. After going into the matter fully, they decided that $7.00 per acre was a fair and equitable price, and flatly refused to sell for less, and remained firm in their decision. As a result the coal right to 3,500 was sold at $7.00 per acre, a clear gain of $10,500 over the amount they would have received had they been unorganized.

I want to give you my figures showing what the A. S. of E. has made the farmers and tobacco growers of this country. in clear cash, since our organization. The first local union was formed in the month of February, 1904. The members have paid a total of $1,000 in fees and dues since that time, which represents the actual investment for a co-operative marketing machine. The gain on prices for tobacco, over the prices for 1904 amounts to $18,000. Gain in the prices received for wheat, over the prices paid for wheat in 1903, $12,000. Gain on prices received for coaling right to mineral lands. over what has been received by the unorganized farmers, $10,500, a total of $40,500 made from an investment of $1,000. (It should be remembered, too, that the larger part of this investment paid for the subscription of the best farm paper in the world, so the actual investment in the societay is small, indeed.) Here are the figures in dollars and cents. Hurrah for the A. S. of E. —E. L. Daveport.

(This county could nearly equip two printing outfits, such as Up-to Date needs, from its profits. There are hundreds of other counties like it.

The farmers of America can control, with absolute certainty the prices of their products, WHEN THEY ARE ORGANIZED TO DO IT. The proofs have been many and undeniable. Yet some farmers will remain blind to their best interests and pay the penalty by giving of their rightful share to others who do not deserve it.

On the 5th day of August, 1905, we held our first county meeting of the Blount County Union of the A. S. of E. with the Snead Local. It was well attended. We had several good speeches and I believe there was much good done in the way of educating the people on the object and plans of the A. S. of E. Our people are getting their eyes opened. One thing is sure; farmers talk and act as never before, and I verily believe that the A. S. of E. is the organization that will stand in spite of all other organizations, for the reason that the object and plans are purely good, and the cause a just one. Equity must and will prevail. God who is all powerful will help and bless the cause of equity for it is right.

We appointed a committee of five on Crop Reports for the county and a committee on organization to select suitable men and recommend them to the National Union for authority to organize the different school districts. Our next county meeting will be held with Clarence Local on the 5th day of October, 1905.

In my opinion, and I speak from observation and experience as I have watched very closely, the best plan to get the people organized is to go into localities suit able for an organiaztion, early in the morning and make a speedy house to house canvass, make the object plain, set the hour and place to meet to organize that night or as early as possible, then proceed in this way on and on, pleading earnestly and honestly for organization, and co-operation, and the cause of equity. Earnest and honest pleading face to face is the keynote to success in this work. ANY MAN can do this work SUCCESSFULLY. Understand I mean for the men in this work to carry suitable literature all the time to give the people. That will help educate and prepare them for going into the different locals, then the county organizers to keep the work moving. Every organizer should carry the Third Power books for sale, also theEquity song books. Yours for the success of the A. S. of E. JOHN W. GREEN.

Clarence, Ala., Aug. 11.

I am a constant reader of Up-to-Date Farming and think it the best farm paper I ever read. That THIRD POWER book is the sum total of practical information on agricultural co-operation.

I am president of our Local Union No. 659 F. E. and C. U. and am glad to say we are all in unity with the A. S. of E., and are trying to walk on the same plank that leads to Controlled Marketing and Profitable Prices.

We intend holding our present crop of coton for an equitable price.

Three cheers for EVERITT, EQUITY and UP-to-DATE.

AMOS FELTS.

Claunch, Ark.. Aug. 24, 1905.

Pub. Up-to-Date Farming: The grocer wrapped two pages of your paper around my goods. Would like a sample copy.—H. W. S., Troy, N. Y.

[A word to the wise is sufficient. Where a sheet of Up-to-Date Farming falls, there the principles of controlled marketing spring up spontaneously.—Ed.]

Our barbecue held at Dobson Spring August 10th, was a big success. It was the grandest event ever "pulled off" in Yell county. Fully 6,000 people were in attendance. We had the best of order and much good work was done. Many new Local Unions will be organized in surrounding territory as a result of this rousing meeting. Send me a large quantity of supplies as I had many calls to organize in different places at the barbecue. Hastily,

C. C. SIMPSON, V. P. Ark.

Dardanelle, Ark., Aug. 12.

The Equity picnic near Henryetta, Ind. Ter., August 9th, was a grand success. Our correspondent says: "Our picnic on the 9th was up-to-date and the program was carried out to the letter. Hon. Sam Hampton, assistant national organizer, was with us and gave us genuine A. S. of E. thunder. We feel he has strengthened us and given us new zeal and courage in the work. Every drop of his blood is Equity blood and he is a power in building up the grand structure of controlled marketing and price making.

He came dressed in the plain, simple garb of a farmer. His talk would have done honor to the finest broadcloth. It was with joy we grasped his hand as a brother. We recommended him as "whole cloth and up-to-date in every way." Oh, for more Sam Hamptons'."

"We are still talking to the farmers, poor fellows, they are down in the old rut so deep it will take hard pulling and lots of scrambling to get them out. We'll fetch 'em after a while. By the way, Mr. Everitt, a plan struck our mind to help the cattle men to control their markets. We will give an outline of same. It is for the A. S. of E. to own and control stock yards out on the farm—as near as practicable to the central shipping terminus. Herd the stuff there—sell it there and never ship a hoof until sold and paid for. Then let the buyers ship the rest of the way to their packing houses. Farmers can handle their own cattle, hogs and sheep in this way and at much less expense than the packers now charge and leave no "loop hole" for them to exact extortions."

Henryetta, Okla., August 11.

[Farmers have prospered remarkably even by partially controlling their marketing since the plan of the A. S. of E. has been taught. Many places they are out of the "old rut" and if prices as have prevailed can be maintained in the future all will be well. The cattle men have the greatest cause for complaint and we recommend the plan suggestedd to be considered at the annual meeting.—Ed.]

SAM J. HAMPTON, assistant national organizer, A. S. of E., will speak at Hartford, Ark., September 4th. There should be a large attendance of members and non-members as Mr. Hampton will explain fully the principles of controlled marketing and show clearly how farmers can compel profitable prices for their products.

GALA DAY IN KENTUCKY

Fordsville Full of Enthusiasm Rally a Grand Success

Editor Up-to-Date Farming:—Last Saturday was a gala day for Fordsville Local Union, No. 600. At least 700 people were present, and seven neighboring local unions participated in the event. E. L. Davenport, of Cisney; Judge Jas. P. Miller, of Hartford, and J. W., Dunn, president of Davies County Union, were the speakers, and the addresses were full of facts, figures and plans pertaining to this great work. Our people are fully awake to their opportunities, and are more determined than ever to push the work of organiaztion forward to completion.

We are under obligations to the Norrows String Band, also to Prof. Lindsay's choir for the excellent music rendered.

Delegates to the Owensboro convention were chosen, and the greatest harmony and good will prevailed.

We hope that now, since the main crops are being stored away, the farmers will lend a hand to the work of organization with renewed energy and redoubled vigor, and set about securing profitable prices for the produce they have labored hard to produce so that all the people in the world may live and prosper.

Yours for advance,

M. F. SHARP,

Narrows, Ohio County, Ky., Aug. 21, 1905.

Indignation in Michigan

Inquiries from various parts of this state and from other states are coming to me asking if it is true that the A. S. of E. is dead in Michigan, as reported by certain papers. To all these inquiries let me say that the A. S. of E. in Michigan is very much alive, healthy and is growing nicely. The paper, however, first containing the item referred to was drawing its last breath at the time and soon after, Aug. 20th, was buried beneath the disapproval of an indignant public sentiment as all papers will be, sooner or later that refuse to stand by the farmers and assist them in their just demands, but oppose their honest efforts.

K. H. WHEELER,
Sec. Washtenaw Couity Union,
Dexter, Michigan.

Equity Speakers

A great many calls are constantly received at headquarters for speakers. We refer to the following, who will accept such calls to address meetings. Write them for terms:

REPORT BLANK—LOCAL AND COUNTY UNIONS

☞ This report must be sent in for each Union on or before October 10, 1905.

Name of Union..... **No**..... **Co**..... **State**....

Secretary..... **P. O**..... **Co**..... **State**. ..

This Union has ..... regular member and ..... special members.

Our last meeting was.....190... Our next meeting will be

.....1905.

The following delegates with P. O. addresses have been elected to represent us at the Annual Meeting:

....

....

Has this Union ratified the New Constitution?..... Do you expect to Ratify the Constitution as approved by the Annual Meeting?

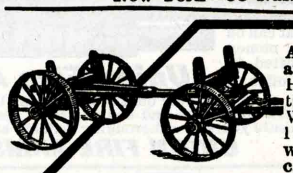
This report was sent by..... P. O..... State.....

Personal to every member: If you are a member of a local union that is not active, and desire to have it become active you are urged to at this time. We want every local Union that was ever organized to be enrolled as active before the Annual Meeting.

LODGING of grain is caused by weakness in the stalk. Complete fertilizers, rich in POTASH, produce strong stalks (making lodging impossible) and full plump grain, rich in starch and of good milling quality.

Our books are free to farmers. Let us send them to you.

Address, GERMAN KALI WORKS
New York—93 Nassau Street, or Chicago—Monadnock Building



A low wagon at a low price. Handy for the farmer. Will carry a load anywhere a horse can travel.

Low Down Wagons

soon earn their cost on any farm.

Steel Wheels

for farm wagons. Straight or staggered spokes. Any size wanted, any width of tire. Hubs to fit any axle. For catalogue and prices, write to

Empire Mfg. Co., Box 68 H Quincy, Ill.

CASH

For your farm, ranch, home or business, no matter what it is worth or where located. If you want your property sold quickly, send us description and price. Then we will immediately write, telling you how and why we can quickly convert your property into cash.

IF YOU WANT TO BUY

a business or property of any kind, anywhere, tell us what you want and where you want it. We can fill your requirements, do it promptly, and save you time and money.

543 Bank Commerce Bldg. Kansas City, Mo.

LETTER FROM DAVID DOBETTER

Number 56

Near Williamsport, Ind., Aug. 15, '05.

Dear Mr. Everitt: My prophecy about the tedder came true. You remember I said after I got mine some of the neighbors kind of looked down their noses at the machine and sniffed at me a little as if they thought I must be getting crazy to spend good money for such a looking thing as that. But I predicted then that before the season was over, some of those very folks would be getting tedders of their own. And it does me good to tell you that it was so. I didn't say much about the help it was, but just let it keep kicking up the hay and advertising itself. Sometimes I think the best way to win a case is to let the other fellow do the most of the talking and you rely on the evidence your witnesses give. If I were a lawyer, that would be my way.

And the tedder gave a good account of itself. We had a real good hay crop this year, the best in some years. The plan we have been following of manuring our ground and rotating the crops seems to be working well. The new seeding was especially fine this season. We would have had a lot of trouble to cure our grass without the tedder. It lay on the ground so thick it would have taken days to cure it out fit for the mow. But the next morning after we mowed the ten acre field of new seeding we put the tedder in and threw the clover and timothy out of the swath, leaving it all nice and light, so that the air and sunshine could get through it. It worked like a charm. In less than half the time it would have taken us otherwise we put that hay into the barn and in better condition than we could have gotten it without the tedder.

I drove the tedder myself the first time. I thought if I did that I could not say anyone but myself was at fault if it failed to do its work properly. I had not been round half a dozen times when I looked up and who should I see but the neighbor that had laughed at me for buying such an "ornery" looking machine. He was leaning over the fence watching proceedings with an interested air. I imagined that he might be snickering away to himself at first to see me riding the tedder about. But if he was, he did not keep it up very long. I finished up my job and drove out of the field, paying no more attention to the neighbor than if he had not been there at all. I kept track of what was going on, though, and after I had reached the barn and stood in the back door looking out, I saw the man climb over the fence and go across to the cloverfield. He took up some of the grass, felt of it, looked at the shape it had fallen in when it left the tedder and then went home. Next morning he happened to be about when we put in the first load of the hay. We visited along as if everything was all right, and it was so far as I was concerned; and finally he said:

"How much did you say that tedder of yours cost?"

Then I knew I had won the day. That very afternoon he drove to town and got a tedder! Two or three other neighbors have done the same since that. Shows how one man can help a whole community, doesn't it? Lots of times all that is needed is a leader.

There is one man down the road a little way that still says, "Dave is getting too lazy to turn hay with a fork!" That's a fact. I am. No, I won't say that, either. It isn't laizness. It is something better than that. I believe it is true enterprise hat leads men o invest in labor-saving farm tools. In our day and age of the world you have got to have all such implements you can to keep up with the procession.

We went down and got Chipper and Sweetheart the very next day after we received the letters from them. Mother and I went ourselves. The boys were busy about the farm and work, and they insisted that mother and I should take the day off and go over to the city, and bring back the little folks. It would have done you good to have been somewhere where you could have seen the antics Chipper went through whn he looked up the street and saw us coming. At first he tried to look very dignified as if he did not care much about going home. Wasn't he a boy? Wasn't this a big city? How could a boy dare to do anything except walk the chalk? But when we drove the horses around into the barn and were fairly out of sight of the folks coming and going, the lad reached up and got me about the neck and hugged me like a little rocky mountain bear. I laughed and cried at the same time. You know how that is. You feel so tickled you can do nothing but cry! Nothing except laugh, and your laughter is mixed with tears like a shower when the sun shines. Sweetheart, too, was as happy as any child you ever knew. We drove home through the twilight. It was a lovely evening and we had a splendid visit. They told us all that had happened to them and we went over the story of the life on the farm. Nothing was too small for them to be interested in.

Sometimes you have got to have a bit of frost to make you really love warm weather. Nothing wins the heart back to the old farm like a few days in the midst of a whirl in the city. Chipper and Sweetheart have been the happiest mortals you ever saw since they came home—the happiest except mother and me. I guess we have been a little bit the happiest!

The wheat is all cut and in the shock. It is fine, too. Seems as if we were favored by the weather this year. I don't know as it was any credit to us that we got along so nicely. And still, there is a great deal in looking ahead in all such matters. We have gotten to be pretty good weather prophets at Four-Leaf Clover Farm. We watch the barometer, the sky and the animals. Tell you how that is. When the wind gets round into the rain quarter, and the barometer begins to go down pretty good jog we begin

(Continued on page ten)

President ROOSEVELT Strongly Endorses Rifle Practise For Boys and Girls

From NEW YORK HERALD August 26 1905

PRESIDENT LIKES BOYS WITH RIFLES

Mr. Roosevelt Accepts the Vice Presidency of Public Schools Athletic League.

PRAISES TARGET WORK

Fully Approves of the Clean Methods Employed in Training the Young Men of America.

GIRLS NEED EXERCISE, TOO

OYSTER BAY, L. I., Friday.—President Roosevelt has accepted the office of honorary vice president of the Public Schools Athletic League, with headquarters in New York city. In his letter to General George W. Wingate, president of the league, President Roosevelt expresses his cordial approval of the objects of the league.

Following is President Roosevelt's letter accepting the tender of the honorary vice presidency:—

"OYSTER BAY, August 19, 1905.

"My dear GENERAL WINGATE:—In answering your letter I beg to say that it will give me the greatest pleasure to accept the office of honorary vice president of the Public Schools Athletic League of which you are President.

Praises Rifle Practice.

"I am glad that you have installed in each of four high schools a sub target rifle practice and are teaching the boys to shoot with the Krag, and I am pleased with the great success that you have met in this effort.

"I'm also particularly pleased that you are about to organize a woman's auxiliary branch, for the girls need exercise quite as much as do the boys.

"The demands such a movement make upon the time and the money of those engaged therein are very heavy. You are doing one of the greatest and most patriotic services that can be done, and you are entitled to the heartiest backing in every way from all who appreciate the vital need of having the rising generation of Americans sound in body, mind and soul. Sincerely yours,

"THEODORE ROOSEVELT."

Every Boy Should Own a

Stevens Rifle

The Best For Him

UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Worn out soils is the natural result of low prices for farm products.

Abandoned farms! Keep prices good and there will be none.

Electricity is destined to play an important part in farm work. The telephones, of course, have come to stay—could not farm without them. On the same poles can be stretched a wire of higher voltage to light, the farmers' homes and supply power to run his cream separator, the grinding mill, pump water and do many other jobs. Yes, electricity will work wonders for the farmers.

Some sections have had three seasons of abundant rainfall. This made plant food rapidly available, induced a luxurient growth of crops and naturally has been exhaustive to the soil. In such sections a dry season will be exceptionally disastrous on account of lack of available plant food. The wise farmer will anticipate a drought soon and prepare for it by supplying humus to his soil and also fertilizers in available form. Dealers in fertilizers would consult their best interests by advertising their goods in Up-to-Date Farming, and other farm papers.

Yet seed time and harvest will continue, and the demands for labor will not relax. There is neither place nor time for discouragement. Keep the brain as well as the muscles busy. Continue to produce, and do it in the best possible way, and on the most economic lines, so as to make the most that can be made out of it. Take the farmers as a class, estimate the value of their homes, and of their crops as they go into the final markets, and they are very wealthy. Hence there is still life and activity on the farm.

The exposures in the Department of Agriculture confirm our belief that that expensive arm of the government would much better serve the masses of agriculture if it would abate what some are not inaptly calling its "science madness," and give more attention to marketing and price making; and the farm papers would better serve their patrons were they to urge changes along these lines.

Up-to-Date Farming has done more to create a sentiment favorable to farm price making than all the other influences combined, and has sprung more new questions to be ridiculed at the time but afterwards supported, than any other publication. However it may be appreciated, this is its record.

This paper would have a circulation of 300,000 if we had printing facilities sufficient to turn them out.

Now Is the Time to Act

(Continued from First Page)

try you represent, and the millions in your class.

If manufacturers can have one thousand in attendance at their annual meetings, miners five thousand and other industries in proportion, let us surpass them ten-fold, as your number and industry surpasses them many-fold.

Never in the history of any country have there been more momentous problems to consider at any meeting or convention. Even our great national political conventions pall before this meeting when the prosperity of the nation and the welfare of its people are considered. Possibilities for good accomplishments were never so iminent at any meeting or convention before. Some of the subjects to be considered are as follows:

Complete Organization of Farmers.

Clearing Houses.

Extension of Telephones and Consolidation of Farmers' Telephone Lines.

Farmers' Warehousing Plan.

Low Rates of Interest on Farmers' Loans.

Our Foreign Markets—How to Maintain and Enlarge Them.

How to Secure Profitable Prices for Perishable Products.

The Railroad Problems—A Simple Plan to Solve Them.

Crop Reporting—A Recommendation to the Government of One Report a Year.

A Law Against Gambling in Farm Products.

The American Society of Equity in Foreign Countries.

How to Prevent Adulteration of Foods and Marketing of Adulterated Food.

Minimum Prices on All Leading Crops.

Election of Officers.

President Everitts address is expected to be a masterpiece in foreful reasoning and sound logic. It will present the agricultural situation in its true light and recommend a solution for every problem. Its scope will be broad—covering nearly every National and International feature that affects American Agriculture. You should hear this address.

To help the committee on entertainment it is desired that each person or group of people. Will notify Secretary M. W. Tubbs of their coming.

David Dobetter

(Continued from Page Nine)

to gather up the threads and look out for a storm. Then, too, if the cows hang around the yard till well along toward noon before going out to eat, look out! The stones on the cellar bottom are also good barometers. When they are all dry go ahead with the farm work. But if they become damp in the night storm is on the way.

And by watching all these things we managed to slip in between the storms and get our wheat all up without much if any wet on it. Some of the neighbors were not quite so lucky. Jim Turner, for instance, had a big field just ready to cut, and the indications were for rain. We noticed his predicament and were afraid if he did not get his work along it might be a long time before he could touch it again. So I slipped over and asked him if he had not even noticed that a storm was on the way. Beats all how careless some men are of such things! But when we told him that we believed a big storm was coming, he was awfully glad to have Ben and John come over with the reapers and give him a lift. I woke up in the night after the wheat was all set up nicely and heard it raining softly. I felt so good to think that Jim's wheat was all up good! "Let it rain," I said to myself and turned over and slept till daylight. I'll bet Jim was happy, too. Now the time has come for me to close this letter. So boodbye and much luck to you. I am coming down to see you in the course of a week or so.

Yours sincerely,
DAVID DOBETTER.

30 FLOWERING BULBS FOR 10c

Together with our Catalogue and a complete treatise on the culture of Hardy Bulbs. All by mail, 10 cts

These 30 Bulbs, 10 kinds, 3 of each, different colors, will make 10 beautiful little pots of flowers for winter, or 10 clumps of early spring flowers for your garden. Pot or plant them now. AGENTS WANTED

Good Pay, Steady Employment, Fine Specialties.

The Greening Bros. Nursery Co., Monroe, Mich.

This Washer Must Pay for Itself.

A MAN tried to sell me a horse, once. He said it was a fine horse and had nothing the matter with it. I wanted a fine horse. But, I didn't know anything about horses much. And, I didn't know the man very well either.

So I told him I wanted to try the horse for a month. He said "all right, but pay me first, and I'll give back your money if the horse isn't all right."

Well, I didn't like that. I was afraid the horse wasn't "all right" and that I might have to whistle for my money if I once parted with it. So I didn't buy the horse although I wanted it badly. Now this set me thinking.

You see I make Washing Machines—the "1900 Washer."

And, I said to myself, lots of people may think about my Washing Machines as I thought about the horse, and about the man who owned it.

But, I'd never know, because they wouldn't write and tell me. You see I sell all my Washing Machines by mail. (I sold 200,000 that way already—two million dollars' worth.)

So, thought I, it's only fair enough to let people try my Washing Machines for a month, before they pay for them, just as I wanted to try the horse.

Now I know what our "1900 Washer" will do. I know it will wash clothes, without wearing them, in less than half the time they can be washed by hand, or by any other machine.

When I say half the time I mean half—not a little quicker, but twice as quick.

I know it will wash a tub full of very dirty clothes in Six minutes. I know no other machine ever invented can do that, in less than 12 minutes, without wearing out the clothes.

I'm in the Washing Machine business for Keeps. That's why I know these things so surely. Because I have to know them, and there isn't a Washing Machine made that I haven't seen and studied.

Our "1900 Washer" does the work so easy that a child can run it almost as well as a strong woman. And, it don't wear the clothes, nor fray edges, nor break buttons, the way all other washing machines do.

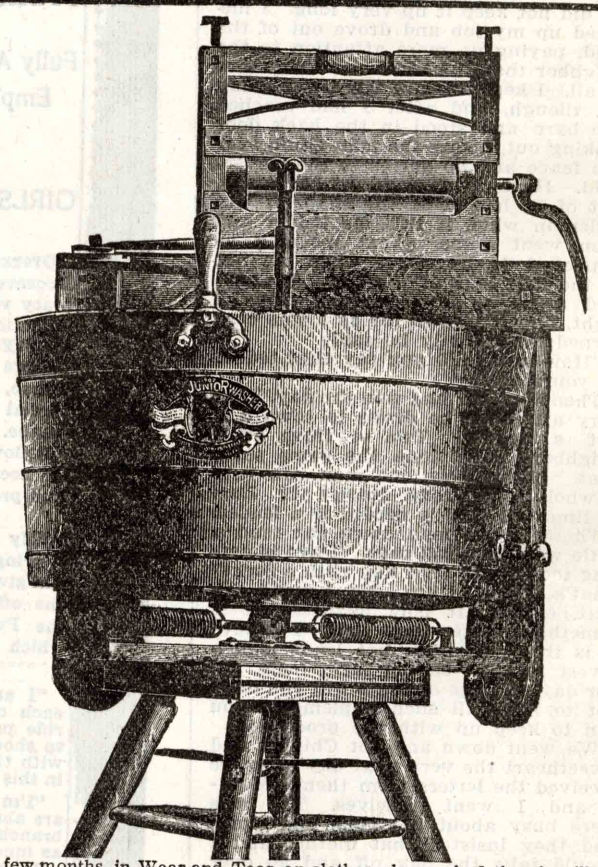
It just drives soapy water clear through the threads of the clothes like a Force Pump might.

If people only knew how much hard work the "1900 Washer" saves every week, for 10 years,—and how much longer their clothes would wear, they would fall over each other trying to buy it.

So said I, to myself, I'll just do with my "1900 Washer" what I wanted the man to do with the horse. Only, I won't wait for people to ask me. I'll offer to do it first, and I'll "make good" the offer every time. That's how I sold 200,000 Washers.

I will send any reliable person, a "1900" Washer on a full month's free trial! I'll pay the freight out of my own pocket. And if you don't want the machine after you've used it a month, I'll take it back and pay the freight that way, too. Surely that's fair enough, isn't it?

Doesn't it prove that the "1900 Washer" must be all that I say it is? How could I make anything out of such a deal as that, if I hadn't the finest thing that ever happened, for Washing Clothes,—the quickest, easiest and handiest Washer on Earth. It will save its whole cost in a few months, in Wear and Tear on clothes alone. And then it will save 50 cents to 75 cents a week over that in Washerwoman's wages. If you keep the machine, after a month's trial, I'll let you pay for it out of what it saves you. If it saves you 60c a week send me 50c a week, 'till paid for. I'll take that cheerfully, and I'll wait for my money until the machine itself earns the balance.



Now, don't be suspicious. I'm making you a simple, straightforward offer, that you can't risk anything on anyhow. I'm willing to do all the risking myself! Drop me a line today and let me send you a book about the "1900 Washer," that washes Clothes in 6 minutes. Or, I'll send the machine on to you, a reliable person, if you say so, and take all the risk myself. Address me this way,—R. F. Bieber, Gen. Mgr. of "1900 Washer Co.," 948 Henry St,, Binghamton, N. Y., or 355 Yonge St., Toronto, Canada. Don't delay, write me a post card now, while you think of it.

UP-TO-DATE Poultry and Bees

PRODUCTION AND MARKETING

A Busy month.

Partly filled sections and frames for extracting should be cleaned up and put away. If this is done before it gets too cold the bees will carry down the honey and cap it over for winter stores.

It is time now to examine the brood chamber to ascertain whether the bees have enough honey to winter them. They should have about twenty-five pounds.

If you find they are short better feed them now. It will then give them a chance to evaporate the syrup to the right consistency and cap it before cold weather.

Only granulated sugar should be used to make the syrup at this time of year and nine pounds of sugar to a gallon of water is the right proportion. A small quantity of honey might be added to keep syrup from granulating.

A small wooden box with ends about one-fourth inch higher than sides to provide entrance for bees under the cover makes a convenient feeding arrangement. It should hold five or ten pounds of syrup and should contain a lattice float that will rise to the top of the syrup to prevent the bees from drowning. When filled it should be put inside the hive, top of the brood frames and covered over with cushion or burlap. The bees will do the rest.

Some swarms may be light in bees. The only thing to do in such a case is to double them in with other swarms until they will cover four or five frames at least. Do not kill the light swarms. If you do not have the moveable frame hive set the light swarm in front of the hive you wish to put them into with entrances as near together as possible and from the top of the light swarm smoke them out. They will run into the other hive and you will have saved the bees. Better yet, transfer them. This is a more complicated job, however, and it will pay you to read up carefully on the process before undertaking it. The A. B. C. of Bee Culture published by the A. I. Root Co., of Medina, Ohio, is a complete guide to the successful handling of bees.

The old biddy should not be jealous.

Bees, poultry and small fruit go well together.

How about that strawberry bed? September is the month to set it and any accumulations of hen manure on hand can not be used to better advantage. Do not get it too near the roots, however.

If you have not already bought your plants look through the advertisements in this issue of Up-to-Date and send at once for them. Don't forget to tell the advertiser you saw his ad in Up-to-Date Farming. You may not get as nice plants if you neglect to let him know that you are one of our Up-to-Date people. It's a fact that our people get the best they have.

It's not too late yet to cut a patch of second growth clover for the hens next winter. Cut it at once and store it away where it will be handy to the cutting box. Then in the winter cut it fine and mix it with their mash. It will save buying. There is nothing better as an egg maker proportionate to cost.

Dust, grit, charcoal and oyster shells were all looked after early in the month—also, everybody has the new hen house well along except Uncle Threadbare—he intended to get at it before now. but, as usual. kept putting it off. If his hens don't lay again next winter we'll know the reason. Trees, fences and sheds won't do in cold weather. No, they won't. Hens can live through it but will not lay with such lack of care. No use talking. They won't do it.

Marketing of spring chickens progresses rapidly—cold storage houses are filling up while prices are falling down. With large crops of grain and resulting low prices for it, it is probable that the growth and increase in weight will make it pay well to keep the chicks till along toward spring. Remember poultry was very high last spring and there is nothing to indicate that it will be any cheaper next spring. It will not pay to crowd the laying stock to keep them nor to keep them in cold quarters. Better get them fat, kill them and pay to keep them in cold storage if the price don't suit you now.

Many flocks are now moulting. An excellent time to feed sunflower seed. Oats are also a good food for the moulting period. If moulting has not commenced it should be forced. First reduce the rations. Let the hens get ravinous. Keep them confined for about a week. Then feed liberally on corn, corn meal and wheat. This will start the feathers. Then begin the sunflower seed, oats and bran mash. Green cut bone and meat are very helpful in growing feathers.

The man who made peace between the two warring nations of the East strongly endorses rifle practice for boys and girls. You all know who that person is, our President—Roosevelt.

We cannot do better than agree with what the first man in the United States—yes, first in all the world—says about the great benefit derived by the boys and girls, using rifles. Perhaps the President should have gone further and recommended the Stevens Rifles. He did not, but we do most strongly.

Stevens Rifles cost from $3.00 to $6.00. Nothing else will do the boy or girl so much good and give them equal pleasure. Think about it. Send 2c for large book describing the famous Stevens Rifles, Shotguns and Pistols. It has valuable chapters on hunting, the proper care of firearms, ammunition and lots of information every lover of outdoor life will want. Write to the J. Stevens Arms & Tool Co., Chicopee Falls, Mass.

$600.00 EASILY MADE

We will start you right in the Poultry and Egg business. By our plan you can begin in a small way and easily make $600 a year at home, and have all the fresh eggs and poultry you want beside. Now is the time to begin, as eggs will be 40 cents a dozen soon. New illustrated plan, directions and Catalogue Free.

A Country Girl Can Dress Just as Smart as a City Girl

With no "home-made" air about her clothes, either, if she reads the page

"The Girl Who Makes Her Own Clothes"

in every number of THE LADIES' HOME JOURNAL. Thousands of girls dress by this page, and look chic and smart at the smallest cost. The page isn't "Up in the air"; it is practical and tells a girl exactly how—and with a pattern for every blouse or skirt.

The Last Chance to Get The Ladies' Home Journal for $1.00

On October 2 the magazine goes up in price; 8 extra pages will be added; new departments will be started; new four-color covers; everything new and better.

The Curtis Publishing Company, Philadelphia, Pa.

UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

Think about sowing a field of rye for early feed next spring.

There are few abandoned farms where stock growing has been the specialty.

Cream separators are a distinct advantage on the farm, whether butter is made or the cream is sold. With the separator the skim milk can be fed to young stock or hogs in the very best condition. This is no small advantage.

There are approximately 30 million hogs marketed in the large markets and several million more marketed in small ways. Now, suppose tre 30 million hogs averaged 150 pounds each, the total weight is 4,500,000.000 lbs. Again suppose that through farmers' stock yards and controlled marketing the price could be maintained 1 cent a pound higher. The gain to stockmen would be 45 million dollars in one year.

This, we estimate would establish all the farmer's stock yards that will be needed and equip them and then be a large sum left. Yet, understand, this comparison is only on one branch of the stockmen's business—hogs. There are cattle, the price of which could be put up 1 1-2c to 2c over what has prevailed. Sheep, horses, etc., all controlled. sold at equitable prices and sold at the farmer's own yards.

By the A. S. of E. plans of marketing live stock the farmers do not attack any other parties, and are invulnerable against attacks from the trusts and combines. It would not be an attempt to put any old stock yards out of business as the stock could be taken from the farmers' yards, to the present stick yards, but the farmers' interests will be closed when they leave the former. Then the commission men, brokers, butchers and packers can fight it out among themselves. The farmers refusing to play in their yard.

Of course, to insure the best results for the A. S. of E., plan of marketing live stock, telephones must be brought into use. But stockmen nearly all have them now and all that will be necessary will be some combining of systems and co-operation of independent companies. This they will gladly do in view of the increased development of the telephone business among farmers.

This is a very important matter. Stockmen have been more nearly at the mercy of a trust—called the great est trust on earth—than any other branch of agriculture. We believe a remedy can be applied to their business and we believe the time has arrived. when steps should be taken to apply it. It is a subject that should concern every person who raises one hog, one steer or one sheep or lamb for sale. We want them to think about it and express themselves. It will cost nothing to cast their vote for or against the A. S. of E. plan or to explain their own plan. Send your vote or plan.

If, as statistics attempt to prove, a cow must produce 190 lbs. of butter a year to be profitable to her owner; and the fact is that the average yield is only 139 lbs., then it follows that there are an immense number of unprofitable cows being kept. These figures are, of course, subject to correction to suit localities and conditions, but may you have some of the unprofitable cows?

Look for lice on stock and give the poor animals relief. They are particularly severe on young animals and may stunt them permanently. Coal oil thoroughly rubbed into the hair is an old reliable remedy and we mention it because it is at hand all the time. Repeat at intervals, and currying will help to rid of the lice and bring the animal to good condition.

Is a horse famine imminent? Some person who has given the matter a close study so predicts. But famine or no famine there will always be a good demand for horses that meet "the demand." Fine carriage or coach horses, also draught horses of proper form and build will find buyers at big prices when scrubs go begging. Breed intelligently and you can sell profitably.

Think about the farmer's stock yards or farms where stock should be received and from where the supply should be let out, just enough to meet the demand. Is this a practical remedy for existing evils? Is there a better way? See article elsewhere in this issue.

Increased Capacity Cream Separators

IN line with its established policy of always keeping FAR IN THE LEAD of all possible competition by further improving its separators every few years, the DE LAVAL COMPANY has just let out another "link" of superiority, which still further widens the gulf of practical efficiency between the DE LAVAL and the best of imitating cream separators.

Seemingly perfect as they have been before, the MAY, 1905, DE LAVAL machines are still further improved, run still easier, have lower-down supply cans, and LARGELY INCREASED CAPACITIES, all for the SAME PRICES as heretofore.

Sharples TUBULAR CREAM SEPARATORS

We want you to know Tubular Cream Separators as they are

Investigate the low can and enclosed gears. Tubulars have neither oil cups, tubes, nor holes—they oil themselves. **They have bowls without complicated inside parts—hold the world's record for clean skimming, durability, capacity, easy turning and easy washing**—save half the work—greatly increase the amount and quality of butter—are wholly unlike all other separators. Write for catalog R-136

THE SHARPLES SEPARATOR CO.,
Toronto, Can. West Chester, Pa. Chicago, Ill.

Bone Spavin

Know it by the lump and the limp—a hard, bony growth on the inner side of the hock joint, usually low down and a little forward of the center of the leg—a quick hitch with the sound leg, and a stiff movement of the lame leg, bearing the weight on the toe, most noticeable in starting.

New cases, old and bad cases, the very worst cases, cases where firing has failed, are cured by

Fleming's Spavin and Ringbone Paste

Guaranteed to cure the lameness for good—may or may not take off the lump. Easily used by anybody, and a single 45-minute application usually does the work—occasionally two required. Write for **Free Horse Book** before ordering. It gives all the particulars, and tells you what to do for other kinds of blemishes,

FLEMING BROS., Chemists,
207 Union Stock Yards, Chicago, Ill.

Don't Forget the Main Point

in dairying is to **make it pay.** The more cream you can get, the more pay, **providing** you do your skimming at the smallest cost in time, labor and running expenses. **You** can make it pay **most,** with least trouble and smallest expense, by using the Improved

U. S. Cream Separator

French Camp, Cal., July 13, 1905.

"I purchased a No. 7 U. S. Cream Separator last April. I have only three cows, but since the 28th of last April I have sold $71.88 worth of cream. I find it everything that could be wished for. It runs very light and is *a perfect skimmer.*—U. B. GOEN."

Gets the Most Cream

and Holds World's Record for Close Skimming

A little figuring will prove to you that Mr. Goen couldn't average about $120 a year **per cow** unless he did get all the cream.

9 TOOLS IN 1

One of the most useful tools of recent invention is the

C. & F. WONDER KNIFE

—9 tools in 1. It successfully combines in one article nine perfect tools, all of which are used every day by the average man and boy. In reality it puts nearly all the tools of a work bench in your pocket. It is so handy that no one will be without after using once.

The knife-blade is of the finest steel and made to stand bad usage. The other tools are: Wire Cutter, that will cut barbed wire; Wire Pliers useful always; Swedging Awl; Leather Punch and Gimlet, for Harness mending and other jobs; Screw Driver, that is always handy; Alligator Wrench and Hoof Hook. The latter is something new and every horse-owner will appreciate it. This alone is worth more than the price of the Knife. Horses hoofs are very quickly cleaned out. All of these useful tools make a bulk no more than the average three-bladed knife.

CUT 1-3 ACTUAL SIZE

We receive letters with expressions like these: "Greatest little article I ever saw," "Never saw its equal," "All my friends want one," "Don't see how I ever got along without it." You will agree when you see the knife.

"C. & F. Wonder Knife received. It is certainly a wonder. I want to buy them by the dozen."—
J. Barnhart, Wilmington, O.

The regular price is $1.50 each. But we want to introduce them and make an offer of only $1.25 each. With each order we send wholesale price list. Agents will find the C. & F. Wonder Knife a wonderfully fast seller. No free samples. Send $1.25 for a sample and get the attractive agents price.

C. & F. Wonder Knives—9 tools in 1—are made to sell on their merits. Made to gain friends and keep them. One sold sells many others.

COONER & FORTUNE CO., Dep. A, Indianapolis, Ind

UP-TO-DATE Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Nothing adds more to the attractive appearance of the farm home than a neatly kept driveway. The "good roads" idea ought to go farther than to the farms—it should lead right up to the farmer's door and out to the barnyard.

Bright, new wall paper and the tasteful use of paint will work a transformation in the rooms of the boys and the hired man, and they will appreciate it. Give them the paper and paint and let them "fix up" on some rainy day. It always pays to add to the cheerfulness of the home. even though it does require a little time, trouble and expense.

Apples are a healthful food, either cooked or raw. and are especially good for dyspeptics. A raw or baked apple and a cup of hot water for breakfast is better for dyspepsia than a dollar's worth of drugs. Apples are plentiful now in fruit growing sections, and may be served in a great variety of ways to delight the palate of a hungry farmer. Try the following recipe, for it is one of the best:

Mix five tablespoonfuls of butter with two cups of flour; stir in two even teaspoonfuls of baking powder and a spoonful of salt; beat an egg until very light, stir it into three-fourths of a cupful of water, and then stir it into the flour; spread the mixture in a shallow pan previously butered; pare and slice three or four tart apples; and place on the dough; sprinkle sugar over it thickly, and bake for a half hour. Serve hot with lemon sauce. This is a new, easy and inexpensive way of serving apples, and the dish is truly delicious. Try it and see.

One of the best managed. and most successful business houses I ever knew called all the employes together each morning for a half hour's discussion of the work in hand. I believe this is a good idea for farmers. Perhaps the evening were a better time, but why not make it a rule to call the folks together, including the hired help and the school teacher who is boarding with you, and go over matters of importance. Don't confine such discussions to ways of making and saving money, or to best ways of accomplishing the tasks before you, but include matters pertaining to making the home a happier, more attractive and cheerful place than it has been. This idea is valuable in more ways than one, and where carried out is seldom given up. Try it.

The woman on the farm cooks three meals every day, and is ever ready to welcome a change that tends to break monotony. How gladly she welcomes the seasons that bring new fruits and vegetables into use. But there is more than one way to break monotony in cooking. Apples have been in use for some time, and if any housewife has wearied of apple pies, apple dumplings, apple sauce, apple etcetera, let her try this delightful dainty: Stew four good sized tart apples as for sauce, making it quite dry. Put it through a sieve to make it smooth. Add half a cup of sugar, butter half the size of an egg, juice of half a lemon, and a dash of nutmeg. Beat three eggs separately and add to the mixture, stirring well. Bake fifteen minutes. It is good hot or cold. with or without sugar and cream. We call it apple omelet. Try it.

The Farm Telephone

Ten years ago a telephone in farm houses were rare luxuries. Today there are thousands of them, and very convenient they are, too, adding to the pleasure of farm life to a great degree, and have become necessities to a greater degree. More than that, they are profitable, for they save time that is money to the farmer. When the writer was a boy on the farm, he remembers the time wasted in notifying neighbors that "threshers will be at our house tomorrow." Now there is no time taken nor trouble caused by hunting up the threshermen—the 'phone does it all. Then we were forced to let machinery lay idle for a day or more at a critical time, when waiting for repairs. Now a few hours is all that is required to get things moving again. Then we sometimes lost a horse or a cow, or perhaps a member of the family because it took so long to receive skilled or medical assistance. It is different now. And after all, the telephone has not yet begun its most important function. It will be the means of connecting the farmers with the great markets and with each other in a way that will enable them to control the stream of produce going into market with as much certainty and precision as Standard Oil controls the supply and price of kerosene.

Put a 'phone in your house, friends. It is worth its cost as a pleasure and a convenience; but its greatest worth is in its ability to save you money.

Should you desire to organize a farmers' telephone company, write us, and we will help you with instructions and advice. Push the 'Phone idea.

RURAL MAIL BOXES

AT ONE-HALF REGULAR PRICE

DO the American People know a REAL BARGAIN when they see one? Are they somewhat skeptical of CHEAPNESS? If every reader of this paper REALIZED what a bargain we are offering in the Ideal Mail Boxes our supply would not last long. We have only a few. We bought them at half-price and they are all perfect boxes. The manufacturer sold them that way to get rid of a large number in the dull season. YOU SAVE ONE-HALF THE COST. We make a small profit. This very same box is sold for more than twice our price. The Postmaster General says they are O. K. Patron and carrier agree that our box is IDEAL.

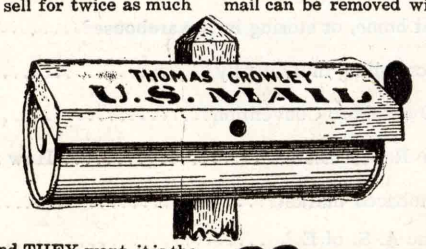
The Ideal R. F. D. Mail Box is the best medium-priced box on the market and is far superior to most of the $2 boxes. It is more convenient for the patron and the carrier than the old-fashioned square boxes, or any box that opens at the end. It is neater, more handsome and better than any of them, even though they sell for twice as much as the Ideal. The Ideal will give better satisfaction in every way.

The Ideal box has no "jim crack" attachments to get out of order, break or freeze shut. It's the kind of a box the farmer wants and the kind of a box the carrier wants, for he don't have to nearly break his neck to look inside, or get out of his rig to serve. If it's the kind THEY want, it is the box that YOU want. Any carrier or farmer will tell you that the Ideal box islike its name, IDEAL.

It is made of honest materials throughout. Lid is made of 20-gauge galvanized steel, (very heavy) and body of 24 gauge galvanized steel, thoroughly reinforced. Size of box 6¼ x 6¼ x 19 inches.

It has automatic signal painted bright red and poised above the box, making it easily seen by the carrier. Lid cannot blow open or freeze shut, nor can it be left open by mistake, as it is self-closing.

The body of the box being round, pennies or mail can be removed with gloves or mittens on. There are no cracks in it around the edges, as in the square boxes, for postal cards and change to lodge in. Both mail and change are always in plain sight of the carrier. The Ideal is rust proof. Screws for attaching to post sent with each box.



The Ideal Mail Box is made and sold at $1.50 and even more every day. Because we want to move this lot at once, the price is 80c each; $8.00 per doz.; $15.00 for twenty-four. We have only a limited number and the first orders get the preference. Order today.

80c each

UP-TO-DATE Tobacco Department

BY C. HAYES TAYLOR

READ THIS CAREFULLY

A Plan Submitted to the Tobacco Growers of America

Controlled Marketing is the principle whereby we hope to maintain profitable prices for the products of our labor. Plans for controlling the marketing are many and varied. Crops, location, and local conditions make varied plans a necessity.

The Owensboro Convention is to adopt the most feasible and practical plan for controlling the marketing of tobacco grown in the various states. And as the editors of Up-To-Date Farming have called for ideas along this line, one plan is submited herewith. Consider it and if there are better ones bring them to the convention:

To be practical, a plan must be simple. Simplicity is the leading feature of this plan.

Approximately, all the tobacco grown in the United States, whether consumed at home or abroad, reaches some of the great tobacco markets sooner or later. These markets are at Cincinnati, Ohio; Clarksville, Tenn.; Edgerton, Wis.; Louisville, Ky.; Baltimore, Md.; Richmond, Va., and Lancaster, Pa. There are a number of lesser markets but these are the principal ones.

The different growers' associations should form a federation. This federation should establish a tobacco clearing house in each of these markets, and in the others of sufficient importance to justify. A competent manager with assistants should be given charge of each.

All tobacco grown should be carefully classed, graded, weighed, prized and stored by local organiaztions and a complete report with sample sent to each clearing house and entered on the books.

Minimum prices on each class and grade should be established at the annual meeting of the federation. These prices should be forwarded to the clearing house managers.

All sales should be made only by the manager of the clearing house in the following manner. A catalog of tobacco, containing a complete report of the tobacco crop should be sent each company engaged in the manufacture of tobacco, and in case of export tobacco, to foreign dealers. This catalog will give information as to the quantity and quality of the tobacco. and buyers will be informed that only at the clearing houses can this tobacco be obtained.

Settlements and statements will be made monthly or quarterly as may be deemed best. To illustrate: During the quarter ending September 30, a clearing house makes sales of dark shipping tobacco to the amount of $50,000. Each tobacco grower having dark shipping listed with the Federation gets a payment in proportion to the value of his crop. At the end of each year, an annual statement of business should be made by each clearing house manager, and if a surplus of tobacco remains unsold, it will be carried over by all the members.

In this way, each tobacco grower will receive monthly or quarterly payments on his crop, and can secure advances if needed. Profitable prices will be maintained, and marketing will be controlled. Selling leaf tobacco will be the farmer's business, but conducted by the farmers' agents under instructions given at the Annual Convention, Direct sales will be made thereby saving to the farmers the profits now paid an army of useless buyers and commission men. Through organization the farmers can keep inspection and storage charges down to the minimum.

Manufacturers should welcome such a change for it will greatly facilitate their business and afford a certainty that is lacking under the old system.

Allow me to refer briefly to a plan whereby this work may be readily accomplished.

First, let the Federation be formed at Owensboro, and constitute a branch of the American Society of Equity as at present the one organization for all farmers and all crops.

Second, by-laws for the government of the tobacco branch, or federation, may be adopted as amendments to the constitution of the American Society of Equity.

Third, local, county and district unions will attend to the local detail work, such as organizing new clubs or unions, grading, prizing, sampling, storing and keeping record of the tobacco, securing advances, etc.

Fourth, each class of tobacco growers may have their own executive committee.

Fifth, the head of the department, or federation, with necessary assistants, clearing house managers, etc., to be chosen at each annual convention of the tobacco growers.

This plan is respectfully submitted to the tobacco growers of America. It has been prepared for the dual purpose of uniting more solidly the tobacco growing interests, thereby increasing their power and at the same time facilitate the marketing of tobacco, and enable the tobacco growers to stand with the producers of other staple crops in the demand for profitable prices, insuring prosperity for all.—C. H. Taylor.

TOBACCO REPORT BLANK

EVERY TOBACCO GROWER, who receives a copy of this paper is urged to Fill this blank and mail it to the THE AMERICAN SOCIETY OF EQUITY, Tobacco Dep't., INDIANAPOLIS, IND., without delay. If you are not a regular subscriber to UP-TO-DATE FARMING, this copy is sent to you to secure a report on YOUR TOBACCO. Kindly attend to this at once.

C. HAYES TAYLOR,

A Statement

Raising anl marketing tobacco so that the grower may be assured of a profit is a problem that demands more consideration than we are able to give it in this department. We have long had in mind a special paper, devoted to the interests of the co-operative tobacco growers, dealing with every phase of tobacco problems confronting the growers. Our members in the tobacco districts would find such a paper of great help to them, and by going into detail regarding methods of handling the tobacco crop, it would be of great assistance to the organization.

We have now more than 20,000 readers of Up-to-Date Farming who grow tobacco. In the past two years prices of tobacco have alvanced fully 40 per cent., due principally to the efforts of the organized farmers. According to government statistics, the average number of pounds each grower produces approximates 2800. Allowing for an advance of 3 cents per pound. the tobacco growers have gained $84.00 each because of organization. If such gains are possible in one crop with an incomplete organiaztion, what may we not expect when iur organization is complete? While it must cost each member a small sum—a mere pittance in comparison with the benefits to be secured, to maintain the organization, the above figures show conclusively that it will cost the average tobacco grower more than $80.00 annually to allow the organization to die.

The best, as well as the most inexpensive way to keep the organization alive, growing, and in perfect working order is through a publication devoted to their interests. This paper, we hope, to publish in the near future, when we get "that new press" so that we may have adequate facilities. Push the good work forward.

The Burley Association

If the leaders of the Burley Tobacco Growers' Association would apply their persistency to a feasible, practical plan of controlling the marketing of Burley Tobacco, they might accomplish something worthy of their efforts.

This is their third year in attempting to organize a capital stock company so the growers may buy their own tobacco at a good price. and sell it again at a higher one. The farmers are not very hopeful, however, and the third trial will probably be the last along this line.

We believe the Burley tobacco growers can organize, and do so to their great alvantage, but they must do it in a way that will enable them to depend entirely on their own resources. The sucess of the Growers' Associations in Kentucky and Tennessee warrants such belief.

We suggest to our Burley friends that they consider carefully the plan of the American Society of Equity. There is no necessity for capital stock to purchase what they already own. All that is necessary is a plan whereby they may co-operate in controlling the marketing. The American Society of Equity has such a plan. It has proven successful in Virginia, Kentucky and Tennessee. As soon as the Burley growers secure a fair proportion of their number in such an organization, they force prices up by withholding the supply. If a surplus exists, hold it over, and curtail the acreage.

If their members become hard pressed for funds, warehouse their tobacco and secure cash advances. Give buyers to understand that fair prices must be paid. or no sale will be made.

AN OPENING FOR YOU

There is an opening for you in the Southwest. So there is for any energetic, wide-awake man. The Southwest is in need of NOTHING but energetic men to develope its wonderful resources. There are vast areas of unimproved land in Indian Territory, Oklahoma and Texas along the line of the M. K. & T. Railway only waiting for men like you to make them yield the wonderful crops of which they are capable. There are hundreds of towns where new businesses ARE ACTUALLY NEEDED. There are openings for mills and manufacturing plants, small stores, newspapers, lumber yards and many other branches of trade. Wages are high, and there is a demand for every kind of skilled and ordinary labor while business chances for men of small capital and much energy are unlimited. There is a great chance in the Southwest for young men in all the trades and professions.

The M. K. & T. Railway is THE line to the Southwest. Extending from St. Louis and Kansas City in the North to San Antonio and Galveston in the South, it traverses the best and most fertile sections in the Southwest. Every large city in Oklahoma, Indian Territory and Texas is located on this line. This to the prospective settler means much, as it assures a ready market in advance for all he may produce.

On the first and third Tuesdays of each month you can purchase tickets to Oklahoma, Indian Territory and Texas at greatly reduced rates. Tickets have liberal limits with stop-over privileges—giving excellent chances to see the country thoroughly.

I can give you many valuable pointers as to locations and business chances. If this interests you, write me to-day, telling me what you want, how much you have to invest and I will assist you. Write for "The Coming Country." It will interest you.

MENTION THIS PAPER

When you write to advertisers. They want to know in what paper their announcement was seen.

As stated elsewhere, the Dark tobacco growers have advanced prices fully 40 per cent. The buyers are beginning to realize that the farmer must be paid his price. The Burley growers should profit by the example of the members of the A. S. of E. Quit floundering and put themselves in a position at once to make themselves felt.

ORGANIZED TOBACCO GROWERS WIN RECOGNITION

Appointment of Joseph Killebrew of Tennessee, as Tobacco Statistician

The recent gross errors in reporting tobacco crops by the Department of Agriculture, followed by disastrous results to the growers by a rapid, but temporary decline in prices. led to the appointment of Mr. Joseph Killebrew, of Clarksville, Tenn., as Government Agent on Tobacco Statistics.

Mr. Killebrew is a tobacco expert, and a man with a reputation for hard work, and whose sterling honesty makes him fully acceptable by the growers in his new capacity. He has been one of the warmest supporters of organization, and was foremost in building it upon a solid foundation. His appointment insures the growers of a "friend at court."

Report Your Tobacco Crop

Full information concerning the size and condition of the 1905 tobacco crop, and the amount of 1904 tobacco still retained by the growers will be needed at Owensboro, if the Tobacco Growers' Convention is to accomplish the great results hoped for. Hence it is important that the conditions as they are be fully reported.

A report blank appears in this issue. It is for YOU to USE. Please use it. Order a dozen or more extra copies, and give or send them to all the non-members in your neighborhood, with an urgent request that they make proper use of them. Do not neglect this. DO IT NOW—TODAY.

The convention delegates at Owensboro will use the facts, contained in these reports as a basis to arrive at fair minimum prices. The facts and prices will be published so that ALL TOBACCO GROWERS MAY KNOW THEM and not be deceived by false reports. When the buyers realize that the growers KNOW THEIR BUSINESS, their opposition will lose half its strength. Send your report. Also get your neighbor to report, In multitude of counsel there is wisdom. Let us have a multitude of reports. The blank is in this paper.

Tobacco News Notes

In this issue appears a Tobacco Report Blank. Every one of our members growing tobacco, should fill out this blank promtply and send to headquarters, or take it to the local county union meeting, to be forwarded with others.

If you have neighbors who are not readers of Up-to-Date Farming, send us their names so that we may send them copies of the paper containing the Tobacco Report Blank.

The Dane County (Wis.) Union holds its next meeting on Sept. 30, and will compile a tobacco report for the Owensboro convention, and also elect delegates. On their return trip they will attend the annual meeting of the Society at Indianapolis, beginning October 32rd.

All delegates who attend the Owensboro convention should arrange to attend the Annual Meeting also. The additional expense will be trifling. and the importance of the latter meeting will fully justify them in doing this. See partial program elsewhere.

Hon. Felix G. Ewing, Chairman of the Executive Committee of the Dark Tobacco Growers' Protective Association, and to whom belongs a large share of credit for its success, and for the higher prices secured for tobacco, is expected to attend the convention.

No well posted man longer doubts but that the dark tobacco crop of 1905 is only about 50 per cent. of the crop of 1903, and is even smaller than the short crop of 1904. The farmers who grow tobacco can have things their own way this year.

New local unions are being formed daily in the tobacco sections of Kentucky, Wisconsin, Virginia and Tennessee. It is becoming discreditable to a planter to stay out of the organization. We are in excellent shape to do business.

It might be better for the tobacco growers to make manure of their primings, trash, and sorry lugs. Usually prices paid for these hardly pay for the labor of saying and marketing them, and they are worth as much as fertilizer. Besides to remove these from the market would make the demand for good tobacco stronger.

Owen Day, of the 12th Tennessee District, sold all his tobacco through the Association for $8.50, $8.90. $11.50 and $12.00, which prices were very satisfactory indeed, as he sold his crop last year for 6 cents a pound. This is only one case of many like it. To say that the farmers cannot handle their own business and set their price on their own produce, is veriest rot.

The French government purchases more than 30,000,000 pounds of American tobacco annually, and pays a price equal to about 80 cents a pound. It is needless to say that the farmers do not get their just portion, as the profits are absorbed by the contractors, who secure the crops. The French government has learned that there is too great a margin between the price they pay and the amount the farmers receive, and they propose to cut out the contractors and buy direct. This will be the opportunity of the tobacco growers. who, if organized, can secure a good price, and still provide France with cheaper tobacco.

Have you appointed delegates to Owensboro, yet? Are you arranging to get a complete crop report ready? Has your county union met and made provision for learning the exact condition of tobacco and for grading, storing and handling it? If not, do not delay longer. You have built a co-operting machines—now use it.

Germany imports about 50.000,000 pounds of tobacco from the United States, annually, paying about $40,000,000 for it. In 1884, Germany produced 104,000,000 pounds of tobacco on her own farms. In 1903, but 72,000,000 pounds were grown in Germany. Production is gradually decreasing, while consumption increases steadily. In 1884, there were 151,000,000 pounds consumed. In 1903 this was increased to 201,000,000. It is evident from the above figures that Germany is a good market for American tobacco. It is also evident that of the price paid, approximately 80 cents per pound, the American farmer does not get his just portion.

From Wisconsin comes the news that buyers are extremely active, and have bought options on a large number of growing crops. Prices paid are considerably in advance of prices in 1903-4. There is evidently a scarcity of Wisconsin leaf in the markets. This being true, there is no reason why the entire crop should not be disposed of at profitable prices. The chances for it would be far better if the growers were thoroughly organized, and working in unison. For instance, when the buyers have secured a large portion of the crop, they may attempt to secure the balance at lower prices. If the unsold crops belonged to organized farmers, it would be possible for them to say to the buyers, "Pay our price or do without," and the buyers would pay the price, sooner or later.

Successful Manufacturing

While the tendency of the present day is to hurry and skimp and make things "to sell" rather than "to last," it is gratifying to know that there are still some few concerns who believe that their own interests are best served by serving the buyers of their products with goods of quality, even, though the cost of producing is greater than for cheaply-gotten-together articles which are sure to prove unsatisfactory in the end.

Prominent among those who have clung to the old idea that quality counts is the Eddystone Manufacturing Company, manufacturers of the celebrated and familiar Simpson-Eddystone prints. These goods have been made continuously for over half-a-century, and their sale is greater to-day than it ever has been before.

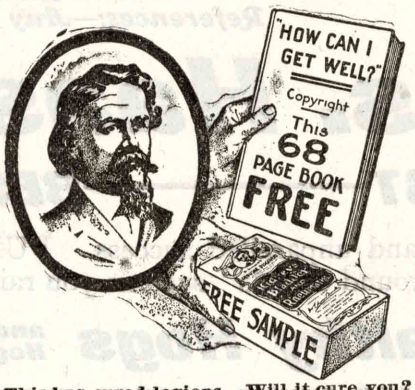
No wonder, then, that these goods, charming in their beauty, and appealing because of their durability, have won their way to the homes and wardrobes of discerning women throughout the country, not alone because of their attractiveness, but because of the confidence placed in them and justly merited.

This Will Cure You

of kidney trouble, bladder trouble, or rheumatism. Sufferers can have free treatments by writing the doctor.

NO CHARGE WHATEVER IS MADE

In order that all men and women who have given up hope of ever being well again may know that now a genuine, guaranteed home cure for uric acid germ dieeases has been found by Dr. Edwin Turnock, the celebrated French-American



This has cured legions. Will it cure you? Write the doctor and see.

specialist, a free double treatment of the new cure will be sent to any reader of this publication or their friends who may be afflicted with this disease in the form of too frequent desire to urinate, weak back, prostatic trouble, Bright's disease, dropsy, diabetes, stone in the bladder, gravel, wetting the bed, swelling of the feet and ankles, sciatica, lumbago, gout and other forms of the worst kind of rheumatism, kidney trouble and bladder disease.

The doctor does not claim to cure all diseases, but he does cure the diseases he claims to cure. To prove this ask Mr. James H. McClung of Berthoud, Colo., whom he cured of Bright's disease; Mrs. Mary Furstenberg of Boody, Ill., whom he cured of diabeates; Mr. A. P. Yochum of Pittsburg, Pa,, whom he cured of rheumatic gout; Mrs. Phebe J. Brown of Kalispell, Mont., whom he cured of dropsy, and ten thousand others whom this new double non-alcoholic treatment cured of each of the diseases and symptoms mentioned in the first paragraph.

All the doctor wants to know is that you have one of these diseases, then you write him what disease you have, and give your name and address, and he will do the rest to cure you. You send no money, no stamps; he will not send anything C. O. D., or send any bills. But he will send you free, without anything to pay:

A double treatment free of charge for your own disease—(the genuine, original and improved cure treatment:) and

A free 68-page illustrated book telling the truth about these diseases, giving different home methods, how to analyze your urine, etc., etc.

To those who earnestly want to be cured this is a heaven-sent free opportunity. Will you take advantage of it. Yes! Then write today to the Turnock Medical Co., 2776 Bush Temple, Chicago, Ill.

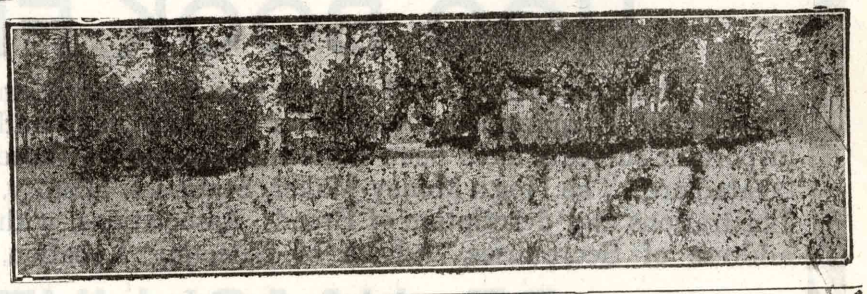
ONLY $1.50 AN ACRE DOWN AND 10c AN ACRE PER MONTH



AFTER A FEW YEARS A COMFORTABLE HOME

GOOD SOIL. FINE CLIMATE. PURE WATER. These lands are in the Park Region of Central Minnesota—10,000 acres to select from—raising wheat, corn, oats, rye, and the finest vegetables you ever saw. Clover grows without reseeding; a perfect dairy and sheep country, with the markets of Minneapolis and Duluth near at hand. Don't pay rent any longer. You can own a farm, This land now sells for $8.00 an acre.

You can begin with 40 acres; but if you can pay more you should take 80 or 160 acres; 80 acres would cost you $120 cash and $8.00 a month. Why not begin today, if you want a farm? Cut out the coupon or send postal card, write your name and address, and I will send you the booklet that will tell you how.

IF YOU WANT TO BUY AN IMPROVED FARM TELL ME HOW MUCH YOU HAVE TO INVEST AND I WILL SUBMIT A LIST TO SELECT FROM.

The Modern Maud

BY FANNIE E. POOLE

Maud Mueller, on a summer day,
Flew out with nimble feet
Across the yellow stubble field,
To Shock the Dollar wheat.

She seized a big fat bundle first,
